

Company Profile

Founded in 1996 in Hong Kong, Fittec International Group Limited (“Fittec”) is one of the leading EMS providers in China, focusing on PCB assembly. Serving as unrivalled partner for many established, large-scale Japanese and Taiwanese corporations, Fittec is the major provider of PCB assembly service for Toshiba’s hard disk drive controllers, the first EMS provider of Sanyo Epson’s mobile LCD controllers in China and the sole supplier of motherboards for ASRock, a subsidiary of Asustek. Currently, Fittec is further strengthening its customer base by securing more international well-known clients as well as augmenting its portfolio mix with products that can achieve higher margins.

With scalable and advanced facilities in China, Fittec is capable of adjusting its production lines to assemble a large variety of PCB products that suit the needs of top-tier OEMs. To capture still greater business opportunities, particularly those arising from the global outsourcing trend which has benefited EMS providers on the mainland, Fittec is presently bolstering its production facilities in southern and eastern China.

Mission: To be the partner of choice for top-tier OEMs
