POLICY AND OUTLOOK

The global economical outlook will continue to be extremely unstable in the remaining of 2008 and 2009. Major economies are facing growing radical uncertainties given the unsettled global credit environment. While China's economic growth has shown signs of easing off in the short term, its long-term prospects remain stable given its fundamentals and potential for internal growth. Hong Kong's economy will inevitably be slightly affected by the worldwide depression, but the impact is likely to be slightly moderated by the favourable support from China's situation. Our Group has invested in Hong Kong, China, Malaysia and Macau with a well-established diversification will enable us to weather the worldwide historical challenges.

Overall, with global slowdown, we shall expect an extreme hard year ahead for our group but we shall still expect a good future prospect in longer term.

Business combinations (other than for combining entities under common control) are accounted for by applying the purchase method. This involves the revaluation at fair value of all identifiable assets and liabilities, including contingent liabilities of the subsidiary, at the acquisition date, regardless of whether or not they were recorded in the financial statements of the subsidiary prior to acquisition. On initial recognition, the assets and liabilities of the subsidiary are included in the consolidated balance sheet at their fair values, which are also used as the bases for subsequent measurement in accordance with the Group's accounting policies.

Intra-group transactions, balances and unrealised gains on transactions between group companies are eliminated in preparing the consolidated financial statements. Unrealised losses are also eliminated unless the transaction provides evidence of an impairment of the asset transferred.

In the Company's balance sheet, subsidiaries are carried at cost less any impairment loss. The results of the subsidiaries are accounted for by the Company on the basis of dividends received and receivable at the balance sheet date.

Minority interest represents the portion of the profit or loss and net assets of a subsidiary attributable to equity interests that are not owned by the Group and are not the Group's financial liabilities.

3. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (cont'd)

3.3 Subsidiaries (cont'd)

Minority interests are presented in the consolidated balance sheet within equity, separately from the equity attributable to the equity holders of the Company. Profit or loss attributable to the minority interests are presented separately in the consolidated income statement as an allocation of the Group's results. Where losses applicable to the minority exceeds the minority interests in the subsidiary's equity, the excess and further losses applicable to the minority are allocated against the minority interest to the extent that the minority has a binding obligation and is able to make an additional investment to cover the losses. Otherwise, the losses are charged against the Group's interests. If the subsidiary subsequently reports profits, such profits are allocated to the minority interest only after the minority's share of losses previously absorbed by the Group has been recovered.

3.4 Joint ventures

A joint venture is a contractual arrangement whereby the Group and other parties undertake an economic activity which is subject to joint control. Joint control is the contractually agreed sharing of control over an economic activity, and exists only when the strategic financial and operating decisions relating to the activity require the unanimous consent of the venturers.

Jointly controlled asset

The Group's share of the jointly controlled assets and share of any liabilities incurred jointly with other ventures are recognised in the consolidated financial statements and classified according to their nature. Liabilities and expenses incurred directly in respect of interests in jointly controlled assets are accounted for on an accrual basis.

Income from the sale or use of the Group's share of the output of jointly controlled assets, together with its share of joint venture expenses, are recognised when it is probable that the economic benefits associated with the transaction will flow to or from the Group.

3.5 Foreign currency translation

The financial statements are presented in Hong Kong dollars (HK\$), which is also the functional currency of the Company.

In the individual financial statements of the consolidated entities, foreign currency transactions are translated into the functional currency of the individual entity using the exchange rates prevailing at the dates of the transactions. At balance sheet date, monetary assets and liabilities denominated in foreign currencies are translated at the foreign exchange rates ruling at the balance sheet date. Foreign exchange gains and losses resulting from the settlement of such transactions and from the balance sheet date retranslation of monetary assets and liabilities are recognised in the income statement.

3.5 Foreign currency translation (cont'd)

Non-monetary items carried at fair value that are denominated in foreign currencies are retranslated at the rates prevailing on the date when the fair value was determined and are reported as part of the fair value gain or loss. Non-monetary items that are measured in terms of historical cost in a foreign currency are not retranslated.

In the consolidated financial statements, all individual financial statements of foreign operations, originally presented in a currency different from the Group's presentation currency, have been converted into Hong Kong dollars. Assets and liabilities have been translated into Hong Kong dollars at the closing rates at the balance sheet date. Income and expenses have been converted into the Hong Kong dollars at the exchange rates ruling at the transaction dates, or at the average rates over the reporting period provided that the exchange rates do not fluctuate significantly. Any differences arising from this procedure have been dealt with separately in the exchange reserve in equity.

Other exchange differences arising from the translation of the net investment in foreign entities, and of borrowings and other currency instruments designated as hedges of such investments, are taken to shareholders' equity. When a foreign operation is sold, such exchange differences are recognised in the income statement as part of the gain or loss on sale.

Deposits and installments received on properties sold prior to the date of revenue recognition are included in the balance sheet under other payables.

Rental income under operating leases is recognised in the period in which the properties are let out and on the straight-line basis over the lease terms.

Land held under operating leases and buildings thereon (where the fair value of the leasehold interest in the land and buildings cannot be measured separately at the inception of the lease and the building is not clearly held under an operating lease) are stated at revalued amounts, being fair value at the date of revaluation less subsequent accumulated depreciation and any subsequent impairment losses. Fair value is determined in appraisals by external professional valuers with sufficient regularity to ensure that the carrying amount does not differ materially from that which would be determined using fair value at the balance sheet date. Any accumulated depreciation at the date of revaluation is eliminated against the gross carrying amount of the asset and the net amount is restated to the revalued amount of the asset. All other property, plant and equipment are stated at acquisition cost less accumulated depreciation and accumulated impairment losses.

Any surplus arising on revaluation of land and buildings is credited to the revaluation reserve in equity, unless the carrying amount of that asset has previously suffered a revaluation decrease or impairment loss as described in Note 3.11. To the extent that any decrease has previously been recognised in income statement, a revaluation increase is credited to income statement with the remaining part of the increase dealt with in the revaluation reserve. A decrease in net carrying amount of land and buildings arising on revaluations or impairment testing is charged against any revaluation surplus in the revaluation reserve relating to the same asset and the remaining decrease recognised in income statement.

Furniture, fittings and	
office equipment	10%
Motor vehicles and accessories	20%

The asset's residual values, useful lives and depreciation method are reviewed, and adjusted if appropriate, at each balance sheet date.

The gain or loss arising on retirement or disposal is determined as the difference between the sales proceeds and the carrying amount of the asset and is recognised in the income statement.

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Group and the cost of the item can be measured reliably. Investment properties include completed properties and investment properties under development for continued future use as investment properties. Investment properties are stated in the balance sheet at fair value. Fair value is determined by external professional valuers, with sufficient experience with respect to both the location and the nature of the investment property. Any gain or loss arising from a change in fair value is recognised in the income statement. 3.10 Properties held for sale

Properties for sale include completed properties for sale and properties under development for sale and are stated at the lower of cost and net realisable value.

(i) Properties under development for sale

The cost of properties under development for sale comprises specifically identified cost, including the acquisition cost of land, aggregate cost of development, materials and supplies, wages and other direct expenses, an appropriate proportion of overheads and borrowing costs capitalised (see note 3.7). Net realisable value represents the estimated selling price less estimated costs of completion and costs to be incurred in selling the property.

(ii) Completed properties for sale

In the case of completed properties developed by the Group, cost is determined by apportionment of the total development costs for that development project, attributable to the unsold properties. Net realisable value represents the estimated selling price less costs to be incurred in selling the property.

The cost of completed properties for sale comprises all costs of purchase, costs of conversion and other costs incurred in bringing the inventories to their present location and condition.

For a transfer of investment properties previously carried at fair value to properties for sale, the property cost is the fair value at the date of change in use.

3.11 減值虧損

於每個結算日,本集團檢討 其有形及無形資產之賬面值 以確認該資產是否可能已經 出現減值現象。若出現任何 以上的現象,本集團將需評 估資產的可收回價值以確認 減值虧損(如有)之程度。如 無法釐訂單一資產之可收回 價值,本集團估計該資產所 屬之賺取現金單位之收回價 值。當一個合理及按持續分 配基準能界定時,企業資產 也能分配至個別賺取現金單 位,或以合理及按持續分配 基準分配至能獨立賺取現金 流量之最少組別。

可收回金額為反映市況之公平值減銷售成本與使用價值兩者之較高者。評估使用價值時,估計未來現金流量採用稅前折現率折算至其現值,以反映現時市場對金錢時間值及有關資產特有風險之評估。

3. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (cont'd)

3.11 Impairment loss

At each balance sheet date, the Group reviews the carrying amounts of its tangible and intangible assets to determine whether there is any indication that those assets have suffered an impairment loss. If any such indication exists, the recoverable amount of an asset is estimated in order to determine the extent of the impairment loss (if any). Where it is not possible to estimate the recoverable amount of any individual asset, the Group estimates the recoverable amount of the cash-generating unit to which the asset belongs. Where a reasonable and consistent basis of allocation can be identified, corporate assets are also allocated to individual cash-generating units, or otherwise they are allocated to the smallest group of cash-generating units for which a reasonable and consistent allocation basis can be identified.

Recoverable amount is the higher of fair value less costs to sell and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risk specific to the asset for which the estimates of future cash flows have not been adjusted.

3.11 Impairment loss (cont'd)

If the recoverable amount of an asset (or cash-generating unit) is estimated to be less than its carrying amount, the carrying amount of the asset (or cash-generating unit) is reduced to its recoverable amount. An impairment loss is recognised immediately in the income statement, unless the relevant asset is carried out at a revalued amount, in which case the impairment loss is treated as a revaluation decrease.

When an impairment loss subsequently reverses, the carrying amount of the asset (or cash-generating unit) is increased to revised estimate of its recoverable amount, but so that the increased carrying amount does not exceed the carrying amount that would have been determined has no impairment loss been recognised for the asset (or cash-generating unit) in prior years. A reversal of an impairment loss is recognised immediately in the income statement, unless the relevant asset is carried at a revalued amount, in which case the reversal of the impairment loss is treated as a revaluation increase.

3.12 Leases

An arrangement, comprising a transaction or a series of transactions, is or contains a lease if the Group determines that the arrangement conveys a right to use a specific asset or assets for an agreed period of time in return for a payment of a series of payments. Such a determination is made based on an evaluation of the substance of the arrangement and is regardless of whether the arrangement takes the legal form of a lease.

3.12 Leases (cont'd)

(i) Classification of assets leased to the Group

Assets that are held by the Group under leases which transfer to the Group substantially all the risks and rewards of ownership are classified as being held under finance leases. Leases which do not transfer substantially all the risks and rewards of ownership to the Group are classified as operating leases, with the following exceptions:

- land held for own use under an operating lease, the fair value of which cannot be measured separately from the fair value of a building situated threon, at the inception of the lease, is accounted for as being held under a finance lease, unless the building is also clearly held under an operating lease (see note 3.8). For these purposes, the inception of the lease is the time that the lease was first entered into by the Group, or taken over from the previous lessee.

(ii) Assets leased out under operating leases as the lessor

Assets leased out under operating leases are measured and presented according to the nature of the assets. Initial direct costs incurred in negotiating and arranging an operating lease are added to the carrying amount of the leased asset and recognised as an expense over the lease term on the same basis as the rental income.

Lease incentives granted are recognised in profit or loss as an integral part of the aggregate net lease payments receivable. Contingent rentals are recognised as income in the accounting period in which they are earned.

3.13 Financial assets

The Group classifies its financial assets in the following categories: financial assets at fair value through profit or loss, loans and receivables and available-for-sale financial assets.

Management determines the classification of its financial assets at initial recognition depending on the purpose for which the financial assets were acquired and where allowed and appropriate, re-evaluates this designation at every reporting date.

3.13 Financial assets (cont'd)

All financial assets are recognised when, an only when, the Group becomes a party to the contractual provisions of the instrument. Regular way purchases of financial assets are recognised on trade date. When financial assets are recognised initially, they are measured at fair value, plus, in the case of investments not at fair value through profit or loss, directly attributable transaction costs.

Derecognition of financial assets occurs when the rights to receive cash flows from the investments expire or are transferred and substantially all of the risks and rewards of ownership have been transferred. At each balance sheet date, financial assets are reviewed to assess whether there is objective evidence of impairment. If any such evidence exists, impairment loss is determined and recognised based on the classification of the financial asset.

(i) Financial assets at fair value through profit or loss

Financial assets at fair value through profit or loss includes financial assets held for trading and financial assets designated upon initial recognition as at fair value through profit or loss.

3.13 Financial assets (cont'd)

(i) Financial assets at fair value through profit or loss (cont'd)

Financial assets are classified as held for trading if they are acquired for the purpose of selling in the near future. Derivatives, including separated embedded derivatives are also classified as held for trading unless they are designated as effective hedging instruments or financial guarantee contracts.

Subsequent to the initial recognition, the financial assets included in this category are measured at fair value with changes in fair value recognised in income statement.

(ii) Loans and receivables

Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market and are not held for trading. They are measured at amortised cost using the effective interest method, except where the effect of discounting would be insignificant. In such case, the receviables are stated at cost less impairment loss. Amortised cost is calculated by taking into account any discount or premium on acquisition, over the year to maturity. Gains and losses arising from derecognition, impairment or through the amortisation process are recognised in the income statement.

3.13 Financial assets (cont'd)

(iii) Available-for-sale financial assets

Available-for-sale financial assets are non-derivative financial assets that are either designated as this category or not classified in any of the other categories of financial assets. They are measured at fair value with change in value recognised as a separate component of equity until the assets are sold, collected or otherwise disposed of, or until the assets are determined to be impaired, at which time the cumulative gain or loss previously reported in equity is transferred to the income statement. Available-for-sale financial assets in equity securities that do not have a quoted market price in an active market and whose fair value cannot be reliably measured are stated at cost less impairment losses.

Impairment of financial assets

Financial assets, other than those at fair value through profit or loss, are assessed for indicators of impairment at each balance sheet date. Financial assets are impaired where there is objective evidence that, as a result of one or more events that occurred after the initial recognition of the financial asset, the estimated future cash flows of the investment have been impacted.

Impairment of financial assets (cont'd)

For unlisted shares classified as available-forsale financial assets, a significant or prolonged decline in the fair value of the security or funds below its cost is considered to be objective evidence of impairment.

For all other financial assets, objective evidence of impairment could include:

- significant financial difficulty of the issuer or counterparty; or
- default or delinquency in interest or principal payments; or
- it becoming probable that the borrower will enter bankruptcy or financial reorganisation.

For certain categories of financial assets, such as trade receivables, assets that are assessed not to be impaired individually are subsequently assessed for impairment on a collective basis. Objective evidence of impairment for a portfolio of receivables could include the Group's past experience of collecting payments, an increase in the number of delayed payments in the portfolio past the average credit period, as well as observable changes in national or local economic conditions that correlate with default on receivables.

3.13 Financial assets (cont'd)

Impairment of financial assets (cont'd)

For financial assets carried at amortised cost, the amount of the impairment is the difference between the asset's carrying amount and the present value of estimated future cash flows, discounted at the financial asset's original effective interest rate.

The carrying amount of the financial asset is reduced by the impairment loss directly for all financial assets with the exception of trade receivables and mortgage loans, where the carrying amount is reduced through the use of an allowance account. When a trade/mortgage loan receivable is considered uncollectible, it is written off against the allowance account. Subsequent recoveries of amounts previously recognised in the allowance account are reversed through the allowance account. Changes in the carrying amount of the allowance account are recognised in income statement. Subsequent recoveries of amounts previously written off are credited to the income statement.

With the exception of available-for-sale equity instruments, if, in a subsequent period, the amount of the impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognised, the previously recognised impairment loss is reversed through income statement to the extent that the carrying amount of the investment at the date the impairment is reversed does not exceed what the amortised cost would have been had the impairment not been recognised.

Current income tax assets and/or liabilities comprise those obligations to, or claims from, fiscal authorities relating to the current or prior reporting period, that are unpaid at the balance sheet date. 3.14 Accounting for income taxes (cont'd)

Deferred tax is calculated using the liability method on temporary differences at the balance sheet date between the carrying amounts of assets and liabilities in the financial statements and their respective tax bases. Deferred tax liabilities are generally recognised for all taxable temporary differences. Deferred tax assets are recognised for all deductible temporary differences, tax losses available to be carried forward as well as other unused tax credits, to the extent that it is probable that taxable profit will be available against which the deductible temporary differences, unused tax losses and unused tax credits can be utilised.

Deferred tax assets and liabilities are not recognised if the temporary difference arises from goodwill or from initial recognition (other than in a business combination) of assets and liabilities in a transaction that affects neither taxable nor accounting profit or loss.

3.14 Accounting for income taxes (cont'd)

Deferred tax liabilities are recognised for taxable temporary differences arising on investments in subsidiaries, except where the Group is able to control the reversal of the temporary differences and it is probable that the temporary differences will not reverse in the foreseeable future.

Deferred tax is calculated, without discounting, at tax rates that are expected to apply in the period the liability is settled or the asset realised, provided they are enacted or substantively enacted at the balance sheet date.

Changes in deferred tax assets or liabilities are recognised in the income statement, or in equity if they relate to items that are charged or credited directly to equity.

3.15 Cash equivalents

For the purpose of the consolidated cash flow statement, cash equivalents represent short-term highly liquid investments that are readily convertible into known amounts of cash and which are subject to any insignificant risk of changes in value, net of bank overdrafts.

A financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires.

Where an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as a derecognition of the original liability and the recognition of a new liability, and the difference in the respective carrying amount is recognised in the income statement.

4. CRITICAL ACCOUNTING ESTIMATES AND JUDGEMENTS

Estimates and judgements are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances.

The Group makes estimates and assumptions concerning the future. The resulting accounting estimates will, by definition, seldom equal the related actual results. The estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within then next financial year are discussed below:

Valuation of investment properties and property, plant and equipment

The valuation of investment properties and land and buildings classified under property, plant and equipment under the fair value model requires management's input of various assumptions and factors relevant to the valuation. The Group conducts annual revaluation using independent professionally qualified valuers based on these assumptions agreed with the valuers prior to adoption.

4. CRITICAL ACCOUNTING ESTIMATES

Deferred tax

At 30 June 2008, a deferred tax asset of HK\$19,493,000 (2007: HK\$11,709,000) in relation to tax losses have been recognised in the Group's consolidated balance sheet. The realisability of the deferred tax asset mainly depends on whether sufficient future profits or taxable temporary differences will be available in the future. In cases where the actual future profits generated are less than expected, a material reversal of deferred tax assets may arise, which would be recognised in the consolidated income statement for the period in which such a reversal takes place.

The application of the share premium account is governed by Section 48B of the Hong Kong Companies Ordinance.

The exchange reserve for the Group has been set up and will be dealt with according to the accounting policy set out in note 3.5 to the financial statements.

為維持或調整資金架構,本集團將 調整支付予股東之股息、發行新股 或出售資產以減低債務。

本集團以資本負債比率以監控資金,此比率以總資本除以負債淨值計算。就此而言,本集團將負債淨值之計算界定為總借貸(包括於綜合資產負債表呈報的流動及非流動有息借貸,董事及一關連公司墊款)減銀行結存及現金。總資本為在綜合資產負債表呈報的權益總額。

The Group monitors capital on the basis of the gearing ratio. This ratio is calculated as net debts divided by total capital. For this purpose, the Group defines net debt as total borrowings (including current and non-current interest-bearing borrowings, advances from a director and a related company as shown in the consolidated balance sheet) less bank balances and cash. Total capital is equity as shown in the consolidated balance sheet.

(c) Interest rate risk (cont'd)

The Group's and the Company's interest rate risk arises from interest receivable from bank balances, mortgage loans and interest-bearing borrowings which includes bank loans, advances from a director and a related company. These arrangements issued at variable rates expose the Group and the Company to cash flow interest rate risk. In accordance with the terms of the mortgage loan and the interest-bearing borrowings, the interest rate will be adjusted should the Hong Kong dollar prime rate and Hong Kong Interbank Offer Rate be changed. The Group and the Company has not used any interest rate swaps to hedge its exposure to interest rate risk.

At 30 June 2008, it is estimated that a general increase/decrease of 50 basis points in interest rates, with all other variables held constant, would decrease/increase the Group's profit after income tax and retained profits by approximately HK\$5,436,000 (2007: HK\$4,036,000) and would decrease/increase the Company's profit after income tax and retained profits by approximately HK\$1,658,000 (2007: HK\$1,696,000). The 50 basis point increase/decrease represents management's assessment of a reasonably possible change in interest rates over the period until the next annual balance sheet date.

(d) Foreign exchange risk

The Group operates mainly in Hong Kong, Malaysia and the PRC with most of the transactions denominated in Hong Kong dollars, Malaysian Ringgit ("RM") or Renminbi ("RMB"). Foreign exchange risk arises when future commercial transactions or recognised assets and liabilities are denominated in a currency that is not the entity's functional currency. The Group considers its foreign currency exposure is mainly arising from the exposure of Renminbi. The Group has not entered into any derivative instruments to hedge the foreign exchange exposures.

The following table details of the Group's exposure at the balance sheet date to foreign exchange risk arising from recognised assets and liabilities denominated in a currency other than the functional currency of the entity to which they relate are shown below:

(d) Foreign exchange risk (cont'd)

At 30 June 2008, if Hong Kong dollar had weakened/strengthened by 10% against Renminbi with all other variables held constant, profit after income tax for the year would have been HK\$6,632,000 (2007: HK\$2,790,000) lower/higher, mainly as a result of foreign exchange gains/losses on translation of Renminbi denominated bank balances. The Group does not hedge its foreign currency risk with Renminbi. However, management monitors the foreign exchange exposure and will consider hedging significant foreign currency exposure should the need arise.

At 30 June 2008, if Hong Kong dollar had weakened/strengthened by 10% against Australian dollars with all other variables held constant, profit after income tax for the year would have been HK\$1,500,000 (2007: HK\$Nil) lower/higher, mainly as a result of foreign exchange gains/losses on translation of Australian dollars denominated bank balances. The Group does not hedge its foreign currency risk with Australian dollars. However, management monitors the foreign exchange exposure and will consider hedging significant foreign currency exposure should the need arise.
