Treasury Policies

The Group generally finances its operations with internally generated cash flow, bank borrowings and unsecured term loans from other third parties. Majority of the Group's bank borrowings are renewable on a yearly basis and are subject to floating interest rates.

It is the policy of the Group to maintain adequate liquidity at all times to meet its obligations and commitments as and when they fall due. The Group's financial risk management strategies include obtaining substantial standby banking facilities, diversifying the funding sources, spacing out the maturity dates to reduce interest volatility exposure and reviewing capital adequacy ratio from time to time.

The Group's principal operations are transacted and recorded in Hong Kong dollars and the level of foreign currency exposure on non-Hong Kong dollar assets and liabilities is relatively immaterial as compared with its total asset value or outstanding liabilities. Hence, the Group considers that it has no significant exposure to foreign exchange fluctuations.

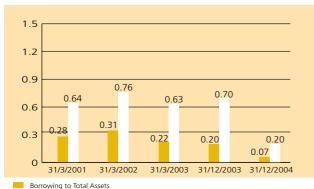

Liquidity and Financial Resources

The financial position of the Group remained sound and healthy in this financial year. At 31 December 2004, the Group's cash balance totalled HK\$258.1 million, up from HK\$139.0 million as at the beginning of the year. Cash held on behalf of customers maintained at HK\$1,266.1 million, compared with HK\$1,224.9 million as at 31 December 2003. The strong liquidity of the Group is manifested in the current ratio (current assets/current liabilities), of 1.46 times, which showed significant improvement over last year's 1.33 times.

As at 31 December 2004, the Group's gearing ratio, measured on the basis of total borrowings as a percentage of total shareholders' equity, was 20% (2003: 70%). All borrowings are of short-term maturities at floating interest rates, which are mainly used to finance our margin financing business. Bank and other borrowings totalled HK\$194.3 million, against total advances of HK\$789.1 million, as at the end of December 2004. The ratio of interest income to interest expense improved to 10.37 times from 6.51 times for the last year.

Our operating cash flow remains adequate for financing our recurrent working capital requirements. Besides, the Group has unutilised banking facilities of HK\$1.24 billion, while our capital commitments are minimal. The Group's assets and liabilities are substantially denominated in Hong Kong dollars, so our foreign exchange exposure is immaterial. Except for the guarantees provided to the banks for securing normal banking facilities for our subsidiaries, the Company has no other significant contingent liabilities.
