**VOLUNTARY ANNOUNCEMENT  
COMMENCEMENT OF PRODUCTION OF FURFURYL ALCOHOL**

The board of directors (the “**Board**”) of China XLX Fertiliser Ltd. (the “**Company**”) is pleased to announce that completion of production facilities for and commencement of production of furfuryl alcohol (糠醇), thereby enhancing the Company’s competitiveness. The designed annual production capacity of the production facility in phase I is 50,000 tons and utilises some mature production techniques.

Furfuryl alcohol (糠醇) is mainly used as adhesives, preservatives, paint, thinner and modifier of resin in the machinery casting industry and as other industrial raw materials, such as rubber and pesticide. Furfuryl alcohol (糠醇) may also be used to produce furan resin (呋喃樹脂), which is used in large-scale casting process in industries such as heavy-weight vehicles, light-weight vehicles, ship vessels, internal combustion engines, machine tools, engineering machinery, agricultural machinery, building material machinery, metallurgical scorch, petrification and electricity.

The Company has established certain production facilities in close proximity to each other, thereby increasing production efficiency between different facilities using hydrogen, oxygen, carbon dioxide gas and related gases from the synthetic ammonia production system. This has created a type of “circular economy”. In such context, the new production facilities allow the Company to strategically leverage the infrastructure and conditions available in the existing production facilities, allowing it to implement its product differentiation strategy and maximise its overall efficiency as a whole.

By Order of the Board
