With the rapid development of the industry and the advent of the era of parity, the photovoltaic field has entered a stage of development that emphasizes safety and stability. At the same time, as land resources are increasingly scarce, the efficient use of land resources has also become the development goal of the industry. The Group is committed to promoting the healthy development of the photovoltaic industry, with the development direction of improving product performance, reducing the cost of electricity, and advancing grid parity.

Based on the accumulated advantages of providing one-stop solutions (EPC, maintenance support and operation) for photovoltaic power plants, combined with big data analysis technology, AI control technology, wireless communication technology of LOAR/Zgibee, the Group is committed to building a digital and intelligent photovoltaic tracking control platform, which enables to achieve cost-efficiency and power generation enhancement, while achieving intelligent and unmanned management of photovoltaic power plants, so as to improve the competitiveness of the Company's products.

In order to stabilize the Group's market share in bracket products and maintain the market competitiveness of the products, the Group has developed a multi-point linkage bracket system with safety and stability as the breakthrough point through professional calculation software such as PVsyst, Ansys and Sap2000 and finite element analysis, while continuously improving its technology and advancement. Based on the original technology, the system has been technically upgraded for the core transmission system, which has adopted a torque transmission system that can adapt to the complex environment and terrain instead of the original push rod transmission system. And it has carried out a modular design for the entire bracket system, with each module designed with a stable self-locking mechanism, which has further upgraded the safety performance of the bracket products.

The Group has designed and developed a floating solar photovoltaic power generation system suitable for the water surface with freezing period, and studied a new bracket system that adopts EPS foam filled floating body wrapped in aluminum-magnesium alloy for its buoyancy base, aluminum alloy or stainless steel for the structure in contact with the water surface, and hot-dip galvanized or galvanized aluminum-magnesium steel for the structure not in contact with the water surface. At the same time, by summarizing the experience in the long-term development and construction process, the Group has researched and developed a floating solar photovoltaic power generation system suitable for the freezing period, which uses different materials according to the actual use environment of the bracket.

With the advancement of photovoltaic projects, fresh water surface resources are rapidly consumed, and the sea area with better offshore conditions has become the new focus of surface photovoltaic projects. In quick response to the market demand, the Group has made great efforts to develop floating photovoltaic brackets on the sea surface, designed and developed a floating photovoltaic bracket on the sea surface, and studied the use of materials resistant to complex environmental conditions including weather-resistant and acid/alkali-resistant to create photovoltaic brackets that can meet the needs of the complex environment on the sea surface. At the same time, the Group has adopted a mode of module installation that can adapt to the complex conditions of the sea surface, with a view to pushing the existing photovoltaic projects towards the sea surface.

The proposal of the targets of hitting peak carbon dioxide emissions before 2030 and achieving carbon neutrality before 2060, forecasts the arrival of the new energy era with solar photovoltaic power generation as the main driving force. While constantly innovating, Tonking New Energy strives to bring the most visible benefits and the most decent services to users. The Company has been adhering to the core values of "with Tonking New Energy, we creating and sharing together" and the vision "becoming an enterprise with global influence in the field of light energy", and is committed to building green ecological intelligent photovoltaic power stations in the world, so that human beings can fully enjoy light energy!
