Notes:

- (1) During the year, each project company is split into two companies to separate the pipeline construction business and gas distribution business. The combined data of the two companies in each operational location is shown in this table.
- (2) Existing pipelines consist of intermediate pipelines and main pipelines.
- (3) The difference between contracted number of gas supply and number of gas connections made represents connections to be made.

(4) Estimated daily gas consumption for households is calculated based on estimated average daily gas consumption of 0.4m<sup>3</sup> per connected and acquired residential household.

(5) It is estimated that connected and acquired commercial/industrial customers have a daily consumption about 50% of the installed designed daily capacity of the gas appliances (as set out in the respective supply contracts).

(6) The project in Xingcheng is operated by Huludao Xinao as a branch company. The operational data is included in Huludao.
