

Quality Control

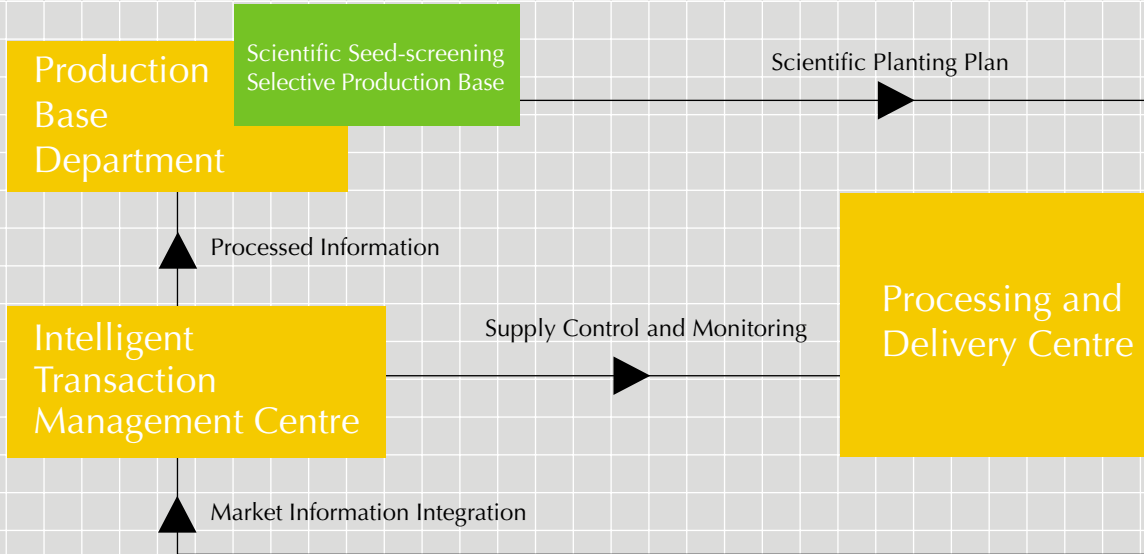

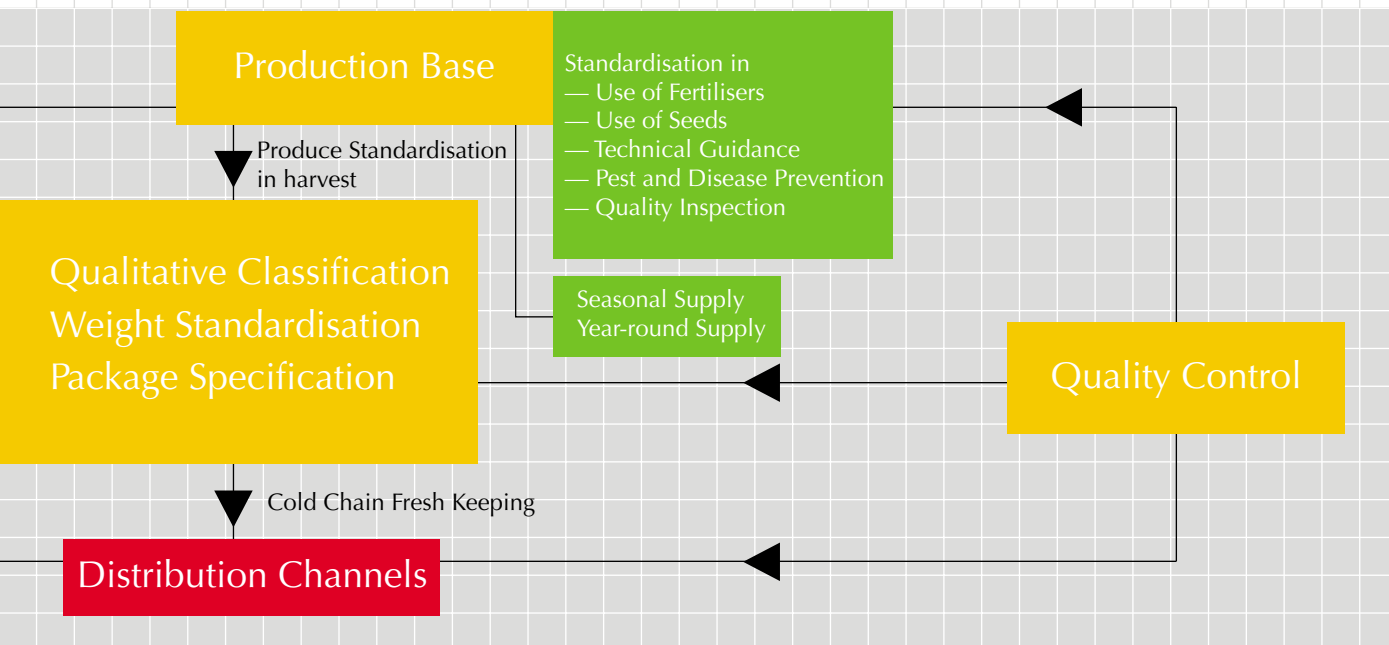

Diagram for Supply Chain Management of Fresh Agricultural Produce under Chaoda Brand

Scientific Cultivation

- Strict application of production standard associated with international organic food on Chaoda vegetables and fruits.
- Standardised use of excellent Chaoda selectively-bred seeds of vegetables and fruits.
- Standardised use of Chaoda biological organic fertilisers.
- Standardised promotion of the use of wide-spectrum, effective biological pesticides and agricultural pesticides for comprehensive prevention of pests and diseases.
- Standardised technical guidance under the technical experts of Chaoda Modern Agricultural Technological Research Institute.

Quality Control

- Comprehensive control and monitoring of the whole processes starting from the selection of production base, production planning, use of seeds, pesticides and fertilisers to harvest, packaging and transportation.
- Standardised safety inspection of agricultural products before entering the market.
- Implementation of a traceable management model, namely "one code, one file for one production base system", i.e. related file of production base can be traced from the "ID card" of every Chaoda fresh agricultural produce, which helps to verify the details including cultivation method, use of pesticides and fertilisers, transportation process and raw materials inspection of the product.
