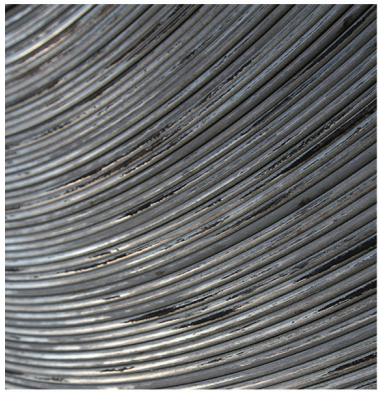
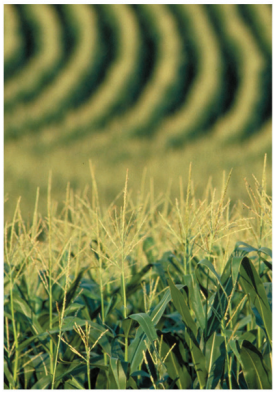
INCORPORATED UNDER THE LAWS OF JERSEY
STOCK CODE: 805

PART 1 OF 2





**This Hong Kong Prospectus is printed in two parts that together form the Hong Kong Prospectus. You should read each part of the Hong Kong Prospectus in conjunction with the other part in order to understand the matters to which the Hong Kong Prospectus relates, particularly the Hong Kong Offer. Prospective investors should read each part of the Hong Kong Prospectus before making any application in response to the Hong Kong Offer. Copies of both parts of this Hong Kong Prospectus are available at the locations set out in the section headed "How to Apply for Hong Kong Offer Shares - Applying through White or Yellow Application Forms" in this Hong Kong Prospectus. In addition, the complete Hong Kong Prospectus is available at www.hkexnews.hk and www.glencore.com.**

*IMPORTANT: If you are in any doubt about the contents of this prospectus, you should seek independent professional advice.*

This document (the "Hong Kong Prospectus") which is printed in two parts (comprising two separate volumes) includes the price range prospectus prepared for the International Offer dated 4 May 2011 (the "International Prospectus") and relates to the Hong Kong Offer and the admission to secondary listing of the Ordinary Shares on the Main Board of the Hong Kong Stock Exchange that form part of the Company's Global Offer. The parts of this Hong Kong Prospectus other than the International Prospectus (the "Wrap") are qualified in their entirety by the more detailed information contained in the International Prospectus. Unless otherwise defined, terms used but not defined in the Wrap have the meanings given to them in the International Prospectus.

Hong Kong Exchanges and Clearing Limited, The Stock Exchange of Hong Kong Limited and Hong Kong Securities Clearing Company Limited take no responsibility for the contents of this Hong Kong Prospectus, make no representation as to its accuracy or completeness and expressly disclaim any liability

whatsoever for any loss howsoever arising from or in reliance upon the whole or any part of the contents of this Hong Kong Prospectus.

A copy of this Hong Kong Prospectus, having attached to it the documents set out in the section "Information about this Hong Kong Prospectus and the Hong Kong Offer—Documents delivered to the Registrar of Companies in Hong Kong" in this Wrap, has been registered by the Registrar of Companies in Hong Kong as required by section 342C of the Companies Ordinance. The Securities and Futures Commission of Hong Kong and the Registrar of Companies in Hong Kong take no responsibility as to the contents of this Hong Kong Prospectus or any other documents referred to above.

The Hong Kong Offer Price is expected to be determined by agreement between the Joint Global Co-ordinators (on behalf of the Managers) and the Company on or about 19 May 2011 and, in any event, not later than 15 July 2011. The Hong Kong Offer Price is currently expected to be not more than HK$79.18 per Hong Kong Offer Share and not less than HK$61.24 per Hong Kong Offer Share, unless otherwise announced. The Hong Kong Offer Price may, however, as a result of fluctuations in the pounds sterling to Hong Kong dollars, pounds sterling to U.S. dollars and U.S. dollars to Hong Kong dollars exchange rates, be higher than HK$79.18 per Hong Kong Offer Share. Please refer to the section "Structure of the Global Offer—Determination of Hong Kong Offer Price" in this Wrap for details regarding determination of the Hong Kong Offer Price. Investors applying for the Hong Kong Offer Shares must pay, on application, the initial maximum Hong Kong Offer Price of HK$79.18 per Hong Kong Offer Share, together with brokerage of 1.0%, SFC transaction levy of 0.003% and Hong Kong Stock Exchange trading fee of 0.005%, subject to refund if the Offer Price is less than HK$79.18 per Hong Kong Offer Share.

The Joint Global Co-ordinators (on behalf of the Managers), with the consent of the Company, may reduce the indicative Offer Price Range stated in this Hong Kong Prospectus and/or reduce the number of Offer Shares being offered pursuant to the Global Offer at any time on or prior to the morning of the last day for lodging applications under the Hong Kong Offer. In such a case, notices of the reduction of the indicative Offer Price Range and/or the number of Offer Shares will be published in the South China Morning Post (in English) and the Hong Kong Economic Times (in Chinese) not later than the morning of the last day for lodging applications under the Hong Kong Offer. Further details are set out in the section "Structure of the Global Offer—Reduction of Hong Kong Offer Price below the Indicative Hong Kong Offer Price Range" in this Wrap. If, for any reason, the Offer Price is not agreed between the Company and Joint Global Co-ordinators (on behalf of the Managers) on or before 15 July 2011, the Global Offer (including the Hong Kong Offer) will not proceed and will lapse.

**Prior to making an investment decision, prospective investors should consider carefully all of the information set out in this Hong Kong Prospectus, including the risk factors contained in the section "Risk Factors" in the International Prospectus.**

The Offer Shares have not been and will not be registered under the Securities Act or any state securities law in the U.S. and may not be offered, sold, pledged or transferred within the U.S., except that the Offer Shares may be offered, sold or delivered (i) within the U.S. in reliance on an exemption from registration provided by, and in accordance with the restrictions of, Rule 144A or another exemption from registration under the Securities Act and (ii) outside the U.S. in offshore transactions in reliance on Regulation S.

A copy of this Hong Kong Prospectus has been delivered to the Jersey registrar of companies in accordance with Article 5 of the Companies (General Provisions) (Jersey) Order 2002, and he has given, and has not withdrawn, his consent to its circulation. The Jersey Financial Services Commission has given, and has not withdrawn, its consent under Article 2 of the Control of Borrowing (Jersey) Order 1958 to the issue of the Offer Shares by the Company. It must be clearly understood that, in giving these consents, neither the Jersey registrar of companies nor the Jersey Financial Services Commission takes any responsibility for the financial soundness of the Company or for the correctness of any statements made, or opinions expressed, with regard to it. The Jersey Financial Services Commission is protected by the Control of Borrowing (Jersey) Law 1947, as amended, against any liability arising from the discharge of its functions under that law.

Nothing in this document or anything communicated to the holders or potential holders of Ordinary Shares by or on behalf of the Company is intended to constitute, or should be construed as, advice on the merits of the subscription for or purchase of Ordinary Shares or the exercise of any rights attached thereto for the purposes of the Financial Services (Jersey) Law 1998.

**13 May 2011**

## IMPORTANT NOTICE TO INVESTORS

This Hong Kong Prospectus is issued by the Company in connection with the Hong Kong Offer and the Hong Kong Offer Shares, and does not constitute an offer to sell, or a solicitation of an offer to buy any security other than, the Hong Kong Offer Shares. This Hong Kong Prospectus may not be used for the purpose of, and does not constitute, an offer or invitation in any other jurisdiction or in any other circumstances. No action has been taken to permit a public offering of the Hong Kong Offer Shares in any jurisdiction other than Hong Kong and no action has been taken to permit the distribution of this Hong Kong Prospectus in any jurisdiction other than Hong Kong. The distribution of this Hong Kong Prospectus and the offering and sale of the Hong Kong Offer Shares in other jurisdictions are subject to restrictions and may not be made except as permitted under the applicable securities laws of such jurisdictions pursuant to registration with or authorisation by the relevant securities regulatory authorities or an exemption therefrom.

You should rely only on the information contained in this Hong Kong Prospectus and the Application Forms to make your investment decision. The Company, the Directors, the Selling Shareholder, the Existing Shareholders, the Joint Global Co-ordinators and the Underwriters, any of their respective directors, officers, employees or agents and any other person or party involved in the Global Offer have not authorised anyone to provide you with information that is different from what is contained in this Hong Kong Prospectus and any information or representation not made in this Hong Kong Prospectus must not be relied on by you as having been authorised by them.

Each of the times and dates in the above timetable is subject to change without further notice. The Company will issue an announcement in Hong Kong to be published in the South China Morning Post (in English) and the Hong Kong Economic Times (in Chinese) if there is any change in the expected timetable of the Hong Kong Offer. References to times are to Hong Kong time unless otherwise stated.

Notes:

(1) You will not be permitted to submit your application through the designated website at www.eipo.com.hk after 11:30 a.m. on the last day for submitting applications. If you have already submitted your application and obtained an application reference number from the designated website prior to 11:30 a.m., you will be permitted to continue the application process (by completing payment of application monies) until 12:00 noon on the last day for submitting applications, when the application lists close.

(2) If there is a "black" rainstorm warning or a tropical cyclone warning signal number 8 or above in force in Hong Kong at any time between 9:00 a.m. and 12:00 noon on Wednesday, 18 May 2011, the application lists will not open and close on that day. Further details are set out in the section headed "How to Apply for Hong Kong Offer Shares—Effect of Bad Weather on the Opening of the Application Lists" in this Wrap.

(3) Applicants who apply for Hong Kong Offer Shares by giving electronic application instructions to HKSCC should refer to the section headed "How to Apply for Hong Kong Offer Shares—Applying by Giving Electronic Application Instructions to HKSCC via CCASS" in this Wrap.

(4) The Price Determination Date, being the date on which the Offer Price is to be determined at the close of business in London on Wednesday, 18 May 2011 and, in any event, not later than Friday, 15 July 2011. If, for any reason, the Offer Price is not agreed by Friday, 15 July 2011, the Global Offering (including the Hong Kong Public Offering) will not proceed and will lapse.

(5) The announcement will be available for viewing on the "Main Board—Results of Allotment" page on the Hong Kong Stock Exchange's website.

(6) Notwithstanding the despatch of share certificates, share certificates will become valid only if the Global Offer has become unconditional in all respects (including the Underwriting Agreement not having been terminated in accordance with its terms). Investors who trade Ordinary Shares on the basis of publicly available allocation details or prior to the receipt of the share certificates do so entirely at their own risk.

(7) Applicants who have applied on White Application Forms for 1,000,000 or more Hong Kong Offer Shares under the Hong Kong Offer and have indicated in their Application Forms that they wish to collect any share certificate and/or refund cheque (where applicable) in person, may do so from the Hong Kong Share Registrar, Computershare Hong Kong Investor Services Limited, at Shops 1712-1716, 17th Floor, Hopewell Centre, 183 Queen's Road East, Wanchai, Hong Kong, between 9:00 a.m. to 1:00 p.m. on Tuesday, 24 May 2011 or on the date notified by the Company as the date of despatch/collection of share certificates/e-Refund payment instructions/refund cheques.

Applicants being individuals who opt for personal collection must not authorise any other person to make collection on their behalf. Applicants being corporations who opt for personal collection must attend by their authorised representatives bearing letters of authorisation from their corporations stamped with the corporation's chop. Both individuals and authorised representatives of corporations, as the case may be, must produce, at the time of collection, identification and (where applicable) documents acceptable to the Hong Kong Share Registrar, Computershare Hong Kong Investor Services Limited, at the time of collection.

If an applicant has applied for less than 1,000,000 Hong Kong Offer Shares or has applied for 1,000,000 Hong Kong Offer Shares or more under the Hong Kong Offer and has not indicated on the relevant Application Form that the share certificate (if the application has been made using a White Application Form) and/or refund cheque (where applicable) will be collected in person then the share certificate and/or refund cheque (where applicable) will be sent to the address specified in the relevant Application Form on the date of despatch by ordinary post at the applicant's own risk.

Applicants who have applied on Yellow Application Forms for 1,000,000 or more Hong Kong Offer Shares under the Hong Kong Offer may collect their refund cheques (where applicable) in person but may not elect to collect their share certificates which will be deposited into CCASS for credit to their designated CCASS Participants' stock accounts or CCASS Investor Participant stock accounts, as appropriate. The procedures for collection of refund cheques for Yellow Application Form applicants are the same as those for White Application Form applicants.

Uncollected share certificates (where applicable) and refund cheques (where applicable) will be despatched by ordinary post at the applicants' own risk to the addresses specified in the relevant Application Forms. Further information is set out in the section headed "How to Apply for Hong Kong Offer Shares—Despatch/Collection of Share Certificates and Refund Monies" in this Wrap.

Applicants who apply for 1,000,000 Hong Kong Offer Shares or more through the **White Form eIPO** service by submitting an electronic application to the designated **White Form eIPO** Service Provider through the designated website at www.eipo.com.hk may collect their Share certificate(s)(where applicable) in person from Computershare Hong Kong Investor Services Limited, at Shops 1712-1716, 17th Floor, Hopewell Centre, 183 Queen's Road East, Wanchai, Hong Kong from 9:00 a.m. to 1:00 p.m. on Tuesday, 24 May 2011 or such other date as notified by the Company as the date of despatch/collection of share certificates/ e-Refund payment instructions/refund cheques.

If you apply through the **White Form eIPO** service by paying the application monies through a single bank account, you may have e-Refund payment instructions (if any) despatched to the application payment account on or before Tuesday, 24 May 2011. If you apply through the **White Form eIPO** service by paying the application monies through multiple bank accounts, you may have refund cheque(s) sent to the address specified in your application instructions to the designated White Form eIPO Service Provider on or before Tuesday, 24 May 2011, by ordinary post and at your own risk.

(8) e-Refund payment instructions/refund cheques will be issued in respect of wholly or partially unsuccessful applications pursuant to the Hong Kong Offer and also in respect of wholly or partially successful applications in the event that the final Offer Price is less than the price payable per Hong Kong Offer Share on application. Part of the applicant's Hong Kong identity card number or passport number, or, if the application is made by joint applicants, part of the Hong Kong identity card number or passport number of the first-named applicant, provided by the respective applicant(s) may be printed on the refund cheque (where applicable). Such data will also be transferred to a third party for refund purposes. The banker of an applicant may require verification of the applicant's Hong Kong identity card number or passport number before cashing the refund cheque. Inaccurate completion of an applicant's Hong Kong identity card number or passport number may lead to delay in encashment of or may invalidate the refund cheque.

In addition to the definitions set out in Section XII: "Definitions" of the International Prospectus which forms part of this Hong Kong Prospectus, the definitions set out below apply throughout this Hong Kong Prospectus, unless the context requires otherwise.

| | |
|---|---|
| "**Application Form(s)**" | means white application form(s), yellow application form(s) and green application form(s), or where the context so requires, any one or all of them, relating to the Hong Kong Offer; |
| "**Articles Requirements**" | means the requirements set out in Appendix 3 of the Hong Kong Listing Rules; |
| "**Banks**" | means the UK Sponsors, the HK Sponsors, the International Managers and the Hong Kong Managers; |
| "**CCASS Clearing Participant**" | means a person admitted to participate in CCASS as a direct clearing participant or general clearing participant; |
| "**CCASS Custodian Participant**" | means a person admitted to participate in CCASS as a custodian participant; |
| "**CCASS Internet System**" | means the online service provided by CCASS through which participants can, amongst other things, operate their accounts, give instructions and make enquiries over the internet; |
| "**CCASS Investor Participant**" | means a person admitted to participate in CCASS as an investor participant who may be an individual or joint individuals or a corporation; |
| "**CCASS Participant**" | means CCASS Clearing Participant, a CCASS Custodian Participant or a CCASS Investor Participant; |
| "**CCASS Phone System**" | means the telephone service provided by CCASS through which participants can, amongst other things, give instructions and make enquiries by using a touch-tone phone; |
| "**DTR3**" | means Rule 3 of the UK Disclosure and Transparency Rules made by the FSA in accordance with Section 788A(3) of the FSMA; |
| "**HKSCC Nominees**" | means HKSCC Nominees Limited, a wholly-owned subsidiary of HKSCC; |
| "**Hong Kong Branch Register**" | means the Hong Kong branch register of members of the Company; |
| "**Hong Kong Offer Price**" | means the Hong Kong dollar equivalent of the International Offer Price, to be determined in the manner set out in the section "Structure of the Global Offer—Determination of Hong Kong Offer Price" in this Wrap at the same time as the International Offer Price is determined on the Price Determination Date; |
| "**Hong Kong Offer Price Range**" | means HK$61.24 per Hong Kong Offer Share to HK$79.18 per Hong Kong Offer Share; |
| "**Hong Kong Share Registrar**" | means Computershare Hong Kong Investor Services Limited; |
| "**Hong Kong Codes**" | means the Hong Kong Codes on Takeovers and Mergers and Share Repurchases; |
| "**Hong Kong Prospectus**" | means this document, which is printed in two parts (comprising two separate volumes), being the International Prospectus together with the Wrap; |

| | |
|---|---|
| "**International Offer Price**" | means the Offer Price per International Offer Share, denominated in pounds sterling, to be determined at the Price Determination Date; |
| "**International Offer Price Range**" | means 480 pence per International Offer Share to 580 pence per International Offer Share, as set out in the International Prospectus; |
| "**International Prospectus**" | means the price range prospectus prepared for the International Offer dated 4 May 2011; |
| "**Joint Consultation**" | means the Joint Consultation Paper on Proposed Changes to Property Valuation Requirements dated 3 December 2010 issued by the Hong Kong Stock Exchange and the SFC; |
| "**Joint Policy Statement**" | means the Joint Policy Statement Regarding the Listing of Overseas Companies dated 7 March 2007 issued by the Hong Kong Stock Exchange and the SFC; |
| "**Managers**" | means the International Managers and the Hong Kong Managers; |
| "**PD Regulations**" | means the European Prospectus Directive Regulation (No 2004/809/EC); |
| "**PDMRs**" | means (i) directors of an issuer; or (ii) senior executives of an issuer who are not directors but who have regular access to inside information in relation to the issuer, and the power to make managerial decisions affecting the future development and business prospects of the issuer as defined for the purposes of the UK Disclosure and Transparency Rules; |
| "**Principal Register**" | means the register of members of the Company kept in Jersey; |
| "**Principal Registrar**" | means Computershare Investor Services (Jersey) Limited; |
| "**Professional Accountants Ordinance**" | means the Professional Accountants Ordinance (Chapter 50 of the Laws of Hong Kong); |
| "**RIS**" | means a regulatory information service; |
| "**SFO**" | means the Securities and Futures Ordinance (Chapter 571 of the Laws of Hong Kong), as amended from time to time; |
| "**UK Listing Rules**" | means the Listing Rules made by the FSA under Part VI of the FSMA; |
| "**White Form eIPO**" | means the application for Hong Kong Offer Shares to be issued in the applicant's own name by submitting an application online through the designated website of **White Form eIPO** www.eipo.com.hk; |
| "**White Form eIPO Service Provider**" | means Computershare Hong Kong Investor Services Limited; and |
| "**Wrap**" | means the parts of the Hong Kong Prospectus other than the International Prospectus which together with the International Prospectus have been prepared in connection with the Hong Kong Offer. |

In this Wrap, references to "pounds sterling", "£" or "pence" are to the lawful currency of the United Kingdom, references to "U.S. dollars" or "U.S.$" are to the lawful currency of the U.S. and references to "Hong Kong dollars" or "HK$" are to the lawful currency of Hong Kong.

References to times in this Wrap are to Hong Kong times and references to times in the International Prospectus are to London times, unless otherwise stated.

In preparation for the Global Offer and HK Admission, the Company and/or the HK Sponsors have applied for, and the Hong Kong Stock Exchange and the SFC have granted, the following waivers and exemptions from Hong Kong laws and regulations. The below exemptions granted by the SFC to the Company from the relevant requirements of the Companies Ordinance are granted on the condition that details of such exemptions are set out in this Hong Kong Prospectus.

## QUALIFICATIONS FOR LISTING

### 1. HONG KONG OFFER AND CLAWBACK

Paragraph 4.2 of Practice Note 18 to the Hong Kong Listing Rules requires a minimum initial allocation to the Hong Kong public of 10 per cent. of the shares available in a global offering. It also requires a clawback mechanism to be put in place, which would have the effect of increasing the number of shares allocated to the Hong Kong public to certain percentages of the total number of shares offered in the global offer if certain prescribed total demand levels with respect to the shares allocated to the Hong Kong public are reached.

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with paragraph 4.2 of Practice Note 18 of the Hong Kong Listing Rules, such that initially 2.5 per cent. of the maximum number of Offer Shares available under the Global Offer (before the exercise of the Over-Allotment Option) will be allocated to the Hong Kong Offer, and a clawback mechanism will be applied such that the allocation of the Offer Shares between the Hong Kong Offer and the International Offer will be subject to the following adjustments:

(a) if the number of Offer Shares validly applied for under the Hong Kong Offer represents 15 times or more but less than 50 times the number of Offer Shares initially available under the Hong Kong Offer, then Offer Shares will be reallocated to the Hong Kong Offer from the International Offer, so that the total number of Offer Shares available under the Hong Kong Offer will represent 3.75% of the maximum number of Offer Shares initially available under the Global Offer (before the exercise of the Over-Allotment Option);

(b) if the number of Offer Shares validly applied for under the Hong Kong Offer represents 50 times or more but less than 100 times the number of Offer Shares initially available under the Hong Kong Offer, then Offer Shares will be reallocated to the Hong Kong Offer from the International Offer, so that the total number of Offer Shares available under the Hong Kong Offer will represent 5% of the maximum number of Offer Shares initially available under the Global Offer (before the exercise of the Over-Allotment Option); and

(c) if the number of Offer Shares validly applied for under the Hong Kong Offer represents 100 times or more the number of Offer Shares initially available under the Hong Kong Offer, then Offer Shares will be reallocated to the Hong Kong Offer from the International Offer, so that the total number of Offer Shares available under the Hong Kong Offer will represent 10% of the maximum number of Offer Shares initially available under the Global Offer (before the exercise of the Over-Allotment Option).

Please refer to Section VIII: "Details of the Global Offer—Reallocation of Offer Shares between the Hong Kong Offer and the International Offer" in the International Prospectus for further information.

Any such clawback and reallocation between the International Offer and the Hong Kong Offer is conditional upon the assumption that the value of the Global Offer that is initially targeted is not materially more or less than U.S.$10 billion prior to any adjustment of the number of the Offer Shares pursuant to the Over-Allotment Option (if any).

Subject to the above and either the Hong Kong Offer failing to be fully subscribed or the International Offer failing to be fully subscribed, any unsubscribed Offer Shares under the Hong Kong Offer or the International Offer, as the case may be, may be reallocated between these offerings at the sole discretion of the Joint Global Co-ordinators.

### 2. BROKERAGE IN RESPECT OF THE INTERNATIONAL OFFER

Paragraph 7(1) of Appendix 8 to the Hong Kong Listing Rules provides that, on an offer for subscription, brokerage will be payable by a person subscribing for or purchasing securities at a rate of 1% of the subscription or purchase price. The application of such rule would require 1% brokerage to be payable by: (a) public investors participating in the Hong Kong Offer and (b) investors participating in the

International Offer who elect to take up Ordinary Shares initially registered on the Hong Kong Branch Register and traded on the Hong Kong Stock Exchange (the "**Hong Kong Placees**"). However, investors participating in the International Offer who elect to take up Shares initially registered on the Principal Register in Jersey and traded on the London Stock Exchange will not be required to pay this 1% brokerage as there is no equivalent requirement under the UK Listing Rules.

The HK Sponsors have applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with paragraph 7(1) of Appendix 8 to the Hong Kong Listing Rules such that the International Managers will be permitted to waive the brokerage payable by the Hong Kong Placees.

The relevant exchange participants of the International Managers have accordingly agreed to waive the brokerage payable by the Hong Kong Placees.

### 3. COMPANY SECRETARY

Rule 8.17 of the Hong Kong Listing Rules requires, among other things, that the secretary of an issuer is a person who is ordinarily resident in Hong Kong.

The Company's secretary, Prism Cosec Limited, is based in the United Kingdom. The Company has appointed an assistant company secretary, Ms Soon Yuk Tai, who will be ordinarily resident in Hong Kong and will have the necessary qualifications as required under Rule 8.17 of the Hong Kong Listing Rules to discharge the functions required of a company secretary under the Hong Kong Listing Rules.

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the requirements of Rule 8.17 of the Hong Kong Listing Rules such that the Company's secretary is not required to be an individual who is ordinarily resident in Hong Kong or to have the qualifications set out in Rule 8.17 of the Hong Kong Listing Rules subject to the condition that Ms Soon Yuk Tai continues to be the assistant company secretary and provides assistance to the Company Secretary.

### 4. SUBMISSION OF PROFIT FORECAST MEMORANDUM

Rule 9.11(10)(b) of the Hong Kong Listing Rules requires that, where a company's listing document does not contain a profit forecast, two copies of a draft profit forecast memorandum must be submitted to the Hong Kong Stock Exchange at least 15 clear business days before the expected hearing date of that company's application for listing.

The Company is not including a profit forecast in this Hong Kong Prospectus. The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver of strict compliance with the requirements of Rule 9.11(10)(b) of the Hong Kong Listing Rules such that the Company was not required to submit a draft profit forecast memorandum to the Hong Kong Stock Exchange in connection with its application for listing.

### 5. INSPECTION OF ENACTMENTS OR PROVISIONS

Section 342(1)(a)(iii) of the Companies Ordinance requires that a prospectus set out an address in Hong Kong where copies of enactments or provisions by which the incorporation of the relevant company was effected may be inspected.

On the basis that the applicable enactments or provisions are lengthy and that it would be unduly burdensome for the Company to offer for inspection in Hong Kong hard copies of such enactments or provisions, the Company has applied for, and the SFC has granted, a certificate of exemption on the condition that the Prospectus will only contain details on how potential investors can access the relevant enactments or provisions on the internet. Further details can be found in the paragraph headed "Documents Delivered to the Companies Registry in Hong Kong and Made Available for Inspection" set out in this Wrap.

## CONTENT REQUIREMENTS FOR PROSPECTUS

### 6. PROPERTY VALUATION REPORT

Paragraph 34(2) of Part II of the Third Schedule to the Companies Ordinance and Chapter 5 of the Hong Kong Listing Rules and paragraph 3(a) of Practice Note 16 to the Hong Kong Listing Rules impose certain requirements on the Company to include in a prospectus and a listing document a property valuation report with respect to its interests in land and buildings. Applicable UK rules and regulations do not require the Company to include any property valuation report or other similar report in a prospectus.

The Company estimates that it has approximately 2,500 property interests spread across 30 different jurisdictions. Most of Glencore's land and building interests are located in remote areas and situated close to its mines where its mineral resources are located. Glencore's buildings and facilities are mainly purpose-built facilities used for Glencore's mining and exploration purposes. In addition, Glencore also owns or leases a small number of properties that it uses to house its office and administrative functions. The net book value of the land and buildings owned by Glencore accounted for approximately 1.31 per cent. of its total assets as reflected in its audited consolidated financial statements for the year ended 31 December 2010. The Company is of the view that the ownership and leasing of properties is incidental to its business and that its properties are not, in themselves, material in the context of the Glencore's business.

On the grounds that it would be unduly burdensome, unnecessary and inappropriate to include a property valuation report in respect of its interests in land and buildings in this Hong Kong Prospectus, the Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver of, and the SFC has granted, an exemption from, strict compliance with Rules 5.01 and 5.06 and paragraph 3(a) of Practice Note 16 to the Hong Kong Listing Rules and paragraph 34(2) of the Third Schedule to the Companies Ordinance such that the Company is not required to include a property valuation report in this Hong Kong Prospectus.

## 7. ACCOUNTANTS' REPORT AND REPORTING ACCOUNTANTS

Rules 4.03, 4.04(3)(a), 4.05, 4.08(3), 4.10, 4.14, 4.15, 4.16 and 4.29(7)(c) of the Hong Kong Listing Rules and paragraphs 31, 42 and 43 of the Third Schedule to the Companies Ordinance set out certain content requirements in respect of an accountants' report included in a listing document and further require that it be prepared by accountants qualified under the Professional Accountants Ordinance.

As the Company is applying for a premium listing (which will be its primary listing) on the Official List, the historical financial information in this Hong Kong Prospectus has been prepared in accordance with IFRS as issued by the IASB and adopted for use in the EU and Deloitte LLP will, with input on Hong Kong matters from Deloitte Touche Tohmatsu in Hong Kong, provide the accountants' report thereon in conformity with the UK Standards for Investment Reporting. The basis of preparation and accounting policies used by the Company in the historical financial information are set out in note 1 to Section VI: "Historical Financial Information" of the International Prospectus that forms part of this Hong Kong Prospectus.

In addition, under the UK Standards for Investment Reporting, Deloitte LLP are not required to include, in its report on the pro forma financial information, a statement to the effect of that set out in Rule 4.29(7)(c) of the Hong Kong Listing Rules.

Certain historical financial information required to be disclosed under Hong Kong requirements are not required to be disclosed under applicable UK requirements, in particular:

(a) balance sheets and related notes, audited for the last three years at a company level;

(b) separate disclosure of taxation on share of associated companies' profits;

(c) ageing analysis of accounts payable;

(d) credit terms of accounts payable;

(e) total assets less current liabilities;

(f) detailed list of current accounts with directors at the year end and the maximum amount outstanding during the year;

(g) analysis of directors' remuneration waived, if any, for each of the relevant years;

(h) details of senior management (including directors') emoluments;

(i) analysis of the five highest paid individuals' emoluments;

(j) analysis of land held under freehold and leasehold, and lease terms for leasehold land;

(k) analysis of investments in subsidiaries at cost;

(l) analysis of market value of investment in listed subsidiaries;

(m) disclosure of amounts of income from listed and unlisted investments;

(n) disclosure of auditors' remuneration;

(o) analysis of equity or debt securities, and the place where the relevant securities are traded;

(p) detailed information of investments, including the names of securities, place of incorporation, principal activities, particulars of issued shares held and interest held if the carrying amounts on an investment exceed 10% of Glencore's total assets; and

(q) rental income net of outgoings.

The following alternative disclosures with respect to certain items identified above which are relevant to Glencore have been included in this Hong Kong Prospectus:

(a) a consolidated financial information table covering the three financial years ended 31 December 2010 in Section VI: "Historical Financial Information" in the International Prospectus which forms part of this Hong Kong Prospectus, which includes:

- Glencore's share of income from associates, which includes tax;
- an ageing analysis of accounts payable;
- credit terms of accounts payable;
- historic remuneration paid and benefits in kind granted to Directors and key management personnel on an aggregate basis;
- a list of the principal operating and finance subsidiaries and investments, including the share price of material listed investments; and
- details of dividend income earned, fair value movements in investments recognised and dividends received;

(b) disclosures on assets and liabilities in Section IV: "Operating and Financial Review" in the International Prospectus which forms part of this Hong Kong Prospectus; and

(c) disclosures on land use rights with respect to land occupied by Glencore on which material mineral resources are located in Section X: "Additional Information" and Section XIV: "Independent Technical Reports" in the International Prospectus which forms part of this Hong Kong Prospectus.

As Deloitte LLP is: (1) qualified to prepare an accountants' report in accordance with UK requirements; and (2) regulated in the UK by the FSA and the Institute of Chartered Accountants in England and Wales (an independent body), it would be unduly burdensome on the Company to require that the accountants' report be co-signed by accountants qualified under the Professional Accountants Ordinance.

The Financial Services Authority in the United Kingdom which regulates Deloitte LLP is a signatory to the International Organization of Securities Commissions Multilateral Memorandum of Understanding that facilitates mutual co-operation and exchange of information for securities regulatory enforcement purposes.

Deloitte LLP will be an 'expert', as the term is defined under section 342B of the Companies Ordinance, in relation to the accountants' report in the International Prospectus and will therefore be liable as an 'expert' under the Companies Ordinance in relation to that report in the same way as accountants who are qualified under the Professional Accountants Ordinance.

On the basis of the matters set out above in this paragraph 7, the Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the Hong Kong Listing Rules referred to above and the Company has applied for, and the SFC has granted, an exemption from strict compliance with paragraphs 31, 42 and 43 of the Third Schedule to the Companies Ordinance referred to above on the ground that it would be unduly burdensome to the Company and of no material value to Hong Kong investors to require that the accountants' report be signed by both Deloitte UK and Deloitte Hong Kong and for the accountants' report to include standalone financial information for the Company, a statement of adjustments and certain content requirements set out in the Companies Ordinance. This waiver and the exemption is granted on the basis that the accountants' report in this Hong Kong Prospectus is prepared and signed by Deloitte LLP and contains only the information required by applicable laws and regulations in the UK together with the alternative disclosures referred to above.

## 8. PROSPECTUS DISCLOSURE

The Company has applied for, and the Hong Kong Stock Exchange (in respect of the Hong Kong Listing Rules) and the SFC (in respect of the Companies Ordinance) have granted, waivers and exemptions from strict compliance with certain content requirements in respect of this Hong Kong Prospectus as follows:

(a) paragraphs 13 and 26 of Appendix 1A and paragraphs 8 and 24 of Appendix 1B to the Hong Kong Listing Rules and paragraphs 11 and 14 of the Third Schedule to the Companies Ordinance in relation

to the particulars of any alterations of the capital of the Glencore Group within two years immediately preceding the issue of the listing document and the particulars of any commissions, discounts, brokerages or other special terms granted within two years immediately preceding the issue of the listing document in connection with the issue or sale of any capital of Glencore Group, on the basis that it would be unduly burdensome for the disclosures to be included in this Hong Kong Prospectus and on the condition that the Company discloses any material change in the amount of the issued share or loan capital of any other member of the Glencore Group (other than intra-group issues by wholly-owned subsidiaries) within three years of the date of the International Prospectus (refer to Section X: "Additional Information—Share capital of the Company" in the International Prospectus);

(b) paragraph 29(1) of Appendix 1A to the Hong Kong Listing Rules and paragraph 29 of the Third Schedule to the Companies Ordinance in relation to the issued share capital, date of incorporation, the public or private status and the general nature of the business of the Company's material subsidiaries, on the basis that it would be unduly burdensome and unnecessary for the disclosures to be included in this Hong Kong Prospectus; applicable UK rules require the disclosure of significant subsidiaries' names, countries of incorporation or residence, proportions of ownership interest and if different, proportions of voting power held and the disclosure in this Hong Kong Prospectus is in accordance with such UK rules (refer to Section X: "Additional Information—Subsidiaries" in the International Prospectus);

(c) paragraphs 41(4) and 45 of Appendix 1A and paragraphs 34 and 38 of Appendix 1B to the Hong Kong Listing Rules in relation to the interests of Directors and the chief executive officer in shares of the Company which would have to be disclosed pursuant to Part XV of the SFO, on the basis that it would be unduly burdensome for the disclosures to be included in this Hong Kong Prospectus;

(d) paragraph 33(2) of Appendix 1A to the Hong Kong Listing Rules in relation to information in respect of Directors' emoluments during the three financial years ended 31 December 2010 and paragraph 46(3) of Appendix 1A to the Hong Kong Listing Rules in relation to an estimate of the aggregate remuneration and benefits in kind payable to Directors in respect of the current financial year, on the basis that it would be unduly burdensome for the disclosures to be included in this Hong Kong Prospectus;

(e) paragraph 33(3) of Appendix 1A to the Hong Kong Listing Rules in relation to information with respect to the five individuals whose emoluments were highest in the Company for the year, on the basis that it would be unduly burdensome for the disclosures to be included in this Hong Kong Prospectus; and

(f) paragraph 6 of the Third Schedule to the Companies Ordinance in relation to the disclosure of the residential addresses of the Directors, on the basis that it would be unnecessary and inappropriate for the disclosures to be included in this Hong Kong Prospectus and on the condition that the Company discloses the business addresses of the Directors (refer to Section X: "Additional Information—Miscellaneous" in the International Prospectus).

## POST-LISTING COMPLIANCE REQUIREMENTS

### 9. OFFERS AND ISSUES OF ORDINARY SHARES

Chapter 7 of the Hong Kong Listing Rules sets out the methods by which equity securities may be brought to listing on the Main Board of the Hong Kong Stock Exchange and the applicable requirements to each method. The Company has applied for, and the Hong Kong Stock Exchange has granted, waivers from strict compliance with certain requirements under Chapter 7 of the Hong Kong Listing Rules as set out below. The Company will comply with the requirements of Chapter 7 and Rules 11.04 and 13.26(1) of the Hong Kong Listing Rules only when an offering of equity securities is made wholly within Hong Kong to persons who hold or are expected to hold equity securities on the Hong Kong Branch Register. Please see paragraph 12 headed "Continuing obligations—General matters relevant to the issuer's securities" below for further information on the application of Rule 13.26(1) of the Hong Kong Listing Rules as it relates to the Company.

#### Offer for sale or subscription

Rules 7.02 to 7.08 of the Hong Kong Listing Rules set out certain requirements before equity securities constituting part of an offer for sale or subscription to the public may be brought to listing on the Main Board of the Hong Kong Stock Exchange. These include requirements as to the fairness of the basis of

allotment and the requirement for any such offer to be supported by a listing document complying with Chapter 11 of the Hong Kong Listing Rules.

Under UK Listing Rule 9.3.11, which will apply to the Company on its UK Admission, where the Company proposes to issue equity securities for cash, it will first be required to offer such securities to Shareholders in proportion to their existing holdings and to holders of any other securities who are so entitled. In addition, under UK Listing Rule 9.5.10, which will apply to the Company on its UK Admission, if the Company makes an offer of a class of equity securities already listed, the price must not be, unless approved by Shareholders, at a discount of more than 10 per cent. to the middle market price of those securities at the time of announcing the terms of the offer.

Furthermore, in respect of the allotment of any Ordinary Shares by the Directors, the Articles provide that the Directors may only allot Ordinary Shares up to specified nominal amounts (the relevant amount depends on whether the allotment is in connection with a rights issue or not). The initial amounts will be set by the Shareholders at a general meeting of the Company held prior to UK Admission and will reflect UK institutional guidelines on the limits on the size of allotment authorities. These authorities will be renewed at each subsequent annual general meeting of the Company.

In general, a prospectus would be required under the UK Listing Rules or the UK Prospectus Rules where there is (a) an offer of transferable securities to the public or (b) an application for the listing of securities on the Official List. However, the Company will not be required to produce a prospectus in connection with an application for the listing of securities (i) which represent over a 12-month period, less than 10 per cent. of the number of securities of the same class, (ii) which are issued in substitution for securities of the same class, (iii) which are offered to existing Shareholders or existing or former directors (if a document is made available containing information on the number and nature of the shares and the reasons for and details of the offer), and (iv) which result from the conversion or exchange of or the exercise of rights conferred by transferable securities, in each case provided that the securities are in the same class as those already admitted to trading. In addition, the Company would not be required to produce a prospectus in connection with an offer to qualified investors, an offer to a restricted number of persons, an offer involving limited consideration, an offer of a restricted number of securities or a substitution, exchange, scrip dividend or employee offer.

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver of strict compliance with the requirements of Rules 7.03, 7.04 and 7.07 of the Hong Kong Listing Rules in instances where any offer for sale or subscription is made wholly or partly to persons outside of Hong Kong who hold or are expected to hold their securities on the Company's Principal Register and who trade or are expected to trade their securities on the London Stock Exchange.

The Company has also applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the requirements of Rules 7.05 and 7.08 of the Hong Kong Listing Rules such that the Company is only required to issue a circular or listing document to Shareholders in respect of offers for sale or subscription to the extent that a circular or prospectus is required to be published for the purposes of listing the relevant new securities on the Official List.

**Placing**

Rules 7.09 to 7.12 of the Hong Kong Listing Rules set out certain requirements in respect of placings by a listed company. These include the requirement to comply with the placing guidelines set out in Appendix 6 to the Hong Kong Listing Rules (which includes, among other things, the requirement to obtain shareholder approval) and the requirement for the placing to be supported by a listing document complying with Chapter 11 of the Hong Kong Listing Rules.

As referred to under "Offer for sale or subscription" above, where the Company proposes to issue equity securities for cash, it will first be required to offer securities to shareholders on a pre-emptive basis. The Company may only issue shares on a non-pre-emptive basis under certain conditions, one of which is where prior shareholder consent has been obtained for the issue and where such issue is in accordance with the terms of such shareholder consent.

The Articles contain provisions relating to the disapplication of pre-emption rights that will require any shareholder consent to be passed by special resolution and be reviewed every five years, although in practice the shareholder consent will be renewed each year at the Company's annual general meeting. An initial shareholder consent will have been received prior to UK Admission and will reflect UK institutional guidelines on the limits on the size of any general authority to allot on a non-pre-emptive basis. In

addition, any placing undertaken by the Company would be subject to the same price restrictions referred to under "Offer for sale or subscription" above.

Further details on the applicable provisions of Chapter 9 of the UK Listing Rules are set out in the section headed "Summary of Certain Rules and Regulations Applicable to the Company—Summary of Applicable UK Listing Rules and UK Disclosure and Transparency Rules" in this Wrap.

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with Rule 7.10 of the Hong Kong Listing Rules in instances where any placing is made wholly or partly to persons outside of Hong Kong who hold or are expected to hold their securities on the Company's Principal Register and who trade or are expected to trade their securities on the London Stock Exchange.

The Company has also applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance from Rule 7.12 of the Hong Kong Listing Rules such that the Company is only required to issue a circular or listing document to Shareholders in respect of placings to the extent that a circular or prospectus is required to be published for the purposes of listing the relevant new securities on the Official List.

**Rights issues and open offers**

Rules 7.18 to 7.27 of the Hong Kong Listing Rules set out certain requirements in respect of rights issues and open offers. These include the requirement that any rights issue or open offer must be fully underwritten and be, in certain circumstances, subject to shareholder approval. In addition, a listing document complying with Chapter 11 of the Hong Kong Listing Rules must be issued in support of the rights issue or open offer.

Under Rule 9.3.12 of the UK Listing Rules, in respect of rights issues or open offers, as a further exception to the restrictions on allotment and non-pre-emptive issues mentioned above, a company may issue equity securities for cash on a non-pre-emptive basis where the disapplication of the basis of a pre-emptive offering relates to securities representing fractional entitlements or securities which it considers necessary or expedient to be excluded from the rights issue or open offer on account of the laws or regulatory requirements of a territory other than its country of incorporation. In addition, UK Listing Rule 9.5 will impose various other obligations on the Company in respect of rights issues and open offers. In particular, the offer period for a rights issue must last for at least 10 business days and the timetable for an open offer must be approved by the FSA. In the case of a rights issue, the Company will be required to announce as soon as possible the issue price, principal terms, results, and if any rights not taken up are sold, details of the sale and price per issue. If rights are not taken up, they can be offered for sale, but any premium received in excess of the subscription price is to be for the account of the Shareholder. Furthermore, rights issues open offers are subject to the same price restrictions referred to under "Offer for sale or subscription" above.

Further details on these provisions and details on the procedural requirements of rights issues and open offers are set out in the section headed "Summary of Certain Rules and Regulations Applicable to the Company—Summary of Applicable UK Listing Rules and UK Disclosure and Transparency Rules" in this Wrap.

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with Rules 7.19 to 7.21 and 7.24 to 7.26A of the Hong Kong Listing Rules in instances where a rights issue or open offer is carried out on a global basis that is open equally to Shareholders holding Ordinary Shares on the Company's Principal Register and Hong Kong Branch Register.

The Company has also applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with Rules 7.22 and 7.27 of the Hong Kong Listing Rules such that the Company is only required to issue a circular or listing document to Shareholders in respect of rights issues and open offers to the extent that a circular or prospectus is required to be published for the purposes of listing the relevant new securities on the Official List.

**Capitalisation and exchange issues**

Rules 7.28, 7.29, 7.32 and 7.33 of the Hong Kong Listing Rules set out certain requirements in respect of capitalisation and exchange issues, such that a listing document complying with Chapter 11 of the Hong Kong Listing Rules must be issued in support of any capitalisation or exchange issue.

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with Rules 7.29 and 7.33 of the Hong Kong Listing Rules such that the Company is only

required to issue a circular or listing document to Shareholders in respect of capitalisation and exchange issues to the extent that a circular or prospectus is required to be published for the purposes of listing the relevant new securities on the Official List.

## 10. SHARE REPURCHASE AND TREASURY SHARES

Rules 10.05 and 10.06 of the Hong Kong Listing Rules set out restrictions and notification requirements regarding purchases of a company's own shares. Certain provisions of Rule 10.06 of the Hong Kong Listing Rules apply to a company with its secondary listing on the Hong Kong Stock Exchange. These include restrictions on the price and timing of share repurchases, notification obligations and the requirement that any shares that are repurchased be immediately cancelled. In addition, Rule 10.06(6) of the Hong Kong Listing Rules allows the Hong Kong Stock Exchange to prohibit repurchases of shares where the Hong Kong Stock Exchange considers that the company has committed a breach of any of the Hong Kong Listing Rules applicable to the company.

With respect to share repurchases, the Company will be subject to similar size and price limitations and restrictions on repurchases during prohibited periods (i.e. periods preceding the publication of an announcement of financial information or periods when inside information exists) and from related parties upon UK Admission. In addition, the Company will be subject to various disclosure requirements under the UK Listing Rules with respect to repurchases of its shares. Further details of the applicable provisions of Chapter 12 of the UK Listing Rules are set out in the section headed "Summary of Certain Rules and Regulations Applicable to the Company—Summary of Applicable UK Listing Rules and UK Disclosure and Transparency Rules" in this Wrap.

With respect to treasury shares, the Company as a Jersey incorporated company, has the ability to hold any shares it repurchases in treasury and does not need to cancel or destroy documents of title of the shares it repurchases as required by Rule 10.06(5) of the Hong Kong Listing Rules. Further, under the UK Listing Rules, shares held in treasury continue to be listed and it will therefore not be necessary for the Company to apply to the FSA for the re-listing of such shares nor for it to produce a prospectus for the purposes of listing those shares on the Official List. Pursuant to Jersey law, the Company may cancel or sell the shares it holds as treasury shares, transfer them for the purposes of or under an employees' share scheme or continue to hold them in treasury. During prohibited periods, the UK Listing Rules prohibit sales for cash of treasury shares or transfers of treasury shares for the purposes of or pursuant to an employees' share scheme except in certain limited circumstances. Any sale for cash, transfers for the purposes of or pursuant to an employees' share scheme or cancellation of treasury shares by a listed company must be notified to a RIS as soon as possible under the UK Listing Rules setting out the details of the transaction and including a statement of the total number of treasury shares held by the company and the total number of non-treasury shares in issue by the company.

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the requirements of Rule 10.06 of the Hong Kong Listing Rules such that only Rules 10.06(2)(d) (in respect only of shares purchased by the Company on the Hong Kong Branch Register) and 10.06(6) of the Hong Kong Listing Rules will apply to the Company. The waiver has been granted subject to the following conditions:

(a) the Company complies with Jersey Companies Law and the UK Listing Rules in relation to its treasury shares and informs the Hong Kong Stock Exchange as soon as practicable in the event of any failure to comply or any waiver being granted;

(b) the Company informs the Hong Kong Stock Exchange as soon as reasonably practicable in the event of any material change being made to the Jersey regime on shares held by a Jersey incorporated company in treasury;

(c) the Company discloses the grant of the waiver setting out relevant details, including the circumstances and the conditions imposed;

(d) the Company confirms compliance with the waiver conditions in its annual reports and circulars seeking Shareholders' approval of the repurchase mandate;

(e) in the event that the Company is no longer listed on the Official List, the Company complies, subject to statutory and regulatory provisions applicable to the Company in Jersey, with the relevant provisions of the Hong Kong Listing Rules applicable to shares held in treasury; and

(f) the Company shall, to the extent not inconsistent with applicable Jersey and UK laws and regulations, use its reasonable endeavours to comply with the relevant provisions of the Hong Kong Listing Rules in the event of any changes to them in relation to shares held in treasury unless the Hong Kong Stock

Exchange agrees to amend the waiver or grant a new waiver having regard to the prevailing circumstances at the relevant time.

As a consequence of the grant by the Hong Kong Stock Exchange of the above waiver, certain Hong Kong Listing Rules are modified. These modifications are posted on the Company's website at www.glencore.com and the Hong Kong Stock Exchange's website at www.hkexnews.hk for reference.

## 11. FURTHER ISSUES OF SECURITIES FOR SIX MONTHS AFTER LISTING

Rule 10.08 of the Hong Kong Listing Rules restricts a company from issuing securities for the period of six months after the date of its listing on the Main Board of the Hong Kong Stock Exchange.

Under the UK Listing Rules and pursuant to the terms of the consent issued to the Company by the Jersey Financial Services Commission on 14 March 2011 under relevant Jersey laws, there will be no restriction imposed on the Company following its listing on the Official List in relation to any issues of new shares.

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the requirements of Rule 10.08 of the Hong Kong Listing Rules such that the Company will not issue further Ordinary Shares (or convertible securities) within six months of HK Admission, unless such issue:

(a) is either for cash or shares to fund a specific acquisition, merger or takeover or as part or full consideration for an acquisition, merger or takeover and any such acquisition, merger or takeover is of assets or businesses that would contribute to the growth of the Company's operations;

(b) is pursuant to an exercise of an option under the Company's share option schemes; or

(c) is pursuant to holders of Convertible Bonds exercising their rights to convert their Convertible Bonds into Ordinary Shares after the listing of the Ordinary Shares on the Main Board of the Hong Kong Stock Exchange.

For the avoidance of doubt, the Company will be able to issue shares held in treasury prior to the end of the date falling six months after the date of its listing on the Main Board of the Hong Kong Stock Exchange.

## 12. CONTINUING OBLIGATIONS

Chapter 13 of the Hong Kong Listing Rules sets out certain continuing obligations of an issuer.

Chapters 9, 12 and 13 of the UK Listing Rules and Chapters 2, 4, 5 and 6 of the UK Disclosure and Transparency Rules contain provisions which are similar to those contained in Chapter 13 of the Hong Kong Listing Rules. A non-exhaustive summary of the continuing obligations imposed on issuers by certain relevant UK Listing Rules and UK Disclosure and Transparency Rules can be found in the section headed "Summary of Certain Rules and Regulations Applicable to the Company—Summary of Applicable UK Listing Rules and UK Disclosure and Transparency Rules" in this Wrap.

On the basis that the Company is applying for a secondary listing on the Main Board of the Hong Kong Stock Exchange, the Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the requirements in Chapter 13 of the Hong Kong Listing Rules in their entirety, other than Rule 13.09 of the Hong Kong Listing Rules, as referred to in the section headed "Publication of Price Sensitive Information" below. A non-exhaustive summary of certain material requirements of Chapter 13 of the Hong Kong Listing Rules, and certain relevant UK Listing Rules and UK Disclosure and Transparency Rules, and where applicable the differences between the two regimes, is set out below.

### General matters relevant to the issuer's business

Rules 13.11 to 13.22 of the Hong Kong Listing Rules require an issuer to disclose information in relation to specified matters relevant to an issuer's business, including advances to an entity, financial assistance to and guarantees for affiliated companies, pledges of shares by any controlling shareholder, loan agreements with conditions imposing specific performance obligations on any controlling shareholder and breaches of loan agreements.

Upon its UK Admission, the Company will be subject to an obligation under UK Listing Rule 9.2.6 which requires it to comply with Rule 2 of the UK Disclosure and Transparency Rules, which requires that a listed company notify the market as soon as possible of any inside information concerning it, being information of a precise nature that is not generally available and that would be likely to have a significant effect on the price of its shares. There are no specific requirements in the UK to disclose the items

specified in Rules 13.11 to 13.22 of the Hong Kong Listing Rules, but, to the extent that those items constitute "inside information", they will be required to be disclosed under Rule 2 of the UK Disclosure and Transparency Rules.

**General matters relevant to the issuer's securities**

Rules 13.25A to 13.36 of the Hong Kong Listing Rules require an issuer to disclose changes in its issued share capital, movements in its securities or other securitised instruments, changes in the terms of its convertible securities, issues of securities, the results and basis of allotment for any offers and the issuer's sale or purchase of any securities. They also require an issuer to apply for the listing of any further securities prior to their issue, and obtain the consent of shareholders prior to allotting, issuing or granting any securities.

Upon its UK Admission, the Company will be required to comply with Chapters 9 and 12 of the UK Listing Rules, which will require disclosure of certain changes to its share capital, redemptions, repurchases, changes in the rights of security holders and offers (although there is no requirement to disclose the names of allottees of securities where securities are issued for cash in accordance with shareholder approval or as part of a pro rata offer, or to disclose the basis of allotment of securities for any offer, as the Hong Kong Listing Rules require). In addition, Rule 5.6.1 of the UK Disclosure and Transparency Rules will require the Company to disclose the total number of voting rights and capital in respect of each class of its shares (although this will be required only at the end of any month in which change occurs, not at the end of every month as the Hong Kong Listing Rules require). UK Listing Rule 9.5.10 will require the Company to obtain shareholder approval for all offers or issues of equity securities at a discount of more than 10 per cent. to the middle market price of the shares at the time of announcing or agreeing the terms, unless the terms of the offer at such a discount have been specifically approved by the Company's shareholders or the issue is for cash and is made pursuant to a pre-existing authority from shareholders to disapply statutory pre-emption rights. UK Listing Rule 9.3.11 will impose pre-emption obligations on the Company, such that where it is proposing to issue equity securities for cash, it must first offer such securities to shareholders in proportion to their existing holdings and to holders of any other securities who are so entitled, unless Shareholder consent has been obtained to allot shares on a non-pre-emptive basis. Furthermore, UK Listing Rule 9.5.14 will require the Company to apply for the listing of any new securities that are allotted by the Company as soon as possible and in any event within one month of allotment (although not prior to their issue as the Hong Kong Listing Rules require). However, if an issue of securities takes place wholly within Hong Kong and all of the securities that are to be issued are to be registered on the Hong Kong Branch Register, the Company will apply for the listing of those securities prior to their issue in accordance with the Hong Kong Listing Rules.

Upon UK Admission, under Rule 3.3.2 of the UK Listing Rules, an applicant must make an application to the FSA two business days before the date the FSA is set to consider an application for a listing of its shares. If an issuer subsequently makes further issue of its shares prior to the approval by the FSA of an application for a listing of such shares, such shares will not listed on the Official List or be able to be traded on the London Stock Exchange until such approval from the FSA is granted. Unlike the requirement set out in Rule 13.26 of the Hong Kong Listing Rules, such application may be made before or after the issue by the Company of its shares. The Company will make an application to the Hong Kong Stock Exchange for a subsequent listing of the Company's securities that are already listed on the Main Board of the Hong Kong Stock Exchange at around the same time as it makes its application to the FSA.

**Meetings**

Rules 13.37 to 13.45 of the Hong Kong Listing Rules require an issuer to ensure that notices of meetings are published and that notices and proxy forms (providing for two-way voting) are sent to persons entitled to vote at the meeting. They also set out certain requirements for shareholder meetings, including that the number of votes for and against a resolution and the identity of the scrutineer of votes be announced, that all shareholders be allowed to vote on an adjournment resolution and that an issuer have in place appropriate procedures to record that any parties that must abstain or have recorded their intention to vote against a resolution have done so, and certain requirements for board meetings, including that board meetings dealing with dividends be announced seven days in advance.

Rule 13.43 of the Hong Kong Listing Rules requires an issuer to, among other things, publish an announcement seven clear business days before any board meeting to approve its results or to declare a dividend. Upon Admission, the Company will post its financial calendar on its website at www.glencore.com and on the Hong Kong Stock Exchange website at www.hkexnews.hk. The financial

calendar will be in English and Chinese. The financial calendar of the Company will, among other things, contain the expected dates of:

(a) the publication of its annual results;

(b) its annual general meeting;

(c) the publication of its half-year results; and

(d) the publication of its interim management statements.

The Company expects that board or board committee meetings to decide or approve the matters set out in Rule 13.43 of the Hong Kong Listing Rules will be held on the day before the publication of any such decision or approval. Further, the Company expects that a board or board committee meeting to approve its annual or half-year results will also consider, and if thought fit, approve the declaration, recommendation or payment (as the case may be) of any associated dividend.

To the extent that a board meeting is held to approve the declaration, recommendation or payment of a dividend that is on a different date to the board meeting to consider the annual or half-year results of the Company, the Company will inform the Hong Kong Stock Exchange of the fact and publish an announcement within the timeframe required by Rule 13.43 of the Hong Kong Listing Rules.

Upon its UK Admission, the Company will be required to comply with Chapter 6 of the UK Disclosure and Transparency Rules, which will provide that the Company provide information to shareholders on the place, time and agenda of meetings, the total number of shares and voting rights, and the rights of shareholders to participate in meetings. Pursuant to the Articles, the Company's annual general meeting shall be called by at least 21 clear days' notice. Under UK Listing Rule 9.3.6(2), the Company will be required to ensure its proxy forms provide for at least three-way voting, i.e. the opportunity to vote for or against or to withhold a vote, except in relation to procedural resolutions (rather than two-way voting as the Hong Kong Listing Rules require). Furthermore, there is no concept of a scrutineer in the UK Listing Rules (although in practice votes are typically counted by the issuer's registrar) and while there is a requirement under UK Listing Rule 9.6.18 to announce the passing of resolutions at general meetings (other than those relating to ordinary business) at an annual general meeting, there is no requirement to announce the number of votes for and against a resolution (but it is considered best practice to do so). In addition, there is no express requirement under the UK Listing Rules to require that all shareholders be allowed to vote on an adjournment resolution or to ensure that parties that must abstain, or have recorded an intention to vote against a resolution, have done so. UK Listing Rule 9.7A.2 will require the Company to disclose any board decision regarding dividends as soon as possible after the board has made the decision (although not the date of the relevant board meeting, as the Hong Kong Listing Rules require).

**Disclosure of financial information**

Rules 13.46 to 13.50 of the Hong Kong Listing Rules set out certain requirements for the distribution of an issuer's annual report and accounts, interim reports and preliminary announcements of results. An issuer must send its annual report and interim reports to every member and such reports must comply with Appendix 16 to the Hong Kong Listing Rules (for further details, refer to the section headed "Financial Disclosure" below). The Hong Kong Stock Exchange will normally suspend an issuer's securities trading if it fails to publish periodic financial information.

Upon its UK Admission, Chapter 4 of the UK Disclosure and Transparency Rules will similarly require the Company to publish an annual and half-year report and an interim management statements (although there is no requirement to send a physical copy to every member, as the Hong Kong Listing Rules require). In addition, the annual report must be published no later than four months after the end of each financial year (in accordance with the requirement under the Hong Kong Listing Rules), the half-year report must be published no later than two months after the end of the relevant period (not three months as the Hong Kong Listing Rules require) and the interim management statement must be published in the period beginning 10 weeks before, and ending six weeks before, the end of the relevant six-month period.

There is no requirement to publish a preliminary statement of results under the UK Listing Rules although an issuer may choose to do so. If an announcement of preliminary results is published, any such announcement should comply with the content requirements set out in Rule 9.7.A.1 of the UK Listing Rules. A summary of these content requirements is set out in paragraph 12 below. If the Company fails to publish financial information in accordance with the UK Listing Rules, the FSA may suspend the listing of its securities under UK Listing Rule 5.1.2.

Each annual and half-year report, preliminary announcement of results and interim management statement of the Company will be published in English and Chinese.

**Notifications**

Rules 13.51 to 13.51C of the Hong Kong Listing Rules require an issuer, in certain circumstances, to notify the Hong Kong Stock Exchange and publish an announcement where, among other things, there is any proposed change to its memorandum or articles of association, or any change to its directorate, the rights attaching to its listed securities, its auditors or financial year end, its secretary, its share registrar, its registered address or its compliance adviser.

Upon its UK Admission, the Company will be subject to Chapter 9 of the UK Listing Rules and Chapter 6 of the UK Disclosure and Transparency Rules which will impose similar obligations on the Company to disclose changes to its constitution, the composition of its board of directors, the rights attaching to its securities and its accounting reference date (although there is no requirement to disclose changes to its secretary, share registrar, registered address or compliance adviser, as the Hong Kong Listing Rules require). In respect of any new directors, UK Listing Rule 9.6.13 will require the Company to announce, as soon as possible following the appointment decision and in any event within five days of such decision, details of past directorships, unspent convictions, insolvency events of any company where the director was an executive director and any public criticisms of the director or disqualifications by statutory or regulatory authorities or disqualifications.

**Announcements, circulars and other documents**

Rules 13.52 to 13.57 of the Hong Kong Listing Rules require an issuer to, among other things, submit to the Hong Kong Stock Exchange drafts of certain announcements, circulars and other documents for review before they are issued, and where a circular is issued to certain holders of its securities, issue a summary of the circular to all other holders of its securities unless the contents are of no material concern to them. An issuer is also required to send to non-registered holders of its securities copies of any corporate communications on a request to Hong Kong Securities Clearing Company Limited, and where an increase of its authorised capital is proposed, to inform members whether there is any present intention to issue any part of that capital.

Upon its UK Admission, the Company will be required to pre-clear with the FSA all of its prospectuses and circulars which are not exempted by the UK Prospectus Rules or the UK Listing Rules. UK Listing Rule 13.2.2 exempts a circular from the requirement for approval in certain circumstances (including where it relates to resolutions proposing to grant the directors authority to allot securities, to disapply the statutory pre-emption rights or to reduce a company's capital, or resolutions to consider a capitalisation or bonus issue, a scrip dividend alternative, a scrip dividend mandate scheme, a dividend reinvestment plan or an employee share scheme, or notices of meetings, amendments to a company's constitution, discounted option arrangements or reminders of conversion rights), where the circular complies with the relevant content requirements and neither it nor the transaction to which it relates has any unusual feature. There are no other documents that are specifically required to be pre-cleared with the FSA. In addition, the Company will not be required to issue a summary circular to all other holders of its securities where a circular is issued to only certain holders of the Company's securities, or to send copies of corporate communications to non-registered holders of its securities (as the Hong Kong Listing Rules require). Furthermore, while the UK Listing Rules do not require the directors to state in a circular concerning an increase in authorised share capital whether they have any present intention of issuing that capital. UK Listing Rule 13.8.1 stipulates that a circular proposing to grant the directors authority to allot shares must include a statement by the directors as to whether they have any present intention of exercising their authority, and if so, for what purpose.

The Company will adopt, for its non-registered shareholders that hold Ordinary Shares through the Hong Kong Securities Clearing Company Limited, the same approach that it takes for its members generally in respect of the dissemination to them of corporate communications.

On request to the Company by any such non-registered shareholder, where corporate communications are made available by means of a website, the Company will notify that non-registered shareholder of: (a) the presence of the notice, document or information on the website; (b) the address of the website; (c) the place on the website where it may be accessed; and (d) how to access the notice, document or information. The notification will be sent to such non-registered shareholder in hard copy form if that non-registered shareholder has not consented to receiving communications in electronic form.

**Trading and settlement**

Rules 13.58 to 13.66 of the Hong Kong Listing Rules set out certain trading and settlement procedures that apply to issuers in Hong Kong and their securities.

No similar obligations will be formally imposed on the Company on its UK Admission, however to the extent that the procedures that are required under the Hong Kong Listing Rules can be accommodated within the expected UK timetable for similar procedures, the Company intends to comply with such requirements, including the requirement to give advance notice of the Company's intention to close its register of members as required by Rule 13.66 of the Hong Kong Listing Rules, in respect of the Hong Kong Branch Register.

There are no requirements under the UK Listing Rules, the UK Disclosure and Transparency Rules or the Jersey Companies Law relating to the closure of the Principal Register or the Hong Kong Branch Register.

**General**

Rules 13.67 to 13.70 of the Hong Kong Listing Rules set out certain requirements for directors' dealings, the grant of service contracts by the issuer or its subsidiaries to their directors or proposed directors (including that shareholder approval be obtained for any service contract which is longer than three years, or expressly requires the issuer to give more than one year's notice or to pay compensation or make other payments equivalent to more than one year's emoluments to terminate the contract) and the publication, by the issuer, of certain particulars in relation to persons nominated as directors.

Upon its UK Admission, every person discharging managerial responsibilities, including directors, will be required to comply with the Model Code regarding share dealings (for further details refer to the section headed "Summary of Certain Rules and Regulations Applicable to Company—Summary of Applicable UK Listing Rules and UK Disclosure and Transparency Rules" in this Wrap). The Company will not be expressly required to obtain shareholder approval of director service contracts, although the UK Corporate Governance Code recommends that notice or contract periods should be set at one year or less (which provides similar protection to shareholders as the requirements of the Hong Kong Listing Rules do). There is no requirement in the UK for a listed company to publish an announcement upon receipt of a notice from a shareholder to propose a person for election as a director.

Rules 13.71 and 13.73 of the Hong Kong Listing Rules require an issuer to send notices to all holders of its listed securities whether or not their registered addresses are in Hong Kong and to publish notices of and despatch to its shareholders circulars in relation to all shareholder or creditor meetings. The notices of meeting must be available on the issuer's website for a period of five years and any new information that is not included in the circulars must be provided to members not less than 10 days before the date of the meeting.

The Articles stipulate that members with registered addresses in the UK, Hong Kong and Jersey are entitled to receive hard copy notices and all members are entitled to receive electronic notices. For further details refer to the section headed "Content Requirements of Articles of Association—Giving notices to members with registered addresses outside Hong Kong" below. In addition, on its UK Admission, the Company will be subject to Chapters 9 and 13 of the UK Listing Rules and Chapter 6 of the UK Disclosure and Transparency Rules which will impose similar requirements with respect to notices and circulars. However, there is no requirement under the UK Listing Rules for documents published on the website of a listed company to be available for five years and there is no specific timeframe for the provision of new information that is not included in a circular to members, as there is under the Hong Kong Listing Rules (although under applicable Jersey Companies Law the Company would have to give adequate notice of material new information).

Rules 13.74, 13.77 and 13.78 of the Hong Kong Listing Rules require an issuer to disclose in notices of meetings certain details of directors who are proposed to be elected or re-elected, to inform the Hong Kong Stock Exchange of any changes in the contact information of directors and to assist the Hong Kong Stock Exchange to locate any directors who have resigned.

The UK Corporate Governance Code, which will apply to the Company on its UK Admission, recommends that the names of directors submitted for election or re-election at meetings be accompanied by sufficient biographical details and other relevant information to enable shareholders to take an informed decision on their election. Furthermore, while it is under no express obligation to do so under the UK Listing Rules, the Company intends to fully co-operate with both the Hong Kong Stock Exchange and

the FSA to the extent that it can regarding any queries on its directors, including their contact information and whereabouts.

Rule 13.75 of the Hong Kong Listing Rules requires an issuer to ensure equality of treatment for all holders of securities of the same class who are in the same position.

Listing Principle 5 in UK Listing Rule 7.2.1, which will apply to the Company on its UK Admission, will similarly require the Company to ensure that it treats all holders of the same class of its listed shares that are in the same position equally in respect of the rights attaching to such listed shares.

Rules 13.81 to 13.84 of the Hong Kong Listing Rules set out certain requirements for independent financial advisers who advise issuers in Hong Kong and provide for access of information by the independent financial advisers. An issuer is required to afford its independent financial adviser full access at all times to all persons, premises and documents relevant to the performance of its duties, to keep it informed of any material change to any information and to provide all necessary consents to the provision of such information. An independent financial adviser must be appropriately licensed. It must also be independent from any issuer for whom it acts and perform its duties impartially.

While the Company, on its UK Admission, will not be under any express obligations under the UK Listing Rules regarding independent financial advisers, it does expect to fully co-operate with any independent financial adviser that is appointed to advise it. UK Listing Rule 8.7.12 requires any financial adviser who is acting for the purpose of the UK Listing Rules (that is, as a sponsor) to complete a declaration that it has no conflict of interest in relation to the relevant transaction or, if it has conflicts, that it has put appropriate arrangements in place that allow it to act independently of the conflicts.

## 13. FINANCIAL DISCLOSURE

Rules 13.47, 13.48 and 13.49 of the Hong Kong Listing Rules require an issuer to comply with the provisions and content requirements of Appendix 16 to the Hong Kong Listing Rules when preparing its annual reports, interim reports and preliminary announcement of results.

Upon UK Admission, the Company will be subject to a number of UK rules and regulations and subject to a number of accounting standards which require the Company to publish its annual reports and interim reports in compliance with, among others, the UK Listing Rules, the UK Disclosure and Transparency Rules, Jersey company law, IAS and IFRS.

The Company is of the view that it would be unduly onerous if it was to comply with Rules 13.47, 13.48 and 13.49 of the Hong Kong Listing Rules and include the relevant information required under Appendix 16 to the Hong Kong Listing Rules to the extent that such inclusion is not required under applicable UK rules and regulations, Jersey company law and/or applicable accounting standards.

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with Rules 13.47, 13.48 and 13.49 of the Hong Kong Listing Rules such that the Company will only be required to comply with the relevant UK rules and regulations, Jersey company law and/or relevant accounting standards when publishing its annual reports, interim reports and preliminary announcement of results. A non-exhaustive summary of certain material requirements of Appendix 16 to the Hong Kong Listing Rules which are not required by applicable UK rules and regulations, Jersey company law and/or relevant accounting standards to be included with certain financial information published by the Company is set out below.

### Financial Statements

The following is an item that, if the Company had not obtained the waiver relating to disclosure of items set out in Appendix 16 to the Hong Kong Listing Rules set out above, would have to be included in the Company's financial statements under Appendix 16 to the Hong Kong Listing Rules but which is not required to be included in the Company's financial statements under relevant UK rules and regulations, Jersey company law and/or relevant accounting standards:

(a) ageing analysis of accounts payable, net current assets and liabilities and total assets less current liabilities as required by Paragraph 4(2) of Appendix 16 to the Hong Kong Listing Rules.

### Annual Reports

The following items are those that, if the Company had not obtained the waiver relating to disclosure of items set out in Appendix 16 set out above, would have to be included in the Company's annual report

under Appendix 16 but which is not required to be included in the Company's annual reports under relevant UK rules and regulations, Jersey company law and/or relevant accounting standards:

(a) details of the interests in the Company and its associated companies of among others, Directors and the Company's chief executive, as required by Paragraph 13 of Appendix 16 to the Hong Kong Listing Rules;

(b) a summary of the published results and of the assets and liabilities of the Group for the last five financial years as required by Paragraph 19 of Appendix 16 to the Hong Kong Listing Rules;

(c) a statement, where applicable, that no pre-emptive rights exist in the jurisdiction in which the Company is incorporated or otherwise established as required by Paragraph 20 of Appendix 16 to the Hong Kong Listing Rules;

(d) if the Company were to hold properties for development, sale or investment purposes beyond specified materiality thresholds, details concerning such properties including address details, progress of any construction at such properties and existing use of such properties as required by Paragraph 23 of Appendix 16 to the Hong Kong Listing Rules;

(e) details of Directors' and past Directors' emoluments, on a named basis, including details of such Directors' fees, basic salaries, benefits in kind and contributions to pension schemes as required by Paragraph 24 of Appendix 16 to the Hong Kong Listing Rules;

(f) a statement of the reserves available for distribution to shareholders as at the balance sheet date as required by Paragraph 29 of Appendix 16 to the Hong Kong Listing Rules;

(g) details of any change in the Company's auditors in any of the preceding three years as required by Paragraph 30 of Appendix 16 to the Hong Kong Listing Rules;

(h) information in respect of the Company's largest supplier and five largest suppliers including details of the percentage of purchases attributable to the largest supplier and a statement of the percentage of purchases attributable to the five largest suppliers combined and any interests of any of the Directors, their associates or Shareholders (which to the knowledge of the Directors own more than 5 per cent. of the Ordinary Shares) have in such suppliers, to the extent such information is required to be disclosed by Paragraph 31 of Appendix 16 to the Hong Kong Listing Rules; and

(i) a statement as to the sufficiency of public float as required by Paragraph 34A of Appendix 16 to the Hong Kong Listing Rules.

The following items are those that, if the Company had not obtained the waiver relating to disclosure of items set out in Appendix 16 to the Hong Kong Listing Rules set out above, would have to be included in the Company's annual report under Appendix 16 to the Hong Kong Listing Rules, but for which relevant UK rules and regulations, Jersey company law and/or relevant accounting standards provide for alternative forms of disclosure to be included in the Company's annual report:

(a) confirmation by the Company that it has received from each of its independent non-executive Directors an annual confirmation of his or her independence as required by Paragraph 12B of Appendix 16 to the Hong Kong Listing Rules. Instead, the applicable UK rules and regulations require the board of the Company to identify in the annual report each non-executive director it considers to be independent;

(b) the name of every subsidiary and certain details in relation to each subsidiary, including its principal country of operation and particulars of their share capital as required by Paragraph 9 of Appendix 16 to the Hong Kong Listing Rules. Instead, the applicable UK rules and regulations and relevant accounting standards require disclosure of relevant details relating to material subsidiaries only (and not every subsidiary);

(c) details of transactions entered into by the Company or its subsidiaries in the securities of the Company or its subsidiaries as required by Paragraph 10 of Appendix 16 to the Hong Kong Listing Rules. Such details include particulars of any exercise of any conversion or subscription rights issued or granted by the Company or its subsidiaries and particulars of any redemption or purchase or cancellation by the Company or its subsidiaries. Under Chapters 9 and 12 of the UK Listing Rules and Rule 4 of the UK Disclosure and Transparency Rules, a number of notifications are required to be made when the Company redeems its listed shares or when the Company or any other member of its group purchases the Company's own equity shares. These include the requirement to notify via RIS as soon as possible when the Company or any other member of its group purchases the Company's own

equity shares, to disclose details including the date of purchase, the number of shares purchases and the purchase price paid, and to disclose in the Company's annual report information about acquisitions of its own shares that have occurred during the relevant financial year;

(d) biographical details of Directors and senior managers of the Company as required by Paragraph 12 of Appendix 16 to the Hong Kong Listing Rules. Such details include the person's name, age, length of service and such other information that Shareholders should be aware of. Instead, the UK Corporate Governance Code requires the annual report to identify the chairman, the deputy chairman (where there is one), the chief executive, the senior independent director and the chairmen and members of the board committees;

(e) necessary information to enable holders of the Company's listed securities to obtain any relief from taxation to which they are entitled as required by Paragraph 21 of Appendix 16 to the Hong Kong Listing Rules. Instead, UK Listing Rule 9.7.A.2 requires notification via a RIS after the board has approved any decision to pay or make any dividend or other distribution on listed equity or any decision to withhold any dividend or interest payment on listed securities, giving details of any foreign income dividend election that may be available, together with any income tax treated as paid at the lower rate and not repayable;

(f) information in respect of the Company's largest customer and five largest customers including details of the percentage of sales attributable to the largest customer and a statement of the percentage of sales attributable to the five largest customers combined and any interests of any of the Directors, their associates or Shareholders (which to the knowledge of the Directors own more than 5 per cent. of the Ordinary Shares) have in such customers to the extent such information is required to be disclosed by Paragraph 31 of Appendix 16 to the Hong Kong Listing Rules. The relevant UK rules and regulations and relevant accounting standards require annual report disclosure in relation to customers accounting for 10 per cent. or more of the Company's revenue;

(g) details of the five highest paid individuals of the Company during the financial year including details of their basic salaries, benefits in kind and contributions to pension schemes as required by Paragraph 25 of Appendix 16 to the Hong Kong Listing Rules. Instead, the applicable UK rules and regulations and/or relevant accounting standards require the total compensation that is paid to key management personnel to be disclosed in the annual report, including an analysis between short-term employee benefits; post-employment benefits; other long-term benefits; termination benefits; and share based payments; and

(h) Paragraph 32 of Appendix 16 to the Hong Kong Listing Rules sets out a number of required disclosures in management's discussion and analysis of the Group's performance in its annual report. Such required disclosures include comments on, among others, the Group's liquidity and financial resources, the capital structure of the group and the currencies in which borrowings are made and in which cash and cash equivalents are held. Under Rule 4 of the UK Disclosure and Transparency Rules, an annual financial report must include a management report that is a fair review of the Company's business and a description of the principal risks and uncertainties facing the Company. The review has to be balanced and comprehensive and, where appropriate, analyse key financial performance indicators or other performance indicators relating to the Company and the business. Further, the review must give an indication of important events that have occurred since the end of the financial year, the Company's likely future development and the Company's exposure to price risk, credit risk, liquidity risk and cash flow risk.

**Interim Reports**

The following is an item that, if the Company had not obtained the waiver relating to disclosure of items set out in Appendix 16 to the Hong Kong Listing Rules set out above, would have to be included in the Company's interim reports under Appendix 16 to the Hong Kong Listing Rules but which is not required to be included in the Company's interim reports under relevant UK rules and regulations, Jersey company law and/or relevant accounting standards:

(a) a statement, in relation to the accounting period covered by the interim report, on whether the Company meets the code provisions sets out in the Code on Corporate Governance Practices contained in Appendix 14 to the Hong Kong Listing Rules as required by Paragraph 44 of Appendix 16 to the Hong Kong Listing Rules. The UK Listing Rules require a similar statement in respect of the UK Corporate Governance Code to be included in the Company's annual report only.

The following is an item that, if the Company had not obtained the waiver relating to disclosure of items set out in Appendix 16 to the Hong Kong Listing Rules set out above, would have to be included in the Company's interim reports under Appendix 16 to the Hong Kong Listing Rules, but for which the relevant UK rules and regulations, Jersey company law and/or relevant accounting standards provide for alternative forms of disclosure:

(a) details of transactions entered into by the Company or its subsidiaries in the securities of the Company or its subsidiaries as required by Paragraph 41 of Appendix 16 to the Hong Kong Listing Rules. Such details include particulars of any purchase, sale or redemption by the listed issuer or any of its subsidiaries during the interim period. Under Chapters 9 and 12 of the UK Listing Rules and Rule 4 of the UK Disclosure and Transparency Rules, a number of notifications are required to be made when the Company redeems its listed shares or when the Company or any other member of its group purchases the Company's own equity shares. These include the requirement to notify via RIS as soon as possible when the Company or any other member of its group purchases the Company's own equity shares, to disclose details including the date of purchase, the number of shares purchases and the purchase price paid and to disclose in the Company's annual report (but not its interim report) information about acquisitions of its own shares that have occurred during the relevant financial year.

**Preliminary Announcements, Summary Financial Reports and Summary Interim Report**

The following items are those that, if the Company had not obtained the waiver relating to disclosure of items set out in Appendix 16 to the Hong Kong Listing Rules set out above, would have to be included in respect of any preliminary announcements, summary financial reports or summary interim reports produced by the Company but for which the relevant UK rules and regulations, Jersey company law and/or relevant accounting standards either do not require or provide for alternative forms of disclosure:

(a) Paragraphs 45 to 46 of Appendix 16 to the Hong Kong Listing Rules sets out certain requirements in relation to preliminary results announcements including prescriptive content requirements. Under applicable UK rules and regulations and applicable accounting standards, the Company is not obliged to publish a preliminary announcement of its results. If the Company elects to publish a preliminary announcement of its results, UK Listing Rule 9.7.A.1 requires, among other things, that: (i) the statement must be agreed with the Company's auditors; (ii) the statement must show the figures in the form of a table and be presented in a manner consistent with the presentation to be adopted in the annual report for that financial year; and (iii) the statement must include any significant additional information necessary for the purpose of assessing the results being announced.

(b) Paragraph 50 of Appendix 16 to the Hong Kong Listing Rules sets out certain requirements in relation to summary financial reports including prescriptive content requirements. Under applicable UK rules and regulations, summary financial statements, among other things, must: (i) be derived from the Company's annual accounts and the Directors' remuneration report; (ii) contain a statement by the Company's auditor of his or her opinion as to whether the summary financial statement is consistent with Company's annual accounts and the Directors' remuneration report; and (iii) contain a statement on whether the auditor's report on the annual accounts and the auditable part of the Directors' remuneration report was unqualified or qualified and, if it was qualified, sets out the auditor's report in full together with any further material needed to understand the qualification.

(c) Paragraph 50 of Appendix 16 to the Hong Kong Listing Rules sets out certain requirements in respect of summary interim reports. There are no equivalent UK rules and regulations in respect of summary interim reports.

## 14. PUBLICATION OF PRICE SENSITIVE INFORMATION

Rule 13.09 of the Hong Kong Listing Rules imposes a general obligation on issuers to disclose to the market price sensitive information. Under Rule 2.07C(4)(a) of the Hong Kong Listing Rules, announcements must not be submitted to the Hong Kong Stock Exchange between 8:30a.m. and 12:00p.m. and 1:00p.m. and 4:15p.m. on a normal business day in Hong Kong. The Company will, as a result of its premium listing on the Official List, be subject to the UK Disclosure and Transparency Rules. These rules set out certain guidelines for the disclosure by the Company of inside information. Such inside information will, in general, also be price sensitive information under the Hong Kong Listing Rules. Under Rule 2 of the UK Disclosure and Transparency Rules, an announcement of inside information is required to be made as soon as possible regardless of whether such announcement is made during normal trading hours.

Compliance with the UK Disclosure and Transparency Rules could require an announcement of inside information to be made by the Company outside the permitted periods for submitting announcements to the Hong Kong Stock Exchange under Rule 2.07C(4)(a) of the Hong Kong Listing Rules.

Accordingly, the Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver of strict compliance with the requirements of Rule 2.07C(4)(a) of the Hong Kong Listing Rules such that the Company is allowed to submit to the Hong Kong Stock Exchange under Rule 13.09 of the Hong Kong Listing Rules any announcement which it is required to make under Rule 2 of the UK Disclosure and Transparency Rules between 8:30a.m. and 4:15p.m. on a normal business day in Hong Kong simultaneously with the submission in the UK to a Regulatory Information Service of the same announcement pursuant to Rule 2 of the UK Disclosure and Transparency Rules, without any suspension of dealings or trading halt in the Company's securities.

The waiver has been granted subject to the following conditions:

(a) the Company discloses the grant of the waiver setting out relevant details including a clear indication of the impact of the waiver on the Hong Kong investing public given that the waiver is not subject to a condition requiring there to be a trading halt immediately following any announcement under the waiver;

(b) the Company informs the Hong Kong Stock Exchange in the first instance in the event of any material change being made to the UK regime on disclosure of inside information as such information may be of material relevance to an assessment of the ongoing appropriateness of the waiver; and

(c) the Company uses reasonable endeavours to comply with the relevant provisions in the event of changes to the Hong Kong regulatory regime and the rules in relation to disclosure of price sensitive information and electronic disclosure unless the Hong Kong Stock Exchange agrees to amend the waiver or grant a new waiver in the circumstances prevailing.

The Company has agreed to notify, and at the same time, submit electronic copies of the English and Chinese versions of announcements at least 10 minutes in advance of the expected time of release.

One effect of the above waiver for investors in Hong Kong is that trading in the Company's securities will continue in the event that an announcement containing price-sensitive information is released by the Company during normal trading hours in Hong Kong. As a result, investors in Hong Kong should consider whether any price-sensitive information has been released during trading hours in Hong Kong prior to making an investment decision regarding the Company's securities.

## 15. NOTIFIABLE AND CONNECTED TRANSACTIONS

Chapters 14 and 14A of the Hong Kong Listing Rules set out certain requirements in respect of notifiable and connected transactions. These include, in certain circumstances, the requirement to publish certain announcements and circulars and to obtain independent shareholders' approval for such transactions.

Upon UK Admission, the Company will be subject to a wide range of continuing obligations in relation to significant and related party transactions that are broadly commensurate with the shareholder protections in relation to notifiable and connected transactions under Chapters 14 and 14A of the Hong Kong Listing Rules. A summary of the applicable provisions of Chapters 10 and 11 of the UK Listing Rules can be found in the section "Summary of Certain Rules and Regulations Applicable to the Company—Summary of Applicable UK Listing Rules and UK Disclosure and Transparency Rules" in this Wrap.

On the basis that the Company is applying for a secondary listing on the Main Board of the Hong Kong Stock Exchange, the Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from the operation of Chapters 14 and 14A of the Hong Kong Listing Rules in their entirety.

## 16. OPTIONS, WARRANTS AND CONVERTIBLE SECURITIES

Chapters 15 and 16 of the Hong Kong Listing Rules set out certain criteria to be satisfied by a company before the Hong Kong Stock Exchange will grant approval of the issue or grant of options, warrants, convertible securities or other similar rights. These include content requirements for circulars or notices to be sent to shareholders in connection with such issue or grant and conditions on the alteration of the terms of convertible securities.

In addition, Practice Note 4 to the Hong Kong Listing Rules sets out additional requirements for the issue of new warrants to existing warrantholders by a company or the alteration of the exercise period or the exercise price of existing warrants.

Upon UK Admission, the Company will not be subject to similar UK Listing Rules relating to the issue of warrants, options, rights and convertible securities.

However, the Company will be subject to certain UK Listing Rules which are relevant to options, warrants and convertible securities. These include:

(a) a requirement for the total of all issued warrants to subscribe for equity shares to not exceed 20 per cent. of the issued equity share capital (excluding treasury shares) of the applicant as at the time of issue of the warrants or options. Rights under employees' share schemes are not included for the purpose of the 20 per cent. limit as set out in UK Listing Rule 6.1.22; and

(b) the requirements relating to the price of options in UK Listing Rule 9.4.4 referred to under "Share Option Schemes" below.

Further details on these provisions are set out in the section headed "Summary of Certain Rules and Regulations Applicable to the Company—Summary of Applicable UK Listing Rules and UK Disclosure and Transparency Rules" in this Wrap.

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from Chapters 15 and 16 of and Practice Note 4 to the Hong Kong Listing Rules save for Rule 15.03 of the Hong Kong Listing Rules where a circular or notice is required to be issued under the UK Listing Rules and Rules 15.04, 15.05, 16.02 and 16.04 of the Hong Kong Listing Rules where any options, warrants, rights or convertible securities are to be listed on the Hong Kong Stock Exchange.

## 17. SHARE OPTION SCHEMES

Chapter 17 of the Hong Kong Listing Rules sets out requirements applicable to schemes involving the issue of or grant of options over shares or other securities by a listed issuer to, or for the benefit of, executives and/or employees. Rule 19.42 of the Hong Kong Listing Rules states that the Hong Kong Stock Exchange may be prepared to vary the requirements applicable to such schemes in the context of a secondary listing.

Upon UK Admission, the Company will be required to comply with the provisions under the UK Listing Rules in respect of share option plans. UK Listing Rule 13.8.11 sets out content requirements for shareholder circulars sent in connection with employee share schemes or long-term incentive schemes. In addition, under UK Listing Rule 9.4.4, there are a number of restrictions on the price that options may be granted to its directors or employees without specific shareholder approval.

In addition, under paragraph B.2.4 of the UK Corporate Governance Code, shareholders should be invited specifically to approve all new long-term incentive schemes and significant changes to existing schemes, save in the circumstances permitted by the UK Listing Rules. A summary of the applicable provisions of the UK Listing Rules can be found in the section "Summary of Certain Rules and Regulations Applicable to the Company—Summary of Applicable UK Listing Rules and UK Disclosure and Transparency Rules" in this Wrap.

On the basis that the Company is applying for a secondary listing on The Main Board of the Hong Kong Stock Exchange, the Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the requirements in Chapter 17 of the Hong Kong Listing Rules with respect to any share option scheme to be adopted by it or any of its subsidiaries.

## 18. SPIN-OFF LISTINGS

Practice Note 15 to the Hong Kong Listing Rules sets out the principles which the Hong Kong Stock Exchange will apply when considering proposals submitted by an issuer to effect a separate listing of any of its subsidiaries.

Upon UK Admission, the Company will be subject to a number of provisions under the UK Listing Rules in relation to any potential spin-off undertaken by it. These include:

(a) the requirement under UK Listing Rule 10.5.1 to have any spin-off transaction approved by Shareholders following circulation of an explanatory circular if the transaction is deemed to be a Class 1 transaction;

(b) the automatic classification of a transaction as a Class 1 transaction under UK Listing Rule 10.2.8 if it is a transaction where a major subsidiary of the Company issues shares in such a way that would dilute the Company's interest and the economic effect of such dilution is equivalent to a disposal of 25 per cent. or more of the aggregate of the gross assets or profits of the Group; and

(c) the fact that the UK Listing Authority may require a listed company which makes a disposal that results in a fundamental change in the business of the listed company to re-apply for listing.

There is no direct UK Listing Rule equivalent to paragraph 3(f) of Practice Note 15 to the Hong Kong Listing Rules in respect of assured entitlement to shares in the spun-off entity. Further information can be found in the section "Summary of Certain Rules and Regulations Applicable to the Company—Summary of Applicable UK Listing Rules and UK Disclosure and Transparency Rules" in this Wrap.

On the basis that the Company is applying for a secondary listing on The Main Board of the Hong Kong Stock Exchange, the Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the requirements of Practice Note 15 to the Hong Kong Listing Rules with respect to any spin-off listings of any subsidiaries of the Company on any stock exchange other than the Hong Kong Stock Exchange on the basis that, so far as is reasonably practicable, the Company will:

(a) so far as is consistent with any applicable rules and regulations in the UK observe the principle set out in paragraph 3(c) of Practice Note 15 to the Hong Kong Listing Rules that after the spin-off listing, the Company will retain a sufficient level of operations and sufficient assets to support the Company's separate listing status;

(b) so far as is consistent with any applicable rules and regulations in the UK observe the principles set out in paragraphs 3(d)(i) to (iv) of Practice Note 15 to the Hong Kong Listing Rules relating to maintaining a clear delineation of business between the Company and the spun-off entity, the ability of the spun-off entity to function independently of the Company, identifying clear commercial benefits to both the Company and the spun-off entity in the spin-off, and there being no adverse impact on the interests of Shareholders resulting from the spin-off; and

(c) in the announcement to be issued by the Company pursuant to Rule 13.09(1) of the Hong Kong Listing Rules disclosing the spin-off proposal: (i) confirm that the Company would so far as is consistent with any applicable rules and regulations in the UK retain a sufficient level of operations and sufficient assets to support the separate listing status; and (ii) explain how the Company is able to meet so far as is consistent with any applicable rules and regulations in the UK the principles set out in paragraphs 3(d)(i) to (iv) of Practice Note 15 to the Hong Kong Listing Rules.

In the event that the Company decides to proceed with the spin-off listing of any of its subsidiaries on the Hong Kong Stock Exchange, Practice Note 15 to the Hong Kong Listing Rules will apply to the Company except that: (i) paragraph 3(b) of Practice Note 15 to the Hong Kong Listing Rules will not apply such that the Listing Committee of the Hong Kong Stock Exchange will consider a spin-off application from the Company within three years of its listing on the Hong Kong Stock Exchange; and (ii) paragraph 3(e) of Practice Note 15 to the Hong Kong Listing Rules regarding shareholders' approval will not be applicable to the Company on the basis of the waivers granted to the Company from compliance with Chapters 14 and 14A of the Listing Rules.

## 19. CORPORATE GOVERNANCE

Appendix 14 to the Hong Kong Listing Rules sets out the Code on Corporate Governance Practices and Appendix 23 to the Hong Kong Listing Rules sets out requirements for a listed issuer's corporate governance report. The Company will be subject to a corporate governance regime in the UK.

The Company has applied for, and the Hong Kong Stock Exchange has granted, waivers from strict compliance with the requirements of Appendices 14 and 23 to the Hong Kong Listing Rules on the basis that it would be unduly burdensome and unnecessary for the Company to have to comply with a second level of corporate governance requirements as set out in Appendices 14 and 23 to the Hong Kong Listing Rules.

A summary of the equivalent provisions in relation to corporate governance under the UK Disclosure and Transparency Rules and the UK Listing Rules is set out in the section headed "Summary of Certain Rules and Regulations Applicable to the Company—Summary of UK Corporate Governance Code and Provisions Relating to the Directors' Report on Corporate Governance".

The following is a non-exhaustive summary of certain material requirements of Appendix 14 to the Hong Kong Listing Rules to which, if the Company had not obtained the waiver referred to above, the Company would otherwise be subject. The below list does not set out certain material differences between Appendix 14 to the Hong Kong Listing Rules and the UK Corporate Governance Code where the relevant Hong Kong requirements are included in another provision of Jersey or UK law or regulation (such as the UK Listing Rules) that are applicable to the Company or have been included in the Articles or the terms of reference for Company's board committees:

(a) the requirement to give at least 14 days' notice of a regular board meeting and reasonable notice of all other board meetings as required by paragraph A.1.3 of Appendix 14 to the Hong Kong Listing Rules;

(b) the requirement to hold a board meeting (rather than resolve by way of a circular resolution) and for independent directors to be at such board meeting where a substantial shareholder has a conflict of interest in the matter to be discussed as required by paragraph A.1.8 of Appendix 14 to the Hong Kong Listing Rules; and

(c) the requirement for independent non-executive directors to be expressly identified as such in all corporate communications that disclose the names of directors of the Company as required by paragraph A.3.1 of Appendix 14 to the Hong Kong Listing Rules. The UK Corporate Governance Code requires the Company's annual report to identify each non-executive director that it considers to be independent but there is no explicit UK requirement to disclose independent non-executive directors in corporate communications of the Company other than its annual reports.

The following is a non-exhaustive summary of certain material requirements of Appendix 23 to the Hong Kong Listing Rules that, if the Company had not obtained the waiver referred to above, the Company would otherwise be subject to. The below list does not set out certain material differences between Appendix 23 to the Hong Kong Listing Rules and the UK Corporate Governance Code where the relevant Hong Kong requirements are included in another provision of Jersey or UK law or regulation (such as the UK Listing Rules) that are applicable to the Company or have been included in the Articles:

(a) the requirement for the Company to disclose, in its corporate governance report, whether the Company has adopted a code of conduct in relation to Directors' securities transactions, any non-compliance with such code of conduct and where there is non-compliance with such code of conduct, the remedial steps taken by the Company as required by paragraph 2(b) of Appendix 23 to the Hong Kong Listing Rules. The UK Listing Rules require the Company to adopt a code broadly commensurate with that contained in Appendix 23 to the Hong Kong Listing Rules, but there is no explicit requirement to identify non-compliance or remedial steps taken by the Company in its corporate governance report;

(b) the requirement for the Company to disclose, in its corporate governance report, whether there has been any non-compliance with Rules 3.10(1) and 3.10(2) of the Hong Kong Listing Rules and the remedial steps taken by the Company as required by paragraph 2(c)(v) of Appendix 23 to the Hong Kong Listing Rules. Under the UK Corporate Governance Code, at least half of the board, excluding the chairman, must be independent non-executive directors, and the Company's annual reports must identify each non-executive director which the board considers independent. However, strict compliance with these rules is not required and the Company may explain and justify any instances of non-compliance;

(c) the requirement for the Company to disclose, in its corporate governance report, the relationship (including financial, business, family or other material relationships), if any, among members of the Company's board as required by paragraph 2(c)(vi) of Appendix 23 to the Hong Kong Listing Rules; and

(d) the requirement for the Company to disclose, in its corporate governance report, an analysis of remuneration in respect of audit and non-audit services provided by the auditors as required by paragraph 2(h) of Appendix 23 to the Hong Kong Listing Rules.

## 20. DISCLOSURE OF INTERESTS

Part XV of the SFO imposes obligations on shareholders, directors and chief executives of listed companies to notify their interests in the listed company and for the listed company to prepare registers and maintain records.

Upon UK Admission, the Company, its Shareholders and its PDMRs will, under the UK Disclosure and Transparency Rules, be subject to the requirements to disclose: (i) any interests of its Directors (and persons discharging managerial responsibility) and (ii) the interests of its Shareholders who hold three per cent. or more of the Ordinary Shares (and for every subsequent 1 per cent. increase or decrease thereafter for so long as they hold more than 3 per cent.).

The Company has applied for, and the SFC has granted, a partial exemption under section 309(2) of the SFO from the requirements under Part XV of the SFO to prepare registers, maintain records or file disclosure of interests reports subject to the following conditions:

(a) the Company shall file with the Hong Kong Stock Exchange all disclosures of interests in the Company's securities made in the UK under the UK Disclosure and Transparency Rules on the basis that the Hong Kong Stock Exchange will publish these disclosures of interests in the same way as those received from other listed corporations pursuant to Part XV of the SFO;

(b) the Company shall report to the SFC within 10 Hong Kong business days after the end of each calendar month the percentage of that calendar month's average daily worldwide turnover of its Ordinary Shares that occurred on the Hong Kong Stock Exchange. The first such report to the SFC will cover the period from the date of HK Admission to the end of the month of HK Admission. This obligation to report to the SFC shall continue until the SFC advises to the Company that it no longer has to submit such reports to the SFC and in any case for no less than 12 months following HK Admission; and

(c) the Company shall advise the SFC if there is any material change in any of the information which the Company has given to the SFC in support of its application for a partial exemption under section 309(2) of the SFO from the requirements under Part XV of the SFO. Such material changes include: (i) any significant change in the disclosure obligations on Directors and Shareholders in the UK and (ii) any exemption or waiver granted in respect of such disclosure obligations in the UK.

## 21. TAKEOVERS AND REPURCHASES CODES

Section 4.1 of the Hong Kong Codes applies to takeovers, mergers and share repurchases affecting public companies in Hong Kong and companies with a primary listing in Hong Kong.

The Company has applied for, and the SFC has granted, a ruling that the Company is not a "public company" within the meaning of the Hong Kong Codes and that accordingly, the Hong Kong Codes shall not apply to the Company upon HK Admission.

This ruling may be reconsidered by the SFC in the event of a material change in information provided to the SFC, such as the location of the Company's head office and place of central management.

The Company is subject to the City Code, the UK Listing Rules and Jersey laws regarding takeovers, mergers and share repurchases. Further details are set out in the section headed "Summary of Certain Rules and Regulations Applicable to the Company" in this Wrap and Section X: "Additional Information" of the International Prospectus.

## 22. CONTENT REQUIREMENTS OF ARTICLES OF ASSOCIATION

Appendix 3 to the Hong Kong Listing Rules requires that the articles of association or equivalent document of a company listed on the Main Board of the Hong Kong Stock Exchange conform with the provisions set out in Appendix 3 to the Hong Kong Listing Rules (the "Articles Requirements").

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the following Articles Requirements.

### Restrictions on transfer

Articles Requirement 1(2) requires fully-paid shares to be free from any restriction on the right of transfer. The Company is subject to Jersey law which provides for certain statutory exceptions where transfer restrictions may be imposed on fully-paid shares.

Under Jersey law, shares of a listed Jersey incorporated company that are electronically traded must be free from all restrictions on transfer. However, there are certain statutory exceptions where transfer restrictions on fully-paid electronically traded shares are permitted and these include: (i) where the transfer is prohibited by a court order; (ii) where the company has actual notice that the transfer is to a

dead person; (iii) where the transfer is to a greater number of persons than is permitted under the terms of issue of the shares; and (iv) where the transfer is to an entity that is not a natural or legal person.

Following UK Admission, the Company will also be subject to UK Listing Rule 2.2.4. This requires, among other things, that a company's shares be fully-paid and free from all liens and from any restriction on the right of transfer (other than restrictions placed on the right of transfer where the relevant member of a company does not provide requested disclosures in relation to their interests in the company).

**Sealing of share certificates**

Articles Requirement 2(1) requires that all certificates for capital of the Company shall be under seal and that this seal may only be affixed with the authority of the Directors.

The Articles allow share certificates of the Company to be executed or authenticated by the Company by either: (i) affixing the seal of the Company onto the relevant share certificate; or (ii) having two Directors (or one Director and the Company Secretary) signing the relevant share certificate under hand.

**Conflict of Interest**

Articles Requirement 4(1) provides that a director of a company shall not vote on any board resolution approving any contract or arrangement or any other proposal in which he or she or any of his or her associates has a material interest (nor be counted in the quorum present at the meeting) unless the matter is subject to an exception contained in the company's articles of association that has been previously approved by the Exchange.

Jersey Companies Law does not impose restrictions on directors voting on transactions in which they are interested (although there is an obligation to disclose such interests and a general fiduciary duty to act in the best interests of the company as a whole).

The Articles provides for certain circumstances where a Director is entitled to vote on resolutions (and be counted in the quorum) despite him or her (or a person connected with him or her) having an interest in the relevant matter. Circumstances where a Director is entitled to vote on such resolutions (and be counted in the quorum) include: (i) where a Director is not aware of the interest; and (ii) where the matter relates to the giving of indemnities in favour of other Directors.

**Giving of notices to members with registered addresses outside Hong Kong**

Articles Requirement 7(3) provides that there should be no prohibition in a company's articles on the giving of notices to members whose registered addresses are outside Hong Kong.

The Articles provide that a member who has not supplied to the Company an address within Jersey, the United Kingdom or Hong Kong will be sent notices, documents or other information by electronic means.

Pursuant to the Articles, where a notice, document or information is sent or supplied by means of a website, the Company will notify the intended recipient of: (i) the presence of the notice, document or information on the website; (ii) the address of the website; (iii) the place on the website where it may be accessed; and (iv) how to access the notice, document or information. Such notification will be sent to the relevant Shareholder in hard copy form if that Shareholder has not consented to receiving communications in electronic form.

**Redeemable shares**

Articles Requirement 8 requires that redeemable shares that are purchased off-market be limited to a maximum price, and where the purchase is by way of tender, it is to be available to all shareholders alike. The Articles do not contain such a requirement, but following UK Admission, the Company will be subject to the UK Listing Rules.

UK Listing Rule 12.4 sets out certain requirements in connection with purchases by a company of its own shares (including its redeemable shares). In particular: (i) unless a tender offer is made to all holders of a class of shares, purchases by a company of less than 15 per cent. of any class of its equity shares (excluding treasury shares) pursuant to a general authority granted by its shareholders may only be made at a price that is not more than the higher of: (a) five per cent. of the average market value of the company's equity shares for the five business days prior to the day the purchase is made; and (b) the most recent independent trades; and (ii) any purchase of 15 per cent. or more of any class of a company's equity shares (excluding treasury shares) must be by way of a tender offer to all shareholders of that class.

UK Listing Rule 12.4 further sets out certain notification obligations on a company in respect of share repurchases. Further details are set out in the section headed "Summary of Certain Rules and Regulations Applicable to the Company—Summary of Applicable UK Listing Rules and UK Disclosure and Transparency Rules" in this Wrap.

**Impairment of rights arising from a failure to disclose interests**

Articles Requirement 12 states that a company's articles shall not contain any power to impair the rights attaching to the shares by reason only that a person interested in them has failed to disclose its interest in such shares.

Following UK Admission, Directors (and PDMRs) and Shareholders who hold 3 per cent. or more of the Ordinary Shares will be subject to disclosure obligations in relation to their interests (or past interests) in the Ordinary Shares under the UK Disclosure and Transparency Rules.

The Articles give the Company the ability to serve a disclosure notice on: (i) any person whom it knows, or has reasonable cause to believe, is either interested in the Company's shares or has been so interested at any time during the three years immediately preceding the date on which the disclosure notice is issued; or (ii) any Shareholder who, where it has come to the notice of the Directors, has not made the necessary notifications required by Chapter 5 of the UK Disclosure and Transparency Rules by the requisite time.

This disclosure notice may, among other things, require such person to provide details of their present and/or past interests in the Ordinary Shares.

The failure to provide the requested information within the time specified in the disclosure notice may make the holder of the relevant Ordinary Shares: (i) not entitled to attend or vote at a shareholders' meeting of the Company (either personally or by proxy) or exercise any other right afforded to members of the Company in relation to shareholders' meetings; and (ii) in certain circumstances, not entitled to receive any payment by way of dividend or to transfer any rights in the relevant Ordinary Shares, in each case for so long as the default continues. The UK Listing Rules only allow dividend payments and share transfers to be restricted in these circumstances where the relevant shareholder holds 0.25 per cent. or more of the shares of a particular class and this is reflected in the powers granted to the Company in the Articles.

See Section X: "Additional Information—Summary of the Articles of the Company—Disclosure of interests in shares" and Section X: "Additional Information—Summary of the Articles of the Company—Disclosures pursuant to the UK Disclosure and Transparency Rules" of the International Prospectus for further information.

## INFORMATION ABOUT THIS HONG KONG PROSPECTUS AND THE HONG KONG OFFER

### 1 DIRECTORS' RESPONSIBILITY FOR THE CONTENTS OF THIS HONG KONG PROSPECTUS

This Hong Kong Prospectus, for which the Directors collectively and individually accept full responsibility, includes particulars given in compliance with the Hong Kong Listing Rules, the Securities and Futures (Stock Market Listing) Rules (Chapter 571V of the Laws of Hong Kong) and the Companies Ordinance, for the purpose of giving information with regard to the Company. The Directors, having made all reasonable enquiries, confirm that to the best of their knowledge and belief the information contained in this Hong Kong Prospectus is accurate and complete in all material respects and not misleading or deceptive, and there are no other matters the omission of which would make any statement herein or this document misleading.

### 2 INFORMATION CONTAINED IN THIS HONG KONG PROSPECTUS

The Hong Kong Offer Shares are being made available solely on the basis of the information contained and representations made in this Hong Kong Prospectus. The Company has not authorised anyone to provide any information or to make any representation not contained in this Hong Kong Prospectus. You should not rely on any information or representation not contained in this Hong Kong Prospectus as having been authorised by the Company, the Joint Global Co-ordinators, the Joint Bookrunners and the Managers or any of their respective directors, officers or representatives or any other person involved in the Global Offer. Neither the delivery of this Hong Kong Prospectus nor any offering, sale or delivery made in connection with the Ordinary Shares should, under any circumstances, constitute a representation that there has been no change or development reasonably likely to involve a change in the Company's affairs since the date of this Hong Kong Prospectus or imply that the information contained in this Hong Kong Prospectus is correct as of any date subsequent to the date of this Hong Kong Prospectus.

### 3 THE HONG KONG OFFER

This Hong Kong Prospectus is published solely in connection with the Hong Kong Offer that forms part of the Global Offer, as described more fully in the section "Structure of the Global Offer" in this Wrap. For applicants under the Hong Kong Offer, this Hong Kong Prospectus and the Application Forms contain the terms and conditions of the Hong Kong Offer.

The application procedures for the Hong Kong Offer Shares are set out in the section "How to Apply for Hong Kong Offer Shares" in this Wrap and on the relevant Application Forms.

### 4 UNDERWRITING

The listing of, and permission to deal in, the Ordinary Shares on the Hong Kong Stock Exchange is sponsored by Citigroup Global Markets Asia Limited and Morgan Stanley Asia Limited and fully underwritten by the Hong Kong Managers pursuant to the Underwriting Agreement. Further details about the underwriting arrangements, including the conditions of the underwriting obligations of the Managers, the circumstances in which the underwriting obligations of the Managers will be terminated and the underwriting commission payable to the Managers, are contained in paragraph 16 (the Underwriting Agreement) of Section X: "Additional Information" of the International Prospectus.

The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the requirement of Rule 10.08 of the Hong Kong Listing Rules relating to further issues of securities. For further details, please refer to "Waivers and Exemptions from Hong Kong Laws and Regulations" in this Wrap.

### 5 APPLICATION FOR LISTING

The Company has applied to the Listing Committee of the Hong Kong Stock Exchange for the listing of, and permission to deal in, the Ordinary Shares in issue and to be issued as described in the Hong Kong Prospectus. Application has also been made to the FSA for the Ordinary Shares to be admitted to the Official List and to the London Stock Exchange and for such Ordinary Shares to be admitted to trading on the London Stock Exchange's main market for listed securities. Other than the London Stock Exchange and the Hong Kong Stock Exchange, no part of the Ordinary Shares is listed on or dealt in on any other stock exchange and no such listing or permission to list is being or proposed to be sought in the near future.

## 6 DEALINGS AND STAMP DUTY

Dealings in Ordinary Shares on the Hong Kong Stock Exchange and the London Stock Exchange will be conducted in Hong Kong dollars and pounds sterling respectively.

As no Sale Shares are being offered as part of the Hong Kong Offer, no stamp duty will be payable by applicants in respect of subscriptions under the Hong Kong Offer.

The transaction costs of dealings in the Ordinary Shares on the Hong Kong Stock Exchange include a Hong Kong Stock Exchange trading fee of 0.005%, an SFC transaction levy of 0.003%, transfer deed stamp duty of HK$5.00 per transfer deed and ad valorem stamp duty on both the buyer and the seller charged at the rate of 0.1% each of the consideration or, if higher, the fair value of the Ordinary Shares transferred. The brokerage commission in respect of trades of Ordinary Shares on the Hong Kong Stock Exchange is freely negotiable.

## 7 REGISTRATION OF SHARES

In accordance with Jersey law, the Principal Register is maintained in Jersey, and is maintained by the Principal Registrar. Glencore has established an overseas register of members in Hong Kong which will be maintained by the Hong Kong Share Registrar. The Hong Kong Branch Register may, in accordance with Jersey law, only include members who are resident in Hong Kong.

Shareholders (including nominee companies (such as HKSCC Nominees Limited) or others who hold as nominees) who have registered addresses in Hong Kong may elect to be registered on the Hong Kong Branch Register. All other Shareholders will be issued with Ordinary Shares registered on the Principal Register.

Certificates in respect of Ordinary Shares registered on the Hong Kong Branch Register will indicate that the Ordinary Shares are registered on the Hong Kong Branch Register.

Possible differences in the taxation consequences of holding shares on the different registers are set out in Section IX: "Taxation" of the International Prospectus.

## 8 TRANSFER OF SHARES BETWEEN THE PRINCIPAL REGISTER AND THE HONG KONG BRANCH REGISTER

Under the Articles, the Directors may make and vary regulations regarding branch registers, including transfers of shares between registers. The current regulations, which are subject to change, are set out below.

### Voluntary transfers

Any Shareholder whose Ordinary Shares are registered on the Principal Register may at any time obtain a form of request from the Principal Registrar for a transfer to the Hong Kong Branch Register. A form of request for transfer when completed should be returned together with the corresponding share certificates and administration fees to the Principal Registrar who will arrange for the transfer of such Ordinary Shares to the Hong Kong Branch Register, provided that the Shareholder concerned provides a registered address in Hong Kong.

Similarly, any Shareholder whose Ordinary Shares are registered on the Hong Kong Branch Register may at any time obtain a form of request from the Hong Kong Share Registrar for a transfer to the Principal Register. A form of request for transfer when completed should be returned together with the corresponding share certificates and administration fees to the Hong Kong Share Registrar who will arrange for the transfer of such Ordinary Shares to the Principal Register.

### Compulsory transfers

Any transfer of Ordinary Shares registered on the Hong Kong Branch Register to a Shareholder with a registered address outside Hong Kong will automatically result in the compulsory transfer of such Ordinary Shares from the Hong Kong Branch Register to the Principal Register. Such a Shareholder will be informed that his Ordinary Shares will be placed on the Principal Register and he will receive new share certificates from the Principal Registrar.

Similarly, if a Shareholder on the Hong Kong Branch Register ceases to have a registered address in Hong Kong following a change of address, his Ordinary Shares will be automatically transferred from the Hong

Kong Branch Register to the Principal Register. In such circumstances, the Shareholder is requested to return all relevant share certificates to the Hong Kong Share Registrar and the Principal Registrar will be instructed to issue new share certificates.

Transfer of Shares between the Principal Register and the Hong Kong Branch Register (in respect of Ordinary Shares held directly by Shareholders on that register) will generally take seven to eight business days for the Principal Registrar and the Hong Kong Share Registrar to process. Shareholders recorded on each share register can contact the respective registrar to request an expedited transfer service provided at the discretion and on terms offered by the respective share registrar. An expedited transfer will take approximately three to four business days to be completed.

## 9 HONG KONG MANAGERS' INTERESTS IN THE COMPANY

Save for their respective obligations under the Underwriting Agreement and/or as otherwise disclosed in this Hong Kong Prospectus, and, if applicable, any stock borrowing arrangement that may be entered into, none of the Managers is materially interested legally or beneficially in any shares of the Company or has any right or option (whether legally enforceable or not) to subscribe for or purchase or to nominate persons to subscribe for or purchase securities in the Company in the Global Offer.

Following the completion of the Global Offer, the Managers and/or their respective affiliated companies may hold a certain portion of the Ordinary Shares as a result of fulfilling their respective obligations under the Underwriting Agreement.

## 10 JOINT SPONSORS' INDEPENDENCE

Each of Citigroup Global Markets Asia Limited and Morgan Stanley Asia Limited satisfy the independence criteria applicable to sponsors as set out in Rule 3A.07 of the Hong Kong Listing Rules.

Citigroup Global Markets Asia Limited is a licensed corporation to conduct type 1 (dealing in securities), type 4 (advising on securities), type 6 (advising on corporate finance), type 7 (providing automated trading services) of the regulated activities as defined under the SFO.

Morgan Stanley Asia Limited is a licensed corporation to conduct type 1 (dealing in securities), type 4 (advising on securities), type 5 (advising on futures contracts), type 6 (advising on corporate finance), type 7 (providing automated trading services) and type 9 (asset management) of the regulated activities as defined under the SFO.

## 11 COMPLIANCE ADVISER

The Company has appointed Citigroup Global Markets Asia Limited as its compliance adviser pursuant to Rule 3A.19 of the Hong Kong Listing Rules. Pursuant to Rule 3A.23 of the Hong Kong Listing Rules, its compliance adviser will advise the Company in the following circumstances:

(i) before the publication of any regulatory announcement, circular or financial report;

(ii) where the Company proposes to use the proceeds of the Global Offer in a manner different from that detailed in this Hong Kong Prospectus or where the Company's business activities, developments or results deviate from any estimate or other information in this Hong Kong Prospectus; and

(iii) where the Hong Kong Stock Exchange makes an inquiry of the Company regarding unusual movements in the price or trading volume of the Ordinary Shares.

The term of appointment shall commence on the date of Admission and end on the date on which the Company distributes its annual report in respect of its financial results for the first full financial year commencing after the date of HK Admission and such appointment may be subject to extension by mutual agreement.

## 12 QUALIFICATIONS OF EXPERTS

The following are the qualifications of the experts who have given an opinion or advice which is contained in this Hong Kong Prospectus:

| Name | Qualification |
|---|---|
| Deloitte LLP | Reporting Accountants (a member firm of the Institute of Chartered Accountants in England and Wales) |
| Mourant Ozannes | Jersey Lawyers to the Company |
| Ogier | Jersey Lawyers to the Underwriters |
| McElroy Bryan Geological Services Pty Ltd. | Mineral Expert |
| Minarco-MineConsult Pty Ltd. | Mineral Expert |
| RPS Energy Limited | Mineral Expert |
| Golder Associates South Africa (Pty) Ltd. | Mineral Expert |
| Wardell Armstrong International Ltd. | Mineral Expert |

Each of the above experts has given and has not withdrawn its written consent to the issue of this Hong Kong Prospectus with the inclusion therein of its report(s) (if any) and the references to its name in the form and context in which they are included.

## 13 COMPANY SECRETARY, ASSISTANT COMPANY SECRETARY AND AUTHORISED REPRESENTATIVE

Prism Cosec Limited has been appointed as Company Secretary. The directors of Prism Cosec Limited are all Chartered Secretaries, each with more than 15 years' experience of company secretarial work in UK listed companies, often also working with Jersey incorporated companies.

Ms Soon Yuk Tai has been appointed as assistant Company Secretary. Ms. Soon, aged 44, is a director of the Corporate Services Division of Tricor Services Limited, a professional services provider. Ms. Soon is a Chartered Secretary and an Associate of both the Institute of Chartered Secretaries and Administrators in the United Kingdom and the Hong Kong Institute of Chartered Secretaries. Currently, Ms. Soon is the named secretary of China Minsheng Banking Corp., Ltd. (stock code: 1988), China Longyuan Power Group Corporation Limited (stock code: 916), Computime Group Limited (stock code: 320) and Maoye International Holdings Limited (stock code: 848), all of which are listed on the Main Board of the Hong Kong Stock Exchange.

Mark Catton has been appointed as the Company's authorised representative. Mr. Catton joined Glencore in May 1990 and is currently managing director of Glencore Singapore Pte. Ltd. Before joining Glencore, Mr. Catton worked at Coopers & Lybrand. Mr. Catton holds an Electrical and Electronic Engineering degree from Nottingham University.

## 14 PLACE OF BUSINESS AND REGISTRATION IN HONG KONG

The Company has set up a place of business in Hong Kong at Level 28, Three Pacific Place, Queen's Road East, Hong Kong and was registered with the Registrar of Companies in Hong Kong as a non-Hong Kong company under Part XI of the Companies Ordinance on 4 May 2011. Ms. Soon Yuk Tai of Level 28, Three Pacific Place, Queen's Road East, Hong Kong is authorised to accept service of process and notices on behalf of the Company in Hong Kong.

## 15 AUDITORS

Upon UK Admission, Deloitte AG, which forms part of Deloitte LLP, will be the Company's auditors. Deloitte AG is:

(a) regulated by the Swiss Financial Markets Supervisory Authority which is a signatory to the International Organization of Securities Commissions Multilateral Memorandum of Understanding that facilitates mutual cooperation and exchange of information for securities regulatory enforcement purposes; and

(b) regulated by the Swiss Institute of Certified Accountants and Tax Consultants, a member of the International Federation of Accountants.

The Company will prepare its accounts in accordance with IFRS. Deloitte AG will conduct their audit in accordance with International Auditing Standards.

## 16 WORKING CAPITAL

In the opinion of the Company, taking into account the net proceeds of the Global Offer receivable by the Company and Glencore's existing debt facilities, the working capital available to the Company and Glencore is sufficient for the Company and Glencore's present requirements, that is for the next 12 months following the date of this Hong Kong Prospectus.

## 17 RESTRICTIONS ON THE OFFER SHARES

No action has been taken to permit a public offering of the Hong Kong Offer Shares other than in Hong Kong, or the distribution of this Hong Kong Prospectus (other than the International Prospectus contained in it) in any jurisdiction other than Hong Kong. Accordingly, this Hong Kong Prospectus may not be used for the purpose of, and does not constitute, an offer or invitation in any jurisdiction or in any circumstances in which such an offer or invitation is not authorised or to any person to whom it is unlawful to make such an offer or invitation.

## 18 PROFESSIONAL TAX ADVICE RECOMMENDED

You should consult your professional advisers if you are in any doubt as to the taxation implications of subscribing for, purchasing, holding, disposing of and dealing in the Ordinary Shares. It is emphasised that none of the Company, the Joint Global Co-ordinators, the Joint Bookrunners and the Managers or any of their respective directors, officers or representatives or any other person involved in the Global Offer accepts responsibility for any tax effects or liabilities resulting from the subscription for, purchase, holding or disposing of, or dealing in, the Ordinary Shares or your exercise of any rights attaching to the Ordinary Shares.

## 19 DOCUMENTS DELIVERED TO THE COMPANIES REGISTRY IN HONG KONG AND MADE AVAILABLE FOR INSPECTION

The documents attached to the Hong Kong Prospectus delivered to the Companies Registry in Hong Kong for registration were:

(i) copies of the Application Forms;

(ii) the written consents referred to in the section headed "Qualifications of Experts" in this section of this Wrap;

(iii) copies of the material contracts referred to in paragraph 18 (Material Contracts) of Section X: "Additional Information" of the International Prospectus that forms part of this Hong Kong Prospectus; and

(iv) a statement of the name, address and description of the Selling Shareholder.

In addition, investors can access copies of the following legislation via the following websites:

(i) the Jersey Companies Law at www.JerseyLaw.je;

(ii) the UK Listing Rules at http://fsahandbook.info/FSA/html/handbook/LR; and

(iii) the UK Disclosure and Transparency Rules at http://fsahandbook.info/FSA/html/handbook/DTR.

Any information contained in, or that can be accessed via, the above websites is not incorporated in and does not constitute part of this Hong Kong Prospectus.

Copies of the following documents will be available for inspection at the offices of Linklaters at 10th Floor, Alexandra House, Chater Road, Central, Hong Kong during normal business hours up to and including the date which is 14 days from the date of this Hong Kong Prospectus:

(i) the Memorandum and the Articles;

(ii) the reports by Deloitte LLP dated the date of the Hong Kong Prospectus on the Company's historical financial information and unaudited pro forma financial information the texts of each of which are set out in this Wrap;

(iii) the audited consolidated financial statements of the Company and its subsidiaries for the years ended December 31 2008, 2009 and 2010;

(iv) the independent technical reports by the Competent Persons, the texts of which are set out in Section XIV: "Independent Technical Reports" of the International Prospectus;

(v) the material contracts referred to in paragraph 18 (Material Contracts) of Section X: "Additional Information" of the International Prospectus; and

(vi) the written consents dated the date of the Hong Kong Prospectus referred to in the section headed "Qualifications of Experts" in this section of this Wrap.

**20 LANGUAGE**

If there is any inconsistency between this Hong Kong Prospectus and the Chinese translation of this Hong Kong Prospectus, this Hong Kong Prospectus shall prevail. Names of any laws and regulations, governmental authorities, institutions, natural persons or other entities (including certain of the Company's subsidiaries) which have been translated into English and included in this Hong Kong Prospectus and for which no official English translation exists are unofficial translations for your reference only.

**21 BILINGUAL PROSPECTUS**

The English language and Chinese language versions of this Hong Kong Prospectus are being published separately, in reliance upon the exemption provided by section 4 of the Companies Ordinance (Exemptions of Companies and Prospectus from Compliance with Provisions) Notice (Chapter 32L of the Laws of Hong Kong).

**22 BINDING EFFECT**

This Hong Kong Prospectus shall have the effect, if an application is made in pursuance hereof, of rendering all persons concerned bound by all the provisions (other than the penal provisions) of sections 44A and 44B of the Companies Ordinance so far as practicable.

**23 NO MATERIAL CHANGE SINCE THE DATE OF THE INTERNATIONAL PROSPECTUS**

The Company confirms that, as at the date of this Hong Kong Prospectus, there has been no material change to the information set out in the International Prospectus dated 4 May 2011 that forms part of this Hong Kong Prospectus and such information remains true, accurate, complete in all material respects and not misleading in any material respect.

Each of McElroy Bryan Geological Services Pty Ltd, Minarco-MineConsult Pty Ltd, RPS Energy Limited, Golder Associates South Africa (Pty) Ltd and Wardell Armstrong International Ltd has confirmed that, as at the date of this Hong Kong Prospectus, there has been no material change to the information set out in its MER(s) dated 4 May 2011 contained in the International Prospectus that forms part of this Hong Kong Prospectus and such information remains true, accurate, complete in all material respects and not misleading in any material respect.

**24 WARNING**

This Hong Kong Prospectus is printed in two parts (comprising two separate volumes) that together form the Hong Kong Prospectus. You should read each part of the Hong Kong Prospectus in conjunction with the other part in order to understand the matters to which the Hong Kong Prospectus relates, particularly the Hong Kong Offer. Prospective investors should read each part of the Hong Kong Prospectus before making any application in response to the Hong Kong Offer. Copies of both parts of this Hong Kong Prospectus are available at the locations set out in the section headed "How to Apply for Hong Kong Offer Shares—Applying through White or Yellow Application Forms" in this Wrap. In addition, the complete Hong Kong Prospectus is available at www.hkexnews.hk and www.glencore.com.

This Hong Kong Prospectus is published solely in connection with the Hong Kong Offer that forms part of the Global Offer. Please refer to Section VIII: "Details of the Global Offer" in the International Prospectus for details of the Global Offer, including the International Offer and the Hong Kong Offer, the allocation and reallocation, over-allocation, stabilisation and pricing arrangements. However, please note the following additional information in relation to the Hong Kong Offer.

## 1 HONG KONG OFFER PRICE, BROKERAGE, SFC TRANSACTION LEVY AND HONG KONG STOCK EXCHANGE TRADING FEE

Prospective investors under the Hong Kong Offer should note that the Hong Kong Offer Shares are to be issued and purchased at the Hong Kong Offer Price not the International Offer Price (which is a pounds sterling price) or any Offer Price denominated in pounds sterling referred to in the International Prospectus. The Hong Kong Offer Price is expected to be not more than HK$79.18 per Hong Kong Offer Share and not less than HK$61.24 per Hong Kong Offer Share unless otherwise announced, as further explained below, or otherwise determined as a result of fluctuations in relevant exchange rates, as further explained below. Applicants under the Hong Kong Offer must pay, on application, the initial maximum price of HK$79.18 per Hong Kong Offer Share plus 1% brokerage, 0.003% SFC transaction levy and 0.005% Hong Kong Stock Exchange trading fee, amounting to a total of HK$7,997.82 per board lot of 100 Hong Kong Offer Shares. Prospective investors should be aware that the Hong Kong Offer Price to be determined on the Price Determination Date may be, but is not expected to be, higher or lower than the indicative offer price range stated in this Hong Kong Prospectus as further explained below.

## 2 REDUCTION OF HONG KONG OFFER PRICE BELOW THE INDICATIVE HONG KONG OFFER PRICE RANGE

The Joint Global Co-ordinators, on behalf of the Managers, may, where considered appropriate, based on the level of interest expressed by prospective professional and institutional investors during the book-building process, and with the consent of the Company, reduce the indicative Hong Kong Offer Price Range below that stated in this Hong Kong Prospectus at any time on or prior to the morning of the last day for lodging applications under the Hong Kong Offer. In such a case, the Company will, as soon as practicable following the decision to make such reduction, and in any event not later than the morning of the day which is the last day for lodging applications under the Hong Kong Offer, cause there to be published in the South China Morning Post (in English) and the Hong Kong Economic Times (in Chinese) notices of the reduction. Such notice will also be available at the website of the Hong Kong Stock Exchange at www.hkexnews.hk and the Company's website at www.glencore.com. Upon issue of such a notice, the revised Hong Kong Offer Price Range and/or number of Hong Kong Offer Shares will be final and conclusive and the Offer Price, if agreed upon by the Joint Global Co-ordinators, on behalf of the Managers and the Company, will be fixed within such revised Hong Kong Offer Price Range. Before submitting applications for the Hong Kong Offer Shares, applicants should have regard to the possibility that any announcement of a reduction in the number of Hong Kong Offer Shares and/or the indicative Hong Kong Offer Price range may not be made until the day which is the last day for lodging applications under the Hong Kong Offer. Such notice will also include confirmation or revision, as appropriate, of the working capital statement and the Global Offer statistics as currently set out in this Hong Kong Prospectus, and any other financial information which may change as a result of any such reduction. In the absence of any such notice so published, the number of Hong Kong Offer Shares will not be reduced and/or the Hong Kong Offer Price, if agreed upon with the Company, will not, other than in the circumstances specified under "Determination of the Hong Kong Offer Price" below, be set outside the Hong Kong Offer Price Range as stated in this Hong Kong Prospectus.

## 3. DETERMINATION OF HONG KONG OFFER PRICE

The Global Offer includes a simultaneous marketing of the Ordinary Shares under the Hong Kong Offer and the International Offer. The Hong Kong Offer Price Range and the Hong Kong Offer Price, which are/will be denominated in Hong Kong dollars, are/will be based on and calculated by reference to the International Offer Price Range and the International Offer Price, which are/will be denominated in pounds sterling. The mechanisms for determining the Hong Kong Offer Price Range and the Hong Kong Offer Price are set out below.

**Hong Kong Offer Price Range**

As disclosed in the International Prospectus, the International Offer Price Range per Offer Share is from 480 pence at the low end to 580 pence at the high end. The Hong Kong Offer Price Range has been calculated using the last practicable and (in the view of the Joint Global Co-ordinators acting reasonably) sufficiently liquid £/US$ spot exchange rate fixed hourly by WM/Reuters immediately prior to finalisation of the Hong Kong Prospectus multiplied by the US$/HK$ spot exchange rate published by Reuters at approximately the same time as the above £/US$ exchange rate is determined. In addition, the Hong Kong Offer Price Range is slightly wider than the International Offer Price Range as it includes a buffer of approximately seven per cent. at the high end to allow for any potential exchange rate fluctuation between Hong Kong dollars and pounds sterling, pounds sterling and U.S. dollars and U.S. dollars and Hong Kong dollars which may occur prior to the Price Determination Date.

**Determination of Hong Kong Offer Price**

The Price Determination Date, being the date on which the International Offer Price and the Hong Kong Offer Price are to be determined, is expected to be on or about 18 May 2011 (London time), and in any event, not later than 15 July 2011. The Hong Kong Offer Price shall be calculated using the last practicable and (in the view of the Joint Global Co-ordinators acting reasonably) sufficiently liquid £/US$ spot exchange rate fixed hourly by WM/Reuters immediately prior to the pricing and allocation decisions in relation to the Global Offer being made on the Price Determination Date multiplied by the US$/HK$ spot exchange rate published by Reuters at approximately the same time as the above £/US$ exchange rate is determined. The resulting price in Hong Kong dollars will be rounded to the nearest cent.

Institutional and professional investors participating in the International Offer and who elect to have their shares registered on the Hong Kong Branch Register shall, like investors who participate in the Hong Kong Offer, pay the Offer Price in Hong Kong dollars at the final Hong Kong Offer Price determined in the manner set out above.

Given the potential exchange rate fluctuation between Hong Kong dollars and pounds sterling, pounds sterling and U.S. dollars and U.S. dollars and Hong Kong dollars during the period between the publication of this Hong Kong Prospectus and the Price Determination Date, it is possible that the Hong Kong Offer Price, which is based on the pound sterling-denominated International Offer Price, may fall outside the Hong Kong Offer Price Range. If the final Hong Kong Offer Price falls outside the Hong Kong Offer Price Range solely as a result of exchange rate fluctuations between Hong Kong dollars and pounds sterling, pounds sterling and U.S. dollars or U.S. dollars and Hong Kong dollars in this period, the following arrangements will apply to the Hong Kong Offer. By lodging applications for the Hong Kong Offer Shares, applicants for Hong Kong Offer Shares will be deemed to have agreed that they are bound by these arrangements which shall form part of the terms of their applications:

*If the Hong Kong Offer Price is above the high end of the Hong Kong Offer Price Range:*

If the Hong Kong Offer Price is determined at above the high end of the Hong Kong Offer Price Range solely as a result of fluctuations in the exchange rates between Hong Kong dollars and pounds sterling, pounds sterling and U.S. dollars or U.S. dollars and Hong Kong dollars prior to the Price Determination Date, the Company will not issue a supplemental prospectus or re-launch the Hong Kong Offer, nor will applicants in the Hong Kong Offer be allowed to withdraw their applications.

In such an event and subject to the final basis of allocations in the Hong Kong Offer, successful applicants will be allocated the number of whole board lots of Ordinary Shares which is represented by (a) their application monies in respect of accepted applications, divided by the product of (b) the Hong Kong Offer Price and (c) the board lot size and will be refunded the balance of their application monies. **Applicants who intend to subscribe for a single board lot of the Hong Kong Offer Shares should note that they will not receive any allocation of Ordinary Shares in these circumstances as the amount of application monies they have submitted will be insufficient for one board lot of Ordinary Shares at the increased Hong Kong Offer Price.** Refunds in respect of the surplus application monies will be made without interest in accordance with the section "How to Apply for Hong Kong Offer Shares—Refund of Application Monies" in this Wrap.

*If the Hong Kong Offer Price is below the low end of the Hong Kong Offer Price Range:*

If the Hong Kong Offer Price is determined at below the low end of the Hong Kong Offer Price Range solely as a result of fluctuations in the exchange rates between Hong Kong dollars and pounds sterling,

pounds sterling and U.S. dollars or U.S. dollrs and Hong Kong dollars prior to the Price Determination Date, the Company will not issue a supplemental prospectus or re-launch the Hong Kong Offer, nor will applicants in the Hong Kong Offer be allowed to withdraw their applications.

In such an event and subject to the final basis of allocations in the Hong Kong Offer, successful applicants will be allocated the number of whole board lots of Ordinary Shares which is represented by (a) their application monies in respect of accepted applications, divided by the product of (b) the Hong Kong Offer Price and (c) the board lot size and will be refunded the balance of their application monies, provided that, the applicants shall in no circumstances be allocated more Ordinary Shares than they had initially applied for. Refunds in respect of the surplus application monies will be made without interest in accordance with the section "How to Apply for Hong Kong Offer Shares—Refund of Application Monies" in this Wrap.

The Company expects to inform investors of the Hong Kong Offer Price on the Hong Kong business day immediately after the Price Determination Date, currently expected to be 19 May 2011. An indication of the level of interest in the International Offer, the level of applications in the Hong Kong Offer, the basis of allotment of Hong Kong Offer Shares available under the Hong Kong Offer and the Hong Kong identity card/passport/business registration numbers of successful applications under the Hong Kong Offer are expected to be made available on 24 May 2011 in a variety of channels in the manner described in the section "How to Apply for Hong Kong Offer Shares—Publication of Results" in this Wrap.

## 4 ALLOCATION OF HONG KONG OFFER SHARES

Allocation of Hong Kong Offer Shares to investors under the Hong Kong Offer will be based solely on the level of valid applications received under the Hong Kong Offer.

The basis of allocation may vary, depending on the number of Hong Kong Offer Shares validly applied for by applicants. Such allocation could, where appropriate, consist of balloting, which could mean that some applicants may receive a higher allocation than others who have applied for the same number of Hong Kong Offer Shares, and those applicants who are not successful in the ballot may not receive any Hong Kong Offer Shares.

The total number of Hong Kong Offer Shares available under the Hong Kong Offer (after taking account of any reallocation referred to in Section VIII: "Details of the Global Offer — The Hong Kong Offer — Re-allocation of Shares between the Hong Kong Offer and the International Offer" in the International Prospectus) is to be divided into two pools for allocation purposes: pool A and pool B. Assuming no such reallocation occurs and subject to adjustment for odd lots, the Hong Kong Offer Shares in pool A will consist of 15,625,000 Hong Kong Offer Shares and will be allocated on an equitable basis to applicants who have applied for Hong Kong Offer Shares with an aggregate price of HK$5 million (excluding the brokerage, the SFC transaction levy and the Hong Kong Stock Exchange trading fee payable) or less. The Hong Kong Offer Shares in pool B will consist of 15,625,000 Hong Kong Offer Shares and will be allocated on an equitable basis to applicants who have applied for Hong Kong Offer Shares with an aggregate price of more than HK$5 million (excluding the brokerage, the SFC transaction levy and the Hong Kong Stock Exchange trading fee payable).

Investors should be aware that applications in pool A and applications in pool B may receive different allocation ratios. If Hong Kong Offer Shares in one (but not both) of the pools are under-subscribed, the surplus Hong Kong Offer Shares will be transferred to the other pool to satisfy demand in that other pool and be allocated accordingly. For the purpose of this paragraph 4 only, the "price" for Hong Kong Offer Shares means the price payable on application (without regard to the Hong Kong Offer Price as finally determined). If Offer Shares are reallocated to the Hong Kong Offer from the International Offer pursuant to the clawback requirements that apply to the Company as set out in this Hong Kong Prospectus, the additional Offer Shares reallocated to the Hong Kong Offer will be allocated between pool A and pool B and the number of Offer Shares allocated to the International Offer will be correspondingly reduced in such manner as the Joint Global Co-ordinators, together with the Company, deem appropriate.

Applicants can only receive an allocation of Hong Kong Offer Shares from either pool A or pool B but not from both pools. Multiple or suspected multiple applications under the Hong Kong Offer and any application for more than 15,625,000 Hong Kong Offer Shares, being the number of Hong Kong Offer Shares initially allocated to each pool, are to be rejected.

## 5 STABILISATION AND OVER-ALLOTMENT

Details of the stabilisation and over-allotment arrangements of the Global Offer can be found in Section VIII: "Details of the Global Offer — Stabilisation and over-allotment" in the International Prospectus.

In particular, stabilising actions permitted in Hong Kong pursuant to the Securities and Futures (Price Stabilizing) Rules include: (i) over-allocation for the purpose of preventing or minimizing any reduction in the market price of the Ordinary Shares; (ii) selling or agreeing to sell the Ordinary Shares so as to establish a short position in them for the purpose of preventing or minimizing any reduction in the market price of the Ordinary Shares; (iii) purchasing or subscribing for, or agreeing to purchase or subscribe for, the Shares pursuant to the Over-Allotment Option in order to close out any position established under (i) or (ii) above; (iv) purchasing, or agreeing to purchase, any of the Ordinary Shares for the sole purpose of preventing or minimizing any reduction in the market price of the Ordinary Shares; (v) selling or agreeing to sell any Ordinary Shares in order to liquidate any position held as a result of those purchases; and (vi) offering or attempting to do anything described in (ii), (iii), (iv) or (v). Stabilising actions by the Stabilising Manager, or any person acting for it, will be entered into in accordance with the laws, rules and regulations in place in Hong Kong on stabilisation.

Specifically, prospective applicants for and investors in the Ordinary Shares should note that:

- the Stabilising Manager, its affiliates or any person acting for it, may, in connection with the stabilising actions, maintain a long position in the Ordinary Shares;
- there is no certainty regarding the extent to which and the time period in which the Stabilising Manager, its affiliates or any person acting for it, will maintain such a position;
- liquidation of any such long position by the Stabilising Manager, its affiliates, or any person acting for it which may also take place during the stabilisation period, may have an adverse impact on the market price of the Ordinary Shares;
- no stabilising action can be taken to support the price of the Ordinary Shares for longer than the stabilising period which will, in London, begin on the date of commencement of conditional dealings in the Ordinary Shares on the London Stock Exchange and ending no later than 30 calendar days thereafter (expected to be 18 June 2011) and in Hong Kong, begin on the date of the admission and is expected to expire on 17 June 2011, being the 30th calendar day after the last date for lodging applications under the Hong Kong Offer. After this date, when no further stabilising action may be taken, demand for the Shares, and therefore the price of the Ordinary Shares, could fall;
- the price of the Ordinary Shares cannot be assured to stay at or above the Offer Price either during or after the stabilising period by the taking of any stabilising action; and
- stabilising bids may be made or transactions affected in the course of the stabilising actions at any price at or below the Offer Price, which means that stabilising bids may be made or transactions effected at a price below the price paid by applicants for, or investors in, the Ordinary Shares.

The Company will procure that a public announcement in compliance with the Securities and Futures (Price Stabilizing) Rules will be made within seven days of the expiration of the stabilising period.

## 6 PUBLICATION OF RESULTS

The final Hong Kong Offer Price, an indication of the level of interest in the International Offer, the basis of allotment of Hong Kong Offer Shares available under the Hong Kong Offer and the Hong Kong identity card/passport/business registration numbers of successful applicants under the Hong Kong Offer are expected to be made available through a variety of channels in the manner described in the section "How to Apply for Hong Kong Offer Shares—Publication of Results" in this Wrap.

## 7 CONDITIONS OF THE HONG KONG OFFER

Acceptance of applications for Hong Kong Offer Shares is conditional on:

(i) the Offer Price and the Hong Kong Offer Price being duly determined;

(ii) the International Offer becoming unconditional and not having been terminated in accordance with its terms and UK Admission taking place; and

(iii) the Listing Committee of the Hong Kong Stock Exchange granting approval for the listing of, and permission to deal in, all the Ordinary Shares in issue,

in each case as applicable on or before the dates and times specified in the Underwriting Agreement (unless and to the extent such conditions are validly waived on or before such dates and times) and in any event not later than 8:00 a.m. on 25 May 2011 (or such later time and date as the Company, the Selling Shareholder and the Joint Global Co-ordinators (on behalf of the Banks) may agree being no later than 31 July 2011).

If the above conditions are not fulfilled or waived prior to the times and dates specified, the Hong Kong Offer will lapse and the Hong Kong Stock Exchange will be notified immediately. Notice of the lapse of the Hong Kong Offer will be published by the Company in the South China Morning Post (in English) and the Hong Kong Economic Times (in Chinese) on the next day following such lapse. In such situation, all application monies will be returned, without interest, on the terms set forth in the section "How to Apply for Hong Kong Offer Shares—Refund of Application Monies" in this Wrap. In the meantime, all application monies will be held in separate bank account(s) with the receiving banks or other bank(s) licensed under the Banking Ordinance (Chapter 155 of the Laws of Hong Kong).

## 1 HOW TO APPLY

You may apply for the Hong Kong Offer Shares by using one of the following three channels:

- using a **WHITE** or **YELLOW** Application Form;
- using the **White Form eIPO** service by applying online through the designated website of the White Form eIPO Service Provider, www.eipo.com.hk; or
- **electronically instructing** HKSCC to cause HKSCC Nominees to apply for Hong Kong Offer Shares on your behalf.

You may either:

- apply for the Hong Kong Offer Shares under the Hong Kong Offer; or
- apply for or indicate an interest for the International Offer Shares under the International Offer,

but you may not do both.

The Company, the Joint Global Co-ordinators or the White Form eIPO Service Provider (where applicable) or the Company's or their respective agents, have full discretion to reject or accept any application, in full or in part, without assigning any reason.

## 2 WHO CAN APPLY

You can apply for the Hong Kong Offer Shares on a **WHITE** or **YELLOW** Application Form or by **electronically instructing** HKSCC via CCASS if you or any person(s) for whose benefit you are applying are an individual, and:

- are 18 years of age or older;
- have a Hong Kong address;
- are outside the U.S. and are not a U.S. Person (as defined in Regulation S); and
- are not a legal or natural person of the PRC.

If you wish to apply for Hong Kong Offer Shares online through the **White Form eIPO** service, in addition to the above you must also:

- have a valid Hong Kong identity card number; and
- be willing to provide a valid e-mail address and a contact telephone number.

If the applicant is a firm, the application must be in the names of the individual members, not the firm's name. If the applicant is a body corporate, the application must be stamped with the company chop (bearing the company name) and be signed by a duly authorised officer, who must state his or her representative capacity. If an application is made by a person duly authorised under a valid power of attorney, the Joint Global Co-ordinators (or their agents or nominees) may accept it at their discretion, and subject to any conditions they think fit, including production of evidence of the authority of the attorney. The number of joint applicants may not exceed four. Joint applicants may not apply by means of **White Form eIPO**.

The Hong Kong Offer Shares are not available to existing beneficial owners of Ordinary Shares or the shares of any of the subsidiaries of the Company, the Directors or the Company's chief executive officer, the directors or chief executive officer of any of the Company's subsidiaries, or their respective associates or any other connected persons of the Company or persons who will become the Company's connected persons immediately upon completion of the Global Offer.

## 3 APPLYING USING AN APPLICATION CHANNEL

Use a **WHITE** Application Form if you want the Hong Kong Offer Shares registered in your own name.

Use a **YELLOW** Application Form if you want the Hong Kong Offer Shares registered in the name of HKSCC Nominees and deposited directly into CCASS for credit to your CCASS Investor Participant stock account or your designated CCASS Participant's stock account.

Instead of using a **WHITE** Application Form, you can apply for the Hong Kong Offer Shares through the **White Form eIPO** service by submitting an application online through the designated website of the White Form eIPO Service Provider at www.eipo.com.hk. Further details about applying through the **White Form eIPO** service are set out below.

Instead of using a **YELLOW** Application Form, you may **electronically instruct** HKSCC via CCASS to cause HKSCC Nominees to apply for Hong Kong Offer Shares on your behalf. Any Hong Kong Offer Shares allocated to you will be registered in the name of HKSCC Nominees and deposited directly into CCASS for credit to your CCASS Investor Participant's stock account or your designated CCASS Participant's stock account. Further details about **electronically instructing** HKSCC via CCASS are set out below.

## 4 APPLYING THROUGH WHITE OR YELLOW APPLICATION FORMS

You can collect a **WHITE** Application Form and a copy of this Hong Kong Prospectus during normal business hours:

You can collect a **YELLOW** Application Form and a copy of this Hong Kong Prospectus during normal business hours from 9:00 a.m. on 13 May 2011 until 12:00 noon on 18 May 2011 from the depository counter of HKSCC at 2nd Floor, Infinitus Plaza, 199 Des Voeux Road Central, Hong Kong.

Your stockbroker may also have the **WHITE** or **YELLOW** Application Forms and copies of this Hong Kong Prospectus available.

If you are an individual and satisfy the relevant criteria set out in paragraph headed "Who can Apply" in this section, you may apply through completed **WHITE** or **YELLOW** Application Forms, with a cheque or banker's cashier order attached, must be lodged by 12:00 noon on Wednesday, 18 May 2011, or, if the Application Lists are not open on that day, by the time and date stated in the paragraph headed "How to Apply for Hong Kong Offer Shares—Effect of Bad Weather Conditions on the Opening of the Application Lists" in this section. Your completed **WHITE** or **YELLOW** Application Form, with payment attached, should be deposited in the special collection boxes provided at any of the branches of the banks listed above in this section at the following times:

| | |
|---|---|
| 13 May 2011 | 9:00 a.m. to 5:00 p.m. |
| 14 May 2011 | 9:00 a.m. to 1:00 p.m. |
| 16 May 2011 | 9:00 a.m. to 5:00 p.m. |
| 17 May 2011 | 9:00 a.m. to 5:00 p.m. |
| 18 May 2011 | 9:00 a.m. to 12:00 noon |

## 5 APPLYING THROUGH THE WHITE FORM eIPO SERVICE

### General

If you are an individual and satisfy the relevant criteria set out in paragraph headed "Who can Apply" in this section, you may apply through the **White Form eIPO** service by submitting an application through the designated website of the White Form eIPO Service Provider at www.eipo.com.hk. If you apply through the **White Form eIPO** service, the Ordinary Shares will be registered in your own name.

Detailed instructions for applying through the **White Form eIPO** service are set out on the designated website of the White Form eIPO Service Provider at www.eipo.com.hk. You should read these instructions carefully. If you do not follow the instructions, your application may be rejected by the White Form eIPO Service Provider and may not be submitted to the Company.

In addition to the terms and conditions set out in this Hong Kong Prospectus, the White Form eIPO Service Provider may impose additional terms and conditions upon you for the use of the **White Form eIPO** service. Such terms and conditions are set out on the designated website at www.eipo.com.hk. You will be required to read, understand and agree to such terms and conditions in full prior to making any application. If you give electronic application instructions through the designated website at www.eipo.com.hk, you will have authorised the White Form eIPO Service Provider to apply on the terms and conditions set out in this Hong Kong Prospectus, as supplemented and amended by the terms and conditions applicable to the **White Form eIPO** service.

By submitting an application to the White Form eIPO Service Provider through the **White Form eIPO** service, you are deemed to have authorised the White Form eIPO Service Provider to transfer the details of your application to the Company, the Joint Global Co-ordinators and the Hong Kong Share Registrar. For the purposes of allocating Hong Kong Offer Shares, each applicant giving electronic application instructions through the **White Form eIPO** service to the White Form eIPO Service Provider through the designated website at www.eipo.com.hk will be treated as an applicant.

### Minimum Subscription Amount and Permitted Numbers

You may submit an application through the **White Form eIPO** service in respect of a minimum of 100 Hong Kong Offer Shares. Each application in respect of more than 100 Hong Kong Offer Shares must be in one of the numbers set out in the table in the Application Forms, or as otherwise specified on the designated website at www.eipo.com.hk. No application for any other number of Hong Kong Offer Shares will be considered and any such application is liable to be rejected.

### Deadline for Submission

You may submit an application through the **White Form eIPO** service from 9:00 a.m. on 13 May 2011 until 11:30 a.m. on 18 May 2011 or such later time as described under the paragraph headed "How to Apply for Hong Kong Offer Shares—Effect of Bad Weather on the Opening of the Applications Lists" in this section (24 hours daily, except on the last application day). The latest time for completing full payment of application monies in respect of such application will be 12:00 noon on 18 May 2011, the last application day, or, if the application lists are not open on that day, then by the time and date described under the paragraph headed "How to Apply for Hong Kong Offer Shares—Effect of Bad Weather on the Opening of the Application Lists" in this section. If you have already submitted your application and obtained an application reference number from the website prior to 11:30 a.m., you will be permitted to continue the application process (by completing payment of application monies) until 12:00 noon on the last day for submitting applications, when the application lists close. If you do not make complete payment of the application monies (including any related fees) on or before 12:00 noon on 18 May 2011, or such later time as described under the paragraph headed "How to Apply for Hong Kong Offer Shares—Effect of Bad Weather on the Opening of the Application Lists" in this section, the White Form eIPO Service Provider will reject your application and your application monies will be returned to you in the manner described on the designated website at www.eipo.com.hk.

### No Multiple Applications

If you apply by means of the **White Form eIPO** service, once you complete payment in respect of any application given by you or for your benefit, an actual application shall be deemed to have been made. For the avoidance of doubt, submitting an application under the **White Form eIPO** service more than once and obtaining different application reference numbers without effecting full payment in respect of a particular reference number will not constitute an actual application.

If you are suspected of submitting more than one application through the **White Form eIPO** service by submitting multiple applications through the designated website at www.eipo.com.hk and completing payment in respect of such applications, or of submitting one application through the **White Form eIPO** service and one or more applications by any other means, all of your applications are liable to be rejected.

**Refunds**

If your payment of application monies is insufficient, or in excess of the required amount, having regard to the number of Hong Kong Offer Shares for which you have applied, or if your application is otherwise rejected by the White Form eIPO Service Provider, the White Form eIPO Service Provider may adopt alternative arrangements for the refund of monies to you. Please refer to the additional information provided by the White Form eIPO Service Provider on the designated website at www.eipo.com.hk.

Otherwise, any monies payable to you due to a refund for any of the reasons set out below in the paragraph headed "How to Apply for Hong Kong Offer Shares—Refund of Application Monies" in this section will be refunded to you in accordance with the requirements set out in that section.

**Environmental Protection**

The obvious advantage of **White Form eIPO** is to save the use of papers via the self-serviced and electronic application process. Computershare Hong Kong Investor Services Limited, being the designated White Form eIPO Service Provider, will contribute HK$2 for each "GLENCORE INTERNATIONAL PLC." **White Form eIPO** application submitted via www.eipo.com.hk to support the funding of "Source of DongJiang—Hong Kong Forest" project initiated by Friends of the Earth (HK).

**Warning**

The application for Hong Kong Offer Shares through the **White Form eIPO** service is only a facility provided by the White Form eIPO Service Provider to public investors. The Company, the Directors, the Joint Global Co-ordinators, the Joint Bookrunners, the Managers and the Hong Kong Share Registrar take no responsibility for such applications, and provide no assurance that applications through the **White Form eIPO** service will be submitted to the Company or that you will be allotted any Hong Kong Offer Shares.

Please note that Internet services may have capacity limitations and/or be subject to service interruptions from time to time. To ensure that you can submit your application through the **White Form eIPO** service, you are advised not to wait until the last day for submitting applications in the Hong Kong Offer to submit your electronic application instructions. In the event that you have problems connecting to the designated website for the **White Form eIPO** service, you should submit a **WHITE** or **YELLOW** Application Form. However, once you have submitted electronic application instructions through the **White Form eIPO** service and completed payment in full using the application reference number provided to you on the designated website, you will be deemed to have made an actual application and should not submit a **WHITE** or **YELLOW** Application Form nor give electronic instructions to HKSCC via CCASS.

**Additional Information for Applying Through White Form eIPO Service**

For the purposes of allocating Hong Kong Offer Shares, each applicant giving electronic application instructions through the **White Form eIPO** service to the White Form eIPO Service Provider through the designated website at www.eipo.com.hk will be treated as an applicant.

If your payment of application monies is insufficient, or in excess of the required amount, having regard to the number of Hong Kong Offer Shares for which you have applied, or if your application is otherwise rejected by the designated White Form eIPO Service Provider, the designated White Form eIPO Service Provider may adopt alternative arrangements for the refund of monies to you. Please refer to the additional information provided by the designated White Form eIPO Service Provider on the designated website at www.eipo.com.hk.

## 6 APPLYING BY GIVING ELECTRONIC APPLICATION INSTRUCTIONS TO HKSCC VIA CCASS

**General**

CCASS Participants may give **electronic application instructions** to HKSCC to apply for the Hong Kong Offer Shares and to arrange payment of the monies due on application and payment of refunds. This will be in accordance with their participant agreements with HKSCC and the General Rules of CCASS and the CCASS Operational Procedures.

If you are a CCASS Investor Participant, you may give **electronic application instructions** through the CCASS Phone System by calling 2979 7888 or through the CCASS Internet System (https://ip.ccass.com) (using the procedures contained in HKSCC's "An Operating Guide for Investor Participants" in effect from time to time). Those who are not CCASS Investor Participants can instruct their brokers or custodians who are CCASS Clearing Participants or CCASS Custodian Participants to give **electronic application instructions** to HKSCC through CCASS terminals to apply for Hong Kong Offer Shares.

HKSCC can also input **electronic application instructions** for you if you go to the customer service center of HKSCC at 2/F Infinitus Plaza, 199 Des Voeux Road Central, Hong Kong, and complete an input request form. Copies of the Hong Kong Prospectus are available for collection from the customer service center.

By giving **electronic application instructions** to HKSCC, you are deemed to have authorised HKSCC and/or HKSCC Nominees to transfer the details of your application, whether submitted by you or through your broker or custodian, to the Company, the Joint Global Co-ordinators and the Hong Kong Share Registrar. For the purposes of allocating Hong Kong Offer Shares, HKSCC or HKSCC Nominees will not be treated as an applicant. Instead, each CCASS Participant who gives **electronic application instructions** or each person for whose benefit each such instructions is given will be treated as an applicant.

**Minimum Subscription Amount and Permitted Numbers**

You may give or cause your broker or custodian who is a CCASS Clearing Participant or a CCASS Custodian Participant to give **electronic application instructions** in respect of a minimum of 100 Hong Kong Offer Shares. Each instruction in respect of more than 100 Hong Kong Offer Shares must be in one of the numbers set out in the table in the Application Forms. No application for any other number of Hong Kong Offer Shares will be considered and any such application is liable to be rejected.

**Deadline for Submission**

CCASS Clearing/Custodian Participants can input **electronic application instructions** at the following times on the following dates:

- 13 May 2011 9:00 a.m. to 8:30 p.m.(1)
- 14 May 2011 8:00 a.m. to 1:00 p.m.(1)
- 16 May 2011 8:00 a.m. to 8:30 p.m.(1)
- 17 May 2011 8:00 a.m. to 8:30 p.m.(1)
- 18 May 2011 8:00 a.m.(1) to 12:00 noon

Note:

(1) These times are subject to change as HKSCC may determine from time to time with prior notification to CCASS Clearing/Custodian Participants.

CCASS Investor Participants can input **electronic application instructions** from 9:00 a.m. on 13 May 2011 until 12:00 noon on 18 May 2011 (24 hours daily, except the last application day).

The latest time for inputting your **electronic application instructions** will be 12:00 noon on 18 May 2011, the last application day or such later time as described in the paragraph headed "How to Apply for Hong Kong Offer Shares—Effect of Bad Weather on the Opening of the Application Lists" in this section.

**No Multiple Applications**

Any **electronic application instructions** to make an application for the Hong Kong Offer Shares given by you or for your benefit to HKSCC shall be deemed to be an actual application. If you are suspected of having made multiple instructions or if more than one application is made for your benefit, the number of Hong Kong Offer Shares applied for by HKSCC Nominees will be automatically reduced by the number of Hong Kong Offer Shares in respect of which you have given such instructions and/or in respect of which such instructions have been given for your benefit.

**Section 40 of the Companies Ordinance**

For the avoidance of doubt, the Company and all other parties involved in the preparation of this Hong Kong Prospectus acknowledge that each CCASS Participant who gives or causes to give **electronic application instructions** is a person who may be entitled to compensation under Section 40 of the Companies Ordinance (as applied by Section 342E of the Companies Ordinance).

**Warning**

The subscription of the Hong Kong Offer Shares by giving **electronic application instructions** to HKSCC is only a facility provided to CCASS Participants. The Company, the Directors, the Joint Global Co-ordinators, the Joint Bookrunners and the Managers take no responsibility for the application and provide no assurance that any CCASS Participant will be allotted any Hong Kong Offer Shares.

To ensure that CCASS Investor Participants can give their **electronic application instructions** to HKSCC through the CCASS Phone System or the CCASS Internet System, CCASS Investor Participants are advised not to wait until the last minute to input their **electronic application instructions** to the systems. In the event that CCASS Investor Participants have problems connecting to the CCASS Phone System or the CCASS Internet System to submit their **electronic application instructions**, they should either: (i) submit a **WHITE** or **YELLOW** Application Form; or (ii) go to HKSCC's customer service center to complete an input request form for **electronic application instructions** before 12:00 noon on 18 May 2011, or such later time as described in the paragraph headed "How to Apply for Hong Kong Offer Shares—Effect of Bad Weather on the Opening of the Application Lists" in this section.

## 7 TERMS AND CONDITIONS OF AN APPLICATION

There are detailed instructions on each Application Form and on the designated website at www.eipo.com.hk. You should read and follow these instructions carefully. If you do not strictly follow the instructions, your application may be rejected.

By completing and submitting a **WHITE** or **YELLOW** Application Form or applying through the **White Form eIPO** service or by giving **electronic application instructions**, among other things you (or HKSCC Nominees on behalf of you):

**(a)** agree with the Company and each of its shareholders, and the Company agrees with each of its shareholders, to observe and comply with the Companies Ordinance, to the extent applicable, the Jersey Companies Law and the Articles;

**(b)** confirm that you have read the terms and conditions and application procedures set out in this Hong Kong Prospectus and the **WHITE** or **YELLOW** Application Form (if applicable) (and in the case of an application through the **White Form eIPO** service, the terms and conditions of the **White Form eIPO** designated website at www.eipo.com.hk) and agree to be bound by them;

**(c)** confirm that you have received and/or read both parts (printed in two separate volumes) of this Hong Kong Prospectus (and in the case of an application through the **White Form eIPO** service, the terms and conditions of the **White Form eIPO** designated website at www.eipo.com.hk) and have only relied on the information and representations contained in this Hong Kong Prospectus (and in the case of an application through the **White Form eIPO** service, the **White Form eIPO** designated website at www.eipo.com.hk) in making your application and will not rely on any other information or representations save as set out in any supplement to this Hong Kong Prospectus;

**(d)** agree that none of the Company, the Joint Global Co-ordinators, the Joint Bookrunners, the Managers, their respective directors, officers, employees, partners, agents, advisers and any other parties involved in the Global Offer is or will be liable for any information and representations not contained in this Hong Kong Prospectus and any supplement thereto (and only then to the extent such liability is held to exist by a court with competent jurisdiction);

**(e)** undertake and confirm that you or the person(s) for whose benefit you have made the application have not applied for or taken up, or indicated an interest for, and will not apply for or take up, or indicate an interest for, any International Offer Shares under the International Offer nor otherwise participated in the International Offer;

**(f)** (if the application is made for your own benefit) warrant that this is the only application which has been or will be made for your benefit on a **WHITE** or **YELLOW** Application Form or by giving **electronic application instructions** to HKSCC or through the **White Form eIPO** service (www.eipo.com.hk);

**(g)** (if you are an agent for another person) warrant that reasonable enquiries have been made of that other person that this is the only application which has been or will be made for the benefit of that other person on a **WHITE** or **YELLOW** Application Form or by giving **electronic application instructions** to HKSCC or through the **White Form eIPO** service and that you are duly authorised to

sign the Application Form or apply through the **White Form eIPO** service or give **electronic application instructions** as that other person's agent;

**(h)** (if the application is made by an agent on your behalf) warrant that you have validly and irrevocably conferred on your agent all necessary power and authority to make the application;

**(i)** agree to disclose to the Company, the Hong Kong Share Registrar, receiving banks, the Joint Global Co-ordinators, the Managers and/or their respective advisers and agents any personal data which they may require about you and the person(s) for whose benefit you have made the application;

**(j)** instruct and authorise the Company and/or the Joint Global Co-ordinators (or their agents or nominees), as agents of the Company, to execute any documents on your behalf and to do on your behalf all things necessary to effect the registration of any Hong Kong Offer Shares allocated to you in your name(s) or in the name of HKSCC Nominees, as the case may be, required by the Articles, and otherwise to give effect to the arrangements described in this Hong Kong Prospectus, the Application Forms and the **White Form eIPO** designated website at www.eipo.com.hk (as the case may be);

**(k)** undertake to sign all documents and to do all things necessary to enable you or HKSCC Nominees, as the case may be, to be registered as the holder of the Hong Kong Offer Shares to be allocated to you, and as required by the Articles;

**(l)** if the laws of any place outside Hong Kong are applicable to your application, agree and warrant that you have complied with all such laws and that none of the Company, the Joint Global Co-ordinators and the Managers nor any of their respective directors, officers or advisers will infringe any law outside Hong Kong as a result of the acceptance of your offer to subscribe, or any action arising from your rights and obligations under the terms and conditions contained in this Hong Kong Prospectus;

**(m)** agree with the Company and each Shareholder that the Ordinary Shares are freely transferable by the holders thereof;

**(n)** confirm that you are aware of the restrictions on the Global Offer disclosed in this Hong Kong Prospectus;

**(o)** agree (without prejudice to any other rights which you may have) that once your application has been accepted, you may not rescind it because of a misrepresentation;

**(p)** agree that the application, any acceptance of it and the resulting contract will be governed by and construed in accordance with the laws of Hong Kong;

**(q)** represent, warrant and undertake that you are not, and none of the other person(s) for whose benefit you are applying, is a United States person (as defined in Regulation S);

**(r)** represent, warrant and undertake that you understand that the Hong Kong Offer Shares have not been and will not be registered under the U.S. Securities Act of 1933, as amended (the "U.S. Securities Act") and you and any person for whose account or benefit you are applying for the Hong Kong Offer Shares are outside the United States (as defined in Regulation S) when completing and submitting any Application Form or applying through the **White Form eIPO** service, and will be acquiring the Hong Kong Offer Shares in an offshore transaction (as defined in Regulation S under the U.S. Securities Act);

**(s)** warrant the truth and accuracy of the information contained in the application;

**(t)** undertake and agree to accept the Hong Kong Offer Shares applied for, or any lesser number allocated under the application;

**(u)** acknowledge that the Hong Kong Offer Price may fall outside of the Hong Kong Offer Price Range as a result of fluctuations in the exchange rates between pounds sterling and Hong Kong dollars, pounds sterling and U.S. dollars or U.S. dollars and Hong Kong dollars prior to the Price Determination Date and agree that in such circumstances you will, if your application is accepted, be bound to purchase at the Hong Kong Offer Price the Ordinary Shares that are allocated to you;

**(v)** authorise the Company to place your name(s) on the application or the name of the HKSCC Nominees, as the case may be, on the Hong Kong Branch Register as the holder(s) of any Hong Kong Offer Shares allocated, and the Company or its agents to send any share certificate(s) and/or any refund cheque(s) to you (or in case of joint applicants, the first-named applicant) by ordinary post at your own risk to the address stated on the application, except that if you have applied for 1,000,000 or more Hong Kong Offer Shares and have indicated in the relevant application that you will collect the

share certificate(s) and/or refund cheque(s) in person, you may do so in the manner as described in the paragraph headed "How to Apply for Hong Kong Offer Shares—Despatch/Collection of Share Certificates and Refund Monies" in this section or such other date as notified by the Company in the newspapers as the date of despatch or collection of share certificates/e-Refund payment instructions/ refund cheques;

**(w)** authorise the Company to enter into a contract on your behalf with each of the Directors and officers whereby each such Director and officer undertakes to observe and comply with their obligations to Shareholders, as stipulated in the Articles; and

**(x)** understand that these declarations and representations will be relied upon by the Company and the Joint Global Co-ordinators in deciding whether or not to allocate any Hong Kong Offer Shares in response to the application and you may be prosecuted for making a false declaration.

**Additional Terms and Conditions for YELLOW Application Forms**

If you apply for the Hong Kong Offer Shares using a **YELLOW** Application Form, in addition to the confirmations and agreements referred to above, you agree that:

**(a)** any Hong Kong Offer Shares allocated to you shall be registered in the name of HKSCC Nominees and deposited directly into CCASS operated by HKSCC for credit to your CCASS Investor Participant stock account or the stock account of your designated CCASS Participant, in accordance with your election on the Application Form;

**(b)** each of HKSCC and HKSCC Nominees reserves the right (1) not to accept any or part of such allotted Hong Kong Offer Shares issued in the name of HKSCC Nominees or not to accept such allotted Hong Kong Offer Shares for deposit into CCASS; (2) to cause such allotted Hong Kong Offer Shares to be withdrawn from CCASS and transferred into your name at your own risk and costs; and (3) to cause such allotted Hong Kong Offer Shares to be issued in your name (or, if you are a joint applicant, to the first-named applicant) and in such a case, to post the share certificates for such allotted Hong Kong Offer Shares at your own risk to the address on your Application Form by ordinary post or to make available the same for your collection;

**(c)** each of HKSCC and HKSCC Nominees may adjust the number of allotted Hong Kong Offer Shares issued in the name of HKSCC Nominees;

**(d)** neither HKSCC nor HKSCC Nominees shall have any liability for the information and representations not so contained in this Hong Kong Prospectus and the Application Form; and

**(e)** neither HKSCC nor HKSCC Nominees shall be liable to you in any way.

In order for a **YELLOW** Application Form to be valid, you, as an applicant, must complete the Application Form as indicated below and sign on the first page of the Application Form. Only written signatures will be accepted. Incorrect or incomplete details of the CCASS Participant or the omission or inadequacy of the participant I.D. or other similar matters may render the application invalid.

**(a) If the application is made through a designated CCASS Participant (other than a CCASS Investor Participant):**

the designated CCASS Participant must endorse the Application Form with its company chop (bearing its company name) and insert its participant I.D. in the appropriate box in the Application Form.

**(b) If the application is made by an individual CCASS Investor Participant:**

(i) the Application Form must contain the CCASS Investor Participant's name and Hong Kong identity card number; and

(ii) the CCASS Investor Participant must insert its participant I.D. in the appropriate box in the Application Form.

**(c) If the application is made by a joint individual CCASS Investor Participant:**

(i) the Application Form must contain all joint CCASS Investor Participants' names and the Hong Kong identity card number of all joint CCASS Investor Participants; and

(ii) the participant I.D. must be inserted in the appropriate box in the Application Form.

**(d) If the application is made by a corporate CCASS Investor Participant:**

(i) the Application Form must contain the CCASS Investor Participant's company name and Hong Kong business registration number; and

(ii) the participant I.D. and company chop (bearing its company name) must be inserted in the appropriate box in the Application Form.

**Additional Terms and Conditions for Electronic Application Instructions**

By giving **electronic application instructions** to HKSCC or instructing a broker or custodian who is a CCASS Clearing Participant or a CCASS Custodian Participant to give such instructions to HKSCC, in addition to the confirmations and agreements referred to above, the persons who have given **electronic application instructions** (and, if they are joint applicants, each of them jointly and severally) are taken to:

**(a)** agree that HKSCC Nominees is only acting as a nominee for that person and shall not be liable for any breach of the terms and conditions of the **WHITE** Application Form or this Hong Kong Prospectus;

**(b)** agree to the arrangements, undertakings and warranties specified in the participant agreement between that person and HKSCC, read with the General Rules of CCASS and the CCASS Operational Procedures, in respect of the giving of **electronic application instructions** relating to Hong Kong Offer Shares;

**(c)** agree that the section of the **WHITE** Application Form entitled "Personal Data" applies to any personal data held by the Company and the Hong Kong Share Registrar about that person in the same way as it applies to personal data about applicants other than HKSCC Nominees;

**(d)** instruct and authorise HKSCC to cause HKSCC Nominees (acting as nominee for the relevant CCASS Participants) to apply for the Hong Kong Offer Shares on that person's behalf;

**(e)** instruct and authorise HKSCC to arrange payment of the maximum Offer Price, brokerage, SFC transaction levy and the Hong Kong Stock Exchange trading fee by debiting that person's designated bank account and, in the case of a wholly or partially unsuccessful application and/or if the Offer Price is less than the Offer Price per Ordinary Share initially paid on application, refund the application monies, in each case including brokerage, SFC transaction levy and the Hong Kong Stock Exchange trading fee, by crediting that person's designated bank account; and

**(f)** instruct and authorise HKSCC to cause HKSCC Nominees to do on that person's behalf all the things which it is stated to do on his or her behalf in the **WHITE** Application Form and in this Hong Kong Prospectus.

Neither HKSCC nor HKSCC Nominees shall be liable to the Company or any other person in respect of any the above.

## 8 HOW MANY APPLICATIONS CAN YOU MAKE

You may make more than one application for the Hong Kong Offer Shares if and only if you are a nominee, in which case you may give **electronic application instructions** to HKSCC (if you are a CCASS Participant) and lodge more than one **WHITE** or **YELLOW** Application Form in your own name if each application is made on behalf of different beneficial owners. In the box on the Application Form marked "For nominees" you must include:

- an account number; or
- some other identification code,

for each beneficial owner or, in the case of joint beneficial owners, for each such beneficial owner. If you do not include this information, the application will be treated as being made for your benefit.

Otherwise, multiple applications for the Hong Kong Offer Shares are not allowed.

Except where you are a nominee and provide the information required to be provided in your application, all of your applications will be rejected as multiple applications under the Hong Kong Offer if you, or you and your joint applicant(s) together:

- make more than one application (whether individually or jointly) on a **WHITE** or **YELLOW** Application Form or through the **White Form eIPO** service or give **electronic application instructions** to HKSCC; or
- both apply (whether individually or jointly) on one (or more) **WHITE** Application Form and one (or more) **YELLOW** Application Form or apply on one (or more) **WHITE** or **YELLOW** Application Form and through the **White Form eIPO** service or give **electronic application instructions** to HKSCC; or
- apply (whether individually or jointly) on a **WHITE** or **YELLOW** Application Form or through the **White Form eIPO** service or give **electronic application instructions** to HKSCC for more than 15,625,000 Shares, being 50% of the Ordinary Shares initially being offered under the Hong Kong Offer; or
- have applied for or taken up, or indicated an interest for, or have been or will be placed or allocated (including conditionally and/or provisionally) International Offer Shares under the International Offer.

All of your applications will also be rejected as multiple applications if more than one application on a **WHITE** or **YELLOW** Application Form or through the **White Form eIPO** service or by giving **electronic application instructions** to HKSCC is made for your benefit (including the part of the application made by HKSCC Nominees acting on **electronic application instructions**). If an application is made by an unlisted company and:

- the principal business of that company is dealing in securities; and
- you exercise statutory control over that company,

then the application will be treated as being for your benefit.

"**Unlisted company**" means a company with no equity securities listed on the Hong Kong Stock Exchange.

"**Statutory control**" means you:

- control the composition of the board of directors of the company; or
- control more than half of the voting power of the company; or
- hold more than half of the issued share capital of the company (not counting any part of it which carries no right to participate beyond a specified amount in a distribution of either profits or capital).

## 9 HOW MUCH ARE THE HONG KONG OFFER SHARES

The initial maximum offer price is HK$79.18 per Ordinary Share. You must also pay brokerage of 1%, SFC transaction levy of 0.003% and the Hong Kong Stock Exchange trading fee of 0.005%. This means that for one board lot of 100 Ordinary Shares you will pay HK$7,997.82. The **WHITE** and **YELLOW** Application Forms have tables showing the exact amount payable for numbers of Ordinary Shares up to 15,625,000 Ordinary Shares.

You must pay the initial maximum Offer Price, brokerage, SFC transaction levy and the Hong Kong Stock Exchange trading fee in full upon application by a cheque or a banker's cashier order in accordance with the terms set out in the Application Forms (if you apply by an Application Form).

If your application is successful, brokerage is paid to participants of the Hong Kong Stock Exchange, and the SFC transaction levy and the Hong Kong Stock Exchange trading fee are paid to the Hong Kong Stock Exchange (in the case of the SFC transaction levy, collected by the Hong Kong Stock Exchange on behalf of the SFC).

## 10 WHEN CAN YOU APPLY

Your completed Application Form, together with a cheque attached and marked payable to "Bank of China (Hong Kong) Nominees Limited—Glencore Public Offer" for the payment, should be deposited in the special collection boxes provided at any of the places where your relevant Application Form can be collected as listed under the paragraph headed "How to Apply for Hong Kong Offer Shares—Applying

Using an Application Form—Where to Collect the Application Forms" in this section, at the following times:

- 13 May 2011 9:00 a.m. to 5:00 p.m.
- 14 May 2011 9:00 a.m. to 1:00 p.m.
- 16 May 2011 9:00 a.m. to 5:00 p.m.
- 17 May 2011 9:00 a.m. to 5:00 p.m.
- 18 May 2011 9:00 a.m. to 12:00 noon

The application lists will be open from 11:45 a.m. to 12:00 noon on 18 May 2011 or, if the application lists do not open and close on that day, then on the time and date stated in the paragraph headed "How to Apply for Hong Kong Offer Shares—Effect of Bad Weather on the Opening of the Application Lists" in this section.

No proceedings will be taken on applications for the Ordinary Shares and no allotment of any such Ordinary Shares will be made until the closing of the application lists. No allotment of any of the Ordinary Shares will be made later than 12 June 2011.

## 11 EFFECT OF BAD WEATHER ON THE OPENING OF THE APPLICATION LISTS

The application lists will not open if there is:

- a tropical cyclone warning signal number 8 or above; or
- a "black" rainstorm warning,

in force in Hong Kong at any time between 9:00 a.m. and 12:00 noon on 18 May 2011. Instead they will open between 11:45 a.m. and 12:00 noon on the next Business Day which does not have either of those warnings in force in Hong Kong at any time between 9:00 a.m. and 12:00 noon.

"**Business Day**" referred to in this paragraph means a day that is not a Saturday, Sunday or a public holiday in Hong Kong.

If the application lists do not open and close on 18 May 2011 or if there is a tropical cyclone warning signal number 8 or above or a "black" rainstorm warning signal in force in Hong Kong on the other dates mentioned in the section "Expected Timetable of Principal Events in Hong Kong" in this Wrap, other dates mentioned in the section "Expected Timetable of Principal Events in Hong Kong" in this Wrap may be affected. An announcement will be made in such event.

## 12 PUBLICATION OF RESULTS

The Company expects to announce the Offer Price and the Hong Kong Offer Price on 19 May 2011. In addition, on 24 May 2011, the Company expects to announce and an indication of the level of interest in the International Offer, the level of applications in the Hong Kong Offer and the basis of allotment of the Hong Kong Offer Shares in the South China Morning Post (in English) and the Hong Kong Economic Times (in Chinese) and on the Company's website at www.glencore.com and the website of the Hong Kong Stock Exchange at www.hkexnews.hk.

The results of allocations and the Hong Kong identity card/passport/Hong Kong business registration numbers of successful applicants under the Hong Kong Offer will be available at the times and dates and in the manner specified below:

**(a)** results of allocations for the Hong Kong Offer can be found in the announcement to be posted on the Company's website at www.glencore.com and the website of the Hong Kong Stock Exchange at www.hkexnews.hk by no later than 9:00 a.m. on 24 May 2011;

**(b)** results of allocations for the Hong Kong Offer will be available from the designated results of allocations website at www.iporesults.com.hk on a 24-hour basis from 8:00 a.m. on 24 May 2011 to 12:00 midnight on 30 May 2011. Search by ID function will be available on the results of allocations website at www.iporesults.com.hk, or via a hyperlink from our website at www.glencore.com to the results of allocations website at www.iporesults.com.hk. The user will be required to key in the Hong Kong identity card/passport/Hong Kong business registration number provided in his/her/its application to search for his/her/its own allocation result;

**(c)** results of allocations will be available from the Hong Kong Offer allocation results telephone enquiry line. Applicants may find out whether or not their applications have been successful and the number

of Hong Kong Offer Shares allocated to them, if any, by calling 2862 8669 between 9:00 a.m. and 10:00 p.m. from 24 May 2011 to 27 May 2011; and

**(d)** special allocation results booklets setting out the results of allocations will be available for inspection during opening hours of individual branches and sub-branches from 24 May 2011 to 26 May 2011 at all the receiving bank branches and sub-branches at the addresses set out in the paragraph headed "How to Apply for Hong Kong Offer Shares—Applying through White or Yellow Application Forms" in this section.

The Company may accept your offer to subscribe for Ordinary Shares (if your application is received, valid, processed and not rejected) by announcing the basis of allotment and/or making available the results of allocations publicly. If the Company accepts your offer to subscribe for Ordinary Shares (in whole or in part), there will be a binding contract under which you will be required to subscribe for the Hong Kong Offer Shares in respect of which your offer has been accepted if the conditions of the Global Offer are satisfied or the Global Offer is not otherwise terminated. You will not be entitled to exercise any remedy of rescission for misrepresentation at any time after acceptance of your application. This does not affect any other right you may have.

## 13 CIRCUMSTANCES IN WHICH YOU WILL NOT BE ALLOTTED HONG KONG OFFER SHARES

Full details of the circumstances in which you will not be allotted Hong Kong Offer Shares are set out in this Hong Kong Prospectus, the relevant Application Forms (whether you are making your application by an Application Form or **electronically instructing** HKSCC to cause HKSCC Nominees to apply on your behalf) and on the **White Form eIPO** service designated website at www.eipo.com.hk for applications made using the **White Form eIPO** service, and you should read them carefully. You should note in particular the following situations in which Hong Kong Offer Shares will not be allotted to you:

### (a) If your application is revoked:

By completing and submitting an Application Form or giving **electronic application instructions** to HKSCC or to the White Form eIPO Service Provider through the **White Form eIPO** service, you agree that your application or the application made by HKSCC Nominees on your behalf cannot be revoked on or before 26 May 2011. This agreement will take effect as a collateral contract with the Company, and will become binding when you lodge your Application Form, submit an application through the **White Form eIPO** service or give your **electronic application instruction** to HKSCC and an application has been made by HKSCC Nominees on your behalf accordingly. This collateral contract will be in consideration of the Company agreeing that it will not offer any Hong Kong Offer Shares to any person before the fifth day after the time of opening of the application lists (excluding for this purpose any day which is Saturday, Sunday or public holiday in Hong Kong), except by means of one of the procedures referred to in this Hong Kong Prospectus.

Your application or the application made by HKSCC Nominees or to the White Form eIPO Service Provider through the **White Form eIPO** service may only be revoked on or before 26 May 2011 if a person responsible for this Hong Kong Prospectus under Section 40 of the Companies Ordinance (as applied by section 342E of the Companies Ordinance) gives a public notice under that section which excludes or limits the responsibility of that person for this Hong Kong Prospectus.

If any supplement to this Hong Kong Prospectus is issued, applicant(s) who have already submitted an application may or may not (depending on the information contained in the supplement) be notified that they can withdraw their applications. If applicant(s) have not been so notified, or if applicant(s) have been notified but have not withdrawn their applications in accordance with the procedure to be notified, all applications that have been submitted remain valid and may be accepted. Subject to the above, an application once made is irrevocable and applicants shall be deemed to have applied on the basis of this Hong Kong Prospectus as supplemented.

If your application or the application made by HKSCC Nominees or to the White Form eIPO Service Provider through the **White Form eIPO** service on your behalf has been accepted, it cannot be revoked. For this purpose, acceptance of applications which are not rejected will be constituted by notification in the press of the results of allocation, and where such basis of allocation is subject to certain conditions or provides for allocation by ballot, such acceptance will be subject to the satisfaction of such conditions or results of the ballot respectively.

**(b) If the Company or its agents exercise its or their discretion to reject your application:**

The Company and the Joint Global Co-ordinators, or their respective agents and nominees or the White Form eIPO Service Provider (where applicable), have full discretion to reject or accept any application, or to accept only part of any application. No reasons have to be given for any rejection or acceptance.

**(c) If the allotment of Hong Kong Offer Shares is void:**

The allotment of Hong Kong Offer Shares to you or to HKSCC Nominees (if you give **electronic application instructions** to HKSCC or apply by a **YELLOW** Application Form) will be void if the Listing Committee of the Hong Kong Stock Exchange does not grant permission to list the Ordinary Shares either:

- within three weeks from the closing date of the application lists; or
- within a longer period of up to six weeks if the Listing Committee of the Hong Kong Stock Exchange notifies the Company of that longer period within three weeks of the closing date of the application lists.

**(d) If your application is rejected:**

You will not receive any allotment if:

- you make multiple applications or suspected multiple applications as described in the paragraph headed "How Many Applications Can You Make" in this section;
- your application is for more than 15,625,000 Hong Kong Offer Shares, exceeding 50% of the 31,250,000 Hong Kong Offer Shares initially offered for public subscription under the Hong Kong Offer;
- you or the person for whose benefit you are applying have applied for or taken up, or indicated an interest for, or have been or will be placed or allocated (including conditionally and/or provisionally) Hong Kong Offer Shares and International Offer Shares (reasonable steps will be taken to identify and reject applications in the Hong Kong Offer from investors who have received International Offer Shares, and to identify and reject indications of interest in the International Offer from investors who have received Hong Kong Offer Shares in the Hong Kong Offer);
- your Application Form is not completed in accordance with the instructions as stated in the Application Form (if you apply by an Application Form);
- your application through the **White Form eIPO** service is not completed in accordance with the instructions, terms and conditions set out in the designated website at www.eipo.com.hk;
- your payment is not made correctly or you pay by cheque or banker's cashier order and the cheque or banker's cashier order is dishonoured upon its first presentation;
- the Underwriting Agreement does not become unconditional either in respect of the Hong Kong Offer or in respect of the Global Offer;
- the Underwriting Agreement is terminated in accordance with its terms either in respect of the Hong Kong Offer or in respect of the Global Offer;
- the Company or the Joint Global Co-ordinators believe that by accepting your application, it would violate applicable securities or other laws, rules or regulations; and
- you have applied for a single board lot of Hong Kong Offer Shares and the Hong Kong Offer Price is above the high end of the Hong Kong Offer Price Range as described in the section "Structure of the Global Offer—Determination of Hong Kong Offer Price" in this Wrap.

## 14 REFUND OF APPLICATION MONIES

If an application is not accepted or accepted in part only, or if the Hong Kong Offer Price as finally determined is less than the offer price initially paid on application of HK$79.18 per Ordinary Share (excluding brokerage, SFC transaction levy and the Hong Kong Stock Exchange trading fee thereon), or if the conditions of the Hong Kong Offer are not fulfilled in accordance with the section "Structure of the Global Offer—Conditions of the Hong Kong Offer" in this Hong Kong Prospectus or if any application is revoked or any allotment pursuant thereto has become void, the application monies, or the appropriate portion thereof, together with the related brokerage, SFC transaction levy and the Hong Kong Stock Exchange trading fee, will be refunded, without interest. All such interest accrued on such monies prior to the date of despatch of refund cheques will be retained for the benefit of the Company. It is intended that special efforts will be made to avoid any undue delay in refunding application monies where appropriate.

In a contingency situation involving a substantial over-subscription, at the discretion of the Company and the Joint Global Co-ordinators, cheques for applications for certain small denominations of Hong Kong Offer Shares on Application Forms (apart from successful applications) may not be cleared.

Refund of your application monies (if any) will be made on 24 May 2011 in accordance with the various arrangements as described in the paragraph headed "Despatch/Collection of Share Certificates and Refund Monies" in this section.

## 15 DESPATCH/COLLECTION OF SHARE CERTIFICATES AND REFUND MONIES

### General

The Company will not issue temporary documents of title. No receipt will be issued for sums paid on application.

You will receive one share certificate for all the Hong Kong Offer Shares issued to you under the Hong Kong Offer (except pursuant to applications made on **YELLOW** Application Forms or by **electronic application instructions** to HKSCC via CCASS where the share certificates will be deposited into CCASS as described below).

If you applied on a **WHITE** Application Form or through the **White Form eIPO** service, subject to personal collection as mentioned below, in due course there will be sent to you (or, in the case of joint applicants, to the first-named applicant) by ordinary post, at your own risk, to the address specified on the application, a share certificate for all the Hong Kong Offer Shares successfully applied for. If you applied on a **YELLOW** Application Form or gave **electronic application instructions** to HKSCC, your share certificate for the Hong Kong Offer Shares successfully applied for will be deposited into CCASS as described below.

For applications on **WHITE** and **YELLOW** Application Forms and through the **White Form eIPO** service, a refund cheque crossed "Account Payee Only" in favour of the applicant (or, in the case of joint applicants, the first-named applicant) in due course will be sent to you (or, in the case of joint applicants, to the first-named applicant) by ordinary post, at your own risk, to the address specified on the application, for (i) the surplus application monies for the Hong Kong Offer Shares unsuccessfully applied for, if the application is partially unsuccessful; or (ii) all the application monies, if the application is wholly unsuccessful; and/or (iii) the difference between the Offer Price and the maximum offer price per Ordinary Share paid on application in the event that the Offer Price is less than the offer price per Ordinary Share initially paid on application, in each case including brokerage of 1%, SFC transaction levy of 0.003% and the Hong Kong Stock Exchange trading fee of 0.005%, attributable to such refund/surplus monies but without interest. Further, if you apply through the **White Form eIPO** service and pay the application monies from a single bank account, you may have e-refund payment instructions (if any) despatched to the application payment account.

Part of your Hong Kong identity card number/passport number, or, if you are joint applicants, part of the Hong Kong identity card number/passport number of the first-named applicant, provided by you may be printed on your refund cheque, if any. Such data will be transferred to a third party for refund purposes. Your banker may require verification for your Hong Kong identity card number/passport number before encashment of your refund cheque(s). Inaccurate completion of your Hong Kong identity card number/passport number may lead to delay in encashment of, or may invalidate, your refund cheque(s).

Subject to personal collection as mentioned below, the share certificates and refund cheques are expected to be posted and e-Refund payment instructions are expected to be despatched on or before 24 May 2011 2011. The right is reserved to retain any share certificate(s) and any surplus application monies pending clearance of cheque(s).

Share certificates will only become valid certificates of title at 9:00 a.m. (Hong Kong time) on 25 May 2011 provided that the Global Offer has become unconditional in all respects. Investors who trade Ordinary Shares prior to the receipt of share certificates or prior to the share certificates becoming valid certificates do so entirely at their own risk.

### Personal Collection

#### (a) If you apply using a WHITE Application Form

If you have applied for 1,000,000 Hong Kong Offer Shares or more on a **WHITE** Application Form and have indicated your intention in your **WHITE** Application Form to collect your refund cheque(s) and/or share certificate(s) (where applicable) in person and have provided all information required by your Application Form, you may collect the relevant refund cheque(s) and/or share certificate(s) (where

applicable) from Computershare Hong Kong Investor Services Limited at Shops 1712-1716, 17th Floor, Hopewell Centre, 183 Queen's Road East, Wanchai, Hong Kong, from 9:00 a.m. to 1:00 p.m. on 24 May 2011 or such other date as notified by the Company in the newspapers as the date of collection/despatch of e-Refund payment instructions/refund cheques/share certificates. If you are an individual who opts for personal collection, you must not authorise any other person to make collection on your behalf. If you are a corporate applicant which opts for personal collection, you must attend by your authorised representative bearing a letter of authorisation from your corporation stamped with your corporation's chop. Such authorised representatives must produce, at the time of collection, evidence of identity acceptable to Computershare Hong Kong Investor Services Limited. If you do not collect your refund cheque(s) and/or share certificate(s) (where applicable) personally within the time specified for collection, they will be sent to the address as specified in the relevant Application Form promptly thereafter, by ordinary post and at your own risk.

If you have applied for less than 1,000,000 Hong Kong Offer Shares or you have applied for 1,000,000 or more Hong Kong Offer Shares but have not indicated on the relevant Application Form that you will collect your refund cheque(s) and/or share certificate(s) (where applicable) in person, your refund cheque(s) and/or share certificate(s) (where applicable) will be sent to the address on the relevant Application Form on or before 24 May 2011, by ordinary post and at your own risk.

**(b) If you apply using a YELLOW Application Form**

If you apply for 1,000,000 Hong Kong Offer Shares or more and you have elected on your **YELLOW** Application Form to collect your refund cheque (where applicable) in person, please follow the same instructions as those for **WHITE** Application Form applicants as described above. If you have applied for 1,000,000 Hong Kong Offer Shares or above and have not indicated on your Application Form that you will collect your refund cheque (if any) in person, or if you have applied for less than 1,000,000 Hong Kong Offer Shares, your refund cheque (if any) will be sent to the address on your Application Form on the date of despatch, which is expected to be on 24 May 2011, by ordinary post and at your own risk.

If you apply for Hong Kong Offer Shares using a **YELLOW** Application Form and your application is wholly or partially successful, your share certificate(s) will be issued in the name of HKSCC Nominees and deposited into CCASS for credit to your CCASS Investor Participant stock account or the stock account of your designated CCASS Participant as instructed by you in your Application Form on 24 May 2011, or under a contingent situation, on any other date as shall be determined by HKSCC or HKSCC Nominees.

**(c) If you are applying through a designated CCASS Participant (other than a CCASS Investor Participant)**

For Hong Kong Offer Shares credited to the stock account of your designated CCASS Participant (other than CCASS Investor Participant), you can check the number of Hong Kong Offer Shares allotted to you with that CCASS Participant.

**(d) If you are applying as a CCASS Investor Participant**

The Company expects to publish the results of CCASS Investor Participants' applications together with the results of the Hong Kong Offer in the manner as described in the paragraph headed "Publication of Results" in this section on 24 May 2011. You should check the announcement published by the Company and report any discrepancies to HKSCC before 5:00 p.m. on 24 May 2011 or any other date HKSCC or HKSCC Nominees chooses. Immediately after the credit of the Hong Kong Offer Shares to your stock account, you can check your new account balance via the CCASS Phone System and CCASS Internet System (under the procedures contained in HKSCC's "An Operating Guide for Investor Participants" in effect from time to time). HKSCC will also make available to you an activity statement showing the number of Hong Kong Offer Shares credited to your stock account.

**(e) If you apply through the White Form eIPO Service**

If you apply for 1,000,000 Hong Kong Offer Shares or more through the **White Form eIPO** service by submitting an electronic application to the White Form eIPO Service Provider through the designated website www.eipo.com.hk and your application is wholly or partially successful, you may collect your share certificate(s) in person from Computershare Hong Kong Investor Services Limited at Shops 1712-1716, 17th Floor, Hopewell Centre, 183 Queen's Road East, Wanchai, Hong Kong, from 9:00 a.m. to 1:00 p.m. on 24 May 2011, or such other date as notified by the Company in the newspapers as the date of despatch/collection of share certificates/e-Refund payment instructions/refund cheques. If you do not collect your

share certificate(s) personally within the time specified for collection, they will be sent to the address specified in your application instructions to the White Form eIPO Service Provider promptly thereafter, by ordinary post and at your own risk.

If you apply for less than 1,000,000 Hong Kong Offer Shares, your share certificate(s) will be sent to the address specified in your application instructions to the White Form eIPO Service Provider through the designated website at www.eipo.com.hk on 24 May 2011, by ordinary post and at your own risk.

If you apply through the **White Form eIPO** service by paying the application monies through a single bank account, you may have e-Refund payment instructions (if any) despatched to the application payment account on or before 24 May 2011. If you apply through the **White Form eIPO** service by paying the application monies through multiple bank accounts, you may have refund cheque(s) sent to the address specified in your application instructions to the designated White Form eIPO Service Provider on or before Tuesday, 24 May 2011, by ordinary post and at your own risk.

Also note the additional information relating to refund of application monies overpaid, application money underpaid or applications rejected by the White Form eIPO Service Provider set out in the paragraph headed "Applying through the **White Form eIPO** service—Refunds" in this section.

**Deposit of Share Certificates into CCASS and Refund of Application Monies**

If you applied by giving **electronic application instructions** to HKSCC and if your application is wholly or partially successful, your share certificate(s) will be issued in the name of HKSCC Nominees and deposited into CCASS for the credit of the stock account of the CCASS Participant which you have instructed to give electronic application instructions on your behalf or your CCASS Investor Participant stock account on 24 May 2011, or, in the event of a contingency, on any other date as shall be determined by HKSCC or HKSCC Nominees.

The Company expects to publish the application results of CCASS Participants (and where the CCASS Participant is a broker or custodian, the Company will include information relating to the relevant beneficial owner), your Hong Kong identity card number/passport number or other identification code (Hong Kong business registration number for corporations) and the basis of allotment of the Hong Kong Offer in the manner as described in the paragraph headed "Publication of Results" in this section on 24 May 2011. You should check the announcement published by the Company and report any discrepancies to HKSCC before 5:00 p.m. on 24 May 2011 or such other date as shall be determined by HKSCC or HKSCC Nominees.

If you have instructed your broker or custodian to give electronic application instructions on your behalf, you can also check the number of Hong Kong Offer Shares allotted to you and the amount of refund monies (if any) payable to you with that broker or custodian.

If you have applied as a CCASS Investor Participant, you can also check the number of Hong Kong Offer Shares allotted to you and the amount of refund monies (if any) payable to you via the CCASS Phone System and the CCASS Internet System (under the procedures contained in HKSCC's "An Operating Guide for Investor Participants" in effect from time to time) on 24 May 2011. HKSCC will also make available to you an activity statement showing the number of Hong Kong Offer Shares credited to your CCASS Investor Participant stock account and the amount of refund monies (if any) credited to your designated bank account.

Refund of your application monies (if any) in respect of wholly and partially unsuccessful applications and/or the difference between the Hong Kong Offer Price and the offer price per Ordinary Share initially paid on application, in each case including brokerage of 1%, SFC transaction levy of 0.003% and the Hong Kong Stock Exchange trading fee of 0.005%, will be credited to your designated bank account or the designated bank account of your broker or custodian on 24 May 2011. No interest will be paid thereon.

## 16 ADMISSION OF THE SHARES INTO CCASS

If the Hong Kong Stock Exchange grants the listing of, and permission to deal in, the Ordinary Shares and the Company complies with the stock admission requirements of HKSCC, the Ordinary Shares will be accepted as eligible securities by HKSCC for deposit, clearance and settlement in CCASS with effect from the date of commencement of dealings in the Ordinary Shares on the Hong Kong Stock Exchange or any other date HKSCC chooses. Settlement of transactions between participants of the Hong Kong Stock Exchange is required to take place in CCASS on the second normal business day in Hong Kong after any trading day. All activities under CCASS are subject to the General Rules of CCASS and CCASS Operational Procedures in effect from time to time. Investors should seek the advice of their stockbroker or other professional adviser for details of the settlement arrangement as such arrangements may affect their rights and interests. All necessary arrangements have been made enabling the Ordinary Shares to be admitted into CCASS.

## 1. ACCOUNTANT'S REPORT ON HISTORICAL FINANCIAL INFORMATION

This report is identical to the report set out in Section VI: "Historical Financial Information" in the International Prospectus, other than its date of issuance, and has been repeated in this Wrap to satisfy applicable Hong Kong laws and regulations.

13 May 2011

Dear Sirs

**Glencore International plc**

We report on the financial information relating to Glencore International AG (the "**Operating Company**") and its subsidiaries (together with the Operating Company, the "**Operating Group**") set out in Section VI: "Historical Financial Information" of the prospectus dated 4 May 2011 of Glencore International plc (the "**Company**" and, together with its subsidiaries, the "**Group**") prepared in connection with the Company's admission to listing on the premium segment of the Official List of the Financial Services Authority and admission to trading on the London Stock Exchange of the ordinary shares of the Company (the "**UK Listing**") (the "**UK Prospectus"**) and having regard to the waivers granted by the Stock Exchange of Hong Kong Limited (the "**HKSE**") in connection with the secondary listing of the ordinary shares of the

Company on the Main Board of the HKSE (the "**HK Listing**") (the "**HK Prospectus**"), (the UK Prospectus and HK Prospectus together being the "**Investment Circular**"). It is intended that the Company will acquire the entire issued share capital of the Operating Company prior to the implementation of the UK Listing. This financial information has been prepared for inclusion in the UK Prospectus on the basis of the accounting policies set out in note 1 to the Historical Financial Information. This report is required by Annex I item 20.1 of Commission Regulation (EC) No 809/2004 (the "**Prospectus Directive Regulation**"), and is given for the purpose of complying with that requirement and for no other purpose.

**Responsibilities**

The Directors of the Company are responsible for preparing the Historical Financial Information on the basis of preparation set out in Note 1 to the Historical Financial Information and in accordance with the International Financial Reporting Standards (the "**IFRS**") as issued by the International Accounting Standards Board (the "**IASB**") and adopted for use in the EU.

It is our responsibility to form an opinion as to whether the Historical Financial Information gives a true and fair view, for the purposes of the UK Prospectus, and to report our opinion to you.

Save for any responsibility arising under Prospectus Rule 5.5.3R(2)(f), Chapter 4 of the Rules Governing the Listing of Securities of the Stock Exchange of Hong Kong Limited (the "**HK Listing Rules**") and the Companies Ordinance (Cap. 32) of the Laws of Hong Kong (the "**Companies Ordinance**"), except where waivers have been granted by the HKSE, to any person as and to the extent there provided, to the fullest extent permitted by law we do not assume any responsibility and will not accept any liability to any other person for any loss suffered by any such other person as a result of, arising out of, or in accordance with this report or our statement, required by and given solely for the purposes of complying with Annex I item 23.1 of the Prospectus Directive Regulation, consenting to its inclusion in the Investment Circular.

Our responsibilities in relation to the UK Prospectus relate only to the UK Listing and our responsibilities in relation to the HK Prospectus relate only to the HK Listing.

**Basis of opinion**

We conducted our work in accordance with the Standards for Investment Reporting issued by the Auditing Practices Board in the United Kingdom. Our work included an assessment of evidence relevant to the amounts and disclosures in the Historical Financial Information. It also included an assessment of significant estimates and judgements made by those responsible for the preparation of the Historical Financial Information and whether the accounting policies are appropriate to the entity's circumstances, consistently applied and adequately disclosed.

We planned and performed our work so as to obtain all the information and explanations which we considered necessary in order to provide us with sufficient evidence to give reasonable assurance that the Historical Financial Information is free from material misstatement whether caused by fraud or other irregularity or error.

Our work has not been carried out in accordance with auditing or other standards and practices generally accepted in jurisdictions outside the United Kingdom, including the United States of America, and accordingly should not be relied upon as if it had been carried out in accordance with those standards and practices.

In connection with the use of this report in the HK Listing, it should be noted that this report has been provided with regard to the waivers granted by the HKSE.

**Opinion**

In our opinion, the Historical Financial Information gives, for the purposes of the Investment Circular, a true and fair view of the state of affairs of the Group as at the dates stated and of its profits, cash flows and changes in equity for the periods then ended in accordance with the basis of preparation set out in Note 1 and in accordance with IFRS issued by the IASB and adopted for use in the EU.

**Declaration**

For the purposes of Prospectus Rule 5.5.3R(2)(f), we are responsible for this report as part of the UK Prospectus and declare that we have taken all reasonable care to ensure that the information

contained in this report is, to the best of our knowledge, in accordance with the facts and contains no omission likely to affect its import. This declaration is included in the UK Prospectus in compliance with Annex I item 1.2 and Annex III item 1.2 of the Prospectus Directive Regulation.

Yours faithfully

13 May 2011

Dear Sirs

**Glencore International plc (the "Company")**

We report on the pro forma financial information (the "**Pro forma financial information**") in respect of Glencore International AG (the "**Operating Company**") and its subsidiaries (together with the Operating Company, the "**Operating Group**") set out in Section VII: "Unaudited Pro Forma Financial Information" of the prospectus dated 4 May 2011 of Glencore International plc (the "**Company**") prepared in connection with the Company's admission to listing on the premium segment of the Official List of the Financial Services Authority and admission to trading on the London Stock Exchange of the ordinary shares of the Company (the "**UK Listing**") (the "**UK Prospectus**") and having regard to the waivers granted by the Stock Exchange of Hong Kong Limited ("**HKSE**") in connection with the secondary listing of the ordinary shares of the Company on the Main Board of the HKSE (the "**HK Listing**") (the "**HK Prospectus**"), (the UK Prospectus and HK Prospectus together being the "**Investment Circular**") which

has been prepared on the basis described in notes 1 to 5, for illustrative purposes only, to provide information about how the transaction might have affected the financial information presented on the basis of the accounting policies to be adopted by the Company in preparing the financial statements for the period ended 31 December 2011. It is intended that the Company will acquire the entire issued share capital of the Operating Company prior to the implementation of the UK Listing. The Pro Forma Financial Information is therefore based on the consolidated audited historical financial information of the Operating Group at 31 December 2010 contained in Section VI: "Historical Financial Information" of the Investment Circular. No adjustments have been made to reflect the results or any other activity of the Operating Group since 31 December 2010. This report is required by Annex I item 20.2 of Commission Regulation (EC) No 809/2004 (the "**Prospectus Directive Regulation**"), and is given for the purpose of complying with that requirement and for no other purpose.

**Responsibilities**

It is the responsibility of the directors of the Company (the "**Directors**") to prepare the pro forma financial information in accordance with Annex I item 20.2 and Annex II items 1 to 6 of the Prospectus Directive Regulation.

It is our responsibility to form an opinion, in accordance with Annex I item 20.2 of the Prospectus Directive Regulation, as to the proper compilation of the pro forma financial information and to report that opinion to you in accordance with Annex II item 7 of the Prospectus Directive Regulation.

Save for any responsibility arising under Prospectus Rule 5.5.3R (2)(f), Chapter 4 of the HKSE Rules Governing the Listing of Securities on the Stock Exchange of Hong Kong Limited (the "**HK Listing Rules**") and the Companies Ordinance (Cap. 32) of the Laws of Hong Kong (the "**Companies Ordinance**"), except where waivers have been granted by the HKSE to any person as and to the extent there provided, to the fullest extent permitted by law we do not assume any responsibility and will not accept any liability to any other person for any loss suffered by any such other person as a result of, arising out of, or in accordance with this report or our statement, required by and given solely for the purposes of complying with Annex I item 23.1 of the Prospectus Directive Regulation, and consenting to its inclusion in the Prospectus.

Our responsibilities in relation to the UK Prospectus relate only to the UK Listing and our responsibilities in relation to the Hong Kong Prospectus relate only to the Hong Kong Listing.

In providing this opinion we are not updating or refreshing any reports or opinions previously made by us on any financial information used in the compilation of the pro forma financial information, nor do we accept responsibility for such reports or opinions beyond that owed to those to whom those reports or opinions were addressed by us at the dates of their issue.

**Basis of Opinion**

We conducted our work in accordance with the Standards for Investment Reporting issued by the Auditing Practices Board in the United Kingdom. The work that we performed for the purpose of making this report, which involved no independent examination of any of the underlying financial information, consisted primarily of comparing the unadjusted financial information with the source documents, considering the evidence supporting the adjustments and discussing the pro forma financial information with the Directors.

We planned and performed our work so as to obtain the information and explanations we considered necessary in order to provide us with reasonable assurance that the pro forma financial information has been properly compiled on the basis stated and that such basis is consistent with the accounting policies of the Company.

Our work has not been carried out in accordance with auditing or other standards and practices generally accepted in jurisdictions outside the United Kingdom, including the United States of America, and accordingly should not be relied upon as if it had been carried out in accordance with those standards or practices.

**Opinion**

In our opinion:

(a) the Pro forma financial information has been properly compiled on the basis stated; and

(b) such basis is consistent with the accounting policies of the Company.

**Declaration**

For the purposes of Prospectus Rule 5.5.3R(2)(f), we are responsible for this report as part of the UK Prospectus and declare that we have taken all reasonable care to ensure that the information contained in this report is, to the best of our knowledge, in accordance with the facts and contains no omission likely to affect its import. This declaration is included in the UK Prospectus in compliance with Annex I item 1.2 of the Prospectus Directive Regulation.

Yours faithfully

## SUMMARY OF CERTAIN RULES AND REGULATIONS APPLICABLE TO THE COMPANY

### 1 SUMMARY OF APPLICABLE JERSEY COMPANY LAWS

The Company is incorporated in Jersey subject to the Jersey Companies Law and, therefore, operates subject to Jersey law. Set out below is a summary of certain provisions of Jersey company law, although this does not purport to contain all applicable qualifications and exceptions or to be a complete review of all matters of Jersey company law and taxation, which may differ from equivalent provisions in jurisdictions with which interested parties may be more familiar. The Jersey Companies Law can be accessed via the internet at www.JerseyLaw.je.

1.1 **Operations**

(a) The Company does not intend to trade in Jersey. If it wished to carry out business activities in Jersey (including, in particular, employing staff in Jersey), it may need to obtain a licence pursuant to the Regulation of Undertakings and Development (Jersey) Law 1973, as amended.

(b) The Company is required to file an annual return each year with the Jersey Registrar of Companies. The current filing fee is £150.

1.2 **Share capital**

(a) ***Alteration of share capital***

The Articles provide substantially similar provisions in relation to alteration of share capital as those set out in the Jersey Companies Law.

(b) ***Share premium accounts***

(i) The Jersey Companies Law sets out what is meant by share premium and what share premium may be used for. If the Company allots shares at a premium (whether for cash or otherwise) where the premiums arise as a result of the issue of a class of limited shares, a sum equal to the aggregate amount or value of those premiums shall be transferred, as and when the premiums are paid up, to a share premium account for that class.

(ii) A share premium account may be applied by the Company for any of the following purposes:

(A) in paying up unissued shares to be allotted to members as fully paid bonus shares;

(B) in writing off the Company's preliminary expenses;

(C) in writing off the expenses of and any commission paid on any issue of shares of the Company;

(D) in the redemption or purchase of shares under Part 11 of the Jersey Companies Law (Redemption and Purchase of Shares); and

(E) in the making of a distribution in accordance with Part 17 of the Jersey Companies Law.

(iii) Subject to the above, the provisions of the Jersey Companies Law relating to the reduction of the Company's share capital apply as if each of its share premium accounts were part of its paid up share capital.

(iv) The Company may also make a distribution in accordance with Part 17 of the Jersey Companies Law (Distributions) from a share premium account (see 1.5 "Dividends and distributions" below).

(c) ***Reductions of capital***

Part 12 of the Jersey Companies Law provides that, subject to confirmation by the Royal Court of Jersey except in certain limited circumstances, the Company may by special resolution reduce its capital accounts in any way. The redemption, purchase or cancellation by a Jersey company of its shares under Part 11 of the Jersey Companies Law is not, for the purposes of Part 12 of the Jersey Companies Law, a reduction of capital.

(d) ***Variation of rights***

The Jersey Companies Law provides for variation of class rights in accordance with the Articles or, where this is not specified in the Articles, with the consent in writing of holders of not less than

two-thirds in nominal value of the issued shares of that class or by a special resolution of the members of that class. The Articles provide for a higher majority for written consent by holders of three-quarters in nominal value of the issued shares of the class or with the sanction of a special resolution passed at a separate meeting of the holders of the shares of the class.

(e) ***Treasury shares***

The Jersey Companies Law provides that the Company may hold as treasury shares any of the limited shares that it has redeemed or purchased under the Jersey Companies Law, to the extent that it is not prohibited by the Memorandum or Articles and it is authorised by a resolution of the Company to hold shares as treasury shares.

1.3 **Financial assistance to purchase shares of a company or its holding company**

There is no specific restriction under the Jersey Companies Law on the provision of financial assistance by the Company to another person for the purchase of, or subscription for, its own or its holding company's shares.

Accordingly, the Company may provide financial assistance if the Directors of the Company consider, in discharging their fiduciary duties, that such assistance can properly be given.

The Directors will need to be mindful of their statutory obligations in relation to, among others, making distributions (as set out below) if any financial assistance is provided by way of a payment to a member in his, her or its capacity as a member and such payment constitutes a distribution of the Company's assets.

1.4 **Purchase of shares and warrants by a company and its subsidiaries**

(a) ***Redemptions***

(i) Subject to the provisions of the Jersey Companies Law, the Company may, if authorised by the Articles (which it is), issue or convert existing non-redeemable limited shares, whether issued or not, into, limited shares which are to be redeemed, or are liable to be redeemed, either in accordance with their terms or at the option of the Company or the shareholder. The Articles provide for the issue of redeemable shares (or conversion of non-redeemable shares) on such terms and in such manner as may be determined by special resolution.

(ii) The redeemable limited shares of the Company shall be capable of being redeemed from any source, but only if they are fully paid up.

(iii) The redeemable limited shares are not capable of being redeemed unless all the directors of the Company who authorise the redemption make a statement as to the solvency of the Company at the time of redemption which is forward looking for a 12-month period following the redemption.

(iv) Any shares redeemed under the Jersey Companies Law (other than shares that are, immediately after being purchased or redeemed, held as treasury shares) are treated as cancelled on redemption.

(b) ***Share purchases***

(i) In addition, the Company may purchase its own shares (including any redeemable shares). Such a purchase shall be sanctioned by a special resolution of the Company.

(ii) If the shares are to be purchased otherwise than on a stock exchange, they may only be purchased in pursuance of a contract approved in advance by a resolution of the Company and they shall not carry the right to vote on the resolution sanctioning the purchase or approving the contract.

(iii) If the shares are to be bought on a stock exchange, the resolution authorising the purchase shall specify the maximum number of shares to be purchased, the maximum and minimum prices which may be paid for them and a date, not being later than 18 months after the passing of the resolution, on which the authority to purchase is to expire.

(iv) A purchase also requires the authorising Directors to make a solvency statement in the same terms as that required for a redemption.

(c) ***Warrants***

The Jersey Companies Law does not contain provisions relating to the issue, redemption or purchase of share warrants.

1.5 **Dividends and distributions**

Pursuant to the Jersey Companies Law, the Company may make a distribution at any time which shall be debited to the share premium account or any other account other than the capital redemption reserve or nominal capital account, provided that the Directors authorising the distribution make a statement as to the solvency of the Company immediately following payment of the distribution, which is forward looking for a 12-month period following the payment. The solvency statement must be in the form set out in the Jersey Companies Law.

1.6 **Protection of minorities**

(a) The principle under English case law that, if any wrong is done to a company (e.g. if the directors have acted in breach of duty in some way), the proper claimant in any legal action for breach of such duty is the company itself, has been held to form a part of Jersey law. However, in exceptional situations a minority shareholder is permitted to bring a derivative action in a company's name, and on a company's behalf, in particular where:

(i) the majority cannot ratify what has been done (e.g. where the company acts illegally or where a resolution has been improperly passed); or

(ii) where it would be unfair not to allow a derivative action (e.g. where there exists fraud on the minority or unfairly prejudicial conduct of the directors or the majority shareholder(s)).

(b) Under the Jersey Companies Law, a member of the Company may apply to the Royal Court of Jersey for an order that the Company's affairs are being or have been conducted in a manner which is unfairly prejudicial to the interests of its members generally or of some part of its members (including at least the member) or that an actual or proposed act or omission of the Company (including an act or omission on its behalf) is or would be so prejudicial. If the Royal Court of Jersey is satisfied that such an application is well founded, it may make such order as it thinks fit for giving relief in respect of the matters complained of.

(c) Under the Jersey Companies Law, inspectors may be appointed to investigate the affairs of the Company, whether or not the Company is being wound up, on the following basis:

(i) The Minister for Economic Development (the "Minister") or the Jersey Financial Services Commission (the "Commission") may appoint one or more competent inspectors to investigate the affairs of the Company and to report on them as the Minister or the Commission may direct.

(ii) The appointment may be made on the application of the registrar, the Company or a member, officer or creditor of the Company.

(iii) The Minister or the Commission may, before appointing inspectors, require the applicant, other than the registrar, to give security, to an amount not exceeding £10,000 or such other sum as may be prescribed for payment of the costs of the investigation.

(d) Any member of the Company may apply to the Royal Court of Jersey to wind the Company up on just and equitable grounds.

1.7 **Management**

Except in relation to distributions, share purchases, redemptions and the return of capital on a winding-up, the Jersey Companies Law contains no specific restrictions on the power of the Directors to dispose of the assets of the Company. However, under the Jersey Companies Law, the Directors, in exercising their powers and discharging their duties, must (a) act honestly and in good faith with a view to the best interests of the Company; and (b) exercise the care, diligence and skill that a reasonably prudent person would exercise in comparable circumstances. Under the Jersey Companies Law, a Director will not be held to have breached his duties if all of the members of the Company authorise or ratify his act or omission and after the act or omission the Company will be able to discharge its liabilities as they fall due.

1.8 **Accounting and auditing requirements**

Under the Jersey Companies Law, the Company must keep accounting records which are sufficient to show and explain its transactions and are such as to disclose with reasonable accuracy, at any time, the financial position of the Company. Accounts must be prepared in accordance with certain generally accepted accounting principles and audited accounts must show a true and fair view of, or be presented fairly in all material respects, so as to show the company's profit or loss for the period covered by the accounts and the state of its affairs at the end of the period.

1.9 **Exchange control**

There are no exchange control regulations or currency restrictions under Jersey law.

1.10 **Taxation**

(a) Jersey taxation legislation provides that the general basic rate of income tax on the profits of companies regarded as resident in Jersey or having a permanent establishment in Jersey will be zero per cent and that only a limited number of financial services companies shall be subject to income tax at a rate of 10 per cent. There is no capital gains tax in Jersey.

(b) A 3 per cent. sales tax is generally paid in Jersey on the sale or exchange of goods and services used in Jersey. All businesses with a 12-month taxable turnover in excess of £300,000 must, by Jersey law, register for this tax. For so long as the Company is an international service entity within the meaning of the Goods and Services (Jersey) Law 2007, having satisfied the requirements of the Goods and Services Tax (International Services Entities) (Jersey) Regulations 2008, as amended, a supply of goods or of a service made by or to the Company shall not be a taxable supply for the purposes of Jersey law.

(c) Further details can be found in paragraph 3 (Jersey Taxation) in Section IX: "Taxation" of the International Prospectus that forms part of this Hong Kong Prospectus.

1.11 **Stamp duty on transfers**

There is no stamp duty payable in Jersey on inter vivos transfers of shares in a Jersey company.

1.12 **Loans to Directors**

There is no express provision in the Jersey Companies Law prohibiting the making of loans by the Company to any of the Directors. However, the Articles include comprehensive prohibitions on loans to Directors as applicable to Hong Kong incorporated companies but with certain exceptions (see 4.2 "Loans to directors" below).

1.13 **Inspection of corporate records**

Under the Jersey Companies Law, the Company's register of members shall during business hours be open to the inspection of a member of the Company without charge and may, on the payment of such sum (if any), not exceeding the published maximum, as the Company may require and on submission to the Company of a declaration under the Jersey Companies Law (as to the use of the copy) require a copy of the register and the Company shall, within 10 days after receipt of the payment and the declaration, cause the copy so required to be available at the place where the register is kept for collection by that person during business hours.

1.14 **Winding-up**

(a) The Company may be placed into liquidation under Jersey law by a summary or creditors' winding up, by order of the Royal Court of Jersey on just and equitable grounds or following a declaration of the assets of the Company as "en désastre" by the Royal Court of Jersey pursuant to Jersey bankruptcy law.

(b) The Company may be wound up summarily if the company is solvent and the Directors make a statement to that effect. The winding-up would commence upon the members passing a special resolution to wind the Company up summarily.

(c) A creditors' winding-up would commence if the members passed a special resolution to wind the Company up by way of creditors' winding-up or if the Company is being summarily wound up and becomes insolvent. The Jersey Companies Law set out comprehensive provisions with regard to, amongst other things, meetings of creditors and procedures thereat, appointment, powers and duties of liquidators, the involvement of the Royal Court of Jersey and the disposal and clawback of the Company's property. Pursuant to the Jersey Companies Law, a liquidator must report possible criminal offences relating to the Company, those involved with it or the Directors. As soon as the affairs of the Company in a creditors' winding-up were fully wound up, the liquidator would make up an account of the winding-up, showing how it had been conducted and the Company's property had been disposed of, and thereupon call a general meeting of the Company and a meeting of the creditors for the purpose of laying the account before the meetings and giving an explanation of it.

(d) Jersey bankruptcy law allows for the assets of the Company to be declared "en désastre" by the Royal Court of Jersey upon an application by the Company or by a creditor with a claim for a liquidated sum of not less than £3,000 against the Company and if the Royal Court of Jersey considers it just and equitable to do so. The Company would have the ability to apply to set aside the declaration if it was not insolvent (i.e. not unable to pay its debts as they fell due). The Royal Court of Jersey would, on a désastre declaration, appoint the Viscount of Jersey to administer the liquidation of the Company and all the property and assets of the Company would vest in the Viscount. The Viscount has similar powers to a liquidator under a creditor's winding-up. In a désastre, the first duty of the Viscount is to liquidate the estate for the benefit of the creditors who prove their claims. Co-extensive with the Viscount's duty to protect and realise the Company's property would be a duty requiring him to investigate the circumstances giving rise to the désastre. The Viscount also has a duty to report possible misconduct. The Viscount would have an obligation to supply all the creditors with a report and accounts relating to the désastre when he had realised all the Company's property.

1.15 **Reconstructions**

Under the Jersey Companies Law, the Company has the power to compromise with creditors and members. Where a compromise or arrangement is proposed between the Company and its creditors, or a class of them, or between the Company and its members, or a class of them, the Royal Court of Jersey may on the application of the Company or a creditor or member of it or, in the case of the Company being wound up, of the liquidator, order a meeting of the creditors or class of creditors, or of the members of the Company or class of members (as the case may be), to be called in such manner as the Royal Court of Jersey directs. If a majority in number representing:

(a) 3/4ths in value of the creditors or class of creditors; or

(b) 3/4ths of the voting rights of the members or class of members,

as the case may be, present and voting either in person or by proxy at the meeting, agree to a compromise or arrangement, the compromise or arrangement, if sanctioned by the Royal Court of Jersey, is binding on:

(a) all creditors or the class of creditors; or

(b) all the members or class of members, as the case may be and also on the Company or, in the case of the Company in the course of being wound up, on the liquidator and contributories of the Company.

1.16 **Compulsory acquisition**

(a) Under the Jersey Companies Law, if, following a takeover offer (which is defined as "an offer to acquire all the shares, or all the shares of any class or classes, in a company (other than shares which at the date of the offer are already held by the offeror), being an offer on terms which are the same in relation to all the shares to which the offer relates or, where those shares include shares of different classes, in relation to all shares of each class"), an offeror has acquired or contracted to acquire not less than nine-tenths in value of the shares to which the offer relates, the offeror may give notice, in accordance with the Jersey Companies Law, to the holders of those shares to which the offer relates which the offeror has not acquired or contracted to acquire, that it desires to acquire those shares. Subject to the provisions of the Jersey Companies Law, upon service of the notice by the offeror, it shall become entitled and be bound to acquire the shares. A minority shareholder also has a right, pursuant to the Jersey Companies Law, to be bought out by an offeror.

(b) Where a notice is given under the Jersey Companies Law to the holder of any shares, the Royal Court of Jersey may, on an application made by the shareholder within six weeks from the date on which the notice was given, order that the offeror shall not be entitled and bound to acquire the shares or specify terms of acquisition different from those of the offer.

1.17 **Indemnification**

(a) Subject to the exceptions in (b) below, the Jersey Companies Law prohibits any provision whether contained in the Articles or in a contract with the Company or otherwise whereby the Company or any of its subsidiaries or any other person, for some benefit conferred or detriment suffered directly or indirectly by the Company, agrees to exempt any person from, or indemnify him against, any liability which by law would otherwise attach to him by reason of the fact that he is or was an officer of the Company.

(b) The above prohibitions do not apply to a provision for exempting a person from or indemnifying him against:

(i) any liabilities incurred in defending any proceedings (whether civil or criminal):

(A) in which judgment is given in his favour or he is acquitted;

(B) which are discontinued otherwise than for some benefit conferred by him or on his behalf or some detriment suffered by him; or

(C) which are settled on terms which include such benefit or detriment and, in the opinion of a majority of the Directors (excluding any Director who conferred such benefit or on whose behalf such benefit was conferred or who suffered such detriment), he was substantially successful on the merits in his resistance to the proceedings;

(ii) any liability incurred otherwise than to the Company if he acted in good faith with a view to the best interests of the Company;

(iii) any liability incurred in connection with an application made under the Jersey Companies Law in which relief is granted to him by the Royal Court of Jersey; or

(iv) any liability against which the Company normally maintains insurance for persons other than Directors.

## 2 SUMMARY OF APPLICABLE UK LISTING RULES AND UK DISCLOSURE AND TRANSPARENCY RULES

In connection with and following UK Admission, the Company will be required to comply with the UK Listing Rules and the UK Disclosure and Transparency Rules. In light of this, the Hong Kong Stock Exchange has granted the Company various waivers from the application of certain Hong Kong Listing Rules and the SFC has granted certain exemptions from certain Hong Kong laws and regulations that would otherwise apply to the Company from HK Admission. Further details are set out in the section "Waivers and Exemptions from Hong Kong Laws and Regulations" in this Wrap.

Set out below is a non-exhaustive summary of certain provisions of the UK Listing Rules and the UK Disclosure and Transparency Rules that will apply to the Company from UK Admission, which regulate the entry by Glencore into significant transactions and related party transactions, regulate dealing by the Company in its own shares, set out the required contents of shareholder circulars published by the Company, impose certain other continuing obligations on the Company and impose certain disclosure obligations in relation to interests held by Directors, PDMRs and certain Shareholders of the Company. The UK Listing Rules can be accessed via the internet at: http://fsahandbook.info/FSA/html/handbook/LR and the UK Disclosure and Transparency Rules can be accessed via the internet at: http://fsahandbook.info/FSA/html/handbook/DTR.

References to "shares" in this summary are to equity securities, and all references to a "listed company" or "listed companies" are to those companies, including the Company, whose shares have been admitted to listing on the premium segment of the Official List, unless otherwise stated.

2.1 **UK Listing Rules Chapter 9—Continuing Obligations**

Chapter 9 contains certain ongoing disclosure obligations that apply to listed companies, as well as requirements in relation to the conduct of certain types of transaction, in particular rights issues and open offers.

(a) ***Pre-emption rights***

A listed company proposing to issue equity shares for cash must first offer those shares to its existing shareholders in proportion to their existing holdings. This rule does not apply: (i) to rights issues and open offers (insofar as the shares issued are in respect of fractional entitlements of shareholders in that rights issue or open offer, or insofar as legal or regulatory requirements make it problematic to offer shares to shareholders in certain jurisdictions in the rights issue or open offer); (ii) to the sale of treasury shares for cash to an employee share scheme; or (iii) to companies that have obtained shareholder consent to issue shares for cash or to sell treasury shares on a non-pre-emptive basis. The Articles set out certain restrictions on the issuance of Ordinary Shares for cash. These Articles are also consistent with the provisions of UK Listing Rule 9 and are summarised in paragraph 7.3 of Section X: "Additional Information" in the International Prospectus that forms part of this Hong Kong Prospectus.

(b) ***The Model Code***

The purpose of the Model Code is to ensure that PDMRs do not abuse, or place themselves under suspicion of abusing, inside information that they may be thought to have, especially in "prohibited periods", which are periods leading up to an announcement of financial information (known as "close periods") and other periods when inside information exists.

No dealings in shares may be effected by or on behalf of a listed company or any other member of its group at a time when, under the provisions of the Model Code, a director of any other group company would be prohibited from dealing in its securities. "Dealing in shares" includes buying and selling shares and also the granting or accepting of options under share schemes (subject to certain exceptions). A listed company must require every PDMR, including directors, to comply with the Model Code and to take all proper and reasonable steps to secure their compliance.

PDMRs must not deal in any shares of a listed company without obtaining clearance to do so in accordance with the notification procedures set out in the Model Code and Rule 3.1.4R of the UK Disclosure and Transparency Rules. A listed company must maintain a record of requests to deal and of clearances granted. A PDMR must not be given permission to deal during a prohibited period or on considerations of a short term nature.[(2)] A PDMR who is not in possession of inside information in relation to the listed company may be given clearance to deal (to sell but not to purchase shares in the company) if he is in severe financial difficulty or there are other exceptional circumstances, but the FSA must be consulted in such scenarios and the nature of the exceptional circumstances must be made public through a RIS. Certain dealings are not subject to the Model Code, such as participation in a rights issue or the acceptance of a takeover offer.

A PDMR must take reasonable steps to prevent any dealings by or on behalf of any connected person of his in any shares of the company on considerations of a short term nature and must seek to prohibit the dealings of his connected persons in close periods.

(c) ***Rights issues and open offers***

Listed companies must ensure the issue price, principal terms and results of a rights issue (including the sale and price per share) are notified to a RIS as soon as possible. The offer period for such a rights issues must remain open for at least 10 days.

If existing shareholders do not take up their rights to subscribe shares in a rights issue, a listed company must ensure that any premium over the subscription or purchase price (net of expenses) achieved from selling the shares in the market is retained for the account of the relevant existing shareholders, except that amounts of less than £5.00 due to an existing shareholder may be retained for the benefit of the listed company. Such shares may be allotted or sold to underwriters if, on expiry of the subscription period, no premium (net of expenses) has been obtained.

(2) Paragraph 8(b) of the Model Code states that an investment with a maturity of one year or less will always be considered to be of a short term nature.

A listed company must ensure that the timetable for any open offer it makes is approved by the regulated exchange on which the company trades. If the open offer is subject to shareholder approval, the related circular must not contain any statement that might imply that the offer gives the same entitlements as a rights issue.

If a shareholder's entitlement in a rights issue or open offer includes a fraction of a security, a listed company must ensure that the fraction is sold for the benefit of the holder, except that if its value (net of expenses) does not exceed £5.00, it may be sold for the company's benefit. Sales of fractions may be made before listing is granted.

If a listed company makes an open offer, placing, vendor consideration placing, offer for subscription of equity shares or an issue out of treasury, the price must not be at a discount of more than 10 per cent. to the middle market price of the shares offered at the time of announcing the terms of the offer or at the time of agreeing the placing (as the case may be), unless such a larger discount has been specifically approved by the company's shareholders.

(d) ***Notifications: general***

A listed company must forward to the FSA for publication all circulars, notices, reports, resolutions (other than resolutions concerning ordinary business passed at an annual general meeting), and all other documents to which the UK Listing Rules apply. It must also notify a RIS of such publication and any proposed changes to its capital structure (including the structure of its listed debt securities), any redemption of listed shares, the results of any new issues of shares or public offerings of existing shares, any planned dividends or other distributions and any lock-up arrangements in respect of its shares.

A listed company must also notify a RIS of any changes to the composition of its board of directors or the roles or responsibilities of any of its chairman or executive and non-executive directors, as well as details of previous directorships and unspent convictions of its directors or any insolvency situations of companies of which they are or have been directors. If this information changes an update must be notified to a RIS.

A listed company must notify a RIS as soon as possible of information relating to the disposal of equity shares under an exemption allowed in any lock-up arrangements disclosed in accordance with the PD Regulations. A listed company must notify a RIS as soon as possible of the details of any variation in the lock-up arrangements disclosed in accordance with the PD Regulations or any subsequent announcement.

A listed company must notify a RIS as soon as possible after a general meeting of all resolutions passed by the listed company other than resolutions concerning ordinary business which have been passed at an annual general meeting.

A listed company which changes its name must, as soon as possible: (i) notify a RIS of the change, stating the date on which it has taken effect; (ii) inform the FSA in writing of the change; and (iii) send the FSA a copy of the revised certificate of incorporation issued by the Registrar of Companies.

A listed company must also notify a RIS as soon as possible of any change in its accounting reference date.

(e) ***Preliminary statement of annual results and statement of dividends***

If a listed company prepares a preliminary statement of annual results, the statement must be published as soon as possible after it has been approved by the board and agreed with the company's auditors prior to publication. The statement must show the figures in the form of a table, including the items required for a half-yearly report, consistent with the presentation to be adopted in the annual accounts for that financial year. The statement must give details of the nature of any likely modification that may be contained in the auditors' report required to be included with the annual financial report and must include any significant additional information necessary for the purpose of assessing the results being announced.

A listed company must also notify a RIS as soon as possible after the board has approved any decision to pay, make or withhold any dividend or other distribution on listed equity, giving full details of the dividend or other distribution.

(f) ***Financial disclosure***

Chapter 9 of the UK Listing Rules sets out a list of information that must be included in a listed company's annual financial report such as details of significant contracts to which the listed company is party and of arrangements under which a shareholder has waived or agreed to waive dividends. A listed company must include a statement that it has complied with the UK Corporate Governance Code or if it has not, details of the reasons for non-compliance. Directors' remuneration packages must be described and Chapter 9

sets out a list of items relevant for inclusion in this disclosure such as remuneration details, share options, long-term incentive plans along with details of entitlements or awards granted and of the monetary value and number of shares, cash payments or other benefits received by each director under any long-term incentive schemes and contractual compensation for early termination of service contracts.

Certain sections of the annual financial report must be reviewed by the auditors before publication and if they are not in compliance with the requirements the auditor's report must contain a statement giving details of such non-compliance.

(g) ***Share schemes***

Employee share schemes and long-term incentive plans established by non-UK incorporated companies do not require shareholder approval under the UK Listing Rules. The Combined Code, however, recommends that shareholders should be invited specifically to approve all new long-term incentive schemes and significant changes to existing schemes. Where shareholder approval of a plan is sought UK Listing Rule 13.8.11 provides that the shareholder circular must contain either the full text of the scheme or a description of its principal terms, details of the trusteeship or interest where this involves the directors, state that certain key provisions cannot be altered to the advantage of participants without shareholder approval; state whether the benefits under the scheme are pensionable; and if the scheme is not circulated to shareholders, give details of where it can be inspected.

UK Listing Rule 9.4.4 provides that a listed company must not, without the prior approval by ordinary resolution of its shareholders grant an option, warrant or similar right of subscription to a director or employee of the listed company or any of its subsidiaries, if the price per share payable on the exercise of the option, warrant or similar right to subscribe is less than market price (which can be calculated in a number of prescribed ways). This rule does not apply to grants under an employee share scheme if participation in the scheme is offered on similar terms to all or substantially all employees of the group companies whose employees are entitled to participate in the scheme or following a take-over or reconstruction where previous arrangements are being replaced with comparable arrangements.

2.2 **UK Listing Rules Chapter 10—Significant Transactions**

The purpose of Chapter 10 is to ensure that shareholders of a listed company are notified of certain transactions entered into by that listed company and have the opportunity to vote on larger transactions. It is aimed at transactions outside the normal course of business[(3)] that might alter a shareholder's economic interest in a listed company's assets or liabilities (whether or not the change in the assets or liabilities is recognised on the company's balance sheet).

(a) ***Classification of transactions***

Transactions for the purpose of Chapter 10 include agreements entered into by the listed company or its subsidiaries and grants of options but excluding transactions entered into in the ordinary course, issues of securities and financing transactions not involving the acquisition or disposal of any fixed asset of any member of the listed company's group and transactions between wholly-owned group companies.

Transactions are classified in order to determine the extent of the disclosure required and whether they will be subject to a shareholder vote. The classifications are determined by assessing the size of the transaction relative to that of the listed company which proposes to enter into the transaction. Chapter 10 sets out a number of tests that will result in a percentage ratio that will in turn determine which classification applies.

(b) ***Class 3 transactions***

Class 3 transactions are those where all percentage ratios are less than 5 per cent. If a listed company carrying out a Class 3 transaction makes any information in relation to the transaction public, it must notify a RIS of those details together with certain other specified details of the transaction. If the consideration for such an acquisition involves the issue of listed shares, then a RIS notification will be required regardless of whether aspects of the transaction are otherwise made public. Chapter 10 sets out the specific content required in these RIS notifications.

(3) In assessing whether a transaction is within a listed company's ordinary course of business, the FSA has regard to the size and incidence of similar transactions with the company.

(c) ***Class 2 transactions***

A Class 2 transaction is a transaction where any percentage ratio is 5 per cent. or more but each is less than 25 per cent. All Class 2 transactions must be notified to a RIS and the information required to be included in such notification is more detailed than that required for Class 3 notifications.

(d) ***Class 1 transactions***

Class 1 transactions are transactions where any percentage ratio is 25 per cent. or more. For Class 1 transactions, companies must comply with the Class 2 requirements but must also circulate an explanatory circular to its shareholders and obtain shareholder approval for the transaction. Any agreement effecting a Class 1 transaction must be conditional on obtaining such shareholder approval. The UK Listing Rules prescribe detailed content requirements for Class 1 circulars, as described in paragraph 2.5(c) below.

(e) ***Reverse takeovers***

A reverse takeover is a transaction consisting of an acquisition by a listed company of a business where any percentage ratio is 100 per cent. or more or which would result in a fundamental change in the business or in board or voting control of the listed company. Reverse takeovers will be treated as Class 1 transactions if: (i) none of the class test calculation ratios exceed 125%; (ii) the acquisition target company is in the same line of business of the listed company; (iii) the acquisition target company satisfies all requirements for premium listing; and (iv) there will be no change of board or voting control of the listed company. When a listed company completes a reverse takeover, its listed shares will generally be cancelled by the FSA and it will be required to re-apply for listing and satisfy the relevant requirements.

(f) ***Rules for specific scenarios***

Chapter 10 stipulates that certain types of transaction will automatically be considered Class 1 transactions regardless of the results of the class tests. These transactions are:

(i) the grant of any exceptional indemnities (other than to a wholly owned subsidiary undertaking of the listed company) where the maximum liability is either unlimited or equal to or in excess of 25 per cent. of the listed company's profits for the last three financial years;

(ii) an agreement to pay a break fee in excess of 1 per cent. of the value and/or market capitalisation of the listed company being acquired; and

(iii) an issue of shares by a major subsidiary undertaking (which itself is not a listed company) of a listed company where the issue would dilute that listed company's interest in the subsidiary and the economic effect of this is equivalent to a disposal of 25 per cent. or more of the assets or profits (after the deduction of all charges except taxation) of the listed company's group.

Transactions completed within any 12-month period before the latest transaction must be aggregated with that transaction if: (i) they involve the same or connected counterparties; (ii) they involve the acquisition or disposal of securities or an interest in one particular company; or (iii) together they lead to substantial involvement in a business activity which did not previously form a significant part of the acquirer company's principal activities. This rule on aggregation does not apply to break fees.

Additional specific rules must be applied to the classification of transactions entered into by property companies, mineral companies and scientific research companies. For instance, an additional class test based on the reserves of the listed company must be applied in relation to mining companies.

Chapter 10 also contains guidance on the assessment of joint venture transactions and provides for exemptions from the Class 1 requirements for companies in severe financial difficulty.

### 2.3 UK Listing Rules Chapter 11—Related Party Transactions

The purpose of Chapter 11 is to prevent related parties of a listed company (including its subsidiary undertakings) from taking advantage of their position (or creating the perception that they may have done so). It sets out safeguards that apply to transactions and arrangements between a listed company's group and its related parties and transactions and arrangements between a listed company's group and any other person that might benefit a related party. The safeguards are intended to prevent a related party from taking advantage of its position and to prevent any perception that it may have done so.

(a) ***Classification***

"Related parties" for the purposes of Chapter 11 are: (i) persons who are or have been substantial shareholders within 12 months of the transaction; (ii) persons who are or have been directors or shadow directors within 12 months of the transaction of any member of a listed company's group; (iii) any person who exercises significant influence over the listed company; or (iv) an associate of any of the foregoing, such as a family member of a company controlled by the related party.

A "related party transaction" can be a non-ordinary course of business transaction between a listed group and a related party, an arrangement pursuant to which a member of a listed company's group and related party each invest in another undertaking or asset, or any other similar transaction or arrangement which benefits a related party except for transactions of a revenue nature in the ordinary course of business.

If an issuer proposes to enter into a transaction that might be a related party transaction it is required to obtain the guidance of a sponsor to assess the potential application of the rules.

A listed company is required to aggregate related party transactions entered into with the same related party and in any 12-month period for the purpose of the application of the percentage ratio tests.

(b) ***Exemptions***

Chapter 11 does not apply to transactions considered to be "small transactions", i.e. those where the class tests set out in Chapter 10 would each result in a percentage ratio of 0.25 per cent. or less.

In addition, it does not apply to certain specified transactions, including (but not limited to): (i) a transaction agreed before a person became a related party; (ii) a transaction that consists of the take-up by a related party of securities under its entitlement in a pre-emptive offering; (iii) a transaction that consists of an issue of new securities made under its entitlement in a pre-emptive offering; (iv) grants of credit (loans and guaranteeing loans) to related parties and directors on normal commercial terms; (v) directors' indemnities and loans; (vi) certain joint investment arrangements; or (vii) an underwriting by a related party of an issue of securities by the listed company (or its subsidiary undertakings) if the consideration paid is no more than usual commercial underwriting consideration, in each case so long as the transaction has no unusual features. In addition, there is an express exemption for transactions in connection with employee share schemes and long-term incentive schemes as long as these transactions have no unusual features.

(c) ***Consequences***

If a listed company does enter into a related party transaction it must make a market notification containing specified information about the transaction and must obtain shareholder approval for the transaction, having: (i) circulated a more detailed shareholder circular satisfying specific content requirements such as the inclusion of a board statement that the transaction is fair and reasonable; and (ii) prevented the related party and its associates from voting.

(d) ***Modifications for smaller transactions***

If each of the percentage ratios relating to a related party transaction is less than 5 per cent. but one or more of the percentage ratios exceeds 0.25 per cent., a listed company does not need to comply with the requirements set out in paragraph 2.3(c) above. Instead, it must: (i) inform the FSA in writing of the details of the transaction; (ii) provide the FSA with written confirmation from an independent adviser acceptable to the FSA that the terms of the transaction are fair and reasonable as far as the shareholders of the listed company are concerned; and (iii) undertake in writing to the FSA to include details of the transaction in the listed company's next published annual accounts.

2.4 **UK Listing Rules Chapter 12—Dealing in own securities and treasury shares**

The rules in Chapter 12 regulate the timing and manner of purchases by a listed company of its own shares and sales of treasury shares.

(a) ***Prohibition on share purchases during prohibited periods***

Listed companies and members of their group cannot purchase or redeem (including early redemption of) their own securities during a prohibited period, unless: (i) the listed company has made advance disclosure of the specific trades of fixed quantities of shares; (ii) the listed company has in place an independently managed buy-back programme executed by a third party; (iii) the value of the securities would likely be

affected by the publication of the information giving rise to the prohibited period; or (iv) the listed company is redeeming securities (other than equity shares) in accordance with their specific terms of issue.

(b) ***Purchases from related parties***

Buy-backs of shares or preference shares from related parties must comply with the rules in Chapter 11 unless a tender offer is made to all holders of the relevant class of securities or, in the case of a market purchase under a general authority granted by shareholders, the buy-back is made without prior understanding, arrangement or agreement between the listed company and the related party.

(c) ***Purchase of own shares***

Unless a general tender offer is made, purchases by a listed company of less than 15 per cent. of any class of shares pursuant to a general authority granted by shareholders may only be made if the offer price is 5 per cent. above the average market value for the five business days before the trade is made. Purchases of 15 per cent. or more of any class of shares must be by way of general tender offer to all holders of the relevant class of securities.

Any proposals from the board of directors put to shareholders (as well as the ultimate outcome of the vote) to authorise a listed company to purchase its own shares must be notified to a RIS setting out details of the proposal. Any consequent purchases must also be notified.

Where a listed company proposes to buy any of its convertible securities it must ensure that there are no dealings in the relevant securities by or on behalf of a listed company or any member of its group until the proposal has been notified to a RIS or abandoned. Any decision to purchase must also be notified to an RIS as must any purchases, early redemptions or cancellations of its convertible securities by or on behalf of a listed company or any member of its group when an aggregate of 10 per cent. of the initial amount of the relevant class of shares has been purchased, redeemed or cancelled and for each 5 per cent. in aggregate acquired thereafter.

Where, in the course of 12 months, a listed company purchases warrants or options over its own shares (excluding treasury shares), which on exercise would represent 15 per cent. or more of the listed company's existing issued shares, the listed company must send a circular to its shareholders containing a statement of the directors' intentions regarding future purchases of the listed company's warrants and options, and details and material terms of the purchases.

All such notifications must be made to an RIS as soon as possible, and in any event by no later than 7.00 a.m. (London time) on the business day following the calendar day on which the purchase occurred or relevant threshold was breached.

(d) ***Treasury shares***

During a prohibited period, treasury shares cannot be sold for cash or transferred for the purposes of an employees' share scheme except in certain specific circumstances.

If, by virtue of holding treasury shares, a listed company is allotted shares as part of a capitalisation issue, the listed company must notify the details to a RIS as soon as possible, and in any event by no later than 7.00 a.m. (London time) on the business day following the calendar day on which the allotment occurred. Any sale for cash, transfer for the purposes of an employees' share scheme or cancellation of treasury shares by a listed company must also be notified to a RIS as soon as possible, and in any event by no later than 7.00 a.m. (London time) on the business day following the calendar day on which the event occurred, with details of the relevant transaction.

(e) ***Exceptions***

The prohibitions outlined in (a) to (d) above do not apply to transactions in the ordinary course of business by a securities dealing business or on behalf of third parties (either by the listed company or any member of its group), if a listed company maintains information barriers between those responsible for any decision relating to the relevant transaction and those in possession of inside information relating to the company.

### 2.5 UK Listing Rules Chapter 13—Contents of Circulars

All circulars issued by listed companies to their shareholders must comply with the content requirements of Chapter 13.

(a) ***Approval of circulars***

A listed company may not distribute a circular unless it has been approved by the FSA except where: (i) it relates to certain specified matters, such as a change in a listed Company's name, a reduction of capital or a bonus issue; (ii) it complies with the content requirements of Chapter 13; and (iii) neither it nor the transaction it relates to has any unusual features.

Circulars relating to the purchase of a listed company's own shares must be approved by the FSA if the counterparty purchasing the shares is a related party or the exercise of the authority sought would result in the purchase of 25 per cent. or more of a listed company's issued shares (excluding treasury shares) except in certain circumstances.

(b) ***Requirements of all circulars***

Chapter 13 sets out requirements that must be met by any circular sent by a listed company to its shareholders, for instance, the circular must: (i) provide a clear and adequate explanation of its subject matter benefiting and risks; (ii) state why the shareholder is being asked to vote (or if no vote is required, why the circular is being sent); (iii) contain all information necessary to allow shareholders to make a properly informed decision where relevant; and (iv), where voting is required, contain a recommendation from the board as to the voting action shareholders should take, indicating whether or not the proposal described in the circular is, in the board's opinion, in the best interests of the shareholders as a whole.

(c) ***Class 1 circulars***

Class 1 circulars must include additional details relating to a listed company and its business. The requirements mirror some of the content requirements of prospectuses as set out in the Prospectus Rules.

Class 1 circulars must also contain a responsibility statement from the directors of a listed company confirming that to the best of the knowledge and belief of the directors, the information in the circular accords with the facts and does not make any material omissions. A statement as to the effect of the acquisition or disposal on the listed company's group earnings, assets and liabilities is also required.

(d) ***Related party circulars***

Every related party circular must contain some of the same information that is required to be included in a Class 1 circular (and if any percentage ratio relating to the transaction is 25 per cent. or more, the circular must contain all information required to be included in a Class 1 circular).

Where the related party concerned is or has within 12 months before a transaction been a director, shadow director or an associate of any director or shadow director of a group company, additional disclosure must be made in relation to the relevant director and his arrangements with a listed company (including details of his service contract, interests in shares and related party transactions).

Full particulars of the related party transaction must always be included and in the case of an acquisition or disposal of an asset that will result in a percentage ratio of 25 per cent. of more, if appropriate financial information is not available, an independent valuation must be included.

A statement by the board of a listed company must also be contained in the circular, stating the transaction is fair and reasonable as far as the shareholders are concerned and that the directors have been so advised by an independent adviser acceptable to the FSA. Any director who is, or an associate of whom is, the related party, or who is a director of the related party should not have taken part in the board's consideration of the matter, and a statement should also be included to that effect.

Chapter 13 sets out additional specific requirements for circulars relating to purchase of own shares, takeover offers, the acquisition or disposal of mineral resources, disapplication of pre-emption rights, directors' authority to all of shares, reductions of capital, scrip dividends, notice of meetings, constituted amendments and employee share schemes.

(e) ***Inclusion of financial information***

Financial information must be included in a Class 1 circular if: (a) a listed company is seeking to acquire an interest in a target company which will result in the consolidation of the target company's assets and liabilities with those of the listed company; (b) a listed company is seeking to dispose of an interest in a target company which will result in the assets and liabilities no longer being consolidated; or (c) the target company itself has acquired a target company within the last three year financial reporting period and the acquisition would have been a Class 1 transaction in relation to the listed company.

Any financial information included must be in a form consistent with the accounting policies adopted in a listed company's latest annual consolidated accounts and the listed company must cite all sources of its financial information where it discloses such information in a circular. If financial information has not been extracted directly from audited accounts, the circular must set out the basis and assumptions on which the information has been prepared. Investors must be provided with all necessary information to understand the context and relevance of non-statutory figures, including a reconciliation to statutory equivalents.

2.6 **UK Disclosure and Transparency Rules Chapter 3**

The purpose of DTR3 is to prevent market abuse by directors, other significant decision-makers of the company, and their connected persons. DTR3 applies in relation to UK-incorporated companies and to certain non-UK incorporated companies (including non-UK incorporated companies with securities admitted to trading on a regulated market where the UK is that issuer's home state, such as the Company).

(a) ***Classification***

DTR3 applies to dealings of PDMRs and their connected persons in the securities of the issuer. 'Connected persons' of a PDMR are: (i) members of the PDMR's family; (ii) body corporates with which the PDMR is associated; (iii) trustees of trusts (which are not pension schemes or share schemes), where the beneficiaries of such trusts include, or where the terms of such trusts may benefit, the PDMR or any of his connected persons mentioned in (i) and (ii) above; (iv) any partner of the PDMR or any of his connected persons mentioned in (i) to (iii) above; and (v) a firm that is a legal person in which the PDMR or one of his connected persons mentioned in (i) to (iii) above is a partner, or in which a partner is a firm in which the PDMR or one of his connected persons mentioned in (i) to (iii) above is a partner.

(b) ***Notification of transactions by PDMRs and their connected persons***

DTR3 provides that PDMRs and their connected persons must notify an issuer in writing of the occurrence of all transactions conducted on their own account in the shares of the issuer, or derivatives or any other financial instrument(s) relating to those shares, within four business days of the day on which the transaction occurred.

Examples of transactions which must be notified to the issuer include: (i) the acquisition of or disposal of shares, (ii) the acceptance of awards; (iii) the acceptance or receipt of an option or gifts from the issuer or a third party and the exercise of options by a PDMR; and (iv) the grant of security over shares.

(c) ***Content of DTR3 notifications***

The notification must contain the following information: (i) the name of the PDMR, or where applicable, the name of the person connected with the PDMR; (ii) the reason for the responsibility to notify; (iii) the name of the issuer; (iv) a description of the financial instrument; (v) the nature of the transaction; (vi) the date and place of the transaction; and (vii) the price and volume of the transaction.

(d) ***Issuer obligation to notify RIS***

Issuers must notify a RIS of the information set out in paragraph 2.6(c) above as soon as possible and no later than the end of the business day following receipt of the information by the issuer.

Generally, financial information must cover a three year financial reporting period, although there are exceptions to this, such as where a business has been in existence for less than three years. The financial information must also include a balance sheet, income statement, cash flow statement and a statement showing changes in equity, each with their explanatory notes as well as the accounting policies applied. An independent accountant's opinion setting out whether the information provided gives a true and fair view of the financial matters set out in it and has been prepared in a form consistent with the accounting policies of the listed company will usually be required. An accountant's opinion is not required if the target company: (i) is admitted to trading on the main market of the London Stock Exchange; or (ii) has its securities listed on an overseas investment exchange or admitted to trading on an overseas regulated markets; and, in either case, no material adjustment is needed to be made to the target company's financial statements to achieve consistency with the listed company's accounting policies.

If a profit forecast or profit estimate is included in a Class 1 circular it must comply with the Prospectus Rules requirements for a profit forecast or profit estimate, except that a listed company does not need to include a report on the forecast or estimate. It must, however, include a statement that the forecast or estimate has been properly compiled on the basis of assumptions stated and is consistent with the accounting policies of the listed company. If, prior to the Class 1 transaction, a listed company has

published a profit forecast or profit estimate relating to the listed company itself, a significant part of its group or the target, and the profit forecast or profit estimate remains outstanding, the listed company must either include it in the Class 1 circular or else include an explanation of why it is not longer valid.

## 3 SUMMARY OF UK CORPORATE GOVERNANCE CODE AND PROVISIONS RELATING TO THE DIRECTORS' REPORT ON CORPORATE GOVERNANCE

In connection with and following UK Admission, the Company will be required to comply with the UK Corporate Governance Code (the "UK Corporate Governance Code"). In light of this, the Hong Kong Stock Exchange has granted the Company waivers from the application of Appendix 14 (Code on Corporate Governance Practices) and Appendix 23 (Corporate Governance Report) to the Hong Kong Listing Rules that would otherwise apply to the Company upon HK Admission. Further details are set out in the section "Waivers and Exemptions from Hong Kong Laws and Regulations" in this Wrap.

Set out below is a non-exhaustive summary of certain provisions of the UK Corporate Governance Code that will apply to the Company from UK Admission, which sets out standards of good practice in relation to board leadership and effectiveness, remuneration, accountability and relations with shareholders.

In addition, the UK Listing Rules require premium-listed companies to include in their annual report and accounts a statement of how they apply the UK Corporate Governance Code's principles of good corporate governance and whether or not they have complied with its best practice provisions throughout the relevant accounting period. Where any of the provisions have not been complied with, the company must state the provisions in question, the period within which non-compliance occurred and the company's reasons for non-compliance.

The UK Listing Rules can be accessed via the internet at http://fsahandbook.info/FSA/html/handbook/LR and the UK Corporate Governance Code can be accessed via the internet at: http://www.frc.org.uk/corporate/ukcgcode.cfm.

### 3.1 Independent directors on the board

Under paragraph B.1 of the UK Corporate Governance Code, the board should include an appropriate combination of executive and non-executive directors (and, in particular, independent non-executive directors) such that no individual or small group of individuals can dominate the board's decision making and the board and its committees should have the appropriate balance of skills, experience independence and knowledge of the company to enable them to discharge their respective duties and responsibilities effectively.

### 3.2 Audit Committee

Under paragraph C.3.1 of the UK Corporate Governance Code, the board should establish an audit committee of at least three, or in the case of smaller companies two, independent non-executive directors. In smaller companies the company chairman may be a member of, but not chair, the committee in addition to the independent non-executive directors, provided he or she was considered independent on appointment as the company chairman. A "smaller company" is defined as one that is below the FTSE 350 throughout the year immediately prior to the reporting year. The board should satisfy itself that at least one member of the audit committee has recent and relevant financial experience.

The main role and responsibilities of the audit committee should be set out in written terms of reference (paragraph C.3.2 of the UK Corporate Governance Code) and the terms of reference of the audit committee, including its role and the authority delegated to it by the board, should be made available, for example, by including the information on a website maintained by the company (paragraph C.3.3 of the UK Corporate Governance Code).

### 3.3 Remuneration Committee

Under paragraph D.2.1 of the UK Corporate Governance Code, the board should establish a remuneration committee of at least three, or in the case of smaller companies two, independent non-executive directors. In addition the company chairman may also be a member of, but not chair, the committee if he or she was considered independent on appointment as the company chairman. The remuneration committee should make available its terms of reference, explaining its role and the authority delegated to it by the board. Where remuneration consultants are appointed, a statement should be made

available for example, on the company's website) of whether they have any other connection with the company.

### 3.4 Nomination Committee

Under paragraph B.2.1 of the UK Corporate Governance Code, there should be a nomination committee which should lead the process for board appointments and make recommendations to the board. A majority of members of the nomination committee should be independent non-executive directors. The company chairman or an independent non-executive director should chair the committee, but the company chairman should not chair the nomination committee when it is dealing with the appointment of a successor to the company chairmanship. The nomination committee should make available (for example, on the company's website) its terms of reference, explaining its role and the authority delegated to it by the board.

### 3.5 Directors' report on corporate governance

Under UK Listing Rule 9.8.6(5), premium-listed companies are required to include a statement as to its compliance with the UK Corporate Governance Code throughout the accounting periods in their annual reports and accounts. The statement must detail how the listed company has applied the main principles set out in the UK Corporate Governance Code in a manner that would enable shareholders to evaluate how the principles have been applied. Where any of the UK Corporate Governance Code's provisions have not been complied with, the relevant provisions must be specified, the period of non-compliance stated and the reasons for non-compliance given.

The UK Corporate Governance Code affects the presentation and content of a company's published annual report and accounts. In addition to the "comply or explain" requirement in the UK Listing Rules, the UK Corporate Governance Code prescribes that numerous disclosures be made in the annual report, usually in the directors' report on corporate governance, including: (i) a statement as to how the board operates; (ii) the number of meetings held by the board and its committees and attendance by individual directors; (iii) identification of each non-executive director whom the board considers to be independent and reasons for determining his or her independence; (iv) how performance evaluation of the board, its committees and individual directors has been conducted; (v) an explanation by the directors of their responsibility for preparing the accounts in the annual report; (vi) a description of the company's business model; (vii) a statement that the business is a going concern (also to be included in any half-yearly financial statements); (viii) certain details regarding the audit committee and external auditors; and (ix) the steps taken by the board to ensure that members of the board have developed an understanding of the views of the major shareholders of the company.

The statement of compliance with the UK Corporate Governance Code and the going concern statement referred to above must be reviewed by the auditors in respect of certain of the UK Corporate Governance Code's requirements which deal with audit and accountability, and should be objectively verifiable.

In addition, the directors of premium-listed companies are required by the UK Listing Rules to report on directors' remuneration and benefits in the annual reports and accounts, usually as part of the directors' report on corporate governance.

## 4 MATERIAL SHAREHOLDER PROTECTION MATTERS

The attachment to the Joint Policy Statement distils certain key shareholder protection matters to ensure that overseas incorporated companies listed in Hong Kong have appropriate standards of shareholder protection that are at least equivalent to those required for a Hong Kong incorporated company. With respect to some of the matters set out in the attachment to the Joint Policy Statement, shareholder protections afforded to shareholders of companies incorporated in Jersey are not at least equivalent to those afforded to shareholders of companies incorporated in Hong Kong. In respect of those matters, the Company is satisfied that either: (a) such matters have been appropriately provided for in the Articles; (b) such matters are broadly commensurate with those protections afforded to shareholders of companies incorporated in Hong Kong on the grounds that there are nevertheless appropriate material shareholder protections under Jersey law in respect of such items; or (c) the Hong Kong Stock Exchange has confirmed that the Company may incorporate alternative provisions in the Articles in respect of certain matters (see 4.1 and 4.2 below).

See the section headed "Summary of Certain Rules and Regulations Applicable to the Company—Summary of Applicable Jersey Company Laws" for a summary of applicable Jersey law and Section X: "Additional Information—Summary of the Articles of the Company" in the International Prospectus for a summary of the Articles.

4.1 **Notice period for convening a meeting to consider a special resolution**

The Joint Policy Statement requirement is that overseas companies must ensure that any annual general meeting or any extraordinary general meeting at which a resolution that requires the approval of members by three-quarter majority vote will be proposed shall be convened by giving at least 21 days' written notice and that any other general meeting shall be convened on at least 14 days' notice. Jersey law requires that all shareholder meetings are convened on not less than 14 days' notice.

Under the Articles, general meetings (other than the annual general meeting of the Company which shall be held on 21 clear days' notice) shall be called by notice of at least 14 clear days.

4.2 **Loans to directors**

The Joint Policy Statement requirement is that the circumstances under which an overseas company may make loans, including quasi loans and credit transactions, to a director must be confined to circumstances no less stringent than those permitted for a Hong Kong incorporated company.

The Company has the ability, under the Articles, to make a loan to a Director to meet expenditure incurred or to be incurred by him or her in defending any regulatory, civil or criminal proceedings brought against such a Director (or to enable him or her to avoid incurring such expenditure). The repayment terms of any such loans will be dependent on whether a Director is successful in defending such proceedings. If a Director is successful in defending such proceedings, the advance shall be treated as part satisfaction of the Company's ability to indemnify a Director for any costs incurred by him or her in successfully defending such proceedings. To the extent that a Director is not successful in defending such proceedings, the amount advanced must be repaid to the Company.

Under the UK Listing Rules, loans to directors to meet expenditure incurred or to be incurred by him or her in defending against civil or criminal proceedings brought against such directors are specifically exempted from the requirements of Chapter 11 of the UK Listing Rules on related party transactions unless such loans have unusual features.

Pursuant to section 157H of the Companies Ordinance, a Hong Kong incorporated company would not be permitted to advance money to directors to assist them in defending civil and criminal proceedings. However such loans are not prohibited under the laws of Jersey and accordingly the Company has the ability under its Articles to make such loans.

## 1 INFORMATION ON COMMODITIES

The information relating to the industry overview in the International Prospectus has been provided for background purposes only from the following sources:

(a) **Third party industry expert data:** CRU International Group (Metals and Minerals), Merlin Trade & Consultancy Ltd. (Energy Products), SSY Consultancy and Research (Energy Products) and Informa Plc (Agricultural Products).

(b) **Data released by public organisations:**

(i) World Gold Council (Metals and Minerals): Information was taken from the publicly available "Gold Demand Trends 2010" released 17 February 2011;

(ii) International Energy Association (Energy Products): Information was taken from the publicly available "Oil Market Report" released 10 February 2011;

(iii) BP plc (Energy Products): Information was taken from the publicly available "Statistical Review of World Energy 2010" released June 2010; and

(iv) U.S. Department of Agriculture (Agricultural Products): Information was taken from the publicly available "World Agricultural Supply and Demand Estimate" released 12 January 2011.

The Company believes that these sources of information are appropriate sources for such information and has taken reasonable care in extracting and reproducing such information. The Company has no reason to believe that such information is false or misleading or that any fact has been omitted that would render such information false or misleading. The information has not been independently verified by the Company, the Joint Sponsors, the Joint Global Co-ordinators or any other party involved in the Global Offer and no representation is given as to its accuracy.

## 2 INFORMATION ON SHAREHOLDERS

The Company has one "substantial shareholder" but no "controlling shareholder" as those terms are defined in the Hong Kong Listing Rules. Details of all persons who are interested in three per cent. or more of the Company's issued ordinary share capital are set out in paragraph 12 of Section X: "Additional Information" in the International Prospectus.

The Selling Shareholder is Penwith Limited, a company incorporated under the Jersey Companies Law whose registered office is at 13-14 Esplanade, St. Helier, Jersey. The Selling Shareholder is a company owned by a charitable trust for the benefit of charities in Jersey and has been incorporated for the purpose of aggregating the Sale Shares which were held by employees of the Group and selling them in the International Offer only. Details of its interest in the Company before the Global Offer and its expected interest in the Company after the completion of the Global Offer are set out in paragraph 12 of Section X: "Additional Information" in the International Prospectus.

This document comprises a Prospectus relating to Glencore International plc (the "Company") and has been prepared in accordance with the Prospectus Rules of the Financial Services Authority (the "FSA") made under Section 73A of the Financial Services and Markets Act 2000 (as amended) (the "FSMA"), has been filed with the FSA and has been made available to the public as required by the Prospectus Rules.

Application has been made to the FSA for all of the Ordinary Shares, issued and to be issued in connection with the Global Offer, to be admitted to the premium listing segment of the Official List of the FSA (the "Official List") and to the London Stock Exchange plc (the "London Stock Exchange") and for such Ordinary Shares to be admitted to trading on the London Stock Exchange's main market for listed securities (together "UK Admission"). UK Admission constitutes admission to trading on a regulated market. Application has also been made to the Listing Committee of the Hong Kong Stock Exchange for listing of, and permission to deal in, all of the Ordinary Shares on the Main Board of the Hong Kong Stock Exchange ("HK Admission"). In the Global Offer, up to 988,973,234 new Ordinary Shares are being made available by the Company and up to 261,026,766 Ordinary Shares are being made available by the Selling Shareholder. Conditional dealings in the Ordinary Shares on a "when issued" basis are expected to commence on the London Stock Exchange on 19 May 2011. It is expected that UK Admission will become effective, and that unconditional dealings will commence in the Ordinary Shares on the London Stock Exchange, at 8.00 a.m. (London time) on 24 May 2011. **All dealings in the Ordinary Shares prior to the commencement of unconditional dealings on the London Stock Exchange will be of no effect if UK Admission does not take place and such dealings will be at the sole risk of the parties concerned. It is expected that HK Admission will become effective on 25 May 2011 and that unconditional dealings will commence in the Ordinary Shares on the Main Board of the Hong Kong Stock Exchange at 9.00 a.m. (Hong Kong time) on 25 May 2011. The new Ordinary Shares issued by the Company will rank *pari passu* in all respects with the existing Ordinary Shares.**

The Company and its Directors (whose names appear on page 30 of this Prospectus) accept responsibility for the information contained in this Prospectus. To the best of the knowledge and belief of the Company and the Directors (who have taken all reasonable care to ensure that such is the case), the information contained in this Prospectus is in accordance with the facts and contains no omission likely to affect the import of such information.

**Prospective investors should read the whole of this Prospectus, including the discussions of certain risk and other factors that should be considered in connection with an investment in the Ordinary Shares, see "Risk Factors".**

## Ordinary Share capital immediately following Admission

**(assuming the Offer Price is set at the mid-point of the Offer Price Range and no exercise of the Over-Allotment Option)**

| **Authorised** | | **Issued and fully paid** | |
|---|---|---|---|
| **Number** | **Amount** | **Number** | **Amount** |
| 50,000,000,000 | U.S.$500,000,000 | 6,893,292,886 | US$68,932,928.86 |

Ordinary Shares of U.S.$0.01 each

The Offer Price Range is indicative only, it may change during the course of the Global Offer and the Offer Price may be set within, above or below the Offer Price Range. The amount to be raised and the number of Ordinary Shares to be issued or sold may be increased or decreased during the course of the Global Offer. A number of factors will be considered in determining the Offer Price, the amount raised in the Global Offer and the basis of allocation, including the level and nature of demand for the Ordinary Shares during the book-building process and prevailing market conditions. A pricing statement containing the Offer Price, confirming the number of Ordinary Shares which are the subject of the Global Offer and containing any other outstanding information (the "Pricing Statement") is expected to be published on or about 19 May 2011.

A copy of this Prospectus has been delivered to the Jersey registrar of companies in accordance with Article 5 of the Companies (General Provisions) (Jersey) Order 2002, and the Jersey registrar of companies has given, and has not withdrawn, consent to its circulation. The Jersey Financial Services Commission has given, and has not withdrawn, its consent under Article 2 of the Control of Borrowing (Jersey) Order 1958, to the issue of the Offer Shares by the Company. It must be clearly understood that, in giving these consents, neither the Jersey registrar of companies nor the Jersey Financial Services Commission takes any responsibility for the financial soundness of the Company or for the correctness of any statements made, or opinions expressed, with regard to it. The Jersey Financial Services Commission is protected by the Control of Borrowing (Jersey) Law 1947, as amended, against any liability arising from the discharge of its functions under that law.

Nothing in this Prospectus or anything communicated to the holders or potential holders of Ordinary Shares by or on behalf of the Company is intended to constitute, or should be construed as, advice on the merits of the subscription for or purchase of Ordinary Shares or the exercise of any rights attached thereto for the purposes of the Financial Services (Jersey) Law 1998.

Citi and Morgan Stanley have been appointed as UK Sponsors in relation to UK Admission. Citigroup Global Markets U.K. Equity Limited, Morgan Stanley and Credit Suisse have been appointed as Joint Global Co-ordinators. BNP Paribas, Citigroup Global Markets U.K. Equity Limited, Credit Suisse, Merrill Lynch and MSSL have been appointed as International Joint Bookrunners in relation to the International Offer. Citi Asia and Morgan Stanley Asia have been appointed as HK Sponsors in relation to HK Admission. BNP Paribas, Citi Asia, Credit Suisse Asia, Merrill Lynch Asia and Morgan Stanley Asia have been appointed as HK Joint Bookrunners in relation to the Hong Kong offer. Each of the UK Sponsors and the International Managers are authorised and regulated in the United Kingdom by the FSA and each of the HK Sponsors and the Hong Kong Managers is authorised and regulated in Hong Kong by the SFC and all of the Banks are acting exclusively for the Company and no one else in connection with the Global Offer and will not regard any other person (whether or not a recipient of this Prospectus) as a client in relation to the Global Offer and will not be responsible to anyone other than the Company for providing the protections afforded to their respective clients, nor for giving advice in relation to the Global Offer or any transaction or arrangement referred to in this Prospectus.

Recipients of this Prospectus are authorised to use it solely for the purpose of considering the acquisition of the Ordinary Shares and may not reproduce or distribute this Prospectus, in whole or in part, and may not disclose any of the contents of this Prospectus or use any information herein for any purpose other than considering an investment in the Ordinary Shares. Such recipients of this Prospectus agree to the foregoing by accepting delivery of this Prospectus.

The Ordinary Shares are subject to selling and transfer restrictions in certain jurisdictions. Prospective purchasers or subscribers should read the restrictions described in paragraph 12 "Selling and transfer restrictions" of Section VIII: "Details of the Global Offer". Each subscriber or purchaser for the Ordinary Shares will be deemed to have made the relevant representations described therein.

This Prospectus does not constitute an offer of, or the solicitation of an offer to subscribe for or buy, any Ordinary Shares to any person in any jurisdiction to whom it is unlawful to make such offer or solicitation in such jurisdiction.

The distribution of this Prospectus and the offer of the Ordinary Shares in certain jurisdictions may be restricted by law. No action has been or will be taken by the Company or the Underwriters to permit a public offering of the Ordinary Shares or to permit the possession, issue or distribution of this Prospectus (or any other offering or publicity materials or application form relating to the Ordinary Shares other than a separate prospectus to be issued by the Company in Hong Kong on or about 13 May 2011 in connection with the Hong Kong Offer) in any jurisdiction where action for that purpose may be required. Accordingly, neither this Prospectus nor any advertisement or any other offering material may be distributed or published in any jurisdiction except under circumstances that will result in compliance with any applicable laws and regulations. Persons into whose possession this Prospectus comes should inform themselves about and observe any such restrictions. Any failure to comply with these restrictions may constitute a violation of the securities laws of any such jurisdiction.

In particular, this Prospectus is not for release, distribution, issue or publication or directed at investors or the public in Hong Kong and does not constitute an offer of, or the solicitation of an offer to subscribe for or buy, any Ordinary Shares, to the public in Hong Kong. Any members of the public in Hong Kong who wish to invest in the Company should make their investment decision solely on the basis of the information contained in a separate prospectus to be issued by the Company in Hong Kong on or about 13 May 2011 in connection with the Hong Kong Offer that is authorised by the Hong Kong Stock Exchange for registration by the Registrar of Companies in Hong Kong.

This Prospectus is not a "web proof information pack" for the purposes of Hong Kong securities law.

The offer, subscription and/or sale of the Ordinary Shares has not been and will not be registered under the U.S. Securities Act of 1933, as amended (the "Securities Act") or under the applicable securities laws of any state of the U.S. and, subject to certain exceptions, may not be offered or sold within the U.S. or to, or for the account or benefit of, U.S. Persons (as defined in Regulation S under the Securities Act ("Regulation S")). The Global Offer is being made (i) in the U.S. to certain qualified institutional buyers (each a "QIB") as defined in Rule 144A under the Securities Act ("Rule 144A"), that are also Qualified Purchasers ("QPs") as defined in Section 2(a)(51) of the U.S. Investment Company Act of 1940, as amended (the "Investment Company Act") in reliance on Rule 144A or another exemption from registration under the Securities Act and (ii) to persons who are not U.S. Persons (as defined in Regulation S) in offshore transactions in reliance on Regulation S. Each prospective subscriber and/or purchaser in the U.S. is hereby notified that the offer and sale of the Ordinary Shares to it may be made in reliance on the exemption from the registration requirements of the Securities Act provided by Rule 144A. In addition, until 40 days after the commencement of the Global Offer, an offer or sale of any of the Ordinary Shares within the U.S. by any dealer (whether or not participating in the Global Offer) may violate the registration requirements of the Securities Act if the offer or sale is made otherwise than in accordance with Rule 144A or pursuant to another applicable exemption from registration under the Securities Act. The Company has not been and will not be registered under the Investment Company Act, and investors will not be entitled to the benefits of that Act. U.S. Persons will only be able to participate in the Global Offer if they are both (i) QPs and (ii) QIBs.

Ordinary Shares acquired by any U.S. Person as provided for in paragraph 12 "Selling and transfer restrictions" of Section VIII: "Details of the Global Offer" are not transferable except in compliance with the restrictions described in such paragraph. **The Ordinary Shares have not been approved or disapproved by the U.S. Securities and Exchange Commission (the "SEC"), any other Federal or State Securities Commission in the U.S. or any other U.S. Regulatory Authority, nor have any such authorities passed upon or endorsed the merits of the Global Offer or confirmed the accuracy or determined the adequacy of this Prospectus. Any representation to the contrary is a criminal offence in the U.S.**

Any prospective subscriber and/or purchaser and any person (including, without limitation, a nominee or trustee) who has a contractual or legal obligation to forward this Prospectus to (or for the account of) any U.S. Person, or to any jurisdiction outside the United Kingdom, should read paragraph 12 "Selling and transfer restrictions" of Section VIII: "Details of the Global Offer" of this Prospectus.

**NOTICE TO NEW HAMPSHIRE RESIDENTS ONLY**

**NEITHER THE FACT THAT A REGISTRATION STATEMENT OR AN APPLICATION FOR A LICENCE HAS BEEN FILED UNDER CHAPTER 421-B OF THE NEW HAMPSHIRE REVISED STATUTES ("RSA 421-B") WITH THE STATE OF NEW HAMPSHIRE, NOR THE FACT THAT A SECURITY IS EFFECTIVELY REGISTERED OR A PERSON IS LICENSED IN THE STATE OF NEW HAMPSHIRE, CONSTITUTES A FINDING BY THE SECRETARY OF STATE OF THE STATE OF NEW HAMPSHIRE THAT ANY DOCUMENT FILED UNDER RSA 421-B IS TRUE, COMPLETE AND NOT MISLEADING. NEITHER ANY SUCH FACT NOR THE FACT THAT AN EXEMPTION OR EXCEPTION IS AVAILABLE FOR A SECURITY OR A TRANSACTION MEANS THAT THE SECRETARY OF STATE OF THE STATE OF NEW HAMPSHIRE HAS PASSED IN ANY WAY UPON THE MERITS OR QUALIFICATIONS OF, OR RECOMMENDED OR GIVEN APPROVAL TO, ANY PERSON, SECURITY OR TRANSACTION. IT IS UNLAWFUL TO MAKE, OR CAUSE TO BE MADE, TO ANY PROSPECTIVE PURCHASER, CUSTOMER OR CLIENT, ANY REPRESENTATION INCONSISTENT WITH THE PROVISIONS OF THIS PARAGRAPH.**

## SUMMARY INFORMATION

*This summary should be read as an introduction to this Prospectus only. Any decision to invest in the Ordinary Shares should be based on consideration of this Prospectus as a whole by the investor and not just this summary. Under the Prospectus Directive, in each Member State of the European Economic Area ("EEA"), civil liability attaches to those persons who are responsible for the summary, including any translations of the summary, but only if the summary is misleading, inaccurate or inconsistent when read together with other parts of this Prospectus. Where a claim relating to the information contained in this Prospectus is brought before a court, the plaintiff investor might, under the national legislation of the Member State of the EEA where such court is located, have to bear the costs of translating this Prospectus before the legal proceedings are initiated.*

### Overview and summary of operations

Glencore is a leading integrated producer and marketer of commodities, with worldwide activities in the marketing of metals and minerals, energy products and agricultural products and the production, refinement, processing, storage and transport of these products. Glencore operates globally, marketing and distributing physical commodities sourced from third party producers and own production to industrial consumers. Glencore has developed and built upon its expertise in the commodities it markets and cultivated long-term relationships with a broad supplier and customer base across diverse industries and geographic regions.

Glencore's marketing activities are supported by investments in industrial assets operating in Glencore's core commodities.

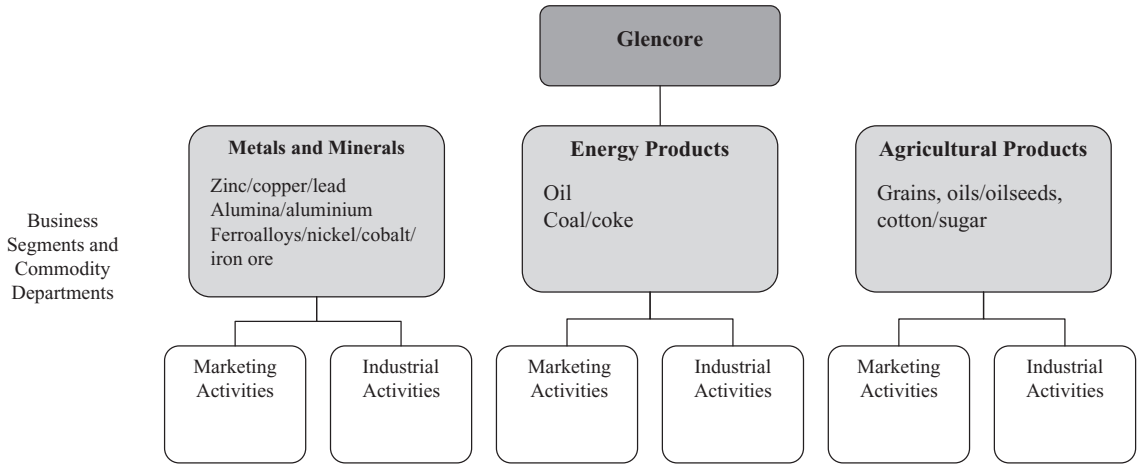
Glencore's industrial, geographical, commodity, supplier and customer diversity, in combination with its long-term relationships, have enabled it to operate profitably, even during periods of market weakness. Glencore's marketing operations are also less correlated to commodity prices than its industrial operations, making Glencore's earnings generally less volatile than those of pure producers of metals, mining and energy products.

Glencore focuses on maximising returns from the entire supply chain, taking into account its extensive global third party supply base, its logistics, risk management and working capital financing capabilities, extensive market insight, business optionality, its extensive customer base, strong market position and economies of scale. In contrast, this is not the business model of Glencore's main industrial competitors who are generally not set up to exploit the full range of value added margin and arbitrage opportunities throughout the commodity supply chain.

Glencore believes it is:

- the world's largest physical supplier of third party sourced commodities in respect of the majority of the metals and minerals it markets;
- among the world's largest non-integrated physical suppliers of crude oil and oil products;
- the world's largest participant in the supply of seaborne steam coal, including attribution of the volumes under a number of exclusive advisory and agency agreements with, amongst others, Xstrata;
- among the world's leading suppliers of sugar; and
- one of the leading exporters of grain from Europe, the CIS and Australia.

The following chart summarises Glencore's business structure:



Glencore's business segments are responsible for managing the marketing, sourcing, hedging, logistics and industrial investment activities for their respective commodities.

Glencore's marketing and industrial activities are supported by a global network of more than 50 offices located in more than 40 countries.

Glencore has an established record of successful strategic investments in industrial assets which have become an important component of its physical marketing activities.

**Key strengths**

***Scale and leading market shares in commodity marketing globally***

Glencore believes that it has significant market share positions in the addressable markets for zinc metal, zinc concentrate, copper metal, copper concentrate, alumina, aluminium, cobalt, seaborne export thermal coal and grains. Glencore's daily oil sales volumes represent approximately 3 per cent. of the world's daily oil consumption.

***Core competence in commodity marketing, logistics, risk management and financing***

Glencore is an established marketer of commodities and has built an outstanding market reputation as a reliable supplier of quality product. Glencore's experience has allowed it to build the market knowledge, insight and logistics capabilities required to generate value-added margins and seek arbitrage potential throughout the physical commodity supply chain.

***Investments in high-quality low-cost extraction/processing operations with strong growth prospects***

Glencore owns many high-quality assets, including Prodeco (coal) and Katanga (copper and cobalt). Glencore continues to invest in its high-quality, large-scale, long-life assets to increase production capacity.

***Marketer with integrated production and processing capabilities***

Glencore is differentiated from commodity production competitors in that it is also a substantial marketer of third party commodities. Glencore sees its ownership of industrial assets both as sources of self-produced commodities and as tools for increasing flexibility, optionality, security of supply and market knowledge.

***Diversified across multiple commodities, suppliers and customers***

Glencore markets a broad range of commodities (the three business segments are involved in the sourcing and marketing of more than 90 distinct commodities) from a diverse supply base to a diverse customer base.

*Track record of value creation achieved*

Glencore has been consistently profitable since the management buyout in 1994 and has a track record of growth across industry cycles. Since 2001, Glencore has achieved an average annual return on equity of 38 per cent.

*World-class management and Board*

Glencore's management is led by Ivan Glasenberg (Chief Executive Officer), supported by Steven Kalmin (Chief Financial Officer) and the rest of the management team. Between them, management has more than 200 years of experience at Glencore, where they have a proven track record of developing and growing the business. In addition to the management team and relevant experience of the Board, Glencore believes that there is considerable strength and depth below this level and it seeks to develop internal talent to ensure that this remains the case.

*Resilient financial performance of marketing*

Since the management buyout in 1994, Glencore's marketing operations have been profitable in every year of operation with a proven track record of resilience through industry cycles. Glencore believes that the financial performance of the marketing operations is less correlated to commodity prices than the industrial operations.

*Barriers to entry*

Glencore believes its scale, global reach and solid track record present significant barriers to entry into the global physical commodity marketing industry, which requires substantial access to credit markets and a global network supporting logistics and risk management capabilities and strong producer relationships.

**Strategy**

*Continue to leverage geographic scope and diversification of operations*

Glencore intends to build upon its position as one of the world's largest physical commodity suppliers and track record of extending product and geographical range by continuing to target market share increases and expansion in emerging markets.

*Capitalise on strategic investments in industrial assets*

Glencore's strategic investments in industrial assets are an important component of its physical sourcing strategy for its marketing activities. Glencore believes these investments provide a competitive advantage over peers which are less vertically integrated.

*Use additional capital and liquidity to grow the business*

Glencore believes the Global Offer will provide it with the financial resources needed to move it to the next stage of its development and achieve further sustainable growth.

*Focus on cost management and further enhancing logistical capabilities*

Glencore intends to continue its focus on cost control and operational efficiencies at its industrial assets and on the sourcing of competitively priced physical commodities from reliable third party suppliers.

*Maintain conservative financial profile and investment grade ratings*

Glencore's conservative financial profile and investment grade credit ratings have enabled it consistently to access the required funding on competitive terms and maintain healthy levels of liquidity. Glencore intends to continue to manage its financial position around maintaining its investment grade credit ratings.

*Disciplined risk management*

Glencore intends to continue its focus in this key area by maintaining and expanding its centralised risk management resources and information systems.

***Place highest priority on employees, the environment and local communities***

Glencore places the highest priority on its employees, the environment and the local communities where it operates.

**Summary financial information**

The table below sets out summary financial information of Glencore International as at and for the years ended 31 December 2008, 2009 and 2010, in each case prepared on a basis that consolidates the financial results and assets and liabilities of each of the companies constituting the Glencore International group before insertion of the Company as issuer and the integration of current shareholder parent entities (which will be completed prior to UK Admission). This information has been extracted without material adjustment from Section VI: "Historical Financial Information" and has been prepared on the basis described in the notes thereto, except for Adjusted EBITDA and cash cost information which have each been calculated as set forth in Section III: "Selected Historical Financial and Other Information".

**Income statement data**

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| Revenue | 152,236 | 106,364 | 144,978 |
| Cost of goods sold | (147,565) | (103,133) | (140,467) |
| Selling and administrative expenses | (850) | (839) | (1,063) |
| Share of income from associates and jointly controlled entities | 1,067 | 82 | 1,829 |
| (Loss)/gain on sale of investments—net | 7 | 33 | (6) |
| Other (expense)/income—net | (2,960) | 35 | (8) |
| Dividend income | 238 | 12 | 13 |
| Interest income | 298 | 267 | 281 |
| Interest expense | (1,135) | (854) | (1,217) |
| **Income before income taxes and attribution** | 1,336 | 1,967 | 4,340 |
| Income tax expense | (268) | (238) | (234) |
| **Income before attribution** | 1,068 | 1,729 | 4,106 |
| Attribution to profit participation shareholders | (677) | (650) | (2,460) |

**Balance sheet data**

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| Non-current assets | 24,803 | 27,551 | 35,491 |
| Current assets | 36,508 | 38,725 | 44,296 |
| **Total assets** | 61,311 | 66,276 | 79,787 |
| Share capital, reserves and retained earnings, and amounts attributed to profit participation shareholders | 15,405 | 16,686 | 19,613 |
| Non-controlling interests | 906 | 1,258 | 2,894 |
| Invested capital | 16,311 | 17,944 | 22,507 |
| Other non-current liabilities | 14,294 | 17,751 | 20,442 |
| Total assets net of current liabilities | 30,605 | 35,695 | 42,949 |
| Current liabilities | 30,706 | 30,581 | 36,838 |
| **Total equity and liabilities** | 61,311 | 66,276 | 79,787 |

**Cash flow data**

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| Cash generated by operating activities before working capital changes | 4,587 | 3,095 | 4,234 |
| Net cash generated/(used) by operating activities after working capital and net interest and income tax payments | 5,960 | (3,010) | 111 |
| Net cash used by investing activities | (2,950) | (1,164) | (4,755) |
| Net cash generated/(used) by financing activities | (2,842) | 4,208 | 5,247 |
| Increase in cash and cash equivalents | 168 | 34 | 603 |
| Cash and cash equivalents, beginning of year | 658 | 826 | 860 |
| Cash and cash equivalents, end of year | 826 | 860 | 1,463 |

**Other financial data and ratios**

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| Adjusted EBITDA[1][5](unaudited) | 5,701 | 3,108 | 6,201 |
| Marketing activities | 2,874 | 1,576 | 2,367 |
| Industrial activities | 2,827 | 1,532 | 3,834 |
| Adjusted EBITDA pre-exceptional items[2][5] | 6,787 | 3,929 | 6,201 |
| Marketing activities | 3,215 | 1,606 | 2,367 |
| Industrial activities | 3,572 | 2,323 | 3,834 |
| Adjusted EBIT[3][5] | 5,126 | 2,486 | 5,290 |
| Marketing activities | 2,861 | 1,561 | 2,337 |
| Industrial activities | 2,265 | 925 | 2,953 |
| Adjusted EBIT pre-exceptional items[4][5] | 6,212 | 3,307 | 5,290 |
| Marketing activities | 3,202 | 1,591 | 2,337 |
| Industrial activities | 3,010 | 1,716 | 2,953 |
| Gross debt (unaudited)[6] | 18,316 | 24,066 | 30,616 |
| Marketing activities | N/A | 10,197 | 12,835 |
| Industrial activities | N/A | 13,869 | 17,781 |
| Interest expense pre-exceptional items—net (unaudited)[7] | (837) | (587) | (897) |
| Marketing activities (unaudited) | N/A | N/A | (299) |
| Industrial activities (unaudited) | N/A | N/A | (598) |
| Capital expenditure | (1,875) | (1,116) | (1,890) |
| Current ratio (x) (unaudited) | 1.19 | 1.27 | 1.20 |
| Current capital employed[9] plus listed associates (at carrying value) to Gross debt[6] (x) (unaudited) | 1.22 | 1.26 | 1.15 |
| Net debt (unaudited)[6] | 11,500 | 10,186 | 14,756 |
| FFO[8]/Net debt[6] (%) (unaudited) | 31.6 | 22.9 | 22.6 |
| Adjusted EBITDA pre-exceptional items[2]/Net interest (x) (unaudited) | 8.11 | 6.69 | 6.91 |
| Income before attribution—pre-exceptional items | 4,824 | 2,820 | 4,007 |
| Income before attribution | 1,068 | 1,729 | 4,106 |

Notes:

(1) Adjusted EBITDA consists of revenue less cost of goods sold and selling and administrative expenses plus share of income from associates and jointly controlled entities and dividends as disclosed on the face of the consolidated statement of income plus depreciation and amortisation.

(2) Adjusted EBITDA pre-exceptional items consists of Adjusted EBITDA as defined above, excluding exceptional items. Exceptional items represent significant items of income and expense which, due to their financial impacts, nature or the expected infrequency of the events giving rise to them, have been separated for internal reporting and analysis of Glencore's results. Exceptional items mainly include impairment charges on inventories and other assets.

(3) Adjusted EBIT consists of revenue less cost of goods sold and selling and administrative expenses plus share of income from associates and jointly controlled entities and dividends as disclosed on the face of the consolidated statements of income.

(4) Adjusted EBIT pre-exceptional items consists of Adjusted EBIT as defined above excluding exceptional items. Exceptional items represent items of income and expense, which, due to their financial impacts, nature or the expected infrequency of the events giving rise to them, have been separated for internal reporting and analysis of Glencore's results. Exceptional items mainly include impairment charges on inventories and other assets.

(5) Adjusted EBITDA, Adjusted EBIT, Adjusted EBITDA pre-exceptional items and Adjusted EBIT pre-exceptional items are not typically measures of operating income, operating performance or liquidity under IFRS; however, Glencore has presented these measures in this Prospectus as Glencore understands that some investors use these measures to determine a company's ability to service indebtedness and fund ongoing capital expenditure and dividends. Investors should not consider these measures in isolation, or as a substitute for income from operations, income for the year and cash flows from operating activities, as determined in accordance with IFRS, as an indicator of operating performance.

The following table is a composition of the key line items on the face of the consolidated statement of income that comprise Adjusted EBIT and reconciles Adjusted EBIT pre-exceptional items, Adjusted EBITDA and Adjusted EBITDA pre-exceptional items for the periods indicated. A reconciliation to net income before attribution is provided in the Adjusted financial information by business segment section in Section III: "Selected Historical Financial and Other Information":

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| Revenue | 152,236 | 106,364 | 144,978 |
| Cost of goods sold | (147,565) | (103,133) | (140,467) |
| Selling and administrative expenses | (850) | (839) | (1,063) |
| Share of income from associates and jointly controlled entities | 1,067 | 82 | 1,829 |
| Dividend income | 238 | 12 | 13 |
| Adjusted EBIT | 5,126 | 2,486 | 5,290 |
| Addback exceptional items | 1,086 | 821 | 0 |
| Adjusted EBIT pre-exceptional items | 6,212 | 3,307 | 5,290 |
| Addback Depreciation and amortisation | 575 | 622 | 911 |
| Adjusted EBITDA pre-exceptional items | 6,787 | 3,929 | 6,201 |
| Deduct exceptional items excluded above | (1,086) | (821) | 0 |
| Adjusted EBITDA | 5,701 | 3,108 | 6,201 |

(6) Gross debt includes Current borrowings, Non-current borrowings and commodities sold with agreements to repurchase. It excludes amounts owing under the Prodeco call option arrangement and other financial liabilities. Net debt is gross debt less cash and cash equivalents, marketable securities and Glencore's assessment of readily marketable inventories. In calculating the illustrative allocation of borrowings to the marketing activities, Glencore has estimated what it believes to be the reasonable amount of borrowings attributable to funding the marketing activities' working capital requirements at the relevant period end date, with particular reference to the level of inventories, net cash margining and other accounts receivable and payable. The balance of group borrowings is allocated to industrial activities. See Section III: "Selected Historical and Other Information".

(7) In calculating the illustrative allocation of interest expense to the marketing activities, Glencore has taken into consideration the average amount of borrowings illustratively allocated to marketing activities as described in the preceding paragraph for the relevant period, what Glencore believes to be the appropriate distribution of funding tenors for the categories of funded assets within the marketing activities, and the average rate of interest incurred by the group during the relevant period on borrowings of the relevant tenor and interest basis. The balance of group interest expense is allocated to industrial activities. See Section III: "Selected Historical and Other Information".

(8) Funds From Operations ("FFO") equals cash provided by operating activities before working capital changes less tax and net interest payments plus dividends received.

(9) Current capital employed is current assets, presented before assets held for sale, less accounts payable, other financial liabilities and income tax payable.

**Summary of the Global Offer**

The Global Offer is expected to comprise of an issue of 893,292,886 new Ordinary Shares and 238,782,586 existing Ordinary Shares which will be sold by the Selling Shareholder in the International Offer (1,132,075,472 Ordinary Shares in aggregate), in each case assuming the Offer Price is set at the mid-point of the Offer Price Range. An additional 113,207,547 new Ordinary Shares will also be made available by the Company pursuant to the Over-Allotment Option (assuming the Offer Price is set at the mid-point of the Offer Price Range). All Offer Shares will be subscribed for or purchased at the Offer Price.

On 4 May 2011, in connection with the International Offer, the Company entered into subscription agreements with certain cornerstone investors (including, in the case of the cornerstone investors that are private banks, the ultimate beneficial owners of the International Offer Shares subscribed for under the relevant Cornerstone Investment Agreements) (the "Cornerstone Investors") who have agreed, subject to customary conditions, to subscribe for International Offer Shares at the Offer Price (the "Cornerstone Investment Agreements"). In aggregate, Cornerstone Investors have committed U.S.$3.1 billion for the subscription of Offer Shares. Based on an Offer Price at the mid-point of the Offer Price Range, the total number of International Offer Shares subscribed for by the Cornerstone Investors would be approximately 350,943,389 International Offer Shares, which represent approximately 31.0 per cent. of the Offer Shares, assuming that the Over-allotment Option is not exercised and that the Kazzinc Consideration Shares are not issued.

Offer Shares made available under the International Offer can, at the election of the relevant investors, be initially registered on the Jersey principal share register and traded on the London Stock Exchange or initially registered on the Hong Kong branch share register and traded on the Hong Kong Stock Exchange. All Offer Shares made available under the Hong Kong Offer shall be initially registered on the Hong Kong branch share register and can be traded on the Hong Kong Stock Exchange.

The total expenses of the Global Offer that are payable by the Company together with Swiss federal issuance stamp tax payable in connection with the Restructuring and the Global Offer are expected to be approximately U.S.$434.6 million (assuming the Offer Price is set at the mid-point of the Offer Price Range).

**FTSE eligibility**

Following discussions with FTSE, it is anticipated that the Company will be included in the FTSE 100 under the fast entry rule (at close of business on the first day of official trading).

**Use of proceeds**

The net proceeds from the Global Offer receivable by the Company are estimated to be pounds sterling, U.S. dollar and Hong Kong dollar amounts equivalent in aggregate to U.S.$7,456.2 million, after deduction of estimated underwriting commissions and estimated expenses of the Global Offer (assuming the maximum amount of the Underwriter's incentive commission and the discretionary elements of the fees of the Company's other advisers will be paid and including applicable VAT), assuming the Over-Allotment Option is not exercised and assuming the Offer Price is set at the mid-point of the Offer Price Range and exchange rates as at 29 April 2011.

The Company currently intends to apply the proceeds from the Global Offer in the following order of priority:

- approximately U.S.$2.2 billion of the net proceeds from the Global Offer towards meeting the cash portion of the consideration payable to Verny, pursuant to the Kazzinc SPAs in respect of Glencore's proposed acquisition of additional stakes in Kazzinc;
- approximately U.S.$5 billion of the net proceeds from the Global Offer towards meeting its budgeted total aggregate capital expenditure for the next three calendar years (ending 31 December 2013). Items falling within this include funding of significant expansion projects in respect of Kazzinc (estimated: U.S.$834 million), Mopani (estimated: U.S.$512 million), Prodeco (estimated: U.S.$919 million), the West African Oil Assets (estimated: U.S.$791 million) and Glencore's other industrial assets (estimated: U.S.$900 million); and
- in order to reduce its cost of borrowing and improve financial flexibility, use of a portion of any proceeds that are not applicable to or, immediately required for, the above purposes to reduce drawings under the U.S.$11,905 million revolving credit facilities and repay various other debt obligations of the Glencore Group. Should growth opportunities arise in the future, Glencore could either draw-down any remaining facilities or put in place new facilities.

**Dividend policy**

The Company intends to pursue a progressive dividend policy with the intention of maintaining or increasing its total ordinary dividend each year.

Dividends are expected to be declared by the Board semi-annually (with the half-year results and the preliminary full year results). Interim dividends are expected to represent approximately one-third of the total dividend for any year. Dividends will be declared and paid in U.S. dollars, although Shareholders will be able to elect to receive their dividend payments in pounds sterling, Euros or Swiss Francs based on the exchange rates in effect at the date of payment. Shareholders on the Hong Kong branch register will receive their dividends in Hong Kong dollars.

The Directors currently expect to declare an interim dividend of U.S.$350 million in August 2011 concurrent with publication of the interim results for the six months to 30 June 2011.

**Lock-ups**

The Company has entered into a lock-up arrangement in favour of the Joint Global Co-ordinators for a period of six months from the date of UK Admission. In addition, each Existing Shareholder has entered

into a lock-up arrangement in favour of the Joint Global Co-ordinators and the Company for various periods from the date of UK Admission. These lock-up arrangements apply in the case of the Executive Directors until five years after UK Admission (with a staggered release after the first year of that period) and in the case of the other Existing Shareholders for a period of time of between one year and four years from Admission (with a staggered release after the first year of that period, if applicable). Furthermore, each Cornerstone Investor has entered into a lock-up arrangement in favour of the Joint Global Co-ordinators and the Company for a period of six months from the date of UK Admission. The lock-up arrangements are subject to certain exceptions.

**Risk factors**

Glencore's results of operations and financial condition could be materially adversely affected by the following risks:

***Risks relating to Glencore***

Glencore is exposed to risks related to:

- Declines in the current and expected volumes of supply or demand for commodities, to commodity prices and to deterioration in economic and financial conditions.
- Significant geopolitical risk.
- Liquidity risk.
- A reduction in Glencore's credit rating.
- Glencore's ability to attract, retain and compensate key employees may be impacted by its transition to a public company.
- Fluctuations in currency exchange and interest rates.
- Competition in the commodities industry.

***Risks relating to Glencore's marketing activities***

Glencore is exposed to risks related to:

- Its ability to identify and take advantage of arbitrage opportunities.
- The effectiveness of its hedging strategy.
- Counterparty risk.
- Risk management policies and procedures that may leave it exposed to unidentified or unanticipated risks.
- Reliance on third parties to source the majority of its products.
- Reliance on certain agreements for the sourcing of commodities.
- Significant amounts of freight, storage, infrastructure and logistics support required by its marketing activities and increases in costs thereof.
- Fluctuations in freight rates.

***Risks relating to Glencore's industrial activities***

Glencore is exposed to risks related to:

- Industrial assets through non-controlling stakes or joint ventures and strategic partnership arrangements.
- Delays in or failure to develop planned expansions or new projects.
- Operating risks and hazards at its industrial assets.
- Title to the land, resource tenure and extraction rights of industrial activities.
- Infrastructure at its industrial assets being adequate and remaining available.
- Increases in production costs.
- Stated mineral and hydrocarbon reserves, resources and mineralised potential are only estimates.

- The processes and chemicals used in Glencore's extraction and production methods and its shipping and storage activities.

***Other risks relating to Glencore***

Glencore is exposed to risks related to:

- Fraud and corruption due to the nature of its business and operations.
- Accidents at Glencore's industrial activities, logistics and storage facilities which could result in injuries and fatalities.
- Processing, storage and transportation of its commodities.
- Product safety and dangerous goods regulations.
- Dependence on its financial, accounting, marketing and other data processing information systems.
- The significant number of laws and regulations to which it is subject.
- Social, economic and other risks in the markets where Glencore operates which could cause disruptions to its business.
- Glencore's reputation in the communities in which it operates.
- Failure to make successful acquisitions or to integrate acquisitions effectively.
- A wide range of risks, not all of which can be covered, adequately or at all, by Glencore's insurance programme.
- The maintenance of positive employee relations and the ability to attract and retain skilled workers is key to the successful operation of Glencore's industrial activities.

***Risks relating to an investment in the Ordinary Shares and the dual listing***

- The price of the Ordinary Shares is subject to volatility.
- Future share issues by the Company and/or sales of Ordinary Shares could lower the market price of the Ordinary Shares. Further share issues or conversions of the Convertible Bonds could also dilute the interests of Shareholders.
- Shareholders in the U.S. may not be able to participate in future equity offerings.
- The rights afforded to Shareholders are governed by Jersey law. Not all rights available to shareholders under English law, Hong Kong law or U.S. law will be available to Shareholders.
- Foreign investors may find it difficult to enforce foreign judgments obtained against Glencore or any of its Affiliates.
- As a company due to be listed on the London Stock Exchange and the Hong Kong Stock Exchange, the Company will be subject to both United Kingdom and Hong Kong laws, regulations and policies and certain Hong Kong laws and regulations will not apply to the Company.

**The Kazzinc transaction**

Glencore has agreed with Verny to acquire additional stakes in Kazzinc. These purchases will increase its ownership from 50.7 per cent. to 93.0 per cent. for a total transaction consideration of U.S.$3.2 billion. Subject to satisfaction of certain conditions, which include receipt of applicable regulatory approvals and the occurrence of UK Admission, consideration for these purchases will be settled through the issuance of U.S.$1 billion of Ordinary Shares at the Offer Price (such issuance expected to occur at the earlier of UK Admission and satisfaction of applicable conditions precedent) and U.S.$2.2 billion in cash (to be paid in tranches between October and December 2011). The acquisition of these additional stakes is expected to be completed by the end of December 2011. The terms of the acquisition have been negotiated on an arm's length basis and the price and structuring of the consideration in respect of these purchases is based on Glencore's detailed valuation of Kazzinc. In addition, Glencore's stake in Kazzinc may be further increased to 99.4 per cent. through the exercise of a put or call option in respect of Verny Investments' remaining 6.4 per cent. interest in Kazzinc, which is conditional on amongst other things, an initial public offering of Kazzinc's gold assets.

## Current Trading and Prospects

### Introduction

Glencore's operating and financial performance over the first quarter of 2011 continued to benefit from improved market conditions as also experienced in the final months of 2010.

### Marketing

Marketing operations began 2011 strongly with performance for the first quarter of 2011 in line with management expectations. In particular, following a challenging 2010, the oil division reported substantially improved results, more in line with 2009 performance, due to increased arbitrage opportunities as a result of market volatility and tighter supply conditions.

### Industrial

Glencore's consolidated industrial activities and associates delivered a substantially improved performance over the first quarter of 2011, primarily on the back of a strong commodity price environment but also assisted by year-on-year production increases at many operations. Operating costs and capital expenditures, including expansion related capital expenditures, were broadly in-line with management expectations.

### Summary and outlook

Overall, Glencore's businesses performed in line with management's expectations over the first quarter of 2011. Strong market conditions experienced in the first quarter are continuing into the second quarter of 2011. Despite recent events in Japan and the Middle East, the Directors remain confident that economic activity and commodity demand remain robust and Glencore remains well positioned for 2011. In this regard, the Directors reconfirm Glencore's previously announced intention to declare an interim dividend of U.S.$350 million in August 2011 concurrent with publication of the interim results for the six months to 30 June 2011.

*An investment in the Company's Ordinary Shares involves a significant degree of risk. Investors should carefully consider the risks and uncertainties described below and the other information contained in this Prospectus before making an investment decision. Glencore's business, results of operations, financial condition and/or prospects could be materially and adversely affected by any of these risks. The trading price of the Company's Ordinary Shares could decline due to any of these risks or other factors, and you may lose all or part of your investment. The risks described below are not the only ones which Glencore faces. The risks described below are those that Glencore currently believes may materially affect it and the Ordinary Shares and the list is not exhaustive. Additional risks and uncertainties not currently known to Glencore, or those that it currently deems to be immaterial, may become material and adversely affect Glencore's business, results of operations, financial condition, prospects and/or the value of the Ordinary Shares. This Prospectus also contains estimates and projections that involve risks and uncertainties. Glencore's results may differ significantly from those previously projected as a result of certain factors, including the risks which it faces, as described below and in other sections of this Prospectus. The order in which the following is presented does not necessarily reflect the likelihood of their occurrence or the relative magnitude of their potential material adverse effect on Glencore's business, results of operations, financial condition, prospects and/or the value of the Ordinary Shares.*

**Risks relating to Glencore**

***Glencore is exposed to declines in the current and expected volumes of supply or demand for commodities, to commodity prices and to deterioration in economic and financial conditions.***

The current and expected volumes of supply and demand for the commodities in which Glencore is active vary over time based on changes in resource availability, government policies and regulation, costs of production, global and regional economic conditions, demand in end markets for products in which the commodities are used, technological developments, including commodity substitutions, fluctuations in global production capacity, global and regional weather conditions and natural disasters including, for example, the recent earthquake and tsunami in Japan, all of which impact global markets and demand for commodities. Furthermore, changes in current and expected supply and demand conditions impact the current and expected future prices (and thus the price curve) of each commodity.

Declines in the volume of each commodity produced or marketed by Glencore, as well as declines in the price of commodities, could materially adversely impact Glencore's business, results of operations and earnings. These declines could result in a reduction in the average marketing unit margin achieved in respect of the volumes handled by Glencore's marketing activities, or a reduction in the volume and/or margin in respect of commodities produced by Glencore's industrial assets.

In addition, a decline in economic and financial conditions globally or in a specific country, region or sector may have a material adverse effect on Glencore's business, results of operations or earnings. For example:

- the insolvency of key suppliers, particularly those with whom Glencore has long-term supply or off-take contracts, could result in supply chain difficulties and/or unmatched commodity price exposures and/or a reduction in commodities available for Glencore's marketing activities;
- although most commodities' fixed pricing periods are relatively short, a significant reduction or increase in commodity prices could result in customers or suppliers, as the case may be, being unwilling or unable to honour their contractual commitments to purchase or sell commodities on pre-agreed pricing terms;
- a tightening of available credit may make it more difficult for Glencore to obtain, or may increase the cost of obtaining, financing for its marketing activities and capital expenditures at its industrial assets;
- a decline in the value of inventories may result in write-downs; and
- production at Glencore's industrial assets may be curtailed or suspended as it becomes not economically viable.

In the first half of 2009, Glencore's financial results were adversely impacted by the failure of various customers to perform under certain pricing contracts primarily related to Glencore's coal business. Glencore believes these customers failed to perform, in part, because the global financial crisis put significant strain on their financial condition, liquidity profiles and customer base which was compounded by being faced with paying significantly higher prices for commodities under the contracts with Glencore than what they would have had to pay in the spot market. Should Glencore experience similar customer

failure in the future as a result of economic factors or otherwise, its business, results of operations and earnings could be adversely affected.

***Glencore is exposed to significant geopolitical risk.***

Glencore operates and owns assets in a large number of geographic regions and countries and, as a result, is exposed to a wide range of political, regulatory and tax environments. These environments are subject to change in a manner that may be materially adverse for Glencore, including changes to government policies and regulations governing industrial production, foreign investors, price controls, export controls, tariffs, income and other forms of taxation (including policies relating to the granting of advance rulings on taxation matters), nationalisation or expropriation of property, repatriation of income, royalties, the environment and health and safety.

Relatively high commodity prices and other factors in recent years have resulted in increased resource nationalism in some countries, with governments repudiating or renegotiating contracts with, and expropriating assets from, companies that are producing in such countries. Many of the commodities that Glencore produces and markets are considered strategic resources for particular countries. Governments in these countries may decide not to recognise previous arrangements if they regard them as no longer being in the national interest. Governments may also implement export controls on commodities regarded by them as strategic (such as oil or wheat) or place restrictions on foreign ownership of industrial assets. Renegotiation or nullification of existing agreements, leases, permits or tax rulings, changes in fiscal policies (including new or increased taxes or royalty rates or the implementation of a windfall tax) and currency restrictions imposed by the governments of countries in which Glencore operates could all have a material adverse effect on Glencore.

Glencore has experienced nationalisation and expropriation of certain of its industrial assets and significant changes in the taxation regime applicable to specific assets in the past. For example, in 2007, the Bolivian government nationalised a smelter owned by a subsidiary of Glencore. However, in that instance, no material losses were sustained and Glencore continues to do business in Bolivia. In addition, in 2009, the government of Bolivia enacted a new constitution which requires mining entities to form joint ventures with the government. Glencore has entered into good faith negotiations with the government regarding this requirement, and a resolution of the issue is expected to be announced by the government in the near future. Glencore does not expect this resolution to have a material economic impact on the Group. While these particular incidents have not had a material adverse effect on Glencore's results or operations, it continues to do business in locations where it is exposed to a greater-than-average risk of overt or effective expropriation or nationalisation, including in countries where the government has previously (and in some cases, recently) expropriated assets held within the jurisdiction of other companies or where members of the government have publicly proposed that such action be taken.

Glencore's operations may also be affected by political and economic instability in the countries in which it operates. Such instability could be caused by, among other things, terrorism, civil war, guerrilla activities, military repression, civil disorder, crime, workforce instability, change in government policy or the ruling party, economic or other sanctions imposed by other countries, extreme fluctuations in currency exchange rates or high inflation.

The geopolitical risks associated with operating in a large number of regions and countries, if realised, could affect Glencore's ability to manage or retain interests in its industrial activities and could have a material adverse effect on the profitability, ability to finance or, in extreme cases, viability of one or more of its industrial assets. Although Glencore's industrial assets are geographically diversified across various countries, disruptions in certain of its industrial operations at any given time could have a material adverse effect on Glencore's marketing business.

***Liquidity risk and a failure to obtain funds could limit Glencore's ability to engage in desired activities and grow its business.***

Liquidity, or ready access to funds, is essential to Glencore's business. Liquidity risk is the risk that Glencore is unable to meet its payment obligations when due, or that it is unable, on an ongoing basis, to borrow funds in the market on an unsecured or secured basis at an acceptable price to fund actual or proposed commitments. A lack of liquidity may mean that Glencore will not have funds available to maintain or increase its marketing activities, grow its industrial activities production output as planned or take advantage of other opportunities that may arise in its marketing or industrial activities.

Glencore's marketing activities employ significant amounts of working capital to fund purchases of commodities for future delivery to Glencore's end customers, to meet margin requirements under derivative contracts and to fund the acquisition and maintenance of certain transport and storage assets which complement its marketing activities. Continued funding of and access to working capital is critical for Glencore to maintain its historic levels of marketing activity and increase such levels in the future. Glencore's industrial activities are also capital intensive and the continued funding of such activities is critical for Glencore to maintain its ownership interests in its industrial assets, to maintain production levels in periods when net operating cash flow is negative or insufficient to cover capital expenditures, to increase production levels in the future in accordance with its business plan and to grow its industrial activities through the acquisition of new assets. Glencore has budgeted a total aggregate capital expenditure of approximately U.S.$5 billion for the three calendar years ending 31 December 2013. Glencore expects to fund its planned capital expenditure from proceeds from the Global Offer.

Prudent liquidity risk management requires Glencore to maintain sufficient cash and cash equivalents through the accumulation of retained earnings and to have ready sources of committed funding available to meet anticipated and unanticipated funding needs. While Glencore adjusts its minimum internal liquidity targets in response to changes in market conditions, its liquidity may be impaired due to circumstances it is unable to control, such as general market disruptions, increases in the prices of commodities or an operational problem that affects its suppliers or customers or Glencore itself.

In addition to maintaining a cash position, Glencore relies on two other principal sources of liquidity: borrowings under various short-term and long-term bank and asset-backed facilities and issuance of notes in the debt capital markets. An inability to raise money in the long-term and short-term debt markets could have a material adverse effect on Glencore's liquidity. Glencore's access to debt in amounts adequate to finance its activities could be impaired by factors that affect Glencore in particular or the industries or geographies in which it operates. For example, lenders could develop a negative perception of Glencore's short-term or long-term financial prospects if Glencore incurred large losses, if the level of its marketing activities were to materially decrease due to a market downturn in the demand for commodities, or if its business was otherwise materially adversely affected. Although Glencore expects the continued support of financial institutions, there can be no assurance that additional credit or funding will be made available in the future.

Future debt financing, if accessible, may result in increased borrowing costs, increased financial leverage, decreased income available to fund further acquisitions and expansions and the imposition of restrictive covenants on Glencore's businesses and operations. In addition, future debt financing may limit Glencore's ability to withstand competitive pressures and render its businesses more vulnerable to economic downturns by exposing it to volatile interest rates, tighter credit markets and potentially reduced access to funding that may be needed to take advantage of future business opportunities.

***A reduction in Glencore's credit rating could adversely affect Glencore.***

Glencore's borrowing costs and access to the debt capital markets, and thus its liquidity, depend significantly on its public credit ratings. These ratings are assigned by rating agencies, which may reduce or withdraw their ratings or place Glencore on "credit watch", which would have negative implications. A deterioration of Glencore's credit ratings could increase its borrowing costs and limit Glencore's access to the capital markets, which, in turn, could reduce Glencore's earnings and adversely affect Glencore's liquidity.

Glencore's counterparties, including its customers, suppliers and financial institutions, are also sensitive to the risk of a ratings downgrade and may be less likely to engage in transactions with Glencore, or may only engage with Glencore at a substantially higher cost or on increased credit enhancement terms (e.g. letters of credit, additional guarantees or other credit support) which carry increased costs, if Glencore's ratings were downgraded to below investment grade. While Glencore does not anticipate its ratings to be downgraded below investment grade, if such an event were to occur, it could have a material adverse effect on Glencore's business, results of operations, financial condition or prospects.

***Glencore's ability to attract, retain and compensate key employees may be impacted by its transition to a public company.***

Glencore has operated within a private company structure and as an employee-owned company. Following Admission, Glencore, as a listed entity, will operate as a public company with the added administration this entails. This cultural change could result in certain key employees, whether skilled marketers, or otherwise, leaving. There are a number of other reasons why such personnel may leave. An employee may leave

Glencore to go to a competitor, to start their own business, to retire or for other reasons. In addition, based on the Offer Price Range, the Ordinary Shares issued to Existing Shareholders in the Restructuring will have a value significantly above the redemption value of Existing Shareholders' pre-Restructuring ownership interests. However, Glencore is not expecting an above-normal level of retirements shortly after Admission. Notwithstanding the high level of employee ownership, there are no secondary sales in the Global Offer by any employee or Director other than to fund expected personal tax liabilities triggered in connection with the Restructuring and/or Admission and to repay to Glencore a small tranche of outstanding loans and all Existing Shareholders are subject to lock-up arrangements ranging from 12 months, to staggered lock-ups of up to five years in the case of the Executive Directors, such lock-ups not being dependent upon continued employment.

Glencore seeks to provide competitive compensation arrangements to retain and attract highly skilled personnel that are important to its business, including salaries, bonus arrangements and share incentive arrangements. The Directors believe that Glencore's current compensation arrangements are competitive and adequate to allow Glencore to retain and attract the necessary calibre of employees. However, these compensation payments may not be as effective as the opportunity to receive ownership interests in Glencore that existed prior to the Restructuring and, as a result, Glencore may need to change its compensation arrangements to make them more attractive to such employees which could be at an increased cost to Glencore. The loss of any senior marketer, senior manager or other key personnel, as well as the inability to retain and/or attract new highly skilled personnel, could have a material adverse effect on Glencore's business.

***Glencore is exposed to fluctuations in currency exchange and interest rates.***

The significant majority of transactions undertaken by both Glencore's marketing and industrial activities are denominated in U.S. dollars. However, Glencore is exposed to fluctuations in currency exchange rates:

- through its industrial activities, because a large proportion of the operating costs of these assets are denominated in the currency of the country in which each asset is located, the largest of such currency exposures being to the Australian dollar, the Kazakhstan tenge and the Canadian dollar via Glencore's stake in Xstrata;
- through the costs of Glencore's global office network, which are denominated largely in the currency of the country in which each office is located, the largest of such currency exposures being to the Swiss franc, the pound sterling and the Euro; and
- through its marketing activities, although only a small minority of purchase or sale transactions are denominated in currencies other than U.S. dollars.

In respect of commodity purchase and sale transactions denominated in currencies other than U.S. dollars, Glencore generally hedges the specific future commitment through a forward exchange contract. Foreign exchange rates have seen significant fluctuation in recent years and a depreciation in the value of the U.S. dollar against one or more of the currencies in which Glencore incurs significant costs will therefore result in an increase in the cost of these operations in U.S. dollar terms and could adversely affect Glencore's financial results.

As discussed above, the reporting currency and the functional currency of the majority of Glencore's operations is the U.S. dollar, as this is assessed to be the principal currency of the economic environment in which Glencore operates. For financial reporting purposes, transactions in foreign currencies are converted into the functional currency of each entity using the exchange rate prevailing at the transaction date. Monetary assets and liabilities outstanding at year end are converted at year-end rates. The resulting exchange differences are recorded in the consolidated statement of income. The exchange rates between relevant local currencies and the U.S. dollar have historically fluctuated, and the translation effect of such fluctuations may have a material adverse effect on both Glencore Group members' individual and Glencore's consolidated results of operations or financial condition.

Glencore's exposure to changes in interest rates results from investing and borrowing activities undertaken to manage its liquidity and capital requirements. Substantially all of Glencore's borrowings, other than its long-term, fixed-rate public bonds, bear interest at floating rates. An increase in interest rates would therefore result in a relatively immediate increase in the cost of servicing Glencore's indebtedness and could adversely affect Glencore's financial results. Although borrowing costs are taken into account when setting transaction terms, there is no assurance that increased financing costs can be passed on to customers and/or suppliers. Glencore may elect in the future to enter into interest rate swaps to convert some or all of its floating-rate debt to fixed-rate debt or enter into fixed-rate to floating-rate swaps. There

can be no assurance that Glencore will not be materially adversely affected by interest rate changes in the future.

***The commodities industry is very competitive and Glencore may have difficulty effectively competing with other commodity marketing and industrial companies.***

The commodities industry is characterised by strong competition. Glencore believes that the majority of its competitors tend to focus on a narrower commodity group or geographic area, or concentrate more heavily on industrial activities such as mining, smelting, processing, refining and food processing. Although Glencore faces intense competition in each of its business segments, in view of Glencore's diversification across different commodity groups and its global geographical presence and scale, Glencore does not believe that there is a precisely comparable company or peer group that can be defined as competing directly with Glencore across all of its business segments. However, some of these competitors or existing producers may, in the future, use their resources to broaden into all of the markets in which Glencore operates and therefore compete further against Glencore. These competitors may also expand and diversify their commodity sourcing, processing or marketing operations, or engage in pricing or other financial or operational practices that could increase competitive pressure on Glencore across each of its business segments. Increased competition may result in losses of market share for Glencore and could materially adversely affect Glencore's business, results of operations and financial condition.

**Risks relating to Glencore's marketing activities**

***The success of Glencore's marketing activities depends in part on its ability to identify and take advantage of arbitrage opportunities.***

Many of the commodity markets in which Glencore operates are fragmented and periodically volatile. As a result, discrepancies generally arise in respect of the prices at which the commodities can be bought or sold in different forms, geographic locations or time periods, taking into account the numerous relevant pricing factors, including freight and product quality. These pricing discrepancies can present Glencore with arbitrage opportunities whereby Glencore is able to generate profit by sourcing, transporting, blending, storing or otherwise processing the relevant commodities. Whilst the strategies used by Glencore's business segments to generate such margin vary from commodity to commodity, the main arbitrage strategies can be generally described as geographic-, product- and time-related. For further details on these arbitrage strategies, please see Section I: "Information on Glencore".

Glencore's profitability is, in large part, dependent on its ability to identify and exploit such arbitrage opportunities. A lack of such opportunities, for example due to a prolonged period of pricing stability in a particular market, or an inability to take advantage of such opportunities when they present themselves, because of, for example, a shortage of liquidity or an inability to access required logistics assets or other operational constraints, could adversely impact Glencore's business, results of operations and financial condition.

***Glencore's hedging strategy may not always be effective and does not require all risks to be hedged.***

Glencore's marketing activities involve a significant number of purchase and sale transactions across multiple commodities. To the extent Glencore purchases a commodity from a supplier and does not immediately have a matching contract to sell the commodity to a customer, a downturn in the price of the commodity could result in losses to Glencore. Conversely, to the extent Glencore agrees to sell a commodity to a customer and does not immediately have a matching contract to acquire the commodity from a supplier, an increase in the price of the commodity could result in losses to Glencore, as it then seeks to acquire the underlying commodity in a rising market. In order for Glencore to mitigate the risks in its marketing activities related to commodity price fluctuations and potential losses, Glencore has a policy, at any given time, of hedging substantially all of its marketing inventory not already contracted for sale at pre-determined prices through futures and swap commodity derivative contracts, either on commodities' exchanges or in the over the counter ("OTC") market. In the event of disruptions in the commodity exchanges or markets on which Glencore engages in these hedging transactions, Glencore's ability to manage commodity price risk may be adversely affected and this could in turn materially adversely affect its business, financial condition and results of operations.

In addition, there are no traded or bilateral derivative markets for certain commodities that Glencore purchases and sells, which limits Glencore's ability to fully hedge its exposure to price fluctuations for these commodities. In these instances, Glencore's ability to hedge its commodity exposure is limited to forward contracts for the physical delivery of a commodity or futures and swap contracts for a different, but

seemingly related, commodity. For example, Glencore hedges physical concentrate positions using future contracts for the estimated payable metal contained in the concentrate, with the expectation that the relative value of these two commodities will change in a similar way. If, however, the relative value of the two commodities changes in a direction or manner that Glencore does not anticipate, Glencore may suffer a loss in those commodity positions. Furthermore, there are certain commodities, such as ferroalloys and alumina, where hedging is limited by the lack of a liquid market. Finally, subject to internal risk management, limits and policies, in some cases, Glencore takes deliberate directional positions without a corresponding opposite directional position in place as part of its marketing strategies which has, at certain points in the past resulted, and may in the future, result in losses. For further detail on Glencore's financial risk management strategies and policies, see Section IV: "Operating and Financial Review".

***Glencore is subject to counterparty risk in its marketing activities.***

Glencore's marketing activities are subject to non-performance risk by its suppliers, customers and hedging counterparties. For example:

- a significant increase in commodity prices could result in suppliers being unwilling to honour their contractual commitments to sell commodities to Glencore at pre-agreed prices;
- a significant reduction in commodity prices could result in customers being unwilling or unable to honour their contractual commitments to purchase commodities from Glencore at pre-agreed prices, as occurred in 2008 and 2009 during the global economic crisis;
- customers may take delivery of commodities from Glencore and then find themselves unable to honour their payment obligations due to financial distress or any other reasons; and
- hedging counterparties may find themselves unable to honour their contractual commitment due to financial distress or other reason.

Glencore seeks to reduce the risk of customer non-performance by requiring credit support from creditworthy financial institutions, where appropriate, and by imposing limits on open accounts extended. In addition, mark-to-market exposures in relation to hedging contracts are regularly and substantially collateralised (primarily with cash) pursuant to margining arrangements in place with such hedge counterparts. However, no assurance can be given that Glencore's attempts to reduce the risk of customer non-performance will be successful in every instance or that its financial results will not be adversely affected by the failure of a counterparty or counterparties to fulfil their contractual obligations in the future. Such failure would have an adverse impact on Glencore's business, results of operations and financial condition, including by creating an unintended, unmatched commodity price exposure.

***Glencore's risk management policies and procedures may leave it exposed to unidentified or unanticipated risks.***

Glencore's marketing activities are exposed to commodity price, foreign exchange, interest rate, counterparty (including credit), operational, regulatory and other risks. Glencore has devoted significant resources to developing and implementing policies and procedures to manage these risks and expects to continue to do so in the future. Nonetheless, Glencore's policies and procedures to identify, monitor and manage risks have not been fully effective in the past and may not be fully effective in the future.

Some of Glencore's methods of monitoring and managing risk are based on historical market behaviour that may not be an accurate predictor of future market behaviour. Other risk management methods depend on evaluation of information relating to markets, suppliers, customers and other matters that are publicly available or otherwise accessible by Glencore. This information may not in all cases be accurate, complete, up to date or properly evaluated. Management of operational, legal and regulatory risk requires, among other things, policies and procedures to properly record and verify a large number of transactions and events, and these policies and procedures may not be fully effective in doing so. Management of counterparty credit risk is mitigated with the use of credit enhancement products, including letters of credit, insurance and bank guarantees, but such risk cannot be eliminated entirely. Failure to mitigate all risks associated with Glencore's business could have a material adverse effect on Glencore's business, results of operations and financial condition.

Glencore uses, among other techniques, Value-at-Risk, or VaR, as a key risk measurement technique for its marketing activities. VaR does not purport to represent actual gains or losses in fair value on earnings to be incurred by Glencore, nor does Glencore expect that VaR results are indicative of future market movements or representative of any actual impact on its future results. VaR has certain limitations; notably, the use of historical data as a proxy for estimating future events, market illiquidity risks and tail

risks. While Glencore recognises these limitations and continuously refines its VaR analysis, there can be no assurance that its VaR analysis will be an effective risk management methodology. For further details on Glencore's VaR calculations and analysis, please see Section IV: "Operating and Financial Review".

***Glencore is reliant on third parties to source the majority of the commodities purchased by its marketing operations.***

Glencore purchases a minority portion of the physical commodities sold by its marketing activities from its controlled industrial operations and associates, including Xstrata. The remainder of the commodities sourced by its marketing operations are purchased from third party suppliers and entities in which Glencore has a minority stake (excluding associates). For the year ended 31 December 2010, Glencore's marketing operations sourced approximately 69 per cent. of its commodity purchases from such third parties (excluding oil purchases). Glencore expects to continue to source commodities from such third parties in the future.

Glencore is exposed to both price and supply risks with respect to commodities sourced from third parties and entities in which it holds a minority stake. Any increases in Glencore's purchase price relative to the price at which Glencore markets a commodity could adversely affect Glencore's margins. Glencore's business, results of operations, financial condition and prospects could be materially adversely impacted if it is unable to continue to source required volumes of commodities from its suppliers on reasonable terms or at all.

***Glencore relies on certain agreements for the sourcing of commodities and these agreements may be terminated or fail to be renewed.***

Glencore is a party to various contracts with certain of its non-controlled industrial assets for the supply of commodities to its marketing business. Glencore has various spot and long-term agreements, including with Xstrata for the supply of copper, nickel, zinc, alloys and cobalt, with Nyrstar for the supply of zinc/lead and with UC Rusal and Century Aluminum for the supply of alumina and aluminium. For details of Glencore's arrangement with Xstrata, please see Section I: "Information on Glencore".

These agreements are an important source of commodities for Glencore's marketing activities and provide certainty of regular supply for Glencore. These supply agreements range from short-term spot contracts to multiple years in duration and have historically been renewed by Glencore and the supplier on commercially acceptable terms. However, in general, these companies have no obligation to renew their supply agreements. Glencore may not be able to compel the relevant company to enter into or renew a supply agreement with Glencore in cases where Glencore does not own 100 per cent. of the company or where related party transaction minority shareholder approval requirements apply. Purchases from Xstrata, UC Rusal, Nyrstar and Century Aluminum represented approximately 10.5 per cent. of Glencore's marketing purchases in the year ended 31 December 2010. Glencore relies on these agreements to source many of its key commodities and any termination or failure to renew such contracts at the end of their terms could have an adverse effect on Glencore's business, results of operations and financial condition. For further details on these arrangements, please see Section I: "Information on Glencore".

***Glencore's marketing activities require access to significant amounts of freight, storage, infrastructure and logistics support and Glencore is exposed to increases in the costs thereof.***

Glencore's marketing activities entail shipments of commodities in large quantities, often by ocean-going transport. Glencore often competes with other producers, purchasers or marketers of commodities or other products for limited storage and berthing facilities at ports and freight terminals, which can result in delays in loading or unloading Glencore's products and expose Glencore to significant delivery interruptions. Limitations or interruptions in rail, shipping or port capacity could impede Glencore's ability to deliver its products on time. In addition, increases in the costs of freight could adversely affect Glencore's business, results of operations or financial condition.

Glencore also requires significant storage capacity for its commodities, which it sources both through facilities in which Glencore holds equity stakes and pursuant to rental agreements with, among others, oil terminals and tank farms, metal and other warehouses and silos. Any decrease in Glencore's ability to access its customary levels of capacity from these storage facilities or an increase in the price at which Glencore can acquire storage capacity could have an adverse effect on Glencore's business by forcing Glencore to use storage facilities in less advantageous locations or at prices that make it less profitable for Glencore to supply its customers.

Coal is a bulk product, with unit freight costs often representing a significant portion of its price. As such, large fluctuations in unit freight costs could have a significant impact on the profitability of Glencore's marketing activities in respect of this commodity. Freight for coal, as well as certain other commodities, is sourced primarily through third parties and any difficulties accessing the necessary freight capacity on acceptable commercial terms could have an adverse effect on Glencore's business, results of operations or financial condition.

The Directors believe that Glencore's large size, global reach and longstanding relationships with third party suppliers of freight give it an advantage in ensuring its commodity transport needs are met. However, there can be no guarantee that Glencore will continue to be able to access freight to support its operations in adequate quantities or at reasonable prices.

***Glencore's oil freight operations are affected by fluctuations in freight rates.***

Glencore's oil freight desk has a large and diversified fleet of 203 vessels, as at 31 December 2010, operated under various short- and long-term time charters and commercial management arrangements; of which 176 vessels are held under time charter, both from third party owners and from Glencore's own joint-venture and 100 per cent. equity interests, and another 27 vessels are commercially managed for third party owners (not leased or owned). The average remaining fixed charge hire period for the majority of 176 vessels under time charter was approximately two years at such date. In total, Glencore has equity interests in 41 vessels, which are delivered or currently under construction, with expected progressive delivery until March 2012. The majority of these vessels service Glencore's Energy Products business segment.

The freight desk deals with other product desks on an arm's length basis and the other desks are able to "contract" with the freight desk or third party vessel operators; however, Glencore's oil freight desk has a last refusal right. Due to its internal requirements and the Directors' belief in Glencore's ability to achieve vessel utilisation above average industry levels, Glencore generally has a long position in fleet time chartering, thereby creating a significant exposure to fluctuations in spot freight rates. Freight rates are driven by, and generally follow, global patterns of economic development and trade. However, they are also influenced by developments and changes in seaborne and other transportation patterns, new shipbuilding supply, consumption and sourcing patterns, changes in weather patterns, environmental concerns, political conditions, armed conflicts, changes to regulatory regimes, canal and port closures, changes in fuel and lubricant prices, foreign exchange fluctuations, embargoes and strikes. Assuming Glencore holds a long position in freight at any given time, a decrease in freight rates could have a material adverse effect on the performance of Glencore's Energy Products business segment and, in turn, have a material adverse impact on Glencore's overall results of operations and financial condition.

The recent economic downturn led to a significant reduction in freight rates and had an adverse effect on the performance of the freight desk, which experienced significant losses in 2009 and 2010. While freight spot rates have recovered to some extent in the current year, there has yet to be a sustained improvement. There can be no assurance that freight losses will not be experienced in the future, which could have a material adverse effect on Glencore's business, results of operations and financial condition.

**Risks relating to Glencore's industrial activities**

***Glencore holds some of its industrial assets through non-controlling stakes or joint ventures and strategic partnership arrangements.***

Glencore does not control a number of its most significant industrial investments (including its stakes in Xstrata, Century Aluminum, Mutanda and UC Rusal). Although Glencore has sought to take steps to protect its industrial activities where it does not exercise control (including entering into a relationship agreement with respect to Xstrata and a shareholders agreement with respect to UC Rusal), the boards of these companies may:

- have economic or business interests or goals that are inconsistent with or are opposed to those of Glencore;
- exercise veto rights or take shareholders' decisions so as to block actions that Glencore believes to be in its best interests and/or in the best interests of all shareholders;
- take action contrary to Glencore's policies or objectives with respect to its investments or commercial arrangements; or

- as a result of financial or other difficulties, be unable or unwilling to fulfil their obligations under any joint venture or other agreement, such as contributing capital to expansion or maintenance projects.

Where projects and operations are controlled and managed by Glencore's co-investors or where control is shared on an equal basis, Glencore may provide expertise and advice, but it has limited or restricted ability to mandate compliance with Glencore's policies and/or objectives. Improper management or ineffective policies, procedures or controls of a non-controlled entity could adversely affect the business, results of operations and financial condition of the relevant investment and, therefore, of Glencore.

***Glencore is exposed to the risk of delays in or failure to develop planned expansions or new projects.***

Glencore has a number of significant expansions planned for its existing operations and plans for certain new greenfield projects, which Glencore estimates will require capital expenditure of approximately U.S.$5 billion for the three calendar years ending 31 December 2013. See Section IV: "Operating and Financial Review" for a further discussion of this capital expenditure.

The timing, implementation and cost of Glencore's expansion and development projects are subject to a number of risks, including:

- Glencore's continued ability or willingness to fund these projects if their free cash flow generation or prospects are not deemed sufficient;
- the failure to obtain, or termination of, necessary leases, licences, permits, consents and approvals;
- the effects of changes in laws and regulations affecting the countries and industries in which the relevant companies operate;
- construction difficulties, including difficulties related to shortages of equipment, labour or materials;
- work stoppages, weather interferences, unforeseen engineering, design, environmental or geological problems, or unanticipated cost increases;
- instability of production following commissioning;
- underestimation or mismanagement of project risks;
- changes in economic conditions, including a decline in the price of commodities, an increase in expected operational or capital expenditure costs and adverse movements in foreign exchange rates;
- the adverse exercise of regulatory discretion by relevant governments in countries or regions in which the companies engaged in the expansion operate;
- the effects of international and domestic political events; and
- the effects of future litigation, if any.

Any future upward revisions in estimated project costs, delays in completing planned expansions, cost overruns, suspension of current projects or other operational difficulties after commissioning, as a result of the above factors or otherwise, may have a material adverse effect on Glencore's business, results of operations and financial condition, in turn requiring Glencore to consider delaying discretionary expenditures, including capital expenditures, or suspending or altering the scope of one or more of its development projects.

Exploration and development of oil producing assets is highly uncertain. If Glencore is unsuccessful in developing its oil producing assets, its results of operations and growth prospects may be adversely affected.

In addition, there can be no assurance that Glencore will be able to effectively manage the risks arising from expansion of its operations. Glencore's current systems, procedures and controls may need to be expanded and strengthened to support Glencore's future operations. Any failure of Glencore to effectively manage its expansion plans or expanded operations could have a material adverse effect on Glencore's business and results of operations. There is no certainty that all or any of the elements of Glencore's current expansion strategy as described in this Prospectus will be delivered.

Once complete, the results of these projects could differ materially from those anticipated by Glencore and Glencore's significant capital expenditures related to these projects may not be offset by cashflows or other benefits from these projects in the timeframe anticipated by Glencore or at all.

***Glencore's industrial activities involve a number of operating risks and hazards, many of which are outside Glencore's control.***

Glencore's business is subject to numerous operating risks and hazards normally associated with the development and operation of natural resource projects, many of which are beyond Glencore's control. These operating risks and hazards include unanticipated variations in grade and other geological problems, seismic activity, climatic conditions such as flooding or drought, metallurgical and other processing problems, technical failures, unavailability of materials and equipment, industrial actions or disputes, industrial accidents, labour force disruptions, unanticipated transportation constraints, tribal action or political protests, force majeure factors, environmental hazards, fire, explosions, vandalism and crime. These risks and hazards could result in damage to, or destruction of, properties or production facilities, may cause production to be reduced or to cease at those properties or production facilities, may result in personal injury or death, environmental damage, business interruption and legal liability and may result in actual production differing from estimates of production, including those estimates contained in this Prospectus.

The realisation of such operating risks and hazards and the costs associated with them could materially adversely affect Glencore's business, results of operations and financial condition, including by requiring significant capital and operating expenditures to abate the risk or hazard, restore Glencore or third party property, compensate third parties for any loss and/or pay fines or damages.

***Title to the land, resource tenure and extraction rights of industrial activities may be challenged.***

Glencore has industrial activities investments in certain countries where title to land and rights in respect of land and resources (including indigenous title) has not been and may not always be clear, creating the potential for disputes over resource development. While Glencore does not believe that any such disputes are imminent, such a dispute, if related to a material industrial asset, could disrupt or delay relevant mining, processing or other projects and/or impede Glencore's ability to develop new industrial properties and may have a material adverse effect on Glencore's business, results of operations and financial condition.

Title to Glencore's mining and hydrocarbon rights may be challenged or impugned, and title insurance may not generally be available. In many cases, the government of the country in which a particular asset is located is the sole authority able to grant such rights and, in some cases, may have limited infrastructure and limited resources which may severely constrain Glencore's ability to ensure that it has obtained secure title to individual exploration licences or extraction rights. Glencore's title may be affected by, among other things, undetected defects. In addition, Glencore may be unable to conduct its activities or operations as permitted or to enforce its rights with respect to its properties. A successful challenge to Glencore's mining and/or hydrocarbon extraction rights may result in Glencore being unable to proceed with the development or continued operation of a mine or project which, in turn, may have a material adverse effect on Glencore's business, results of operations and financial condition.

***The production, processing and product delivery capabilities of Glencore's industrial assets rely on their infrastructure being adequate and remaining available.***

The mining, drilling, processing, development and exploration activities of the industrial assets in which Glencore holds an interest depend on adequate infrastructure. Certain of these assets are located in areas that are sparsely populated and difficult to access. Reliable roads, power sources, transport infrastructure and water supplies are essential for the conduct of these operations and the availability and cost of these utilities and infrastructure affect capital and operating costs and therefore Glencore's ability to maintain expected levels of production and results of operations. Unusual weather or other natural phenomena, sabotage or other interference in the maintenance or provision of such infrastructure could impact the development of a project, reduce production volumes, increase extraction or exploration costs or delay the transportation of raw materials to the mines and projects and commodities to end customers. Any such issues arising in respect of the infrastructure supporting or on Glencore's sites could have a material adverse effect on Glencore's business, results of operations, financial condition and prospects.

***Industrial activities are exposed to an increase in production costs, including as a result of increased energy costs or shortages of equipment, spare parts and labour.***

In relation to Glencore's industrial activities, Glencore's main production expenses include personnel expenses, maintenance and repairs, raw materials, energy and contractors. Increased costs could result from a number of factors beyond Glencore's control, including increased charges for fuel, other

consumables, electricity, transport or site contractors or increased processing or storage costs for such commodities.

Furthermore, the resources industry is currently experiencing worldwide tightness in certain equipment, spare parts and specialised labour. Such shortages may increase the costs of Glencore's operations as a result of equipment, spare parts or labour becoming more expensive due to increased demand and tight supply. Such shortages may also cause delays to, and quality issues in respect of, Glencore's operations either as a result of equipment used in Glencore's operations being temporarily unavailable or not being available at all or there being insufficient resources to operate equipment or maintain production at the optimum capacity. Any resulting increase in costs or production delays could have a material adverse effect on Glencore's business, results of operations and financial condition.

***Glencore's stated mineral and hydrocarbon reserves, resources and mineralised potential are only estimates and the anticipated volumes or grades may not be achieved.***

The estimated resources described in this Prospectus should not be interpreted as a statement of the commercial viability, potential or profitability of any future operations. No assurance can be given that the anticipated tonnages and grades will be achieved, that the indicated level of recovery will be realised or that mineral and hydrocarbon reserves, resources and mineralised potential can be extracted or processed profitably. Actual reserves, resources or mineralised potential may not conform to geological, metallurgical or other expectations, and the volume and grade of ore or product recovered may be below the estimated levels. Lower market prices, increased production costs, reduced recovery rates and other factors may render Glencore's reserves, resources or mineralised potential uneconomic to exploit and may result in revision of its reserve estimates from time to time. Reserve data are not indicative of future results of operations. For assets outside the scope of the independent technical reports contained in Section XIV: "Independent Technical Reports", reserve data are based on information collected by Glencore. If Glencore's actual mineral and hydrocarbon reserves and resources are less than current estimates or if Glencore fails to develop its resource base through the realisation of identified or new mineralised potential, Glencore's business, results of operations and financial condition may be materially and adversely affected.

***The processes and chemicals used in Glencore's extraction and production methods, as well as its shipping and storage activities, are subject to environmental hazards.***

Where Glencore holds or has interests in industrial activities, these assets are generally subject to environmental hazards as a result of the processes and chemicals used in traditional extraction, production, storage, disposal and transportation methods. Environmental hazards may exist on Glencore's owned or leased properties or at those of the industrial activities in which it holds an interest, or may be encountered while its products are in transit. In addition, the storage of tailings at Glencore's industrial assets may present a risk to the environment, property and persons. There remains a risk of leakage from or failure of Glencore's tailings dams, as well as theft and vandalism during the operating life of the assets or after closure.

Additionally, Glencore conducts oil exploration and drilling activities and also stores and transports crude oil and oil products around the world. Damage to exploration or drilling equipment, a vessel carrying oil or to a facility where it is stored could lead to a spill, causing environmental damage with significant clean-up or remediation costs.

Glencore may be liable for losses associated with environmental hazards, have its licences and permits withdrawn or suspended or may be forced to undertake extensive remedial clean-up action or to pay for government-ordered remedial clean-up actions, even in cases where such hazards have been caused by any previous or subsequent owners or operators of the property, by any past or present owners of adjacent properties, by independent third party contractors providing services to Glencore or by acts of vandalism by trespassers. Any such losses, withdrawals, suspensions, actions or payments may have a material adverse effect on Glencore's business, results of operations and financial condition.

**Other risks relating to Glencore**

***Due to the nature of its business and operations, Glencore is exposed to the risks of fraud and corruption.***

As a diversified sourcing, marketing and distribution company conducting complex transactions globally, Glencore is exposed to the risks of fraud and corruption both internally and externally.

Glencore's marketing operations are large in scale, which may make fraudulent or accidental transactions difficult to detect. In addition, some of Glencore's industrial activities are located in countries where corruption is generally understood to exist.

Glencore seeks to comply fully with legislation such as the Foreign Corrupt Practices Act and the soon to be enacted Bribery Act and has put in place internal control policies and external diligence and compliance policies. However, there can be no assurance that such procedures and established internal controls will adequately protect it against fraudulent and/or corrupt activity and such activity could have an adverse effect on Glencore's business, reputation, results of operations, financial condition and/or prospects.

***Accidents at Glencore's industrial activities, logistics and storage facilities could result in injuries and fatalities.***

Any accidents or hazardous incidents causing personal injury or death or property or environmental damage at or to Glencore's mines, smelters, refineries, concentrators, drill rigs or related facilities (such as logistics and storage facilities) or surrounding areas may result in significant losses, interruptions in production, expensive litigation, imposition of penalties and sanctions or suspension or revocation of permits and licences. Risks associated with Glencore's open pit mining operations include flooding of the open pits, collapses of the open pit walls and accidents or failures in operation of large equipment for open pit mining and material transportation. Risks associated with Glencore's underground mining operations include flooding, underground fires and explosions (including those caused by flammable gas), cave-ins or ground falls, discharges of gases or toxic chemicals, sinkhole formation and ground subsidence. Risks associated with Glencore's oil exploration and deepwater drilling activities include explosions, spills and potential large-scale environmental pollution. Risks associated with the group logistics and storage operations may include the risk of ruptures and spills from crude oil and other product carriers; spillage, leakage or seepage of tailings or other hazardous substances found in storage or disposal facilities; and failure of tailings dams during the operating life of the mines or after closure. Injuries to and deaths of workers and contractors at mines and facilities controlled by Glencore have occurred in the past and may occur in the future. If accidents occur in the future, Glencore's business and results of operations may be adversely impacted.

***Glencore is subject to risks relating to the processing, storage and transportation of its commodities.***

Glencore relies on a network of processing, transportation and storage facilities that are subject to numerous risks and hazards. If any of these risks materialise Glencore's business, results of operations and financial condition could be materially adversely affected.

Glencore's processing and storage facilities, which include ore processing plants, smelters, refineries, grain silos, tank farms and oil terminals, are subject to risks and hazards, including accidental environmental damage, technical failure, vandalism and terrorism. In addition, Glencore also depends upon seaborne freight, rail, trucking, pipeline, overland conveyor and other systems to deliver its commodities to market. Disruption of these transport services due to weather-related problems, key equipment or infrastructure failures, strikes, maritime disaster or other events could temporarily impair Glencore's ability to supply its commodities to its customers and thus could adversely affect Glencore's operations.

Metal processing plants (ore processing plants, smelters and refineries) are especially vulnerable to interruptions, particularly where events cause a stoppage that necessitates a shutdown in operations. Stoppages in smelting, even if lasting only a few hours, can cause the contents of furnaces to solidify, resulting in a plant closure for a significant period and necessitating expensive repairs, any of which could adversely affect Glencore's smelting operations.

Transportation and storage of crude oil and oil products involves significant hazards that could result in fires, explosions, spills, maritime disaster and other unexpected or dangerous conditions. The occurrence of any of these events could result in a material adverse effect, either directly or indirectly, through resulting damages, claims and awards, remediation costs or negative publicity on Glencore's business.

Crop storage entails significant risks associated with the storage environment, including temperature, humidity levels, pests, parasites and/or diseases. Excessively high or low levels of moisture, temperature or humidity may result in damage to stored crops and seeds. An event that destroys or takes all or part of a silo complex or terminal out of service could result in the loss of stored crops and require Glencore to find alternative storage arrangements. Glencore may also be subject to the loss of stored crops as a result of catastrophic events, such as fires, explosions or natural disasters.

In addition, the vessels Glencore uses to transport its products may be exposed to a variety of natural calamities during operations, including violent storms, tidal waves, rogue waves and tsunamis. Any of these natural calamities could result in Glencore's vessels grounding, sinking, colliding with other vessels or property, or the loss of life. If one of the vessels suffers damage, in addition to the potential loss of its cargo, it would need to be repaired, and the costs relating to such losses or repairs may not be covered (either in part or in full) by the insurance policies that are in place. The costs of such repairs are unpredictable and could be substantial. In addition, vessels will require general repair and maintenance from time to time. The loss of earnings while the vessels are being repaired and repositioned, the cost of arranging for alternative transport, as well as the actual cost of such repairs, could adversely affect Glencore's business and results of operations. Furthermore, the vessels Glencore uses to transport its products may be exposed to piracy, terrorist attacks and other events beyond its control. These events could result in adverse effects to Glencore's business as a result of seizure of its cargoes and disruption to its customers' or suppliers' business. While Glencore has procured insurance for its operations against these types of risks, no insurance can compensate for all potential losses and there can be no assurance that the insurance coverage Glencore has will be adequate or that its insurers will pay a particular claim. As is the standard for policies of this type, Glencore's insurance policies do not cover risks arising from damage caused by wear and tear to the vessels that it owns directly or through joint ventures. In the event of damage to, or the loss of, a vessel or vessels and/or their cargoes, lack of adequate insurance coverage may have a material adverse effect on Glencore's business and results of operations.

***Glencore is subject to risks relating to product safety and dangerous goods regulations.***

Products sold by Glencore are in many cases covered by national and international product safety and dangerous goods regulations. In some instances, product safety regulations (e.g. the EU's Chemical Control Act, REACH) oblige manufacturers and importers to register their products and to regularly monitor and evaluate the risks and hazards of substances (chemicals, metals, etc.) to protect humans and the environment from harm during handling, storage and use. Any failure in complying with these obligations could result in a delay of Glencore's product delivery, a loss of insurance coverage, business interruption on the customer side, administrative or criminal sanctions and, in the extreme, banning (temporarily) from a marketplace. Such events could have a material impact on the local or global demand, reducing Glencore's marketing opportunities for such a product, or at least increase the handling costs while shipping and placing the product in the market, all of which could have a material adverse effect on Glencore's business, results of operations and financial condition.

***Glencore is dependent on its financial, accounting, marketing and other data processing information systems to conduct its business.***

Glencore's software applications for areas such as traffic, accounting and finance are primarily based on integrated standard components. Glencore's key business processes rely on in-house developed modules and are regularly adapted to suit its business needs. All of these applications are primarily managed from Glencore's headquarters in Baar and are available to all the major business locations. If any of these systems does not operate properly or is disabled, Glencore could suffer, among other things, financial loss, a disruption of its business, liability to its counterparties, regulatory intervention or reputational damage.

In addition, Glencore's operations are dependent on information systems and technology. The cost of maintaining Glencore's information systems may increase from its current level. Glencore relies on its headquarters in Baar, Switzerland, as well as its offices in London, Rotterdam and Stamford, Connecticut for the continued operation of its business. Glencore has taken precautions through disaster recovery sites to limit the impact that a disruption to these key offices could cause. Although precautions have been taken and plans are in place, a disaster or a disruption in the infrastructure at a main site and its disaster recovery site that supports Glencore's business, including a disruption involving electronic communications or other services used by it or third parties with whom it conducts business, or directly affecting its headquarters or other key offices, could have a material adverse impact on its ability to continue to operate its business without interruption. In addition, insurance and other safeguards might only partially reimburse Glencore for its losses, if at all.

Although Glencore performs and backs up all key functions of its business internally, it relies on third party products and services providers widely used in the industry for certain aspects of its business, including for certain information systems and technology. Severe interruptions or deteriorations in the performance of these third parties or failures of their information systems and technology could impair Glencore's operations.

***Glencore is subject to a significant number of laws and regulations.***

Glencore's activities are subject to extensive laws and regulations governing various matters. These include laws and regulations relating to taxation, anti-trust, environmental protection, management and use of hazardous substances and explosives, management of natural resources, licences over resources owned by various governments, exploration, development of projects, production and post-closure reclamation, the employment of expatriates, labour and occupational health and safety standards, and historic and cultural preservation. Additionally, in many of the developing countries where Glencore operates, the legal systems may not be mature and legal practice may not be developed, such that, in certain cases, there may be significant uncertainty as to the correct legal position as well as the possibility of laws changing or new laws and regulations being enacted, which has the potential to increase risk and compliance costs.

These laws and regulations may allow governmental authorities and private parties to bring lawsuits based upon damages to property and injury to persons resulting from the environmental, health and safety and other impacts of Glencore's past and current operations, and could lead to the imposition of substantial fines, penalties, other civil or criminal sanctions, the curtailment or cessation of operations, orders to pay compensation, orders to remedy the effects of violations and/or orders to take preventative steps against possible future violations. Moreover, the costs associated with compliance with these laws and regulations are substantial. More stringent enforcement or restrictive interpretation of current laws and regulations by governmental authorities or rulings or clearances obtained from such governmental authorities could cause additional expenditure (including capital expenditure) to be incurred or impose restrictions on or suspensions of Glencore's operations and delays in the development of its properties.

Glencore's subsidiaries and the companies in which Glencore holds investments are generally required, under applicable laws and regulations, to seek governmental licences, permits, authorisations, concessions and other approvals in connection with their activities. Obtaining the necessary governmental permits can be a particularly complex and time-consuming process and may involve costly undertakings. The duration and success of permit applications are contingent on many factors, including those outside Glencore's control. Failure to obtain or renew a necessary permit could mean that such companies would be unable to proceed with the development or continued operation of a mine or project, which, in turn, may have a material adverse effect on Glencore's business, results of operations, financial condition and prospects.

In addition, the enactment of new laws and regulations and changes to existing laws and regulations (including, but not restricted to, environmental laws, the imposition of higher licence fees, mining and hydrocarbon royalties or taxes), compliance with which could be expensive or onerous, could also have a material adverse impact on Glencore's ability to operate its business and/or the profitability of its industrial investments.

Glencore's smelting and mineral processing operations are generally energy intensive and depend heavily on fossil fuels. In addition, the methods of transportation used by Glencore's marketing operations in order to deliver commodities to customers around the world depend heavily on fossil fuels. Increasing regulation of greenhouse gas emissions, including the progressive introduction of carbon emissions trading mechanisms and tighter emission reduction targets in numerous jurisdictions in which Glencore operates is likely to raise energy costs and costs of production in the future. Regulation of greenhouse gas emissions in the jurisdictions of Glencore's major customers and in relation to international shipping could also have a material adverse effect on the demand for Glencore's products.

***Social, economic and other risks in the markets where Glencore operates may cause serious disruptions to its business.***

Through the geographic diversity of its operations, Glencore is exposed to risks of political unrest, strikes, war and economic and other forms of instability, such as natural disasters, epidemics, widespread transmission or communicable or infectious diseases, acts of God, terrorist attacks and other events beyond its control that may adversely affect local economies, infrastructure and livelihoods.

These events could result in disruption to Glencore's, its customers' or suppliers' businesses and seizure of, or damage to, any of their cargoes or assets. Such events could also cause the destruction of key equipment and infrastructure (including infrastructure located at or serving Glencore's industrial activities as well as the infrastructure that supports the freight and logistics required by Glencore's marketing operations). These events could also result in the partial or complete closure of particular ports or significant sea passages, such as the Suez or Panama canals or the Straits of Hormuz, potentially resulting in higher costs, congestions of ports or sea passages, vessel delays or cancellations on some trade routes. Any of these events could adversely impact Glencore's business and results of operations.

***Glencore's reputation in the communities in which it operates could deteriorate.***

If it is perceived that Glencore is not respecting or advancing the economic and social progress and safety of the communities in which it operates, Glencore's reputation and shareholder value could be damaged, which could have a negative impact on its "licences to operate", its ability to secure new resources and its financial performance.

Some of Glencore's current and potential industrial activities are located in or near communities that may regard such operations as having a detrimental effect on their safety or environmental, economic or social circumstances. The consequences of negative community reaction could also have a material adverse impact on the cost, profitability, ability to finance or even the viability of an operation. Such events could lead to disputes with national or local governments or with local communities or any other stakeholders and give rise to material reputational damage. If Glencore's operations are delayed or shut down as a result of political and community instability, its earnings may be constrained and the long-term value of its business could be adversely impacted. Even in cases where no action adverse to Glencore is actually taken, the uncertainty associated with such political or community instability could negatively impact the perceived value of Glencore's assets and industrial investments and, consequently, have a material adverse effect on Glencore's financial condition.

***Glencore may fail to make successful acquisitions or fail to integrate acquisitions effectively.***

From time to time, Glencore considers the acquisition of complementary businesses or assets where the opportunity is presented to do so at attractive prices. Business combinations entail a number of risks, including the ability of Glencore to integrate effectively the businesses acquired with their existing operations (including the realisation of synergies, significant one-time write-offs or restructuring charges, difficulties in achieving optimal tax structures and unanticipated costs). All of these may be exacerbated by the diversion of the Directors' attention away from other ongoing business concerns. In addition, although Glencore does not currently have significant shares of the total market for commodities which it markets (as set out in the section titled "Presentation of Information"), further acquisitions to be made by Glencore may be subject to certain approvals (e.g. anti-trust approvals) which may or may not be obtained. Glencore may also be liable for the past acts, omissions or liabilities of companies or businesses it has acquired, which may be unforeseen or greater than anticipated at the time of the relevant acquisition. In addition, various factors could impact Glencore's estimated synergies for potential acquisitions and have a material adverse impact on Glencore's business, results of operations and financial condition.

***The industries in which Glencore operates are subject to a wide range of risks as described elsewhere in this section, not all of which can be covered, adequately or at all, by Glencore's insurance programme.***

Glencore has a broad insurance programme in place which provides coverage for operations at a level believed by the Directors to be appropriate for the risks associated therewith. Such insurance protection is maintained with leading international insurance providers and includes coverage for physical loss and damage to owned vessels and kidnap and ransom, as well as third party liability, including for pollution. However, although Glencore's insurance is intended to cover the majority of the risks to which Glencore is exposed, it cannot account for every potential risk associated with its operations. Adequate coverage at reasonable rates is not always commercially available to cover all potential risks and no assurance can be given that, where available, such coverage would be sufficient to cover all loss and liability to which Glencore may be exposed. The occurrence of a significant adverse event not fully or partially covered by insurance could have a material adverse effect on Glencore's business, results of operations and financial condition.

***The maintenance of positive employee relations and the ability to attract and retain skilled workers is key to the successful operation of Glencore's industrial activities.***

Some of Glencore's employees, as well as employees in non-controlled industrial investments, are represented by labour unions under various collective labour agreements. Glencore, its subsidiaries or the industrial investments in which it holds an interest may not be able to satisfactorily renegotiate its collective labour agreements when they expire and may face tougher negotiations or higher wage demands than would be the case for non-unionised labour. In addition, existing labour agreements may not prevent a strike or work stoppage at its facilities in the future, and any strike or other work stoppage could have a material adverse effect on Glencore's business, results of operations and financial condition. Glencore's industrial activities have experienced strikes and other labour disputes in the past. Prodeco, in particular,

experienced a 38-day strike by employees at one of La Jagua's concessions in 2010 and the Directors believe that strikes and other industrial actions will remain a risk to the business for the foreseeable future.

The success of Glencore's business is also dependent on its ability to attract and retain highly qualified and skilled engineers and other industrial, technical and project experts to operate its industrial activities in locations experiencing political or civil unrest, or in which they may be exposed to other hazardous conditions. Glencore may not be able to attract and retain such qualified personnel and this could have a material adverse effect on Glencore's business, results of operations and financial condition.

**Risks relating to an investment in the Ordinary Shares**

***The price of the Ordinary Shares is subject to volatility.***

The share prices of publicly traded companies can be highly volatile. The market price of the Ordinary Shares could be subject to significant fluctuations due to a change in sentiment in the market regarding the Ordinary Shares (or securities similar to them), including, in particular, in response to various facts and events, including any regulatory changes affecting Glencore's operations, variations in Glencore's operating results and/or business developments of Glencore and/or its competitors, the operating and share price performance of other companies in the industries and markets in which Glencore operates, large sales or purchases of shares, the publication of research analysts' reports regarding Glencore, its competitors or the sectors in which Glencore operates generally and general economic conditions unrelated to Glencore's actual performance or conditions in its key markets. Stock markets have in the past, and particularly in recent times, experienced significant price and volume fluctuations which have affected market prices of publicly traded companies' securities. Prior to the Global Offer, there has been no public market for the Ordinary Shares. A listing on the London Stock Exchange and the Hong Kong Stock Exchange does not guarantee, and Glencore can give no assurance, notwithstanding Admission, that active trading markets in the Ordinary Shares will develop or, if developed, that it will be sustained, stable or regarding the liquidity of that market. Furthermore, Glencore's operating results and prospects from time to time may be below the expectations of market analysts and investors. Any of these events could result in a decline in the market price of the Ordinary Shares. In addition, there is also no guarantee that the Ordinary Shares will remain listed on the London Stock Exchange and the Hong Kong Stock Exchange, and failure to maintain the Company's listings on these exchanges could adversely affect the liquidity of the market for the Ordinary Shares.

***Future share issues by the Company and/or sales by Shareholders could lower the market price of the Ordinary Shares and adversely affect Glencore's ability to raise capital in the future. Further share issues could also dilute the interests of Shareholders.***

The issue of additional shares by the Company or the sale or transfer of Ordinary Shares or the possibility of such issue or sale may cause the market price of the Ordinary Shares to fluctuate or decline or be lower than might otherwise be the case or result in the dilution of the interests of Shareholders. In particular, following Admission, it is expected that Existing Shareholders will control, in aggregate, approximately 83.6 per cent. of the Ordinary Shares (assuming no acquisition of Over-Allotment Shares pursuant to the Over-Allotment Option) and, notwithstanding the lock-up arrangements that Glencore has put in place with its Existing Shareholders, the possibility of significant sales by those Existing Shareholders may cause the market price of the Ordinary Shares to fluctuate or decline. In particular, there can be no assurance that there will be no significant disposals of Ordinary Shares following the expiry of the lock-up arrangements. Future share sales, or perceived future share sales, of substantial numbers of Ordinary Shares could materially and adversely affect Glencore's ability to raise capital in the future at a time and price favourable to Glencore.

***Investors in the Global Offer may suffer a dilution in their interest upon any conversions by the holders of the Convertible Bonds.***

Glencore Finance (Europe) S.A., one of Glencore's financing vehicles, has issued U.S.$2.3 billion guaranteed convertible bonds due 2014 (the "Convertible Bonds"). Following Admission, investors in the Convertible Bonds will be eligible to convert their bonds into Ordinary Shares of Glencore, which would in total represent 5.5 per cent. of the total issued share capital of the Company following Admission, assuming an Offer Price at the mid-point of the Offer Price Range, the Over-Allotment Option is not exercised and the Kazzinc Consideration Shares have not been issued. Any such conversions will have the effect of diluting the interest of the investors in the Global Offer.

***Exchange rate fluctuations may adversely affect the foreign currency value of the Ordinary Shares and any dividends.***

The Ordinary Shares will be quoted in pounds sterling on the London Stock Exchange and in Hong Kong dollars on the Hong Kong Stock Exchange. Dividends in respect of the Ordinary Shares, if any, will be declared in U.S. Dollars. Glencore's financial statements are, however, prepared in U.S. dollars. Fluctuations in the exchange rate between the U.S. dollar and each of the pounds sterling and the Hong Kong dollar will affect, amongst other matters, the pounds sterling and Hong Kong dollar value of the Ordinary Shares and of any dividends.

***Shareholders in the U.S. may not be able to participate in future equity offerings.***

The Articles provide for pre-emptive rights to be granted to Shareholders unless such rights are disapplied by a shareholder resolution. Shareholders in the U.S. may, however, not be entitled to exercise these rights unless the rights or Ordinary Shares are registered under the Securities Act or the Company has available to it, and utilises, an exemption from the registration requirements of the Securities Act.

There can be no assurance that the Company will file any such registration statement, or that an exemption from the registration requirements of the Securities Act will be available, which could result in Shareholders in the U.S. being unable to exercise their pre-emptive rights. The Company would expect to evaluate at the time of any rights or similar offering the costs and potential liabilities associated with any such registration statement or qualifying for an exemption from registration, as well as the indirect benefits of enabling Shareholders in the U.S. to exercise any pre-emptive rights for Ordinary Shares and any other factors considered appropriate at the time, prior to making a decision whether to file a registration statement with the U.S. Securities and Exchange Commission or utilise an exemption from the registration requirements of the Securities Act.

***The Company and certain of its operating subsidiaries and associates may be subject to restrictions on their ability to pay dividends.***

Glencore's results of operations and financial condition are entirely dependent on the financial performance of members and associates of the Glencore Group other than the Company. The Company's ability to pay dividends will depend, among other things, on the level of distributions, if any, received from the Company's operating subsidiaries and interests, and its level of cash balances. Certain of the Company's operating subsidiaries may, from time to time, be subject to restrictions on their ability to make distributions to the Company or return cash to it by other means, and there can be no assurance that such restrictions will not have a material adverse effect on the market price of the Ordinary Shares.

***The rights afforded to Shareholders are governed by Jersey law. Not all rights available to shareholders under English law, Hong Kong law or U.S. law will be available to Shareholders.***

The rights afforded to Shareholders will be governed by Jersey law and by the Articles, and these rights differ in certain respects from the rights of shareholders in typical English and Hong Kong companies and U.S. corporations. In particular, Jersey law significantly limits the circumstances under which shareholders of companies may bring derivative actions and, in most cases, only the corporation may be the proper claimant or plaintiff for the purposes of maintaining proceedings in respect of any wrongful act committed against it. Neither an individual nor any group of shareholders has any right of action in such circumstances. In addition, Jersey law does not afford appraisal rights to dissenting shareholders in the form typically available to shareholders of a U.S. corporation.

***Foreign investors may find it difficult to enforce foreign judgments obtained against Glencore or any of its Affiliates.***

The Company is a holding company organised as a public limited company incorporated in Jersey with business operations conducted through various subsidiaries. The majority of the Directors and all of its officers reside outside the U.S. In addition, substantially all of the Company's assets and the majority of the assets of its Directors and officers are located outside the U.S. As a result, it may not be possible for U.S. investors to effect service of process within the U.S. upon the Company or its Directors and officers located outside the U.S. or to enforce, in the U.S. courts or outside the U.S., judgments obtained against them in U.S. courts or in courts outside the U.S., including judgments predicated upon the civil liability provisions of the U.S. federal securities laws or the securities laws of any state or territory within the U.S.

There is also doubt as to the enforceability in England and Wales, Jersey, Switzerland and/or Hong Kong, whether by original actions or by seeking to enforce judgments of U.S. courts, of claims based on the

federal securities laws of the U.S. In addition, punitive damages in actions brought in the U.S. or elsewhere may be unenforceable in England and Wales, Jersey, Switzerland and/or Hong Kong.

**Risks related to the dual listing**

***The London Stock Exchange and the Hong Kong Stock Exchange have different characteristics.***

Following the Global Offer, the International Offer Shares and the Hong Kong Offer Shares will be fungible and able to be traded on the London Stock Exchange or the Hong Kong Stock Exchange. Shareholders resident in Hong Kong will be able to hold their Ordinary Shares on a branch register of the Company maintained in Hong Kong. As there is no direct trading or settlement between the stock markets of London and Hong Kong, the time required to move Ordinary Shares held on the branch register of the Company maintained in Hong Kong to the principal share register of the Company maintained in Jersey (and vice versa) may vary and there is no certainty of when Ordinary Shares that are moved will be available for trading or settlement.

In addition, the London Stock Exchange and the Hong Kong Stock Exchange have different trading hours, trading characteristics (including trading volume and liquidity), trading and listing rules and investor bases (including different levels of retail and institutional participation). As a result of these differences, the trading price of the Ordinary Shares on the London Stock Exchange and the Hong Kong Stock Exchange may not be the same at any given time.

Furthermore, fluctuations in the Ordinary Share price on the London Stock Exchange could materially and adversely affect the Ordinary Share price on the Hong Kong Stock Exchange (and vice versa). Moreover, fluctuations in the exchange rate between United Kingdom pounds sterling and Hong Kong dollars could materially and adversely affect the prices of the Ordinary Shares listed on the London Stock Exchange and the Hong Kong Stock Exchange.

In addition and in accordance with the terms of the Underwriting Agreement, in the event that the Company, the Selling Shareholder and the Joint Global Co-ordinators (on behalf of the Banks) decide following the date of this Prospectus not to proceed with the Hong Kong Offer, the parties reserve the right to proceed with the International Offer and the Hong Kong Offer Shares will be made available in the International Offer on the basis of the information contained in this Prospectus. In such circumstances, HK Admission would not occur and there would be no listing of the Ordinary Shares on the Hong Kong Stock Exchange.

***As a company due to be listed on the London Stock Exchange and the Hong Kong Stock Exchange, the Company will be subject to both United Kingdom and Hong Kong laws, regulations and policies.***

Hong Kong laws, regulations and policies may differ in some respects from comparable laws, regulations and policies in the United Kingdom. The differences in compliance requirements may subject the Company to additional regulatory burdens. In the event of any conflict between the applicable laws, regulations and policies in the United Kingdom and those in Hong Kong, the Company will have to comply with the more onerous rules and may incur additional costs and require additional resources.

***Certain Hong Kong laws and regulations will not apply to the Company.***

The Company, whose primary listing on Admission will be on the London Stock Exchange, has applied for, and the Hong Kong Stock Exchange and the SFC have granted, a number of waivers and exemptions from Hong Kong laws and regulations.

Shareholders therefore will not obtain the rights and benefits afforded under those Hong Kong laws and regulations for which the Company has been granted waivers and exemptions by the Hong Kong Stock Exchange and the SFC. Additionally, if any of these waivers or exemptions were to be revoked, the Company may be subject to additional legal and compliance obligations, which might be costly and time consuming to comply with, which could adversely affect the Company and Shareholders.

## GLOBAL OFFER STATISTICS

| | |
|---|---|
| Offer Price Range (per Ordinary Share)[1] | 480 to 580 pence |
| Maximum number of Ordinary Shares available under the Global Offer | 1,250,000,000 |
| Number of Ordinary Shares expected to be issued and sold in the Global Offer[2][3] | 1,132,075,472 |
| —New Offer Shares | 893,292,886 |
| —Sale Shares | 238,782,586 |
| Percentage of the issued Ordinary Share capital expected to be issued and sold in the Global Offer[2] | 16.4% |
| Number of Ordinary Shares subject to the Over-Allotment Option[4] | 113,207,547 |
| Number of Ordinary Shares expected to be in issue following the Global Offer[2][5][6] | 6,893,292,886 |
| Expected market capitalisation of the Company at the Offer Price[2][6] | U.S.$60.9 billion |
| Estimated net proceeds of the Global Offer receivable by the Company[7] | U.S.$7,456 million |

Notes:

(1) The Offer Price may be set within, above or below the Offer Price Range. To the fullest extent permitted by law, applications received under the International Offer are irrevocable and are based on the amount the applicant wishes to invest and not the number of Ordinary Shares or the Offer Price. It is expected that the Pricing Statement containing the Offer Price and the number of Ordinary Shares which are the subject of the Global Offer will be published on or about 19 May 2011. Further details of the Global Offer are contained in Section VIII: "Details of the Global Offer".

(2) Assumes an Offer Price at the mid-point of the Offer Price Range, the Over-Allotment Option is not exercised and there is no conversion of the Convertible Bonds.

(3) The Company will determine the aggregate number of Offer Shares, the number of New Offer Shares and the number of Sale Shares in light of the determination of the Offer Price on the Price Determination Date. In the Global Offer, the Company and the Selling Shareholder together intend to raise aggregate gross proceeds equivalent to approximately U.S.$10 billion at exchange rates prevailing at the Price Determination Date. The number of Sale Shares will be determined by the Company and the Selling Shareholder by reference to the Offer Price, exchange rates prevailing at the Price Determination Date, and the aggregate amount of the expected tax liabilities and loan repayments of Existing Shareholders. The number of New Offer Shares will (subject to the Company's right to increase or decrease the number of Ordinary Shares issued and/or sold under the Global Offer, as set out in Section VIII: "Details of the Global Offer") be determined so as to provide the balance of the intended aggregate gross proceeds of the Global Offer. The Company and the Selling Shareholder also reserve the right to increase or decrease the intended aggregate gross proceeds amount, subject to no more than 1,250,000,000 Ordinary Shares being issued and/or sold in the Global Offer. The aggregate number of Offer Shares, the number of Sale Shares and the number of New Offer Shares will each be set out in the Pricing Statement.

(4) Assumes an Offer Price at the mid-point of the Offer Price Range.

(5) Following Admission, investors in the Convertible Bonds will be eligible to convert their bonds into Ordinary Shares, which would in total represent 5.5 per cent. of the total issued share capital of the Company following Admission and following conversion, assuming an Offer Price at the mid-point of the Offer Price Range, the Over-Allotment Option is not exercised and the Kazzinc Consideration Shares have not been issued.

(6) Assumes that the Kazzinc Consideration Shares have not been issued.

(7) The estimated net proceeds receivable by the Company are stated after deduction of the estimated underwriting commissions and estimated expenses of the Global Offer (including Swiss federal issuance stamp tax payable in connection with the Restructuring and the Global Offer and VAT) payable by the Company, which are currently expected to be approximately U.S.$434.6 million, and assumes the Over-Allotment Option is not exercised. The Company will not receive any portion of the proceeds resulting from the sale of the Sale Shares by the Selling Shareholder in the Global Offer (other than where proceeds are paid to Glencore in respect of tax liabilities settled by the Company on behalf of certain Existing Shareholders where the Glencore Group has a withholding tax or other legal obligation to do so and in certain cases to repay a small tranche of outstanding loans extended by companies within the Glencore Group).

## EXPECTED TIMETABLE OF PRINCIPAL EVENTS IN THE UK

| | |
|---|---|
| Announcement of Offer Price Range | 4 May 2011 |
| Price Range Prospectus published | 4 May 2011 |
| Announcement of results of the Global Offer and notification of allocations[1] | 7.00 a.m. on 19 May 2011 |
| Publication of the Pricing Statement containing the Offer Price[1][2] | 19 May 2011 |
| Commencement of conditional dealings in Ordinary Shares on the London Stock Exchange | 8.00 a.m. on 19 May 2011 |
| UK Admission and commencement of unconditional dealings in Ordinary Shares on the London Stock Exchange | 8.00 a.m. on 24 May 2011 |
| Crediting of Ordinary Shares to CREST accounts | 8.00 a.m. on 24 May 2011 |
| Despatch of definitive share certificates (where applicable) | Week commencing 6 June 2011 |

Each of the times and dates in the above timetable is subject to change without further notice. References to times are to London time unless otherwise stated.

**It should be noted that, if UK Admission does not occur for any reason (including the Restructuring not being implemented in all material respects as described in paragraph 3 of Section X: "Additional Information"), all conditional dealings will be of no effect and any such dealings will be at the sole risk of the parties concerned. Temporary documents of title will not be issued.**

---

Notes:

(1) The announcement of results of the Global Offer and notification of allocations and publication of the Pricing Statement containing the Offer Price as set out in the expected timetable of principal events in the UK above and mentioned throughout this document may be adjusted in event of a "black" rainstorm warning or a tropical cyclone warning signal number 8 or above in force in Hong Kong at any time between 9.00 a.m. and 12.00 noon (Hong Kong time) on 18 May 2011, in which case details of the new dates and times will be announced publicly.

(2) The Pricing Statement will not automatically be sent to persons who receive this document but it will be available free of charge at the registered office of the Company (Queensway House, Hilgrove Street, St. Helier, Jersey JE1 1ES). In addition, the Pricing Statement will, subject to certain restrictions, be published in electronic form and be available on the Company's website at www.glencore.com.

| | |
|---|---|
| Opening of the Hong Kong Offer to retail investors in Hong Kong | 9.00 a.m. on 13 May 2011 |
| Latest time to complete electronic applications under White Form eIPO Service through the designated website www.eipo.com.hk | 11.30 a.m. on 18 May 2011 |
| Application list open[1] | 11.45 a.m. on 18 May 2011 |
| Latest time for lodging Application Forms and giving electronic application instructions to HKSCC | 12 noon on 18 May 2011 |
| Latest time to complete payment of the White Form eIPO applications by effecting internet banking transfer(s) or PPS payment transfer | 12 noon on 18 May 2011 |
| Application lists close | 12 noon on 18 May 2011 |
| Expected Price Determination Date | 19 May 2011[2] |
| Announcement of the Offer Price | 19 May 2011 |
| Announcement of an indication of the level of interest in the International Offer, the level of applications in the Hong Kong Offer and the basis of allotment under the Hong Kong Offer to be published in the South China Morning Post (in English) and the Hong Kong Economic Times (in Chinese) and on the websites of the Hong Kong Stock Exchange at www.hkexnews.hk[3] and the Company at www.glencore.com on or before | 24 May 2011 |
| Results of allocations under the Hong Kong Offer (with successful applicants' identification document numbers or Hong Kong business registration numbers, where appropriate) to be available through a variety of channels and at www.iporesults.com.hk with a "search by ID" function from | 24 May 2011 |
| Despatch of share certificates or deposit of share certificates in CCASS in respect of wholly or partially successful applications in the Hong Kong Offer on or before[4] | 24 May 2011 |
| Despatch of refund cheques or white form e-Refund payment instructions/refund cheques in respect of wholly or partially unsuccessful applications in the Hong Kong Offer on or before | 24 May 2011 |
| Commencement of unconditional dealings in Ordinary Shares on the Hong Kong Stock Exchange expected from | 9.00 a.m. on 25 May 2011 |

Each of the times and dates in the above timetable is subject to change without further notice. The Company will issue an announcement in Hong Kong to be published in the South China Morning Post (in English) and the Hong Kong Economic Times (in Chinese) if there is any change in the expected timetable of the Hong Kong Offer. References to times and dates are to Hong Kong time and dates unless otherwise stated.

---

Notes:

(1) If there is a "black" rainstorm warning or a tropical cyclone warning signal number 8 or above in force in Hong Kong at any time between 9.00 a.m. and 12.00 noon on 18 May 2011, the application lists will not open and close on that day.

(2) Please note that the price will be determined at the close of business in London on 18 May 2011.

(3) The announcement will be available for viewing on the "Main Board—Results of Allotment" page on the Hong Kong Stock Exchange's website.

(4) Notwithstanding the despatch of share certificates, share certificates will become valid only if the Global Offer has become unconditional in all respects (including the Underwriting Agreement not having been terminated in accordance with their terms). Investors who trade Ordinary Shares on the basis of publicly available allocation details or prior to the receipt of the share certificates do so entirely at their own risk.

**General**

**Investors should rely only on the information in this Prospectus. No person has been authorised to give any information or to make any representations other than those contained in this Prospectus in connection with the Global Offer and, if given or made, such information or representations must not be relied upon as having been authorised by or on behalf of the Company, the Directors, the Selling Shareholder, the Existing Shareholders or the Banks. No representation or warranty, express or implied, is made by any Bank or any selling agent as to the accuracy or completeness of such information, and nothing contained in this Prospectus is, or should be relied upon as, a promise or representation by the Banks or any selling agent as to the past, present or future. In particular, the content of the Company's website (www.glencore.com) does not form part of this Prospectus and prospective investors should not rely on it. Further, Glencore does not accept any responsibility for the accuracy or completeness of any information reported by the press or other media, nor the fairness or appropriateness of any forecasts, views or opinions expressed by the press or other media regarding the Global Offer or Glencore. Glencore makes no representation as to the appropriateness, accuracy, completeness or reliability of any such information or publication.**

**Without prejudice to any obligation of the Company to publish a supplementary prospectus pursuant to section 87G of the FSMA and PR 3.4.1 of the Prospectus Rules, neither the delivery of this Prospectus nor any subscription or sale made under this Prospectus shall, under any circumstances, create any implication that there has been no change in the business or affairs of Glencore taken as a whole since the date hereof or that the information contained herein is correct as of any time subsequent to its date.**

The contents of this Prospectus are not to be construed as legal, business or tax advice. Each prospective investor should consult his or her own lawyer, financial adviser or tax adviser for legal, financial or tax advice in relation to any subscription, purchase or proposed subscription or purchase of Ordinary Shares.

In connection with the Global Offer, the Banks and any of their affiliates, acting as investors for their own accounts, may subscribe for and/or purchase Ordinary Shares, and in that capacity may retain, purchase, sell, offer to sell or otherwise deal for their own accounts in such Ordinary Shares and other securities of the Company or related investments in connection with the Global Offer or otherwise. Accordingly, references in this Prospectus to the Ordinary Shares being issued, offered, subscribed, purchased, acquired, placed or otherwise dealt in should be read as including any issue or offer to, or subscription, purchase, acquisition, placing or dealing by, any Bank and any of its affiliates acting as an investor for its own accounts. The Banks do not intend to disclose the extent of any such investment or transactions otherwise than in accordance with any legal or regulatory obligations to do so.

None of the Company, the Directors, the Selling Shareholder, the Existing Shareholders or the Banks is making any representation to any offeree or purchaser of the Ordinary Shares regarding the legality of an investment by such offeree or purchaser.

Apart from the responsibilities and liabilities, if any, which may be imposed on the Banks by the FSMA, Hong Kong or the regulatory regime established thereunder or thereby or any other applicable regulatory regime, the Banks accept no responsibility whatsoever for the contents of this Prospectus or for any other statement made or purported to be made in it, in connection with the Company, the Ordinary Shares or the Global Offer. The Banks accordingly disclaim all and any liability whether arising in tort, contract or otherwise (save as referred to above) which they might otherwise have in respect of this Prospectus or any such statement.

No representation or warranty, express or implied, is made by the Banks named herein as to the accuracy or completeness of information contained in this Prospectus, and nothing in this Prospectus is, or shall be relied upon as, a promise or representation by the Banks.

Prior to making any decision as to whether to subscribe for or purchase the Ordinary Shares, prospective investors should read this Prospectus in its entirety. In making an investment decision, prospective investors must rely upon their own examination of the Company and the terms of this Prospectus, including the risks involved.

The investors also acknowledge that: (i) they have not relied on the Underwriters or any person affiliated with the Underwriters in connection with any investigation of the accuracy of any information contained in this Prospectus or their investment decision; and (ii) they have relied only on the information contained in this document, and that no person has been authorised to give any information or to make any representation concerning the Company or its subsidiaries or the Ordinary Shares (other than as contained

in this document) and, if given or made, any such other information or representation should not be relied upon as having been authorised by the Company, the Selling Shareholder or the Underwriters.

**Presentation of financial information and non-financial operating data**

***Historical financial information***

The historical financial information in this Prospectus has been prepared in accordance with the requirements of the Prospectus Directive regulation, the UK Listing Rules, and IFRS issued by the International Accounting Standards Board ("IASB") and as adopted for use in the EU. The basis of preparation is further explained in Part VI: "Historical Financial Information". The historical financial information presented in this Prospectus consists of audited consolidated financial information for the years ended 31 December 2008, 31 December 2009 and 31 December 2010. The consolidated historical financial information contained in Section VI: "Historical Financial Information" has been prepared on a basis that consolidates the assets and liabilities of the companies comprising the Glencore Group. Internal transactions within the Glencore Group have been eliminated on consolidation.

The historical financial information included in Section VI: "Historical Financial Information" was audited in accordance with the Standards for Investment Reporting issued by the Auditing Practices Board in the United Kingdom. Neither this information nor the other financial information used in this Prospectus was prepared in accordance with accounting principles generally accepted in the U.S. ("U.S. GAAP"), audited in accordance with the auditing standards generally accepted in the U.S. ("U.S. GAAS"), or the auditing standards of the U.S. Public Company Accounting Oversight Board (the "PCAOB Standards"). No opinion or any other assurance with regard to any financial information was expressed under U.S. GAAP, U.S. GAAS or PCAOB Standards, and the historical financial information included in Section VI: "Historical Financial Information" and other financial information is not intended to comply with SEC reporting requirements. Compliance with such requirements would require the modification, reformulation or exclusion of certain financial measures. In addition, changes would be required in the presentation of certain other information. Potential investors should consult their own professional advisers to gain an understanding of the financial information in Section VI: "Historical Financial Information" and the implications of differences between the auditing standards noted herein.

***Pro forma financial information***

This Prospectus includes an unaudited pro forma net assets statement as at 31 December 2010 for the Company illustrating the effect of Admission had it occurred on 31 December 2010. Because of its nature, the pro forma financial information addresses a hypothetical situation and, therefore, does not represent the Company's actual financial position. The Prospectus Rules regarding the preparation and presentation of pro forma financial information vary in certain respects from Article 11 of Regulation S-X promulgated under the Securities Act and, accordingly, the unaudited pro forma financial information included herein should not be relied upon as if it has been prepared in accordance with such requirements.

Shareholders and potential investors should refer to the basis of preparation of the unaudited pro forma financial information set forth in Section VII: "Unaudited Pro Forma Financial Information".

***Non-financial operating data***

The non-financial operating data included in this Prospectus has been extracted without material adjustment from the management records of Glencore International and are unaudited.

**Non-IFRS Measures**

In this Prospectus, certain financial measures are presented that are not recognised by IFRS, including Adjusted EBIT, Adjusted EBIT pre-exceptional items, Adjusted EBITDA, Adjusted EBITDA pre-exceptional items and net debt (the "Non-IFRS Measures").

***Adjusted EBIT***

Adjusted EBIT consists of revenue less cost of goods sold and selling and administrative expenses plus share of income from associates and jointly controlled entities and dividends as disclosed on the face of the consolidated statements of income. Although Adjusted EBIT is not typically a measure of operating income, operating performance or liquidity under IFRS, the Directors have presented Adjusted EBIT in this Prospectus because they believe Adjusted EBIT is used by some investors to determine a company's

ability to service indebtedness and fund ongoing capital expenditure and dividends. Adjusted EBIT should not, however, be considered in isolation or as a substitute for income from operations as determined in accordance with IFRS, or for cash flows from operating activities as determined in accordance with IFRS, or as an indicator of operating performance.

***Adjusted EBITDA***

Adjusted EBITDA consists of Adjusted EBIT (as defined above) plus depreciation and amortisation. Although Adjusted EBITDA is not typically a measure of operating income, operating performance or liquidity under IFRS, the Directors have presented Adjusted EBITDA in this Prospectus as they believe that Adjusted EBITDA is used by some investors to determine a company's ability to service indebtedness and fund ongoing capital expenditure and dividends.

Adjusted EBITDA has limitations as an analytical tool, and an investor should not consider these measures in isolation from, or as a substitute for, analysis of Glencore International's results of operations. Some of the limitations of Adjusted EBITDA are that:

- it does not reflect Glencore International's cash expenditures or future requirements for capital expenditure or contractual commitments;
- it does not reflect changes in, or cash requirements for, Glencore International or the Company's working capital needs (as applicable);
- it does not reflect the significant interest expense or the cash requirements necessary to service interest or principal payments in respect of any borrowings;
- although depreciation and amortisation are non-cash charges, the assets being depreciated and amortised will often have to be replaced in the future, and Adjusted EBITDA does not reflect any cash requirements for such replacements; and
- other companies in Glencore International's industry may calculate these measures differently from how Glencore International does, limiting their usefulness as a comparative measure.

Adjusted EBIT and Adjusted EBITDA may not be indicative of Glencore International's historical operating results, nor are they meant to be a projection or forecast of the Company's future results.

***Adjusted EBITDA pre-exceptional items, Adjusted EBIT pre-exceptional items and Income before attribution pre-exceptional items***

Adjusted EBITDA pre-exceptional items, Adjusted EBIT pre-exceptional items and Income before attribution pre-exceptional items are Adjusted EBITDA, Adjusted EBIT and Income before attribution, respectively, excluding exceptional items. Exceptional items represent significant items of income and expense which, due to their nature or the expected infrequency of the events giving rise to them, are separated for internal reporting and analysis of Glencore International's results. Exceptional items mainly include impairment charges on inventories and other assets.

These measures are intended to provide additional information to investors and analysts, do not have any standardised meaning prescribed by IFRS and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. These measures exclude the impact of cash costs of financing activities and taxes, and the effects of changes in operating working capital balances, and therefore are not necessarily indicative of income from operations or cash flow from operations as determined under IFRS. Other companies may calculate these measures differently.

***Net debt***

Glencore defines net debt as total current and non-current borrowings and commodities sold with agreements to repurchase less cash and cash equivalents, marketable securities and readily marketable inventory. Glencore includes marketable securities and readily marketable inventory as cash equivalents in its internal definition of net debt. Readily marketable inventory comprises inventory that is readily convertible into cash due to their liquid nature, widely available markets and the fact that any associated price risk is covered. This includes, for example, LME approved inventory (such as copper or aluminium) held at LME warehouses. Given the liquid nature of these inventories and associated funding, which represents a significant share of current assets and liabilities, Glencore believes it is appropriate to consider them as cash equivalents.

The Directors believe this Non-IFRS Measure is a valuable tool in analysing its net debt levels and computing certain debt coverage ratios. This measure is intended to provide additional information to investors and analysts, does not have any standardised meaning prescribed by IFRS and should not be considered in isolation or a substitute for measures of performance prepared in accordance with IFRS.

**Pro forma financial information**

In this Prospectus, any reference to "pro forma" financial information is to information which has been extracted without material adjustment from the unaudited pro forma financial information contained in Section VII: "Unaudited Pro Forma Financial Information". The unaudited pro forma net assets statement contained in Section VII: "Unaudited Pro Forma Financial Information" is based on the balance sheet of Glencore International as at 31 December 2010, extracted without material adjustment from Section VI: "Historical Financial Information". The unaudited pro forma net assets statement includes certain adjustments in respect of the Global Offer, including the crystallisation of tax items in connection with the Restructuring. However, the unaudited pro forma net assets statement is not necessarily indicative of what the financial position of Glencore International would have been had the Global Offer occurred on 31 December 2010.

The unaudited pro forma financial information is for illustrative purposes only. Because of its nature, the pro forma financial information addresses a hypothetical situation and, therefore, does not represent Glencore International's actual financial position. Future results of operations may differ materially from those presented in the pro forma financial information due to various factors.

**Rounding**

Percentages and certain amounts included in this Prospectus have been rounded for ease of presentation. Accordingly, figures shown as totals in certain tables may not be the precise sum of the figures that precede them.

**Credit ratings**

Credit ratings included or referred to in this Prospectus have been issued by Moody's and Standard and Poor's, each of which is established in the European Union and has applied to be registered under Regulation (EC) No 1060/2009 of the European Parliament and of the Council of 16 September 2009 on credit rating agencies.

**Currencies**

In this Prospectus, references to "pounds sterling", "£", "GBP", "pence" or "p" are to the lawful currency of the United Kingdom; references to "U.S. dollars", "dollars", "U.S.$", or "cents" are to the lawful currency of the U.S., references to "Hong Kong dollars" or "HK$" are to the lawful currency of Hong Kong, references to "Euros" or "€" are to the currency introduced at the start of the third stage of European economic and monetary union pursuant to the Treaty establishing the European Community, as amended, references to "Swiss Francs", "Swiss francs" or "CHF" are to the lawful currency of Switzerland and references to "South African Rand" or "ZAR" are to the lawful currency of the Republic of South Africa.

The Offer Price will be stated in pounds sterling. On 29 April 2011 (being the last practicable date prior to the publication of this Prospectus), £1.00 = HK$12.974 and £1.00 = U.S.$1.667, based on the exchange rate quoted by Bloomberg on that date.

The Company prepares its financial statements in U.S. dollars. The basis of translation of foreign currency for the purpose of inclusion of the financial information set out in Section VI: "Historical Financial Information" is described in that Section. Information derived from this financial information set out elsewhere in this Prospectus has been translated on the same basis.

Unless otherwise indicated, the financial information contained in this Prospectus has been expressed in U.S. dollars.

Indicative exchange rates of the U.S. dollar against the Australian Dollar, Swiss Franc, Euro, pounds sterling, Kazakh Tenge and South African Rand comprising the average rate used for income statement information and the period end rate used for balance sheet information, are shown below:

| | Period | | | | | |
|---|---|---|---|---|---|---|
| | Year ended 31 December 2008 | | Year ended 31 December 2009 | | Year ended 31 December 2010 | |
| | Average rate | Period end rate | Average rate | Period end rate | Average rate | Period end rate |
| **Currencies** | | | | | | |
| AUD:U.S.$ | 1.1738 | 1.4371 | 1.2615 | 1.114 | 1.0863 | 0.9768 |
| CHF:U.S.$ | 1.0826 | 1.0645 | 1.0855 | 1.0338 | 1.0425 | 0.9368 |
| EUR:U.S.$ | 0.6799 | 0.7192 | 0.7173 | 0.6974 | 0.7539 | 0.7453 |
| GBP:U.S.$ | 0.5399 | 0.6914 | 0.6387 | 0.6194 | 0.647 | 0.6402 |
| KZT:U.S.$ | 120.3303 | 121.125 | 147.6582 | 148.52 | 147.3884 | 147.4 |
| ZAR:U.S.$ | 8.258 | 9.37 | 8.4165 | 7.3774 | 7.3289 | 6.6237 |

**Presentation of reserves and resources information**

This Prospectus contains information relating to the reserves and resources of some of Glencore's industrial assets which have been extracted or derived from the following technical reports contained in Section XIV: "Independent Technical Reports":

- in relation to the mineral reserves and mineral resources of Prodeco (comprising the Calenturitas mine and the La Jagua complex), the technical report prepared by Minarco Mine Consult Pty Ltd. ("MMC") and McElroy Bryan Geological Services Pty Ltd. ("MBGS") (the "Prodeco Report");
- in relation to the mineral reserves and mineral resources of Katanga, Mopani and Mutanda, the technical reports prepared by Golder Associates South Africa (Pty) Ltd. ("Golders") (the "Katanga Report", the "Mopani Report" and the "Mutanda Report", respectively); and
- in relation to the mineral reserves and mineral resources of Kazzinc, the technical report prepared by Wardell Armstrong International Ltd. ("WAI") (the "Kazzinc Report").

Such information must be read in connection with the relevant technical report.

In this Prospectus, the mineral reserves and mineral resources estimates in relation to Katanga, Mutanda, Mopani, Prodeco and Kazzinc, initially prepared by Glencore, have been substantiated by evidence obtained from the relevant MER provider's site visits and observations, analyses and other evidence and take account of all relevant information supplied by Glencore. The basis of preparation for the MERs is set out in more detail in each of these reports.

***Oil and gas reserves and resources information***

The RPS Report (as contained in Section XIV: "Independent Technical Reports") presents information concerning oil and gas reserves and resources in accordance with the definitions and guidelines set forth in the 2007/SPE/AAPG/WPC/SPEE Petroleum Resource Management System ("PRMS") which is approved by the Society of Petroleum Engineers as the standard for classification and reporting. As set out in the PRMS, "reserves" are "those quantities of petroleum anticipated to be commercially recoverable by application of development projects to known accumulations from a given date forward under defined conditions". Reserves must further satisfy four criteria: they must be (i) discovered, (ii) recoverable, (iii) commercial and (iv) remaining (as of the evaluation date) based on the development project(s) applied. Reserves are further categorised in accordance with the level of certainty associated with the estimates and may be sub-classified based on project maturity and/or characterised by development and production status. "Contingent resources" are defined by PRMS as "those quantities of petroleum estimated, as of a given date, to be potentially recoverable from known accumulations, but the applied project(s) are not yet considered mature enough for commercial development due to one or more contingencies". Contingent resources may include, for example, projects for which there are currently no viable markets, or where commercial recovery is dependent on technology under development, or where evaluation of the accumulation is insufficient to clearly assess commerciality. Contingent Resources are further categorised in accordance with the level of certainty associated with the estimates and may be sub-classified based on project maturity and/or characterised by their economic status. "Prospective resources" are defined by PRMS as "those quantities of petroleum estimated, as of a given date, to be

potentially recoverable from undiscovered accumulations by application of future development projects". Prospective resources have both an associated chance of discovery and a chance of development. Prospective resources are further subdivided in accordance with the level of certainty associated with recoverable estimates assuming their discovery and development and may be sub-classified based on project maturity.

***Mineral reserves and mineral resources information***

Glencore estimates its mineral reserves and mineral resources in accordance with internationally recognised mineral standards (which include the JORC Code and the 2007 edition of the South African Code for Reporting of Exploration Results, Mineral Resources and Mineral Reserves ("SAMREC")) based on information compiled by Competent Persons (as defined by the JORC Code). Golders, MMC and MBGS and WAI have reviewed the mineral reserves and mineral resources estimates compiled by Glencore in respect of Katanga, Mutanda and Mopani, Prodeco and Kazzinc (as set out in the relevant MER contained in Section XIV: "Independent Technical Reports") and have stated the mineral reserves and mineral resources in respect of the relevant industrial asset to be in compliance with the JORC Code.

Mineral resources are based on mineral occurrences quantified on the basis of geological data and an assumed cut-off grade, and are divided into measured, indicated and inferred categories reflecting decreasing confidence in geological and/or grade continuity. No allowances are included for dilution and losses during mining, but the reporting of resource estimates carries the implication that there are reasonable prospects for eventual economic exploitation. Measured and indicated resources may therefore be viewed as the estimation stage prior to the application of more stringent economic criteria for the reserve definition, such as a rigorously defined cut-off grade and mine design outlines, along with allowances for dilution and losses during mining. It is common practice, for example, for companies to include in the resources category material with a reasonable expectation of being converted to reserves, but for which either the detailed mine planning work has not been undertaken or for which an improvement in economic conditions or exploitation efficiencies would be required to enable the company to exploit the resources economically. An inferred resource is that part of a mineral resource for which tonnage, grade and mineral content can be estimated with a low level of confidence. This categorisation is inferred from geological evidence and assumed, but not verified, geological and/or grade continuity. It is based on information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes which may be limited or of uncertain quality and reliability. Mineral reserves are designated as proved and probable, and are derived from the corresponding measured and indicated resource estimates by including allowances for dilution and losses during mining. It is an explicitly stated further requirement that other modifying economic, mining, metallurgical, marketing, legal, environmental, social and governmental factors also be taken into account. The measured and indicated mineral resources can be reported as either being inclusive of those mineral resources modified to produce the ore reserves or additional to the ore reserves. In this Prospectus, measured and indicated resources are stated inclusive of reserves but with no allowance for ore loss or dilution. Inferred resources are stated on an exclusive basis.

Included in this Prospectus are various statements relating to mineral potential at Katanga, Mutanda, Mopani, Prodeco and Kazzinc. The relevant MER providers have reviewed the information supporting these statements compiled by Glencore and have stated the mineral potential as set out in the relevant technical report is in compliance with section 18 of the JORC Code. This disclosure of mineral potential, follows guidance in section 18 of the JORC Code; specifically, that the mineral potential should be expressed as a range of quantity and grade, with an explanation of the basis of the statement. The summary statement of potential for each target is expressed explicitly on the basis that (i) the potential range of quantity and grade is conceptual in nature, there has been insufficient exploration to define a mineral resource on the target and it is uncertain if further exploration will result in the discovery of a mineral resource on the target and (ii) the mineral potential constitutes a possible mineral deposit that is to be the target of further exploration.

**Forward-looking statements**

Certain information contained in this Prospectus, including any information as to Glencore's strategy, plans or future financial or operating performance constitutes "forward-looking statements". All statements, other than statements of historical fact, are forward-looking statements. The words "believe", "expect", "anticipate", "contemplate", "aim", "target", "plan", "intend", "continue", "budget", "estimate", "may", "should", "will", "would", "schedule" and similar expressions identify forward-looking statements.

Forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by Glencore, are inherently subject to significant business, economic and competitive uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements. Such factors include, but are not limited to: the impact of global economic conditions; fluctuations in the currency markets; fluctuations in the spot and forward prices of certain commodities; changes in national and local government legislation, taxation, controls, regulations and political or economic developments in any countries where Glencore operates, or other countries in which Glencore may carry on business in the future; business opportunities that may be presented to, or pursued by, Glencore; Glencore's ability to successfully integrate future acquisitions; operating or technical difficulties in connection with mining or development activities; employee relations; availability and costs associated with mining inputs and labour; litigation; diminishing quantities or grades of reserves; adverse changes in Glencore's credit rating; and risk of trespass, theft and vandalism.

Investors are cautioned that forward-looking statements are not guarantees of future performance. Forward-looking statements may, and often do, differ materially from actual results. Any forward-looking statements in this Prospectus speak only as of the date of this Prospectus, reflect Glencore's current view with respect to future events and are subject to risks relating to future events and other risks, uncertainties and assumptions relating to Glencore's operations, results of operations, growth strategy and liquidity. Investors should specifically consider the factors identified in this Prospectus which could cause actual results to differ before making an investment decision. All of the forward-looking statements made in this Prospectus are qualified by these cautionary statements. Specific reference is made to "Risk Factors", Section I: "Information on Glencore" and Section IV: "Operating and Financial Review".

Subject to the requirements of the Prospectus Rules, the Disclosure and Transparency Rules, the Listing Rules, the Hong Kong Listing Rules or applicable law, the Company explicitly disclaims any intention or obligation or undertaking publicly to release the result of any revisions to any forward-looking statements in this Prospectus that may occur due to any change in the Company's expectations or to reflect events or circumstances after the date of this Prospectus.

**Addressable markets**

Included in this Prospectus are various statements relating to the size of the addressable markets for certain commodities in which Glencore acts as marketer. This information has been provided because Glencore considers these markets to be the relevant markets for consideration of its market shares.

Within the global production and supply of commodities, there are fragments of the market whose volumes are not accessible to a third party marketer such as Glencore. Therefore, these volumes should not be considered for the purpose of calculating market shares for that commodity. These fragments tend to fall within one of the three categories described below, although not all categories are deemed relevant to the calculation of the addressable market in each of Glencore's key commodities:

(i) Production in a vertically-integrated system: This relates only to intermediate products, such as a metallic concentrate or unprocessed agricultural products, which are moved between processing stages within a single company or vertically-integrated system, and do not require the assistance of a third party marketer to facilitate this.

(ii) Production consumed within a domestic/inland market: This relates to commodities that are produced and consumed domestically in a country and are therefore not exported. Glencore may still be involved in the import of these commodities into such country and therefore import volumes are included within the addressable market share calculation.

(iii) Production sold directly to end users: This relates primarily to finished products, such as a refined metal or processed agricultural products, which are sold directly to the consumers or end users by the producer without the assistance of a third party marketer.

All statements relating to "market share" or "addressable market" are statements of the Directors' beliefs, which have been calculated using a combination of data sourced from third party industry expert data providers and Glencore's own estimates. Furthermore, the different market dynamics of the various commodities which Glencore markets means that the calculation of market share positions and the size of the addressable markets may differ for each commodity.

The following tables set out the basis of calculation of the size of the addressable markets for the main commodities that Glencore markets, as well as the calculation of Glencore's approximate market shares in each of these markets. In each case, the source of the underlying data in each calculation is also indicated.

***Basis of calculation***

*Metals and Minerals business segment*

| | Total market | Exclusions from addressable market | Addressable market | Glencore volumes marketed | Glencore's approximate % market share | Glencore's approximate % of total market |
|---|---|---|---|---|---|---|
| Calculation: . . . . . | A | B | C (A – B) | D | E (D/C) | F (D/A) |

A: Glencore defines the total market for each commodity within the Metals and Minerals business segment as total global production for that commodity based on data provided by CRU International Group ("CRU").

B: For commodities within the Metals and Minerals business segment, Glencore defines the addressable market as excluding: (i) for certain intermediate products, production within a vertically-integrated producing system, based on data provided by CRU; (ii) for certain intermediate products, all production within the Chinese domestic market, based on data provided by CRU; (iii) for certain finished metals, all volumes which are moved within a vertically-integrated producing system where those producers have downstream capability or which are sold directly by producers to end users without the use of an intermediary, based on data provided by CRU and Glencore's own estimates; and (iv) for certain finished metals, all production within the Chinese domestic market, based on data provided by CRU.

C: Addressable market is calculated as the total market (A) less exclusions from the addressable market (B).

D: Glencore volumes marketed are based on actual marketed volumes.

E: Glencore's market shares for commodities within the Metals and Minerals business segment are calculated as Glencore volumes marketed (D) divided by addressable market (C).

F: Glencore's share of total market for commodities within the Metals and Minerals business segment are calculated as Glencore's volumes marketed (D) divided by total market (A).

| Commodity | Total market (million MT) | Exclusions from addressable market (million MT) | Addressable market (million MT) | Glencore volumes marketed (million MT) | Glencore's approximate % market share | Glencore's approximate % of total market |
|---|---|---|---|---|---|---|
| 2010 | | | | | | |
| Zinc metal[2][3] . . . . . | 12.7 | 10.0[4] | 2.7[4] | 1.7 | 60[4] | 13 |
| Zinc concentrates[1][2][3] . . | 24.8 | 20.0[4] | 4.8[4] | 2.4 | 50[4] | 10 |
| Copper metal[2][3] . . . . . | 18.7 | 15.9[4] | 2.8[4] | 1.4 | 50[4] | 7 |
| Copper concentrates[1][2][3] . . . . | 46.9 | 40.8[4] | 6.1[4] | 1.8 | 30[4] | 4 |
| Lead metal[2][3] . . . . . | 9.0 | 8.3[4] | 0.7[4] | 0.3 | 45[4] | 3 |
| Lead concentrates[1][2][3] . | 6.2 | 4.8[4] | 1.4[4] | 0.6 | 45[4] | 10 |
| Alumina[1][2] . . . . . | 81.6 | 64.0 | 17.6 | 6.7 | 38 | 8 |
| Aluminium[1][2] . . . . . | 42.0 | 23.8 | 18.2 | 3.9 | 22 | 9 |
| Nickel . . . . . | 1.4 | N/A | 1.4 | 0.2 | 14 | 14 |
| Cobalt . . . . . | 0.077 | N/A | 0.077 | 0.018 | 23 | 23 |
| Ferrochrome . . . . . | 9.1 | N/A | 9.1 | 1.5 | 16 | 16 |

Notes:

(1) Excludes production within a vertically-integrated producing system.

(2) Excludes all production within the Chinese domestic market.

(3) Excludes volumes sold directly by producers to end users without the use of an intermediary.

(4) Based on the mid-point estimated range for exclusions from addressable market figure.

*Energy Products business segment*

| Commodity | Total market | Exclusions from addressable market | Addressable market | Glencore volumes marketed | Glencore's approximate % market share | Glencore's approximate % of total market |
|---|---|---|---|---|---|---|
| Calculation: | A | B | C (A – B) | D | E (D/C) | F (D/A) |

A: Glencore defines the total market for crude oil and oil products within the Energy Products business segment as total global demand based on data sourced from the IEA, and defines the total market for coal and coke as total global production based on data provided by Merlin Trade and Consultancy Ltd.

B: For coal and coke within the Energy Products business segment, Glencore defines the addressable market being only seaborne export coal or coke, and so excludes all coal or coke which is not seaborne export. There are no exclusions from the addressable market for oil and oil products.

C: Addressable market is calculated as the total market (A) less exclusions from the addressable market (B).

D: Glencore volumes marketed are based on actual marketed volumes. For coal and coke, these volumes include attribution of volumes under agency and advisory agreements as well as on a principal basis.

E: Glencore's market shares for commodities within the Energy Products business segment are calculated as Glencore volumes marketed (D) divided by addressable market (C).

F: Glencore's share of total market for commodities within the Energy Products business segment are calculated as Glencore's volumes marketed (D) divided by total market (A).

| Commodity | Total market (million MT) | Exclusions from addressable market (million MT) | Addressable market (million MT) | Glencore volumes marketed (million MT) | Glencore's approximate % market share | Glencore's approximate % of total market |
|---|---|---|---|---|---|---|
| 2010 | | | | | | |
| Crude oil and oil products (million bbl/day) | 87.8 | N/a | 87.8 | 2.5 | 3 | 3 |
| Metallurgical coal | 830.0 | 576.0 | 254.0 | 30 | 12 | 4 |
| Thermal coal | 4,556.0 | 3,864.0 | 692.0 | 196 | 28 | 4 |
| Coke | 575.0 | 562.8 | 12.2 | 0.7 | 6 | Not meaningful |
| Total coal | 5,961.0 | 5,002.8 | 958.2 | 226.7 | 24 | 4 |

*Agricultural Products business segment*

| Commodity | Total market | Exclusions from addressable market | Addressable market | Glencore volumes marketed | Glencore's approximate % market share | Glencore's approximate % of total market |
|---|---|---|---|---|---|---|
| Calculation: | A | B | C (A – B) | D | E (D/C) | F (D/A) |

A: Glencore defines the total market for each commodity within the Agricultural Products business segment as total global production for that commodity based on data provided by Informa and on data sourced from the United States Department of Agriculture.

B: For all commodities within the Agricultural Products business segment, Glencore defines the addressable market as being the traded or export market for that commodity, based on data provided by Informa and on data sourced from the United States Department of Agriculture.

C: Addressable market is calculated as the total market (A) less exclusions from the addressable market (B).

D: Glencore volumes marketed are based on actual marketed volumes.

E: Glencore's market shares for commodities within the Agricultural Products business segment are calculated as Glencore volumes marketed (D) divided by addressable market (C).

F: Glencore's share of total market for commodities within the Agricultural Products business segment are calculated as Glencore's volumes marketed (D) divided by total market (A).

| Commodity | Total market (million MT) | Exclusions from addressable market (million MT) | Addressable market (million MT) | Glencore volumes marketed (million MT) | Glencore's approximate % market share | Glencore's approximate % of total market |
|---|---|---|---|---|---|---|
| 2010 | | | | | | |
| Barley | 171.3 | 155.4 | 15.9 | 3.8 | 24 | 2 |
| Wheat (excl. durum wheat) | 846.4 | 731.9 | 114.5 | 12.3 | 11 | 1 |
| Corn | 968.2 | 874.5 | 93.7 | 3.3 | 4 | Not meaningful |
| Sun and rapeseed | 99.6 | 87.5 | 12.1 | 3.1 | 26 | 3 |
| Sunflower oil | 12.2 | 8.1 | 4.1 | 0.8 | 20 | 7 |

| Soybean oil | 43.5 | 34.5 | 9.0 | 0.8 | 9 | 2 |
| Soybean meal | 175.7 | 118.4 | 57.3 | 2.9 | 5 | 2 |
| Sugar | 234 | 182.0 | 52.0 | 0.5 | 1 | Not meaningful |

**U.S. considerations**

**Available information for U.S. investors**

The Company has agreed that, for so long as any of the Ordinary Shares are "restricted securities" within the meaning of Rule 144(a)(3) under the Securities Act, the Company will, during any period in which it is neither subject to Section 13 or 15(d) of the U.S. Securities Exchange Act of 1934, as amended (the "Exchange Act"), nor exempt from reporting under the Exchange Act pursuant to Rule 12g3-2(b) thereunder, make available to any holder or beneficial owner of such restricted securities or to any prospective purchaser of such restricted securities designated by such holder or beneficial owner, upon the request of such holder, beneficial owner or prospective purchaser, the information required to be delivered pursuant to Rule 144A(d)(4) under the Securities Act.

## SECTION I: INFORMATION ON GLENCORE

*Investors should read the whole of this Prospectus and not just rely upon the summarised information, including the tables, in this Section I. Where stated, information in this section has been extracted without material adjustment from Sub-section B of Section VI: "Historical Financial Information" and from Section XIV: "Independent Technical Reports". Investors can find further background information on the commodities that Glencore markets in Section XIII: "Information on Commodities".*

### Overview

Glencore is a leading integrated producer and marketer of commodities, with worldwide activities in the marketing of metals and minerals, energy products and agricultural products and the production, refinement, processing, storage and transport of these products. Glencore operates on a global scale, marketing and distributing physical commodities sourced from third party producers and own production to industrial consumers, such as those in the automotive, steel, power generation, oil and food processing industries. Glencore also provides financing, logistics and other services to producers and consumers of commodities. Glencore's long experience as a commodity merchant has allowed it to develop and build upon its expertise in the commodities which it markets and cultivate long-term relationships with a broad supplier and customer base across diverse industries and in multiple geographic regions. Glencore's marketing activities are supported by investments in industrial assets operating in Glencore's core commodities. Glencore's industrial, geographical, commodity, supplier and customer diversity, in combination with its long-term supplier and customer relationships, has enabled Glencore to operate profitably, even during periods in which a particular commodity, industry, customer or geographic region may be experiencing some weakness. In addition, Glencore's marketing operations are less correlated to commodity prices than its industrial operations, which makes Glencore's earnings less volatile than those of producers of metals and mining products and energy products that do not also have marketing and logistics operations.

As a marketer, Glencore is able to differentiate itself from other production entities as, in addition to focusing on minimising costs and maximising operational efficiencies, Glencore focuses on maximising returns from the entire supply chain, taking into account its extensive and global third party supply base, its logistics, risk management and working capital financing capabilities, extensive market insight, business optionality, its extensive customer base, strong market position and penetration in most commodities and economies of scale. In contrast, this is not the business model of Glencore's mainly industrial competitors who are generally not set up to exploit the full range of value added margin and arbitrage opportunities which exist throughout the commodity supply chain.

Glencore's consolidated revenues for the years ended 31 December 2009 and 31 December 2010 were U.S.$106,364 million and U.S.$144,978 million, and its income before attribution for the years ended 31 December 2009 and 31 December 2010 were U.S.$1,729 million and U.S.$4,106 million. As at 31 December 2010, Glencore's total assets amounted to U.S.$79,787 million. Measured by revenues, Glencore believes it was one of the world's largest privately held companies during this period.

Selected key financial information in relation to Glencore's marketing and industrial activities for the years ended 31 December 2008, 31 December 2009 and 31 December 2010 is set out below. This information has been extracted without material adjustment from Section VI: "Historical Financial Information" except

where marked as unaudited. Unaudited information has been extracted without material adjustment from Glencore's accounting records.

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | | *(U.S.$ million)* | |

Notes:

(1) Revenue is not split between Marketing and Industrial activities in the audited Historical Financial Information set out in Section VI of this document and is therefore marked as unaudited. Total segment and total Group revenue is audited.

(2) Includes variable bonus and other corporate selling, general and administrative expenses.

(3) Excludes share of income from associates and dividends.

(4) Adjusted EBITDA pre-exceptional items plus Share of income from associates and dividends and Adjusted EBIT pre-exceptional items plus Share of income from associates and dividends are audited.

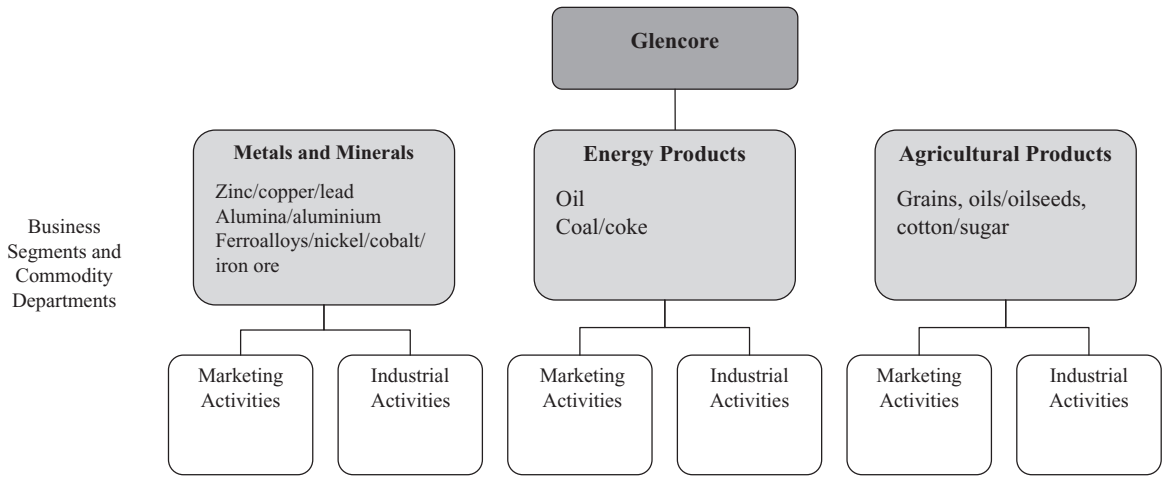
(5) Excludes exceptional items, see "Presentation of Information".

(6) Includes share of income from associates and dividends.

Glencore believes it is:

- the world's largest physical supplier of third party sourced commodities in respect of the majority of the metals and minerals it markets;
- among the world's largest non-integrated physical suppliers of crude oil and oil products;
- the world's largest participant in the supply of seaborne steam coal, including attribution of the volumes under a number of exclusive advisory and agency agreements with, amongst others, its associate company Xstrata;
- among the world's leading suppliers of sugar; and
- one of the leading exporters of grain from Europe, the CIS and Australia.

Glencore conducts its operations in three business segments: Metals and Minerals, Energy Products and Agricultural Products. The following chart summarises Glencore's business structure:



Glencore's business segments are responsible for managing the marketing, sourcing, hedging, logistics and industrial investment activities relating to the commodities which they cover.

Glencore's marketing and industrial investment activities are supported by a global network of more than 50 offices located in more than 40 countries throughout Europe, North, Central and South America, the CIS, Asia, Australia, Africa and the Middle East. Glencore's main offices are located in Baar (Switzerland), Stamford (Connecticut), London, Rotterdam, Beijing, Moscow and Singapore. This network provides Glencore with significant worldwide sourcing and distribution capabilities.

Glencore has an established record of successful strategic investments in industrial assets which have become an important component of its physical marketing activities. Glencore intends to continue to pursue selective strategic acquisitions and alliances to support and strengthen its core physical marketing activities as and when opportunities arise. Glencore evaluates each industrial asset investment opportunity on a stand-alone basis, however, also recognising its potential to support and strengthen Glencore's physical marketing activities or existing industrial coverage. Similarly, Glencore evaluates disposals of investments in industrial assets when they are no longer deemed to support its marketing activities and/or when compelling selling opportunities arise.

Selected key financial information in relation to the marketing and industrial activities of Glencore's business segments for the year ended 31 December 2010 is set out below. This information has been extracted without material adjustment from Section VI: "Historical Financial Information" except where

marked as unaudited. Unaudited information has been extracted without material adjustment from Glencore's accounting records.

Notes:

(1) Revenue is not split between Marketing and Industrial activities in the audited Historical Financial Information set out in Section VI of this document and is therefore marked as unaudited. Total segment and total Group revenue is audited.

(2) Excludes share of income from associates and dividends.

(3) Adjusted EBITDA pre-exceptional items plus Share of income from associates and dividends and Adjusted EBIT pre-exceptional items plus Share of income from associates and dividends are audited.

(4) Includes variable bonus and other corporate selling, general and administrative expenses, as well as share of income from Xstrata.

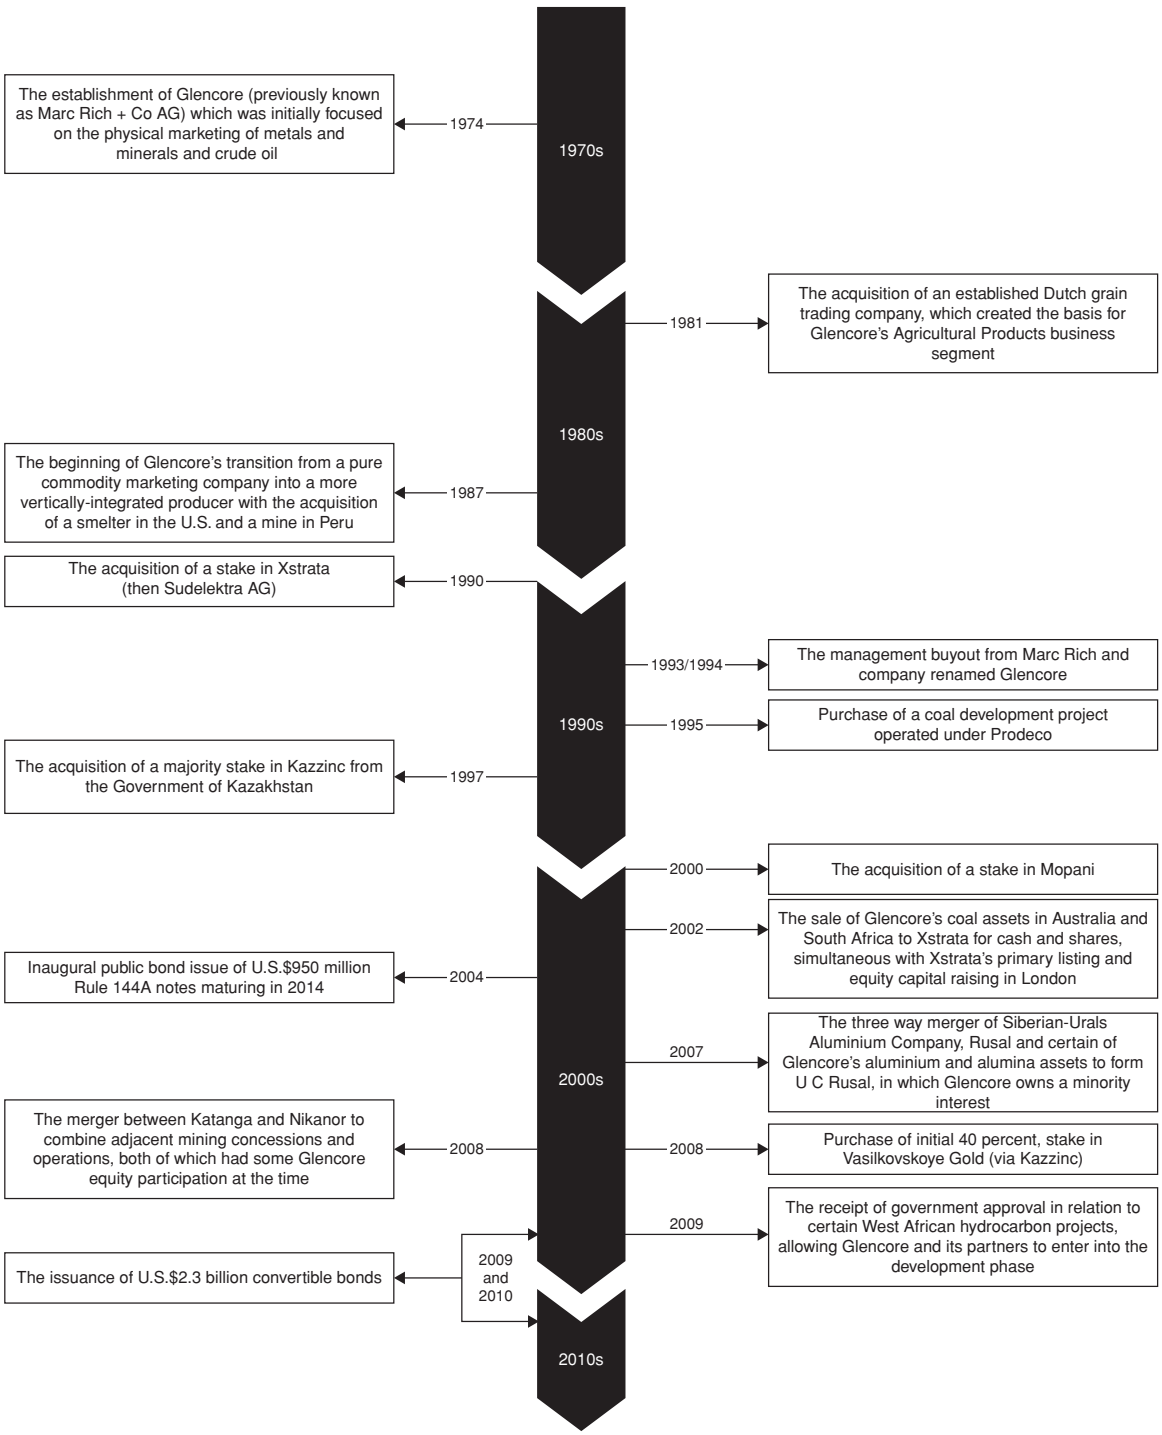
(5) Includes share of income from associates and dividends.

## History

Glencore was founded in 1974 (previously known as Marc Rich + Co AG) and initially focused on the physical marketing of ferrous and non-ferrous metals and minerals and crude oil, and shortly thereafter expanded into oil products. In 1981, Glencore acquired an established Dutch grain trading company, which created the basis for its Agricultural Products business segment, and later Glencore added coal to its Energy Products business segment.

Starting in 1987, Glencore developed from a purely commodity marketing company into a diversified natural resources group through key acquisitions in mining, smelting, refining and processing in its three principal business segments. Glencore made its first equity investment in an industrial asset in 1987, when it acquired 27 per cent. of the Mt. Holly aluminium smelter in the United States and acquired its first controlling interest in an industrial asset in 1988, when it acquired a 66.7 per cent. interest in a zinc/lead mine in Peru. In 1994, the founder of Glencore sold his stake by way of a management buyout and the company was renamed Glencore International.

The following diagram sets out some key milestones in Glencore's history and shows its development over the course of 37 years into a leading diversified natural resources group with worldwide marketing and industrial activities.



Glencore has always been principally or wholly owned by management and key employees. See "Description of ownership structure" in Section II: "Directors and Corporate Governance", for further details of the group's ownership structure.

**Competitive strengths**

Glencore believes that its success has been built upon a unique combination of competitive strengths that have enabled it to grow into one of the world's largest diversified and vertically-integrated producers, processors and marketers of natural resources. These competitive strengths include:

***Scale and leading market shares in commodity marketing globally***

Glencore believes that it has significant market share positions in the addressable markets for zinc metal (approximately 60 per cent.), zinc concentrate (approximately 50 per cent.), copper metal (approximately 50 per cent.), copper concentrate (approximately 30 per cent.), alumina (approximately 38 per cent.), aluminium (approximately 22 per cent.), cobalt (approximately 23 per cent.), seaborne export thermal coal (approximately 28 per cent.) and grains (approximately nine per cent.). In addition, Glencore's daily oil sales volumes represent approximately 3 per cent. of the world's daily oil consumption. Glencore's global network of offices, its mining, smelting, refining and processing operations and its logistics and storage capabilities enable it efficiently to source, transport, process and physically deliver commodities throughout the world.

Glencore believes that being a major global physical marketer with leading market positions in its key commodities enables it to:

- flexibly and optimally manage product flows and logistics;
- access a broad spectrum of commodities in different grades and specifications to meet customer requirements;
- be competitive with pricing in tender and other bid processes;
- develop strong relationships with suppliers and customers;
- maintain a reputation for reliability with suppliers and customers;
- maintain knowledge of local market supply and demand dynamics;
- gain significant insight into trade flows and marketing requirements which enables continuous price discovery and rapid identification and investigation of arbitrage opportunities;
- benefit from economies of scale in relation to all key transaction components, including commodity purchases and sales, storage, transportation and risk management activities;
- market commodities linked to several different international exchanges;
- operate as a commodity supplier of last resort in difficult market conditions;
- act as a quasi-clearance house in the global physical commodities market; and
- identify strategic investment opportunities.

***Core competence in commodity marketing, logistics, risk management and financing***

Glencore is an established marketer of commodities and has, over a period of years, built an outstanding market reputation as a reliable supplier of quality product on a timely basis. In addition, Glencore's long experience has allowed it to build up the extensive market knowledge and insight, as well as full logistics capabilities, required to generate value added margins, as well as seek arbitrage potential throughout the physical commodity supply chain. Glencore's provision of value added services includes shipping, logistics, transportation, storage, risk management and marketing to producers and consumers of commodities, as well as arranging working capital and capital expenditure financing for its suppliers and customers, generally secured by future physical commodity flows and/or other assets.

The broad range of value added services Glencore can offer fulfils the needs of customers that do not have the equivalent internal capability and cannot outsource to other providers who can offer these services as seamlessly or efficiently as Glencore can provide them. Furthermore, Glencore's ability to arrange for short- and long-term financing for its customers and suppliers provides Glencore with long-term demand for and supply of its physical commodities. Glencore believes that the combination of its outstanding market reputation, its market knowledge and these value added services enables it frequently to be a preferred purchaser or supplier of commodities and generally to strengthen its long-term relationships

with customers and suppliers. By way of illustration, six, nine and eight of the top ten suppliers of each of the Metals and Minerals, Energy Products and Agricultural Products business segments, respectively, have been clients for more than ten years. Similarly, nine, ten and eight of the top ten customers of each of the Metals and Minerals, Energy Products and Agricultural Products business segments, respectively, have been clients for more than ten years.

Access to a large shipping fleet and various freight intermediaries provides Glencore with very useful information on trade flows. Access to storage and other logistical assets increases Glencore's flexibility to blend products (such as oil distillates, metal concentrates and coal) and to manage the delivery of products in line with specific contractual quality requirements. Furthermore, Glencore believes that all of the above enable Glencore quickly and efficiently to seize time (contango) and other arbitrage opportunities, as they arise.

***Investments in high-quality low-cost extraction/processing operations with strong growth prospects***

Glencore owns many high-quality assets, for example Prodeco, which produces high grade thermal coal, and Katanga, which has significant high grade copper and cobalt reserves. Glencore continues to invest in its high-quality, large-scale, long-life assets to increase production capacity over the coming years. Production is expected to expand materially at several of Glencore's mining and processing assets, including Katanga's plans to ramp up copper production from 70k MT of annualised fourth quarter 2010 production capacity to 310k MT by 2015. Kazzinc is finalising the completion of major new metallurgy facilities (new copper smelter and lead smelter upgrade), while gold production is expected materially to increase, following the commissioning of the new Vasilkovskoje gold mine during 2010. At Mutanda a 20k MT SXEW plant was commissioned in the fourth quarter of 2010 and a 40k MT SXEW plant is due to be commissioned during the third quarter of 2011. Glencore is also, together with its partners, investing in the development of its West African Oil Assets, namely an initial two fields in Blocks I and O, with the aim of achieving production in the first quarter of 2012 and first quarter of 2014 at daily production levels of 50,000 bbls and 37,500 bbls, respectively. Finally, Prodeco is targeting 20.7 million MT of coal production per annum by 2015 compared to 10 million MT of production in 2010.

***Marketer with integrated production and processing capabilities***

Glencore is differentiated from commodity production competitors in that, in addition to being a producer, it is also a substantial marketer of commodities produced by third parties. Accordingly, Glencore sees its ownership of industrial assets not solely as sources of self-produced commodities, but also as tools for increasing flexibility, optionality and security of supply and for gaining valuable market knowledge.

Glencore's ownership of certain controlled industrial assets provides Glencore with access to long-term supply and throughput for its marketing activities. Of Glencore's total marketing purchases in the year ended 31 December 2010, approximately 30.6 per cent. related to commodities mined, produced or processed within Glencore's controlled industrial assets and associates (excluding oil department purchases). In addition to its investments in controlled industrial assets, Glencore also has stakes in non-controlled industrial assets, some of which are publicly traded companies, with which Glencore has secured long-term, arm's-length marketing and off-take agreements. This positioning throughout the supply chain allows Glencore to capture value at each stage and differentiates Glencore from less integrated producers of commodities, which tend to be more focused on the competitive sale of own products rather than enhanced global sourcing, distribution and marketing activities.

Glencore's ownership of industrial assets and knowledge of supply and end user commodity demand conditions gained from its global network of offices and relationships spanning more than 7,200 suppliers and customers (excluding agricultural farming origination) also provide Glencore with valuable insight into the broad production spectrum, flexibility to optimise between its own production and third party suppliers, access to strategic markets and operating and technical know-how. In addition, these factors provide Glencore with valuable access and insight into a range of industrial assets investment opportunities and, more broadly, assist Glencore to manage its industrial assets portfolio, including production volume and expansion decisions, as well as asset purchase and disposal decisions. This combination also promotes credibility with customers and other suppliers by positioning Glencore as both producer and marketer and enhancing Glencore's overall reputation as a secure and reliable long-term supplier.

***Diversified across multiple commodities, suppliers and customers***

Glencore markets a broad range of commodities from a diverse supply base to a diverse customer base. Glencore's three business segments are involved in the sourcing and marketing of more than 90 distinct commodities, including various grades, blends and products within such categories. Glencore has, for a long time, developed and built upon its expertise in these commodities, cultivating long-term relationships with a broad supplier and customer base across diverse industries and geographic regions. No customer represented more than 3.4 per cent. of Glencore's trade receivables as at 31 December 2010, or accounted for more than 3.0 per cent. of its consolidated revenues in the year ended 31 December 2010. For the year ended 31 December 2010, Glencore's top ten customers represented approximately 16 per cent. of Glencore's consolidated revenues, with the top ten customers for the Metals and Minerals, Energy Products and Agricultural Products business segments representing approximately 18 per cent., 26 per cent. and 23 per cent. of the revenue for each business segment, respectively. Other than oil, which represented approximately 56 per cent. of Glencore's consolidated revenues in the year ended 31 December 2010, no single commodity department accounted for more than approximately 13 per cent. of such revenues in that period. In addition, the geographic diversity of suppliers, including Glencore's own industrial assets, mitigates the risk of exposure to any one particular country or region and helps to ensure a steady supply of commodities for the marketing operations. Glencore's top ten suppliers represented approximately 22 per cent. of Glencore's consolidated cost of goods sold, with the top ten suppliers for the Metals and Minerals, Energy Products and the Agricultural Products business segments representing approximately 36 per cent., 32 per cent. and 21 per cent. of the costs of goods sold for each business segment, respectively. This industrial, geographical, commodity, supplier and customer diversity, in combination with Glencore's long-term supplier and customer relationships, has enabled Glencore to operate profitably even during periods in which a particular commodity, industry, customer or geographic region may be experiencing some weakness.

The geographic diversity of Glencore's operations is further demonstrated by the fact that it has skills and experience in operating and providing services across the globe, including in Eastern Europe, Central Africa and South America. Part of Glencore's geographic diversity is built on its willingness to invest in geographies and markets in which some of its competitors have historically avoided or been slower to enter and Glencore believes that its successful track record in this regard has enabled it to gain an effective first-mover advantage in a number of countries with high-quality strategic resources. Many of Glencore's important industrial assets are located in the CIS, Central Africa and South America, in which Glencore has been successfully operating for many years. By following its established strategy of teaming with experienced local partners, fostering good working relationships with local and national governments, investing in local infrastructure and communities and actively managing risk, Glencore believes that it has established a competitive advantage over many of its peers in this respect.

***Track record of value creation***

Glencore has been consistently profitable since the completion of the management buyout in 1994 and has a track-record of growth across industry cycles. Over the past ten years, Glencore has achieved an average annual return on equity of 38 per cent., ranging between 15 and 61 per cent.

Glencore has a favourable track record of creating value through both acquisitions and organic development of existing assets in its portfolio. For example, since Glencore's initial 2007 investment in Nikanor, Glencore has accumulated a 74.4 per cent. interest in Katanga resulting in an internal rate of return of approximately 50 per cent., based on Katanga's attributable market capitalisation as at 29 April 2011. Similarly, Kazzinc's recent acquisition and development of a large gold deposit is expected to produce favourable returns. Finally, Prodeco, which Glencore acquired in 1995, which together with the subsequent acquisition and consolidation of nearby coal mines, is now the third largest producer of export thermal coal in Colombia and should improve its market position going forward as it targets 20.7 million MT of coal capacity per annum by 2015 compared to 10 million MT of production in 2010. Glencore has also disposed of various assets over the years, which resulted in substantial gains, including the merger of part of its alumina/aluminium asset portfolio into UC Rusal in 2007 and the sale of certain coal assets to Xstrata at the time of its London IPO and the Cerrejón stake thereafter. In total, over the past ten years, Glencore has spent approximately U.S.$9.6 billion on its capital expenditure in controlled industrial assets.

***World-class management and Board***

Glencore's management is led by Ivan Glasenberg (Chief Executive Officer), supported by Steven Kalmin (Chief Financial Officer) and the rest of the management team. Between them, management has more than 200 years of experience working together at Glencore, where they have a proven track record of developing and growing the business. Ivan Glasenberg and the commodity heads have worked at Glencore for an average of 16 years and each was promoted to their current position from within the Company. Notwithstanding their long service with Glencore, they have a relatively low average age of 46 years.

In addition to the management team and the relevant experience of the Board, Glencore believes that there is considerable strength and depth below this level and it seeks to develop internal talent to ensure that this remains the case. Senior employees are incentivised to optimise the performance of their departments and have been empowered to make the decisions to achieve this.

Assuming the Over-Allotment Option is not exercised, the Kazzinc Consideration Shares have not been issued and the Offer Price is set at the mid-point of the Offer Price Range the number of Ordinary Shares in issue following the Global Offer will be 6,893,292,886 and, of these, 83.6 per cent. will be held by Existing Shareholders. Such Shareholders will be subject to lock-ups as described in Section VIII: "Details of the Global Offer". Glencore believes that this ownership structure aligns the interests of Shareholders, management and employees and will continue to foster a culture of excellence, teamwork and accountability. Existing Employee Shareholders have also entered into lockup arrangements as described in Section X: "Additional Information". Certain employees will in due course be incentivised through participation in employee share plans established by Glencore as described in Section X: "Additional Information".

***Resilient financial performance of marketing***

Since the management buyout in 1994, Glencore's marketing operations have been profitable in every year of operation and have a proven track record of resilience through industry cycles. Glencore believes that the financial performance of the marketing operations is less correlated to commodity prices than the industrial operations, as Glencore uses price hedging strategies, meaning that marketing profitability is primarily determined by volume activity and associated value added supply chain margins and other market conditions rather than the absolute flat price itself. Owing to the marketing activities being less volatile than the industrial activities, their relative contribution to group results tends to increase during times of falling commodity prices, such as occurred during the second half of 2008 and first half of 2009.

This lower correlation with commodity prices makes Glencore's earnings less volatile than those of producers of metals, mining and energy products that do not also have marketing and logistics operations. For example, in the period of the second half of 2008, where the Thomson Reuters Equal Weight Continuous Commodity Index fell 20 per cent. (as compared to the first half of 2008), Glencore's marketing operations reported positive net income before exceptional items for the same period. Glencore believes that the resilient financial performance of marketing will contribute to its ability to adhere to its stated dividend policy as described in this Section I.

Furthermore, because the marketing operations' funding requirements are highly linked to commodity prices, during periods of falling commodity prices (as experienced in the fourth quarter of 2008 in particular), the marketing operations require less working capital. Accordingly, the marketing activities tend to generate significant amounts of cash (via release of working capital) during periods of low commodity prices (such as those which occurred at the end of 2008), at a time when industrial operations tend to be less profitable and cash generative.

***Barriers to entry***

The advantages provided by scale, global reach and a solid track record are also believed to present significant barriers to sustainable competitive entry into the global physical commodity marketing industry, which requires, amongst other attributes, substantial access to credit markets and a global network which supports the assembly of logistics and risk management capabilities and strong producer relationships.

**Strategy**

Glencore's strategy is to maintain and build upon its position as one of the world's largest diversified natural resources marketing companies. Glencore's key strategic objectives include:

***Continue to leverage geographic scope and diversification of operations***

Glencore already has a large geographic footprint, with more than 50 offices in more than 40 countries around the world and, in many cases, industrial assets in key commodity producing and consuming locations. Similarly, Glencore's operations are already extremely diverse, covering a wide range of commodities, industries, suppliers and customers. Glencore's geographic scope and diversification of operations have allowed it to develop a track record of reliable supply performance with other large, global companies such as BHP Billiton and Shell. Glencore intends to build upon its position as one of the world's largest physical commodity suppliers and track record of extending product and geographical range by continuing to target market share increases in the geographies in which it currently operates and further expansion in emerging markets. Glencore believes that this strategy will allow it flexibly to align the geographic scope and diversity of its operations with the evolving global flows of natural resources. Glencore believes that the global scope of its operations will enable it to continue to supply a diversified range of physical commodities to its existing customer base and provide opportunities to continue developing new producer and consumer relationships and selectively target new business opportunities worldwide. Furthermore, Glencore believes that its geographic scope in countries and markets in which some of its competitors have historically avoided, or been slower to enter, has and will continue to provide an effective first-mover advantage in a number of geographies with high-quality strategic resources such as the CIS, parts of South America, the African Copperbelt and Australia.

***Capitalise on strategic investments in industrial assets***

Glencore's strategic investments in industrial assets are an important component of its physical sourcing strategy for its marketing activities, and Glencore believes these investments provide a competitive advantage over its marketing peers which are less vertically integrated, both upstream and downstream, and which do not have the market presence to build up the strong supply relationships that Glencore enjoys. Glencore's investments in industrial assets also provide it with other advantages such as information, technical expertise and local presence. While Glencore intends to remain focused on physical commodity sourcing, distribution and marketing, it also intends to continue to pursue selective strategic acquisitions and alliances which support and strengthen its core physical marketing and value added activities where such acquisitions have their own industrial and financial justification as and when such opportunities arise. Glencore believes that investment opportunities will continue to be created by, among other things, (i) the privatisation of natural resources producers in primarily emerging markets, (ii) the rebalancing of asset portfolios by other players in the natural resources industry and (iii) further industry consolidation as smaller producers sell out and/or seek capital to fund growth. Glencore will continue to apply its investment criteria to these opportunities, pursuing investments in industrial assets that are of strategic importance to its core business and that are projected to achieve its targeted return-on-capital objectives on a stand-alone basis. Glencore will continue to identify investment opportunities in which value can be created through the application of its market knowledge and operational and technical know-how. Similarly, Glencore evaluates disposals of certain investments, from time to time, particularly when they are no longer deemed to support its core business and/or when attractive selling opportunities arise.

***Use additional capital and liquidity to grow the business***

Glencore believes the Global Offer will provide it with the financial resources needed to move it to the next stage of its development and achieve further sustainable growth. More specifically, the Global Offer will provide Glencore with an upfront capital injection and, going forward, access to the equity capital markets. The amounts attributed out of net income for the year to profit participation shareholders are presented within "Invested Capital", comprising equity share capital, reserves, accumulated amounts attributed to profit participation shareholders and non-controlling interests. All amounts attributed to profit participation shareholders are to convert to ordinary shares in the Company as part of the Global Offer. Such conversion of existing partnership interests into traditional permanent equity capital on Glencore's balance sheet is also likely lead to enhanced and/or more robust credit ratings. Glencore

intends to use this additional capital and access to liquidity, in combination with its existing brand, scale, product portfolio and logistics capabilities, to grow the business by, for example:

- investing in and expanding its existing industrial and logistics capacity;
- increasing the volumes marketed, for example, by purchasing additional commodities, in each case allowing Glencore to take advantage of additional opportunities which may present themselves in the market; and
- acquiring new industrial and logistics businesses as and when appropriate opportunities arise.

***Focus on cost management and further enhancing logistical capabilities***

Glencore intends to continue its focus on cost control and operational efficiencies at the industrial assets it controls and maintain its focus on the sourcing of competitively priced physical commodities from reliable third party suppliers. Glencore intends to supplement this focus on low-cost production and competitive sourcing with the continued development of its transport, shipping, storage and other logistical capabilities and, where appropriate, its ability to source these services from third parties at attractive levels. Glencore believes that the continued focus on these factors will enable it to continue to benefit from and exploit arbitrage opportunities occurring in the physical commodities markets in which it operates.

***Maintain conservative financial profile and investment grade ratings***

Glencore's conservative financial profile and investment grade credit ratings (currently BBB− from Standard & Poor's and Baa2 from Moody's) have enabled it consistently to access the bank and international debt capital markets on competitive terms to obtain required funding and maintain healthy levels of liquidity. Glencore intends to continue to manage its financial position around maintaining its investment grade credit ratings.

***Disciplined risk management***

Glencore already has a highly disciplined approach to risk management supported by its flat organisational structure and the privately owned nature of the business. Glencore intends to continue its focus in this key area by maintaining and expanding its centralised risk management resources and information systems and continuing to adopt and follow policies which are intended to mitigate and manage commodity price, credit and political risks. Examples of such policies which are already in place include:

- Minimise price risk: Glencore routinely hedges its exposure to price movements in its marketing inventories and forward purchase and sale commitments through futures and swap transactions or physically sells forward at pre-determined prices—in 2010, around 98 per cent. of Glencore's marketing inventory was covered by a sale at a pre-determined price or a hedge, which virtually eliminated Glencore's price risk on this inventory;
- Minimise credit risk: Glencore seeks to reduce the risk of non-payment by its customers by setting limits on open accounts extended to certain more creditworthy customers and by imposing credit support requirements and/or purchasing credit insurance products in respect of remaining customers; and
- Minimise political risk: Glencore seeks to remain diversified and where possible to obtain political risk insurance from creditworthy financial institutions in situations where Glencore believes that obtaining such insurance is financially prudent.

***Place highest priority on employees, the environment and local communities***

Glencore places the highest priority on its employees, the environment and the local communities where it operates. Regarding employees, Glencore takes a broad approach to employee welfare and will seek to maintain and improve its strong health and safety record. Regarding the environment, Glencore will demand high environmental performance standards from its controlled operations and, while executing marketing and logistics activities, to work with its partners and suppliers to ensure similar standards are demanded within the supply chain, as well as demanded of its non-controlled operations. Regarding local communities, Glencore will consult with and invest in the local communities where it operates.

**Marketing activities—group level**

***Functions of the marketing activities***

Glencore's marketing activities source a diversified range of physical commodities from third party suppliers and from industrial assets in which Glencore has full or part ownership interests. These commodities are sold, often with value added services such as freight, insurance, financing and/or storage, to a broad range of consumers and industrial commodity end users, with many of whom Glencore enjoys long-term commercial relationships. As a marketer, Glencore is able to differentiate itself from other production entities as, in addition to focusing on minimising costs and maximising operational efficiencies, Glencore focuses on maximising returns from the entire supply chain, taking into account its extensive and global third party supply base, its logistics, risk management and working capital financing capabilities, extensive market insight, business optionality, extensive customer base, strong market position and penetration in most commodities and economies of scale. In contrast, this is not the business model of Glencore's mainly industrial competitors who are generally not set up to exploit the full range of value added margin and arbitrage opportunities which exist throughout the commodity supply chain.

***Types of arbitrage strategies***

Many of the physical commodity markets in which Glencore operates are fragmented or periodically volatile. As a result, discrepancies generally arise in respect of the prices at which the commodities can be bought or sold in different geographic locations or time periods, taking into account the numerous relevant pricing factors, including freight and product quality. These pricing discrepancies can present Glencore with arbitrage opportunities whereby Glencore is able to generate profit by sourcing, transporting, blending, storing or otherwise processing the relevant commodities. Whilst the strategies used by Glencore's business segments to generate such margin vary from commodity to commodity, the main arbitrage strategies can be generally described as being:

- geographic: where Glencore leverages its relationships and production, processing and logistical capabilities in order to source physical commodities from one location and deliver them to another location where such commodities can command a higher price (net of transport and/or other transaction costs);
- product-related: where it is possible to exploit the blending or multi-use characteristics of the particular commodities being marketed, such as the various crude oil products, coal or concentrates, in order to supply products which attract higher prices than their base constituents, or exploit existing and/or expected price differentials; and
- time-related: where it is possible to exploit a difference between the price of a commodity to be delivered at a future date and the price of a commodity to be delivered immediately, where the available storage, financing and other related costs until the future date are less than the forward pricing difference.

Glencore uses market information made available by its marketing and industrial teams across its many locations to identify arbitrage opportunities. Glencore's marketing and investment activities and relationships with producers and consumers of raw materials are supported by a global network of more than 50 offices providing sourcing and distribution capabilities located in more than 40 countries throughout Europe; North, Central and South America, the CIS, Asia, Australia, Africa and the Middle East. This network provides Glencore with visibility over shifting supply and demand dynamics in respect of significant volumes of physical commodities across the globe. The detailed information from Glencore's widespread operations and close relationships with producers, consumers and logistics providers is available to Glencore's marketing operations and often enables them to identify opportunities, taking into account Glencore's extensive logistics capabilities, to source and supply physical commodities at attractive margins.

***Types of marketing activities***

Glencore's marketing activities can be categorised in order of focus as follows:

- Base supply chain activities: Glencore's primary marketing activities are those performed in the ordinary course of its global sourcing and distribution of commodities, including the provision of multiple value added services across the full supply chain and seeking arbitrage opportunities (discussed above) as they frequently arise.

- Event-driven activities: Glencore also seeks to optimise around an event or an anticipated event such as unexpectedly good or bad weather conditions, transport bottlenecks or failures (for example, a train derailment) or a labour or production issue as its global network alerts it to the possibility of such an event occurring or implications where such event has occurred. These types of events often cause global and/or regional "market tightness" (that is, a situation where available supply is insufficient to meet demand in a particular market) and Glencore's marketing operations will often be able to derive enhanced returns from such market conditions. These situations are, of course, not predictable, but generally occur reasonably frequently during any particular year.
- Price risk activities: Glencore also engages in some position taking within its marketing activities in which it applies its deep market intelligence and analysis to seek to profit from movements in the price and/or spread of a particular commodity, for example, by correctly anticipating a change in the price of a commodity and sourcing that commodity at a lower price than will be available later or selling that commodity at a higher price than will be available later. Glencore engages in price risk activities only in accordance with its risk policies and limits and price risk activities account for the substantial minority of Glencore's overall marketing operations.

***Types of contractual arrangements***

Glencore's marketing activities can be further segmented according to how much risk Glencore takes on a particular transaction:

- Purchase/off-take agreements: Under these arrangements, representing the substantial majority of transactions (approximately 99.9 per cent. of the Glencore Group's total revenues in 2008, 2009 and 2010), Glencore markets commodities which it purchases as principal (that is, commodities of which Glencore becomes the legal owner) and will receive nothing if it is unable to sell the commodity. Glencore ordinarily hedges or sells forward these commodities, meaning that it does not assume all the price or selling risk.
- Agency and advisory arrangements: Under these arrangements (which represent approximately 0.1 per cent. of the Glencore Group's total revenues in 2008, 2009 and 2010), Glencore markets commodities owned by a third party and is generally paid a fixed fee per unit of goods sold and/or a percentage of the sales revenue. Glencore therefore does not take principal purchase risk and derives fee-based income in respect of marketing services provided.

Glencore mitigates credit and performance risk in relation to suppliers and customers through the extensive application of measures such as credit insurance, letters of credit, security arrangements and/or bank and corporate guarantees. Glencore also leverages its network of global offices, which have direct access to and keep close relationships with its customers and suppliers.

There was no material non-performance by the Glencore Group of its contractual obligations in 2008, 2009 or 2010.

***Logistics***

Glencore's logistics operations are a key part of its marketing operations as they enable Glencore to fulfil its marketing obligations and to maximise arbitrage opportunities created by demand and supply imbalances. Physical sourcing and marketing of commodities requires highly professional handling and shipment of such goods from the supplier to the customer, including storage activities, as required. Typically, the staff handling the physical movement of goods (the "traffic team") account for a significant proportion of the headcount of a business segment. Glencore's dedicated chartering teams actively trade freight to gain market knowledge and volume benefits. The freight element of transactions is furthermore used to maintain maximum physical optionality so that full value can be extracted from the underlying commodity positions of each department, thereby complementing Glencore's overall ability to seize geographic and time spread arbitrage opportunities as they arise.

***Competitors***

Glencore believes that physical commodity marketing is a volume-driven business requiring highly professional risk management, substantial financial resources, market knowledge and product and logistical expertise. Glencore believes that it is the most diversified and globally active physical commodity sourcing and marketing company. Glencore believes that the majority of its competitors by segment are niche players that tend to focus on a specific commodity group or geographic area, or concentrate more

heavily on commodity-related industrial activities such as mining, drilling, smelting, processing and refining. In view of Glencore's diversification in different commodity groups and global geographical presence and scale, Glencore does not believe that there is a precisely comparable company or peer group that can be defined as competing directly with Glencore. However, three types of physical commodity marketing companies compete with Glencore indirectly or directly in certain markets. These include:

- large participants active in specific commodity portfolios, such as Cargill in agricultural products and Vitol Group in oil;
- captive marketing vehicles of major oil and metals producers and processors, such as Total, BP and BHP Billiton (though these companies are less focused on third party marketing than Glencore); and
- smaller marketing companies whose operations are more limited to particular commodities and/or to geographic areas, such as Noble Group.

**Industrial activities—group level**

Glencore's ownership of controlled and non-controlled industrial assets is seen as both a source of potential and desirable stand-alone financial returns and overall business diversification, complemented by their very useful source of physical commodities into Glencore's marketing arm and access to further market insight and technical know-how. Glencore believes that its corresponding reduced reliance on third parties helps to ensure that suppliers and customers alike see Glencore as a very reliable, and therefore desirable, counterparty, given its integrated business model.

Glencore capitalises on investment opportunities created by, among other things, (i) the privatisation of natural resources producers primarily in emerging markets, (ii) the rebalancing of asset portfolios by other players in the natural resources industry and (iii) further industry consolidation as smaller producers sell out and/or seek capital to fund growth. Any decision to acquire or dispose of an industrial asset is based on the stand-alone potential of the asset and its potential contribution to Glencore's marketing activities and requires group level approval. Once acquired, an asset is held within one of the business segments (the only major exception to this is Xstrata, which is held between the Metals and Minerals and Energy Products business segments as it supplies commodities to both segments). The business segments manage the controlled and non-controlled industrial assets via hands-on "asset controllers" to interface between the asset and Glencore in respect of day-to-day operating, financial and commercial matters. Glencore's approach to the management of its industrial assets differs from some of its key competitors in that Glencore encourages its industrial assets to focus primarily on operating performance, which those businesses can largely control and influence, leaving Glencore to handle marketing and distribution activities as part of its integrated global system.

**Principal business segments**

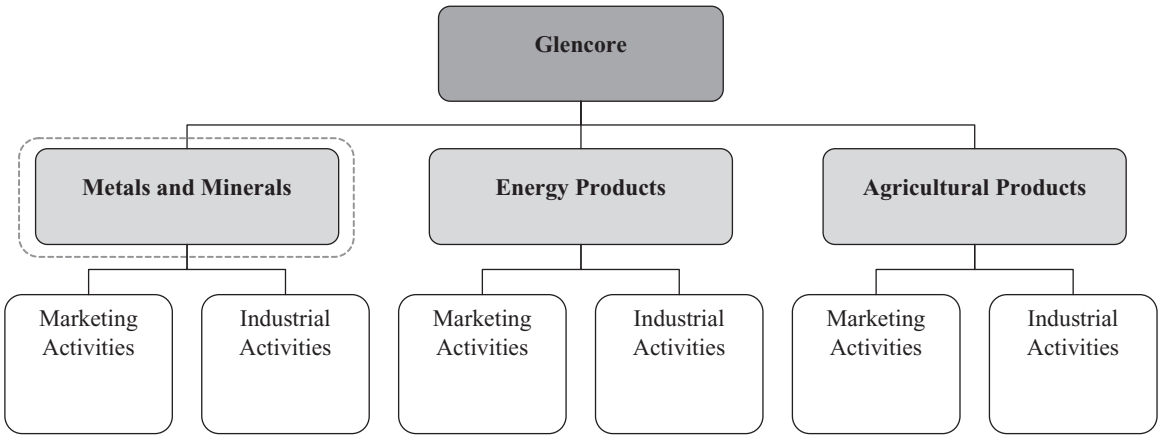
Glencore's three business segments focus on the following commodity departments.

- The Metals and Minerals business segment focuses on the following commodity departments: zinc/copper/lead, alumina/aluminium and ferroalloys/nickel/cobalt/iron ore. The business segment also markets some gold, silver, tin and other by-products such as sulphuric acid. The activities of Glencore's Metals and Minerals business segment are supported by ownership interests in controlled and non-controlled industrial assets such as mining, smelting, refining and warehousing operations.
- The Energy Products business segment focuses on the following commodity departments: oil/oil products and coal/coke. The activities of Glencore's Energy Products business segment are supported by ownership interests in controlled and non-controlled coal mining and oil production operations as well as investments in strategic handling, storage and freight equipment and facilities.
- The Agricultural Products business segment focuses on the following commodities: grains (including wheat, maize and barley, oils/oilseeds, cotton and sugar). The activities of Glencore's Agricultural Products business segment are supported by investments in controlled and non-controlled storage, handling, processing and port facilities in strategic locations.

Each of Glencore's business segments undertakes both marketing and industrial asset investment activities and is responsible for managing the marketing, sourcing, hedging, logistics and industrial investment activities relating to the relevant commodities in each business segment.

## Metals and Minerals

### Introduction (Metals and Minerals business segment)



The Metals and Minerals business segment focuses on the following commodity departments: zinc/copper/lead, alumina/aluminium and ferroalloys/nickel/cobalt/iron ore. The business segment also markets some gold, silver, tin and other by-products such as sulphuric acid. The activities of Glencore's Metals and Minerals business segment are supported by ownership interests in controlled and non-controlled industrial assets such as mining, smelting, refining and warehousing operations. The marketing of metals and minerals commodities is co-ordinated primarily through Glencore's Baar office.

Selected key financial information in relation to the Metals and Minerals business segment's marketing and industrial activities for the years ended 31 December 2008, 31 December 2009 and 31 December 2010 is set out below. This information has been extracted without material adjustment from Section VI: "Historical Financial Information" except where marked as unaudited. Unaudited information has been extracted without material adjustment from Glencore's accounting records.

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| **Marketing Activities** | | | |
| Revenue (unaudited)[1] | 34,565 | 30,221 | 37,889 |
| Adjusted EBITDA pre-exceptional items[2] | 1,117 | 553 | 1,401 |
| Adjusted EBIT pre-exceptional items[2] | 1,117 | 553 | 1,401 |
| **Industrial Activities** | | | |
| Revenue (unaudited)[1] | 6,120 | 5,170 | 7,322 |
| Adjusted EBITDA pre-exceptional items[2][3][4] | 1,099 | 1,072 | 1,820 |
| Adjusted EBIT pre-exceptional items[2][3][4] | 658 | 551 | 1,112 |
| Share of income from associates and dividends (excl. Xstrata)[4] | 195 | (53) | 48 |
| Capex | 1,062 | 607 | 1,001 |
| **Total Metals & Minerals** | | | |
| Revenue | 40,685 | 35,391 | 45,211 |
| Adjusted EBITDA pre-exceptional items[2][5] | 2,411 | 1,572 | 3,269 |
| Adjusted EBIT pre-exceptional items[2][5] | 1,970 | 1,051 | 2,561 |

Notes:

(1) Revenue is not split between Marketing and Industrial activities in the audited Historical Financial Information set out in Section VI of this document and is therefore marked as unaudited. Total segment and total Group revenue is audited.

(2) Includes corporate selling, general and administrative expenses, but excluding variable pool bonus accrual, which is recorded at group/corporate level.

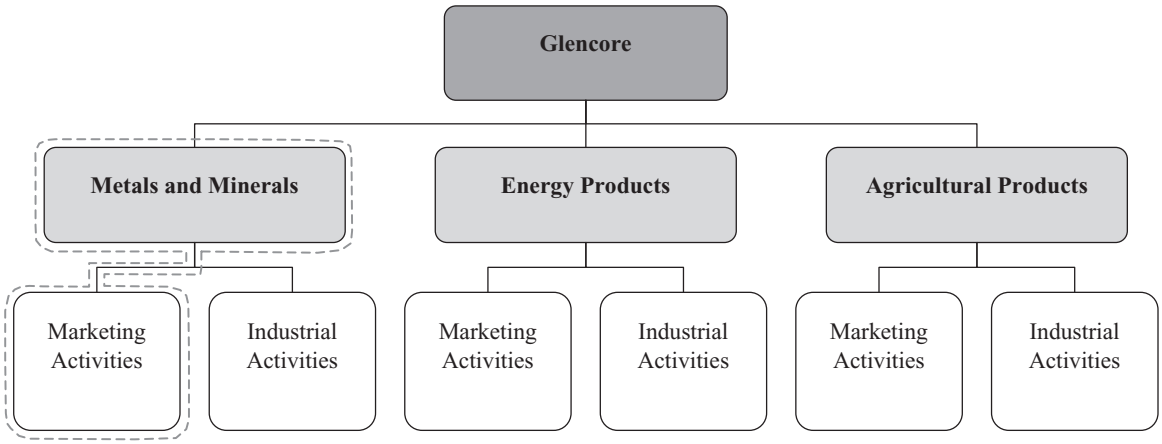
(3) Excludes share of income from associates and dividends.

(4) Adjusted EBITDA pre-exceptional items plus Share of income from associates and dividends and Adjusted EBIT pre-exceptional items plus Share of income from associates and dividends are audited.

(5) Includes share of income from associates and dividends.

The Metals and Minerals business segment currently has some 522 employees globally (excluding individuals employed within Glencore's industrial activities), with approximately 230 of these employees based in Baar, Switzerland. This business segment also employs some 43,000 individuals globally in its industrial activities.

**Marketing activities (Metals and Minerals business segment)**



The table below sets out the approximate marketing volumes sold to third parties of each main commodity handled by the Metals and Minerals business segment in the years ended 31 December 2008, 31 December 2009 and 31 December 2010:

**Marketing volumes sold to third parties**

| | | 2008 | 2009 | 2010 |
|---|---|---|---|---|
| Zinc metal | million MT | 1.0 | 1.3 | 1.7 |
| Zinc concentrates | million MT | 2.6 | 2.5 | 2.4 |
| Copper metal | million MT | 1.4 | 1.4 | 1.4 |
| Copper concentrates | million MT | 2.2 | 2.0 | 1.8 |
| Lead metal | million MT | 0.2 | 0.4 | 0.3 |
| Lead concentrates | million MT | 0.5 | 0.5 | 0.6 |
| Gold | '000 ounces | 447 | 578 | 589 |
| Silver | '000 ounces | 13,604 | 11,422 | 8,527 |
| Alumina | million MT | 6.5 | 5.8 | 6.7 |
| Aluminium | million MT | 2.4 | 3.2 | 3.9 |
| Ferroalloys (incl. agency) | million MT | 1.8 | 2.2 | 2.6 |
| Nickel | '000 MT | 156.9 | 175.3 | 193.9 |
| Cobalt | '000 MT | 25.5 | 23.7 | 17.9 |
| Iron ore | million MT | 0.9 | 4.8 | 9.3 |

Glencore acquired the LME accredited Pacorini metals warehousing business in the third quarter of 2010, which operates warehousing facilities in Europe, the U.S., the Middle East and Asia, including China. The acquisition of the metal warehousing business of the Pacorini Group reinforces and broadens Glencore's worldwide distribution capabilities, allowing further direct access to storage capacity across a range of important geographic locations which enhances and supports its global marketing operations, thereby providing increased optionality.

Examples of marketing strategies for metals and minerals business segment include:

- Due to obsolescence risk, alumina is typically moved on a first-in, first-out basis and needs to be stored in optimum conditions in order to maintain levels of quality. However, Glencore has a greater capacity than many of its competitors for storing and/or transporting alumina, which allows it to take advantage of geographic and time arbitrage opportunities and logistics differentials. In particular, Glencore believes that its willingness and flexibility to store larger amounts of alumina in China than its competitors represents a competitive advantage in this growing market.

- Glencore also seeks to exploit geographic and time arbitrage opportunities and logistics differentials in relation to alumina through the use of physical swap arrangements and through optimising delivery allocations.
- Glencore uses its established presence in the Chinese market to exploit arbitrage opportunities between the LME and the SHFE in the aluminium market.
- Glencore uses its global presence and ability to trade on several exchanges and geographical markets to exploit arbitrage opportunities between the various exchanges on which each of zinc, copper, lead, silver and gold are traded. This was particularly important in 2009 and 2010 when Asian markets led the recovery in commodity prices.
- Glencore uses its ability to warehouse zinc, copper and lead at either its own production facilities, free of charge, or at warehouses, owned (Pacorini Group) or subject to long-term leases, to benefit from carry trades, that is, to sell metal at higher future prices in a contango market and to exploit such time arbitrage opportunities as they present themselves.
- Glencore uses its access to a wide range of qualities of concentrates and its blending facilities to exploit product arbitrage opportunities, that is, to convert lower priced concentrates through the blending process into higher value concentrates.
- Glencore uses its knowledge of supply and demand dynamics, obtained through its physical marketing activities, to take advantage of expected movements in underlying commodity prices and supply and demand curves.

***Zinc/copper/lead commodity department (marketing activities, Metals and Minerals business segment)***

*Overview*

The zinc/copper/lead commodity department is run as an integrated business managing the production and global marketing of refined metals and concentrates. In addition to zinc, copper and lead, the commodity department also markets tin, silver and gold, which are typically mined in conjunction with zinc, copper and lead ores, as well as sulphuric acid, a by-product of the smelting process. The commodity department has a global presence, sources commodities from all key producing regions and has relationships with consumers in the key consuming countries.

*Market*

Glencore believes that it has a substantial share of the relevant addressable markets, amounting to approximately 60 per cent. for zinc metal, approximately 50 per cent. for copper metal and approximately 45 per cent. for lead metal. Glencore also believes that it has leading positions in the addressable concentrates markets of approximately 50 per cent. for zinc concentrates, approximately 30 per cent. for copper concentrates and approximately 45 per cent. for lead concentrates.

*Suppliers*

The zinc, copper and lead operations benefit from a geographically diverse portfolio of industrial assets, located across five continents, in each of the key producing regions for these commodities. In the year ended 31 December 2010, the zinc, copper and lead operations sourced approximately 22 per cent. of material from their stakes in controlled industrial assets. Approximately 65 per cent. of volumes marketed (in value terms) in the year ended 31 December 2010 were sourced from the top ten suppliers, and nine of the top ten suppliers in the year ended 31 December 2010 were also top ten suppliers in the year ended 31 December 2009, reflecting long-term relationships, a stable supplier base and the importance of a secure long-term supply chain to Glencore. Nine of these top ten suppliers operate under predominantly long-term contracts. One top ten supplier operates under short-term contracts; however, it is effectively a long-term agreement due to the length of relationship and significant volumes supplied. Glencore believes that approximately 80 per cent. of volumes marketed, including those which are sourced through industrial assets, are secured through long-term agreements ranging from one year contracts to 15-year agreements and "evergreen" contracts (which automatically renew each year unless notice of termination is given). Long-term supply agreements with third parties, combined with supply from industrial assets, enhance Glencore's reputation as a reliable supplier, which is important for customers who are reliant on both timeliness and quality of supply for the continuation of their operations.

Glencore's main own sources of supply for zinc metal are Kazzinc, Portovesme and AR Zinc and, together, Glencore's controlled industrial assets accounted for some 28 per cent. of the zinc metal marketed during the year ended 31 December 2010. Glencore's main own sources of supply for the zinc concentrates are Los Quenuales and Sinchi Wayra and, together, Glencore's controlled industrial assets accounted for some 17 per cent. of the zinc concentrates marketed during the year ended 31 December 2010. The balance of metal and concentrate is sourced from third parties and associate industrial assets.

Glencore's main own sources of supply for copper metal are Mopani, Katanga and Pasar, and together Glencore's controlled industrial assets accounted for some 20 per cent. of the copper metal marketed during the year ended 31 December 2010. Glencore's main own sources of supply for the copper concentrates are Kazzinc and Cobar and, together, Glencore's controlled industrial assets accounted for some 25 per cent. of the copper concentrates marketed during the year ended 31 December 2010. The balance of metal and concentrate is sourced from third parties and associate industrial assets.

Glencore's main own sources of supply for lead metal are Kazzinc, Portovesme and AR Zinc and, together, Glencore's controlled industrial assets accounted for some 36 per cent. of the lead metal marketed during the year ended 31 December 2010. Glencore's main own sources of supply for the lead concentrates are Los Quenuales and Sinchi Wayra and, together, Glencore's controlled industrial assets accounted for some 9 per cent. of the lead concentrates marketed during the year ended 31 December 2010. The balance of metal and concentrate is sourced from third parties and associate industrial assets.

The zinc, copper and lead operations' large number of industrial assets provides Glencore with access to an integrated production and marketing system.

*Customers*

Across the zinc, copper and lead operations, there is a diversified customer base, including galvanisers, alloy producers, steel and brass mills, rod and wire producers and other fabricators, with the top ten customers by value representing around 25 per cent. of sales in the year ended 31 December 2010. Seven of the top ten customers in the year ended 31 December 2010 were also in the top ten customers in the year ended 31 December 2009. The concentrates market has fewer customers (smelters) than the refined metals market. The diversification is larger for customers than for suppliers, reflecting a greater number of end users for metals and concentrates relative to the number of mines, smelters and refineries which produce concentrates and metals, respectively. Glencore believes that the zinc, copper and lead operations generally enter into long-term agreements with customers in order to secure sales of metals and concentrates, with approximately 60 per cent. of sales volumes being sold under long-term agreements in the year ended 31 December 2010, though the trend is towards a larger proportion of spot contracts as these are more prevalent in India and China, which are growth markets.

In respect of the individual commodities:

- Glencore sells its zinc products to various industrial customers, with zinc used primarily in the construction and automotive industries. Glencore's top ten customers accounted for 36 per cent. of the zinc metal and 63 per cent. of the zinc concentrates sold during the year ended 31 December 2010;
- Glencore sells its copper products to various industrial customers. Glencore's top ten customers accounted for 42 per cent. of the copper metal and 75 per cent. of the copper concentrates sold during the year ended 31 December 2010; and
- Glencore sells its lead products predominantly to producers of lead acid batteries for the automotive industry and industrial capacitors. Glencore's top ten customers accounted for 53 per cent. of the lead metal and 77 per cent. of the lead concentrates sold during the year ended 31 December 2010.

*Features of the market*

The physical metal trades are based on an exchange price plus/minus a premium/discount. A highly liquid paper futures market exists for zinc, copper, lead and tin metals, which are traded on the LME (zinc, copper, lead and tin), the SHFE (copper and zinc) and the COMEX (copper). Silver and gold are traded on the LBMA and the COMEX. These exchanges allow Glencore's underlying commodity price exposures on physical transactions to be hedged, whether the price is based on an exchange price or a fixed price. If desired, and subject to group risk limits and policies, they also allow Glencore to gain exposure to price risk and spread positions through the use of long and short paper transactions, and to take advantage of arbitrage opportunities.

Concentrates are non-fungible products and, consequently, are not directly tradable on an exchange. Glencore hedges physical concentrate positions using future contracts for the estimated payable metal contained in the concentrate.

*Logistics*

The marketing team for zinc, copper and lead are supported by a traffic team of 48 people who are responsible for executing transactions following the negotiation of the key contractual terms and for managing metals along the supply chain through inventory, financing and transportation from source to end customers. The department also benefits from storage and blending facilities in Peru and has access to other warehousing facilities, including those at Glencore's industrial assets.

Although important, the freight component of price is not as critical for metals as for bulk cargoes and crude oil. All freight relating to the commodities marketed is chartered through third party freight brokers on competitive terms, taking into account Glencore's scale of activities, both on the spot market and through the longer-term contracts of affreightment.

*Competitors*

Glencore has few major marketing competitors for zinc, copper and lead, with Noble Group and Trafigura Group trading smaller zinc, copper and lead quantities as part of their core businesses, neither of which has significant production assets.

***Alumina/aluminium commodity department (marketing activities, Metals and Minerals business segment)***

*Overview*

The alumina/aluminium commodity department is involved in the marketing and processing of bauxite, alumina and primary aluminium. Through the sourcing and physical exchange of alumina and aluminium of different origins, the alumina/aluminium commodity department has been able to create a global position in its market.

*Market*

Glencore is a leading supplier in the global third party alumina market, with an estimated share of the addressable market of approximately 38 per cent., supplying a physical volume (excluding physical swaps) of 6.7 million MT and 5.8 million MT during the years ended 31 December 2010 and 31 December 2009, respectively.

Glencore is a leading physical supplier of third party aluminium, with an estimated share of the addressable market of approximately 22 per cent., marketing physical volumes of 3.9 million MT and 3.2 million MT during the years ended 31 December 2010 and 31 December 2009, respectively.

*Suppliers*

The alumina market is a wholesale market with only a limited number of suppliers and customers operating in the market. Glencore has a guaranteed supply source as it is involved in the production of alumina through its industrial assets. In addition, Glencore purchases alumina from many of the world's leading alumina producers, mostly under long-term contracts. A significant portion of Glencore's alumina supply is sourced from a few key suppliers with the top ten alumina suppliers accounting for approximately 78 per cent. of supply in the year ended 31 December 2010. In the year ended 31 December 2010, some 23 per cent. of alumina purchased originated from Glencore's stakes in industrial assets, namely Sherwin Alumina and UC Rusal. Glencore believes that it currently operates with a mixture of approximately 65 per cent. long-term and 35 per cent. short-term alumina contracts. Eight of the top ten suppliers in the year ended 31 December 2010 were under predominantly long-term contracts. Prices under alumina supply contracts are typically linked to the LME price of aluminium for long-term contracts and are fixed for short-term contracts.

Glencore's supply sources for aluminium are fairly concentrated as well, with its top ten suppliers accounting for some 74 per cent. of supply in the year ended 31 December 2010. Five of the top ten suppliers in the year ended 31 December 2010 were also top ten suppliers in the year ended 31 December 2009, reflecting a stable supplier base. Seven of the top ten suppliers in the year ended 31 December 2010 were under long-term contracts. Glencore's supply sources also include its industrial assets. In the year ended 31 December 2010, approximately 50 per cent. of aluminium purchased originated from Glencore's

partially owned industrial assets, UC Rusal and Century Aluminum. In the year ended 31 December 2010, Glencore believes that around 44 per cent. of Glencore's supplier contracts were short-term. However, these contracts are typically renegotiated so that the contract is replaced with a new one upon expiry. Glencore is focused on obtaining a larger proportion of its aluminium under long-term contracts.

*Customers*

Glencore's alumina customer base is diverse and geographically dispersed and includes Century Aluminum as well as many of the world's other major alumina consumers. The top ten alumina customers accounted for some 61 per cent. of the sales in the year ended 31 December 2010. Seven of the top ten customers in the year ended 31 December 2010 were also top ten customers in the year ended 31 December 2009, reflecting a stable alumina customer base. In the year ended 31 December 2010, approximately 5 per cent. of total sales of alumina were to associates. Glencore believes that approximately 59 per cent. of Glencore's alumina sales are made pursuant to long-term contracts under which (similarly to alumina purchase contracts) prices are linked to the LME price of aluminium for long-term contracts and are fixed for short-term contracts. Contracts are usually entered into on a "take or pay" arrangement, meaning volumes are fixed, which offsets Glencore's own risk of accepting similar terms from its suppliers.

Since there is a much larger market for aluminium than for alumina, Glencore's customer base for aluminium is somewhat broader than for alumina, with the top ten customers representing some 50 per cent. of the sales in the year ended 31 December 2010. The largest customers include most of the aluminium consuming industrial groups in the construction, packaging, transport and electronics industries. Aluminium customers can have multiple contracts with Glencore with different terms, contract durations and geographical locations and are typically priced on the LME price plus premium.

*Features of the market*

Alumina can only be stored for limited time periods in optimum conditions in order to maintain levels of quality. There is no derivatives exchange for alumina, which restricts the ability to hedge. As such, Glencore is unable to adjust its position through a deliverable paper market and the great majority of near-term alumina forward purchase and sale contracts are physically matched. Short-term contracts are mostly based on a fixed price and long-term contracts are normally priced as a percentage of LME aluminium prices. Many of the LME linked contracts have put/call features. Additionally, there are nascent efforts to establish an alumina index pricing system. Where possible, Glencore hedges its exposure by contracting on a back-to-back basis or taking hedges against LME aluminium prices.

Primary aluminium is mainly traded on the LME, allowing paper and physical marketing contracts to be entered into with reference to a market price. Aluminium is also traded on the SHFE. This allows positions to be hedged and marked to market, as well as providing a purchaser of last resort. The LME provides information on forward curves as well as a standardised contract that determines purity levels, delivery dates, weights and forms of the metal. Almost all of Glencore's physical aluminium transactions are priced based on the LME price plus/minus a premium/discount. These are hedged when originated or priced. The existence of the LME allows Glencore to enter into immediate and effective, price risk hedges against its positions in physical aluminium. The existence and use of LME approved warehouses allow marketers to manage supply and store the metal while they lock in future prices on the LME. If desired, and subject to group risk limits and policies, it also allows Glencore to gain exposure to price risk and spread positions through the use of long and short paper transactions.

*Logistics*

68 employees form the alumina/aluminium traffic team and are responsible for producing information to enable the marketers to make informed transactions as well as executing the transactions after the marketers have negotiated the key terms.

*Competitors*

Glencore has few major competitors trading in its addressable markets for alumina and aluminium; however, its competitors do market significant volumes of their own alumina and aluminium production. Alumina and aluminium production utilised by the aluminium smelters and downstream facilities of integrated companies such as Rio Tinto plc, Alcoa Inc. and Norsk Hydro ASA are outside Glencore's addressable markets, but are noteworthy as these volumes are very large and therefore may affect pricing and customer relationships within the addressable markets.

***Ferroalloys/nickel/cobalt commodity department (marketing activities, Metals and Minerals business segment)***

*Overview*

The ferroalloys/nickel/cobalt commodity department markets bulk ferroalloys (including ferrochrome and chrome ore, ferromanganese, siliconmanganese, manganese ore and ferrosilicon), noble ferroalloys (vanadium and molybdenum products), nickel, cobalt, steel and iron ore.

*Market*

Glencore has a significant presence in the market for ferrochrome, nickel and cobalt, with estimated shares of the addressable market of approximately 16 per cent., 14 per cent. and 23 per cent., respectively. Glencore is currently, and has for the last few years been, the largest physical supplier of ferrochrome and cobalt products.

*Suppliers*

Ferroalloys, nickel and cobalt products are sourced through some of the key industrial assets Glencore has stakes in, including Xstrata by way of long-term off-take, agency and distribution agreements as well as from third party suppliers. In the year ended 31 December 2010, the ferroalloys/nickel/cobalt department sourced approximately 61 per cent. of its products in this commodity department via its stakes in industrial assets (Murrin Murrin, Mopani, Mutanda and Katanga for nickel and cobalt) and off-take and agency agreements with Xstrata for nickel, ferronickel, cobalt, ferrochrome and vanadium.

Glencore's main source of supply for ferrochrome products is Xstrata, which supplied approximately 85 per cent. of the ferrochrome products marketed during the year ended 31 December 2010, under an exclusive agency agreement.

With regards to nickel, the top ten suppliers represented more than 95 per cent. of Glencore's total physical supplies by value in the year ended 31 December 2010. Nine of the top ten suppliers in the year ended 31 December 2010 were also in the top ten suppliers in the year ended 31 December 2009, reflecting long-term relationships. Seven of the top ten suppliers in the year ended 31 December 2010 were under long-term contracts. During the year ended 31 December 2010, Glencore's industrial assets (controlled and non-controlled) provided approximately 75 per cent. of the total nickel supply, largely from Murrin Murrin and Xstrata. Glencore believes that nickel supply arrangements are primarily under long-term contracts of three to five years, priced by reference to LME prices. Approximately 97 per cent. of the volumes purchased (in value terms) from the top ten nickel suppliers in the year ended 31 December 2010 are under long-term contracts.

Cobalt is purchased as either cobalt intermediates, concentrates or cobalt metal, which are sourced from different suppliers, including from companies which form part of Glencore's industrial assets. The top ten suppliers represented approximately 94 per cent. of purchases of cobalt in the year ended 31 December 2010. Seven of the top ten suppliers in the year ended 31 December 2010 were also in the top ten suppliers in the year ended 31 December 2009, reflecting long-term relationships. Approximately 65 per cent. of cobalt is supplied by Glencore's industrial assets. Glencore believes that almost all cobalt agreements are long-term off-take agreements of up to five years with prices typically agreed annually by reference to London Metals Bulletin prices. Approximately 92 per cent. of the volumes purchased (in value terms) from the top ten cobalt suppliers in the year ended 31 December 2010 are under long-term contracts.

Glencore has monitored the development of the iron ore market for a number of years, prior to entering the market and began to actively market the product in the year ended 31 December 2008, initially sourcing from small suppliers, then increasing its focus on supply from major miners in the years ended 31 December 2009 and 2010. Volumes sold increased significantly from 0.9 million MT in the year ended 31 December 2008 and to 4.8 million MT in the year ended 31 December 2009 to 9.3 million MT in the year ended 31 December 2010. The opportunity to trade on a spot price basis reflects demand/supply imbalances across the major miners and steel mills and related pricing mechanism preferences which have moved away from annual price agreements. All iron ore volumes are sourced from third parties under spot and long-term contracts with Glencore's main suppliers. On an aggregate basis, the top ten iron ore suppliers accounted for approximately 94 per cent. of the volumes purchased (in value terms). This high concentration is largely due to the limited numbers of iron ore suppliers globally.

*Customers*

Glencore's ferroalloys, nickel and cobalt customer base is geographically diverse and consists of large multinational European, American and Asian businesses across the carbon, stainless steel and other special steel industries. Most products are sold to end users, but a small portion are sold to intermediaries. Glencore has also recently developed its chrome, iron and manganese ore businesses, supplying mostly large ferroalloys smelters (chrome and manganese) and carbon steel mills (iron). Contracts for the bulk ores are both spot and long-term (typically one year) with prices negotiated based on prevailing market prices.

Glencore's customers for ferroalloys are typically large carbon steel, stainless steel and special steel mills. During the year ended 31 December 2010, the top ten customers represented some 50 per cent. of ferroalloys sales (approximately 85 per cent. of ferrochrome sales). Excluding iron ore and steel customers, eight of Glencore's top ten customers in the year ended 31 December 2010 were also in the top ten customers of Glencore in the year ended 31 December 2009. Contracts are usually one to three years in duration with pricing terms either linked to industry publication prices or negotiated on a quarterly basis.

Glencore markets a range of nickel products in ore, concentrates, matte forms and refined products, with its sales of refined products accounting for some 93 per cent. of total physical volumes supplied during the year ended 31 December 2010. The nickel customer base is well established, with the top ten customers representing approximately 49 per cent. of sales during the year ended 31 December 2010. Historically, the top customers have been European stainless steel producers, but recently Chinese stainless steel producers have become more important customers as the steel market has recovered more quickly in China than in Europe. In the year ended 31 December 2010, however, demand from European customers recovered, resulting in a mix of Chinese and European customers being the top customers. Glencore believes that, typically, sales are approximately 70 per cent. made under long-term arrangements of one to five years and 30 per cent. are made in the spot market. Apart from nickel ore, which has its own market prices due to the variability of the grade, all nickel related products are priced by reference to LME prices.

Glencore's customers for cobalt are typically large processors. Cobalt is sold in many forms, including ore, concentrates, intermediates, salts and metal. The top ten customers represented approximately 53 per cent. of sales in the year ended 31 December 2010. Cobalt contracts are approximately 12 months long on average, but can be up to five years, while contract pricing terms are set using the London Metals Bulletin price.

*Features of the market*

Ferroalloys, nickel and cobalt marketing operations principally involve marketing these commodities through physical, as opposed to paper, transactions.

An active futures market exists for nickel on the LME, which allows the marketing team to hedge sales and purchases for nickel products; typically, physical positions are fully hedged using futures on the LME.

Whilst the LME launched trading platforms for cobalt and molybdenum in February 2010, volumes are currently low, and these exchanges are therefore still relatively illiquid and, as a result, there is limited possibility to achieve effective paper hedging through a metals exchange. However, Glencore has developed and offers financial products, such as cash settled swaps, for cobalt and molybdenum as a means of managing the risk in respect of its physical exposures in these commodities.

In 2008 the LME and Singapore Exchange Ltd. each launched an exchange for iron ore. Volumes traded on these exchanges are currently low and, as such, these exchanges are relatively illiquid.

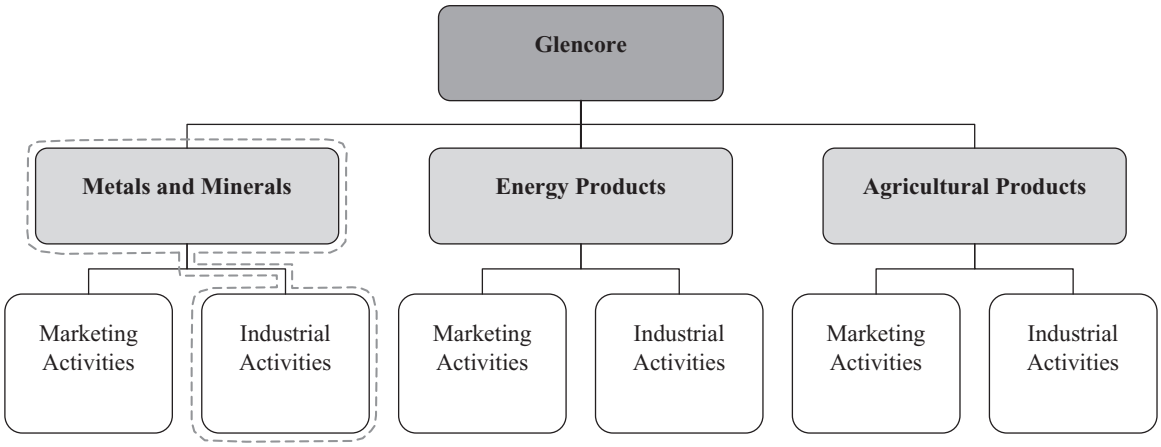
*Logistics*

Marketers of ferroalloys, nickel and cobalt are supported by a traffic team of 68 people who provide the marketers with data, such as prices for freight and logistics, before sales are agreed with customers. The traffic team also manage the logistics of product delivery once a deal has been agreed, where freight requirements are generally outsourced to third parties.

*Competitors*

Glencore has few major competitors trading in its addressable markets for ferroalloys, nickel and cobalt and the majority of its competitors compete primarily in upstream production, although some also have significant end product capabilities.

**Industrial activities (Metals and Minerals business segment)**



***Zinc/copper/lead commodity department (industrial activities, Metals and Minerals business segment)***

*Overview*

The table below summarises information about the key zinc/copper/lead producing industrial assets as at 31 December 2010:

| Company | Country | Commodity | Current annual production capacity | Glencore's ownership interest | Remaining ownership interest | Any contractual relationship with Glencore |
|---|---|---|---|---|---|---|
| **Controlled**: | | | | | | |
| Kazzinc | Kazakhstan | Zinc metal | 300k MT | 50.7% | 49.3% privately held[1] | Supply and purchase agreements |
| | | Lead metal | 130k MT[2] | | | |
| | | Copper concentrates | 240k MT[3] | | | |
| | | Copper metal | 70k MT | | | |
| | | Gold | 1.5 million toz | | | |
| | | Silver | 45 million toz | | | |
| Katanga | DRC | Copper metal | 130k MT[4] | 74.4% | 25.6% publicly traded on Toronto Stock Exchange | Purchase agreements |
| | | Cobalt | 5.5k MT[4] | | | |
| Mopani | Zambia | Copper metal | 300k MT | 73.1% | 16.9% First Quantum Minerals Ltd., 10% ZCCM | Supply and purchase agreements |
| | | Cobalt | 2.8k MT | | | |
| AR Zinc | Argentina | Zinc metal | 44k MT | 100% | — | Purchase agreements |
| | | Lead metal | 14k MT | | | |

Notes:

(1) Glencore has agreed with Verny to acquire additional stakes in Kazzinc thereby increasing its ownership from 50.7 per cent. to 93.0 per cent. See Section X: "Additional Information" for further details of these purchases and the terms of the Kazzinc SPAs.

(2) After commissioning of its lead smelter capacity will increase to 168k MT.

(3) Copper metal production to replace copper concentrate production with new smelter.

(4) Expansion to 310k MT of copper metal, 8k MT of cobalt and 22k MT of cobalt contained in cobalt hydroxide by 2015.

(5) Operation forecast for 2011.

(6) Mutanda is not a controlled asset as Glencore has only a 40 per cent. stake; however, Glencore is the operator.

(7) 20 per cent. interest in Mutanda Mining Sprl was recently acquired by Rowny Assets Limited (an entity associated with Dan Gertler) from Gécamines.

(8) Cobalt contained in cobalt hydroxide.

(9) Exploration stage.

(10) 25 per cent interest in Kansuki was recently acquired by Biko Invest Corp (an entity associated with Dan Gertler) from Gécamines.

(11) Ownership interest on completion of earn-in by 2012.

(12) Operation forecast for first half 2013.

*Financial information*

The table below sets out selected financial information on the controlled zinc/copper/lead industrial activities for the years ended 31 December 2008, 31 December 2009 and 31 December 2010. The information in this table has been extracted without material adjustment from Glencore's accounting books and records, which are unaudited:

Notes:

(1) As at 1 January 2011. The information in the table above, in relation to mineral reserves and resources, is in compliance with the JORC Code and has been extracted without material adjustment from the Kazzinc Report in Section XIV: “Independent Technical Reports”.

(2) Remaining mine life: different for each mine, ranging from eight to 21 years. Expiry date of relevant mining/concession licences: different for each mine, ranging from 19 May 2013 to 7 November 2030.

Competent Persons: the mineral reserves and resources estimates set out above were reviewed and approved by Phil Newall of WAI. The reserves and resources estimates have been prepared in accordance with the JORC Code. Mr Newall is a Competent Person as defined by JORC and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking.

Notes:

(1) As at 31 December 2010. The information in the table above, in relation to mineral reserves and resources, is in compliance with the JORC Code and has been extracted without material adjustment from the Katanga Report in Section XIV: “Independent Technical Reports”.

(2) Remaining mine life: in excess of 25 years. Expiry date of relevant mining/concession licences: 7 May 2022 for the extension of Katanga and 3 April 2024 for all remaining operations.

Competent Persons: the mineral reserves and resources estimates set out above were reviewed and approved by Willem van der Schyff of Golders. The reserve and resources estimates have been prepared in accordance with the JORC Code. Mr Van der Schyff is a Competent Person as defined by JORC and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking.

| Mopani[(1)(2)] | Commodity | Reserves | | | Resources | | | |
|---|---|---|---|---|---|---|---|---|
| | | Proved | Probable | Total | Measured | Indicated | Inferred | Total |

Notes:

(1) As at 31 October 2010. The information in the table above, in relation to mineral reserves and resources, is in compliance with the JORC Code and has been extracted without material adjustment from the Mopani Report in Section XIV: "Independent Technical Reports".

(2) Remaining mine life: 25 years for Nkana and 11 years for Mufulira. Expiry date of relevant mining/concession licences: 31 March 2025 for both of these mines.

Competent Persons: the mineral reserve and resource estimates set out above were reviewed and approved by Willem van der Schyff of Golders. The reserves and resources estimates have been prepared in accordance with the JORC Code. Mr Van der Schyff is a Competent Person as defined by JORC and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking.

| AR Zinc[(1)(2)] | Commodity | Reserves | | | Resources | | | |
|---|---|---|---|---|---|---|---|---|
| | | Proved | Probable | Total | Measured | Indicated | Inferred | Total |
| Aguilar . . . . . | Ore ('000 MT) | 1,574 | 1,541 | 3,115 | 2,132 | 3,132 | 1,856 | 7,120 |
| | Zinc (%) | 8.49 | 4.91 | 6.72 | 7.59 | 3.89 | 7.52 | 5.95 |
| | Lead (%) | 8.28 | 5.49 | 6.90 | 6.85 | 3.91 | 6.66 | 5.51 |
| | Silver (toz/MT) | 6.00 | 3.71 | 4.87 | 5.04 | 2.80 | 4.33 | 3.87 |

Notes:

(1) As at 31 December 2010.

(2) Remaining mine life: approximately four years based on reserves and ten years based on resources. AR Zinc plans to continue exploration with the aim of extending the life of mine. Expiry date of relevant mining/concession licences: permanent.

Competent Person: the mineral reserves and resources estimates set out above were reviewed and approved by Glencore Competent Person, Chris Emerson, and have been prepared in accordance with the JORC Code. Mr Emerson is a Competent Person as defined by the JORC Code. Mr Emerson is a fellow of the Geological Society of London and a member of AusIMM—The Minerals Institute and has more than ten years experience in underground pollymetallic deposits, predominantly in Latin America.

| Cobar[(1)(2)] | Commodity | Reserves | | | Resources | | | |
|---|---|---|---|---|---|---|---|---|
| | | Proved | Probable | Total | Measured | Indicated | Inferred | Total |
| Cobar . . . . . | Ore ('000 MT) | 1,370 | 4,879 | 6,249 | 1,992 | 3,775 | 6,147 | 11,914 |
| | Copper (%) | 4.17 | 4.95 | 4.8 | 5.80 | 6.30 | 5.90 | 6.00 |
| | Silver (g/t) | 15 | 19 | 18 | 20 | 24 | 20 | 21 |

Notes:

(1) As at 31 December 2010.

(2) Remaining mine life: current expected life of mine is approximately five years based on reserves and approximately 11 years based on resources, although Cobar has previously been able to extend its expected life of mine through exploratory drilling in the area covered by its concession. Expiry date of relevant mining/concession licences: 5 December 2028.

Competent Person: the mineral reserves estimates set out above were reviewed and approved by Glencore Competent Person, Tom Simpson. The mineral resources estimates set out above were reviewed and approved by Glencore Competent Person, Jason Hosken. The mineral reserves and resources estimate have been prepared in accordance with the JORC Code. Mr Simpson has been a member of AusIMM—the Minerals Institute for more than 20 years and has more than 15 years' of experience in underground pollymetallic deposits in Australia. Mr Hosken has been a member of AusIMM-the Minerals Institute for more than 12 years and has more than 16 years of experience in underground pollymetallic deposits in Australia.

| Los Quenuales[1][2] | Commodity | Reserves | | | Resources | | | |
|---|---|---|---|---|---|---|---|---|
| | | Proved | Probable | Total | Measured | Indicated | Inferred | Total |
| Iscaycruz | Ore ('000 MT) | 2,820 | 1,250 | 4,070 | 3,661 | 4,705 | 7,379 | 15,746 |

| | Silver (toz/MT) | 3.04 | 6.94 | 6.35 | 3.66 | 8.64 | 8.60 | 8.38 |

Notes:

(1) As at 31 December 2010.

(2) Remaining mine life: the expected life of the mines as a group, considering current production capacities, is an average of two years based on reserves and seven years based on resources. Expiry date of relevant mining/concession licenses: different for each mine, ranging from 30 June 2014 to 16 January 2027 in respect of Porco, Colquiri and Poopo and permanent in respect of Bolivar and Caballo Blanco.

Competent Person: the mineral reserves and resources estimates set out above were reviewed and approved by Glencore Competent Person, Chris Emerson, and have been prepared in accordance with the JORC Code. Mr Emerson is a Competent Person as defined by the JORC Code. Mr Emerson is a fellow of the Geological Society of London and a member of AusIMM—The Minerals Institute and has more than ten years' experience in underground pollymetallic deposits, predominantly in Latin America.

| | Cobalt (%) | 0.17 | 0.38 | 0.35 | 0.31 |

Notes:

(1) As at 31 December 2010. The mineral resource estimates set out above were reviewed and approved by Willem Van der Schyff of Golders. The resource estimates have been prepared in accordance with the JORC Code. Mr Van der Schyff is a Competent Person as defined by JORC and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking.

(2) Expiry date of relevant mining/concession licences: 5 May 2022. This is renewable in accordance with the DRC mining code for periods of 15 years.

KAZZINC:

Glencore owns 50.7 per cent. of Kazzinc, a fully integrated zinc producer with significant copper, precious metals and lead resources in Kazakhstan. The remainder of the business is currently owned by Verny Capital JSC (48.73 per cent.), a Kazakh investment fund unrelated to Glencore, with certain small shareholders accounting for the remaining 0.58 per cent.

Glencore has agreed with Verny to acquire additional stakes in Kazzinc. These purchases will increase Glencore's ownership from 50.7 per cent. to 93.0 per cent. for a total transaction consideration of U.S.$3.2 billion. Subject to satisfaction of certain conditions, which include receipt of applicable regulatory approvals and the occurrence of UK Admission, consideration for these purchases will be settled through the issuance of U.S.$1 billion of Ordinary Shares at the Offer Price (such issuance is expected to occur at the earlier of UK Admission and satisfaction of applicable conditions precedent) and U.S.$2.2 billion in cash (to be paid in tranches between October and December 2011). Assuming that the Offer Price is set at the mid-point of the Offer Price Range and the Over-Allotment Option is not exercised, the issuance of U.S.$1 billion of Ordinary Shares is expected to result in Verny holding 1.6 per cent. of the Ordinary Shares in issue following the Global Offer. The acquisition of these additional stakes is expected to be completed by the end of December 2011. The terms of the acquisition have been negotiated on an arm's length basis and the price and structuring of the consideration in respect of these purchases is based on Glencore's detailed valuation of Kazzinc. In addition, Glencore's stake in Kazzinc may be further increased to 99.4 per cent. through the exercise of a put or call option in respect of Verny Investments' remaining 6.4 per cent. interest in Kazzinc, which is conditional on amongst other things, an initial public offering of Kazzinc's gold assets. See Section X: "Additional Information" for further details of these purchases and the terms of the Kazzinc SPAs.

Kazzinc owns three major polymetallic facilities, Zyrianovsk, Ridder and Ust-Kamenogorsk, as well as a gold mining operation, VasGold in Kokshetau and 48.3 per cent. interest in the Novoshirokinskoe gold mine in Russia. Kazzinc's major operations are located primarily in Eastern Kazakhstan, spread over seven towns and employing approximately 24,300 staff, including 2,284 VasGold employees. Kazzinc in total operates eight mines, four concentrators, two zinc smelters, a gold recovery plant, a copper smelter (which is under construction, with planned cold commissioning in the second quarter of 2011), a lead smelter (which is being significantly upgraded) and a precious metals refinery. Kazzinc also owns and operates a variety of auxiliary units which support its mining, smelting and refining operations, including:

- a long-term concession over the Bukhtarma Hydro-Electric Power Station which provides more than 80 per cent. of Kazzinc's electricity needs either directly through the company's own power lines or through swapping of energy production from the plant for electricity from the relevant local grids;
- Kazzinc-Mash, an industrial entity which produces a wide variety of parts and machinery related to mining and metallurgy, providing Kazzinc with necessary spare parts and customised mechanical solutions; and

- a transportation division with more than 100 kilometres of rail track, 1,000 rail tank cars and open-top wagons, 29 locomotives and 700 vehicles.

**Zyrianovsk:**

The Zyrianovsk mining and concentrating complex mines and processes polymetallic ores and produces zinc, copper, lead and gravity gold concentrates and copper sulphate reagent. The complex consists of three assets:

- Maleevsky mine: The Maleevsky mine is Kazzinc's largest underground operation, accounting for the majority of Kazzinc's zinc and copper production. The mine was commissioned in June 2000 and had an initial production rate of 1.5 million MT of ore per annum, which was expanded in 2001 to its current level of 2.25 million MT per annum. In the year ended 31 December 2010, ore mined at Maleevsky contained more than 50 per cent. of total zinc produced from Kazzinc's own mines and accounted for approximately three quarters of total Kazzinc copper concentrate production. Ore is transported from the Maleevsky mine to the Zyrianovsk concentrator by truck.
- Grekhovsky mine: The Grekhovsky mine is a small underground mining operation (the Aleksandrovsky area is the only operational part of the mine) producing 70k MT of primarily copper ore per annum, which is transported to the Zyrianovsk concentrator. The majority of the reserves at Grekhovsky have now been mined and reserves are expected to be depleted by the year ending 31 December 2013 following additional development work to expand underground operations to lower levels.
- Zyrianovsk concentrator: The Zyrianovsk concentrator primarily treats ore from the Maleevsky and Grekhovsky deposits, as well as third party ore (the majority from Kazakhmys PLC under a tolling arrangement) and Kazzinc industrial residues. The concentrator uses a flotation process to separate the ore into different metal concentrates. The concentrating process includes a heavy media separation process to deal with the dilution inherent in large-scale mining, crushing, grinding, flotation, thickening and filtering facilities. Free gold is recovered using gravity tables and centrifugal concentrators. Metal concentrates are transported by rail to the Ust-Kamenogorsk metallurgical complex and to third party copper smelters until the new copper smelter is commissioned in the first half of 2011.

**Ridder:**

The Ridder mining and concentrating complex mines and processes ores and produces zinc, copper, lead and gold concentrates. The complex consists of five assets:

- Tishinsky mine: The Tishinsky mine is an underground operation located 15 kilometres from the Ridder concentrator, adjacent to the Ust-Kamenogorsk-Ridder road and railway. The mine produces approximately 1.3 million MT of polymetallic ore per annum. A heavy media plant is located on the surface, removing up to 20 per cent. of waste rock prior to the upgraded ore being transported by rail to the Ridder concentrator for further processing.
- Ridder-Sokolniy mine: The Ridder-Sokolniy mine is an underground mine located three kilometres from the centre of the city of Ridder and is adjacent to the Ridder concentrator. The mine produces approximately 2 million MT of polymetallic ore per annum and is to remain in operation until at least 2040.
- Shubinsky mine: The Shubinsky mine, located 15 kilometres from the Ridder concentrator, is a small underground operation producing approximately 200k MT of zinc-copper ore per annum. Mining is undertaken through sub-level stoping methods with backfill. The Shubinsky mine is expected to remain in operation until 2027.
- Ridder concentrator: All ores mined at the Tishinsky, Ridder-Sokolniy and Shubinsky mines together with gold bearing-tailings are treated at the Ridder concentrator. Zinc concentrates are typically further processed at the Ridder zinc refinery, while lead and gold concentrates are shipped to the Ust-Kamenogorsk lead smelter for pyrometallurgical treatment. Copper concentrates produced at the concentrator are currently sold to third party copper smelters, until the commissioning of Kazzinc's Ust-Kamenogorsk copper smelter in 2011.

- Ridder zinc refinery: The Ridder zinc refinery produces approximately 110k MT of high grade zinc metal and alloys per annum. The refinery's sulphuric acid output is either sold locally by Kazzinc or neutralised into gypsum in the absence of demand for acid.

**Ust-Kamenogorsk:**

The Ust-Kamenogorsk metallurgical facility is fully integrated and will ensure the full and complex recovery of the maximum amount of valuable polymetallic components into marketable products. The facility produces zinc, lead, copper (from 2011), gold, silver, bismuth, cadmium, indium, selenium, thallium, tellurium, mercury, sulphuric acid and sodium antimonate. The intention is for it to also produce antimony and tin in the future, thereby bringing its entire complex metallurgical output to refined metal level. The complex consists of three assets:

- Zinc refinery: Originally constructed in the 1960s and substantially rebuilt over the past 12 years, the refinery produces 190k MT of zinc and metal alloy per annum. In addition to refined zinc metal, the refinery also produces zinc alloys, sulphuric acid and refined cadmium metal.
- Lead smelter: The current lead smelter employs a standard process of sintering-smelting-pyrometallurgical refinement. However, the process has certain modifications allowing the smelter to work in conjunction with the zinc plant and, in the future, the copper plant to enhance metal recoveries through the cross-treatment of residues and by-products from the two processes. The Ust-Kamenogorsk smelter produces up to 130k MT of refined LME-grade lead and 7k MT of blister copper per annum, as well as smaller amounts of selenium, bismuth, indium, tellurium, thallium, mercury and sodium antimonate. Kazzinc purchases lead concentrates from Kazakhmys PLC, Gorevsky mine in Russia, the Chelyabinsk zinc plant owned by Akzhal mine in Kazakhstan and a number of smaller producers as lead collector feed for use in gold production. In addition to this, Kazzinc purchases lead-bearing smelter residues and lead scrap from Russian and Kazakh secondary feed suppliers, as well as gold and silver concentrates from several suppliers in Russia, Kazakhstan, Tajikistan and Kyrgyzstan.
- Precious metals refinery: The precious metals refinery processes silver crust from the lead refinery and will also process copper anode slimes following the commissioning of the company's copper smelter and refinery. The refinery is currently producing approximately 110 MT of refined silver and 9 MT of refined gold per annum, both products LBMA registered, which is expected to increase significantly following the ramp-up in VasGold production described below.

Kazzinc is finalising the completion of a major new metallurgical project in which it will have invested a total of U.S.$870 million to construct a fully integrated processing facility designed to treat a wide range of polymetallic and gold raw materials. As part of the new metallurgical complex, the following projects are nearing completion and commissioning is scheduled for the first half of 2011:

- Construction of a new copper smelter which will be able to refine up to 370k MT of copper concentrate and produce 70k MT (and subsequently 87.5k MT) of cathode copper per annum. Glencore estimates that it will purchase 25 to 30 per cent. of the copper concentrate from third parties. Once the new copper smelter is operational, a portion of the gold-bearing concentrates will be processed through the copper smelter to optimise the economics of third party lead feed purchases and take advantage of the tax benefits of producing copper metal in Kazakhstan (commissioning is scheduled for the second quarter of 2011).
- Reconstruction of the lead smelter to accommodate more varied feed and to re-engineer the process flow at Ust-Kamenogorsk metallurgical complex. The current concentrates sintering stage at the lead smelter is to be replaced by smelting in an ISASMELT furnace. This is expected to result in greater feed composition flexibility, increased recoveries from polymetallic concentrates and significantly lower emissions.
- Construction of a sulphuric acid plant at the Ust-Kamenogorsk metallurgical complex designed using a dual contact absorption process, which is expected to meet all high sulphur off-gases produced by the ISASMELT copper furnace. The new acid plant underwent cold commissioning at the end of 2010 and is designed to become operational in 2011 once the copper ISASMELT furnace commences operation.

- Construction of auxiliary operations equipment associated with the new copper smelter and lead smelter, such as the modern electrolytic tank house (which should be operational in the first quarter of 2011).

**Altyntau:**

Kazzinc's gold assets consist of its 100 per cent. interest in VasGold together with its 48.3 per cent. interest in the Novoshirokinskoe gold mine and concentrator (which is held through a 50:50 joint venture with Highland Gold Mining Limited, the joint venture holding in total a 96.6 per cent. stake in Novoshirokinskoe) and a gold and silver stream provided from Kazzinc's other mining activities described above. VasGold is located in the Akmola region, 17 kilometres to the north of the city of Kokshetau. The region has well-developed infrastructure, including motor roads, railways, electricity and water supplies. It is the largest gold mining and processing operation in Kazakhstan. It is an open pit mine with a width of 1,200 metres, a length of 1,300 metres and a current depth of 70 metres. With a very conservative cut-off grade the final depth of the pit is expected to reach 450 metres. VasGold is currently evaluating several options involving optimisation of the open pit or using underground methods to access ore at further depth.

VasGold is a new mine which started producing gold in 2010. As at January 2011 VasGold was producing 6.6 million MT on an annualised basis, is capable of processing 8 million MT of ore per annum and is expected to recover 450k to 500k toz of gold per annum. Kazzinc has incurred capital expenditure for VasGold of approximately U.S.$514 million in developing and bringing this mine on stream.

WAI provided the following in relation to the VasGold mine:

| | Resources | | | |
|---|---|---|---|---|
| | **Measured** | **Indicated** | **Inferred** | **Total** |
| **Vasilkovskoje** | | | | |
| ('000 MT) | 45,230 | 141,560 | 99,080 | 285,870 |
| Au (g/t) | 1.75 | 1.72 | 1.77 | 1.74 |

Plans are also in place to expand the mine design capacity of Novoshirokinskoe from 450k MT per annum to 550k MT per annum by 2013.

Kazzinc's production of gold and silver from its mining operations in Ridder, Zyrianovsk and Novoshirokinskoe is the equivalent of 350k toz of gold per annum.

Kazzinc's gold assets have provided it with an opportunity to consolidate its gold activities within one gold-producing company and to potentially spin off that company or seek a listing for it on an international stock exchange. Such a company, on its own, would employ approximately 5,500 people and would operate two hubs in Kazakhstan and a mine in Russia and have the advantage of a diversified portfolio of operated assets producing 249k toz in 2010, expected to increase to 800k toz, including silver in gold equivalents by 2013. Kazzinc is currently reorganising this gold business into a new corporate structure to be known as Altyntau Gold, which will be the largest gold mining and processing operation in Kazakhstan. Pursuant to the terms of the Kazzinc SPAs (details of which are set out in Section X: "Additional Information"), Glencore will, subject to its commercial decision based on prevailing market conditions, use reasonable commercial endeavors to seek a listing of Altyntau to the premium listing segment of the Official List of the FSA, subject to Altyntau's eligibility for a listing.

Glencore believes that Altyntau has a number of significant competitive advantages which make it a highly attractive growth prospect. One of Altyntau's key competitive advantages is having access to excellent operational experience as a result of its history and relationships as part of Kazzinc. Altyntau's other major competitive advantage is its access to sophisticated processing operations, allowing Altyntau to process gold deposits that are challenging to process. Such refractory gold deposits account for most of the undeveloped gold deposits in Central Asia, and will, in time, account for a significant proportion of undeveloped gold deposits worldwide as gold deposits which can be processed using conventional methods are depleted.

**Other:**

Glencore purchases, through an off-take agreement, on average approximately 80 per cent. of Kazzinc's annual output of zinc at LME-based prices. Glencore also occasionally purchases concentrates from third parties and sells them to Kazzinc for processing. Whilst the volume of concentrates which Glencore sells to

Kazzinc have not historically been material, they are expected to increase in the future once the Company's metallurgical processing facilities for complex feed have been expanded.

Due to the geographic remoteness of the majority of the mining and processing facilities situated in Kazakhstan, Kazzinc, as an integrated operator, enjoys a competitive advantage over other Kazakh mining operations due to its ability to process and transport finished metal products. For similar geographic reasons, Kazzinc is also able to acquire concentrates from local producers for its smelters at a lower cost base than its Russian or Chinese competitors.

Kazzinc's operating expenses were impacted during the financial year ended 31 December 2009 by a new levy introduced by the Kazakh government. This new mineral extraction tax is linked to the royalties payable to the LME price of the relevant metal. At the same time, the profit tax rate was reduced from 30 per cent. to 20 per cent.

KATANGA:

Glencore owns 74.4 per cent. of Katanga, a company listed on the Toronto Stock Exchange, which is developing and operating high grade copper and cobalt mines with integrated metallurgical facilities in the Kolwezi region of the DRC through its 75 per cent. shareholding in Kamoto Copper Company SARL ("KCC"). Substantial high grade resources indicate a potential mine life for KCC in excess of 25 years and a potential to produce 310k MT per annum of copper and 8k MT per annum of cobalt and 22k MT of cobalt contained in cobalt hydroxide by 2015. As at 29 April 2011, the last practicable date prior to the publication of this Prospectus, Katanga had a market capitalisation of U.S.$3.6 billion. As at 31 December 2010, Katanga had approximately 3,175 employees and 3,313 contractors (including projects staff).

Katanga's assets were originally held through two joint ventures, KCC and DRC Copper and Cobalt Project SARL ("DCP"), the latter acquired by Katanga as part of a merger with Nikanor in January 2008. On 25 July 2009, an amended joint venture agreement was signed with Gécamines, pursuant to which it was agreed that, subject to Presidential approval, KCC and DCP would be merged into a single entity. On 27 April 2010, the merger of KCC and DCP was approved by Presidential decree.

KCC's integrated mine complex contains both underground and open pit mines, providing both sulphide and oxide ores. A concentrator and metallurgical plant enable the production of refined copper and cobalt metal on-site. The complex will be a mix of existing assets being progressively refurbished and new processing facilities which are being engineered and are under construction.

KCC's material assets are located in the Kolwezi District of the Katanga Province in the DRC and are as follows:

**Mining assets:**

- Kamoto Underground Mine ("KTO"), an operating underground mine: KTO is KCC's primary sulphide ore source and has twin six and a half by six metre ramp declines, a service shaft and a 11k MT per day capacity production shaft. Mining is currently a combination of room and pillar methods and cut and fill methods with sub-level caving being considered for future production. Ore from production chambers/stopes is taken to the underground crusher before being hoisted up the shaft to the surface in skips. Ore from development ends is taken to the underground grizzly and conveying system before being hoisted up the shaft to the surface in skips. KTO is scheduled to produce 37.8 million MT of ore at 3.9 per cent. copper grade through Life-of-Mine ("LOM") to 2030.
- T-17, an operating open pit mine: T-17 Open Pit is a cobalt-rich mine. T-17 Open Pit commenced production in 2008 and the reserves were scheduled to be depleted in 2011. However, exploration drilling conducted in 2009 and 2010 has identified (1) an extension of the resource in an easterly direction along strike near surface which will allow a continuation of open pit mining to 2012 with 1.5 million MT of ore being mined at 2.7 per cent. copper grade in 2011 and 2012; and (2) an extension of the reserve below the bottom of the current pit which will allow an additional 13.7 million MT of ore to be mined from underground at 2.6 per cent. copper grade from 2018 onwards.
- KOV Open Pit, an operating open pit mine: KOV Open Pit is considered to be the world's highest grade significant copper resource. KOV Open Pit is the primary development project within KCC's mining assets (see below) and is scheduled to produce 83.2 million MT of ore at 4.1 per cent. copper grade through LOM to 2030.
- Mashamba East Open Pit, a development project: Mashamba East Open Pit will commence production in 2015 and will produce 12.8 million MT of ore at 2.8 per cent. copper grade through LOM.

- Kamoto East Underground Mine ("KTE"), a development project: KTE will commence production in 2019 and will produce 20.5 million MT of ore at 4.4 per cent. copper grade through LOM.

**Processing assets:**

- Kamoto Concentrator ("KTC"), an operating concentrator: KTC consists of crushing facilities and four milling and flotation sections constructed between 1968 and 1982 and was recently completely refurbished back to its historical nameplate capacity of 7.6 million MT of ore per annum. Recent engineering has identified that the 32' DIMA mills, which have conventionally being operated as autogenous mills, can be converted to semi-autogenous mills which will result in the nameplate capacity increasing to in excess of 9 million MT of ore per annum. It is currently being refurbished to capacity of 150k MT of copper metal and 8k MT of cobalt to be completed by second quarter of 2011.
- Luilu Refinery ("Luilu"), an operating metallurgical plant: Luilu has concentrate dewatering facilities, sulphide concentrate roasters, atmospheric leaching circuits and an electro-winning tank house for production of both copper and cobalt metal.
- KCC is currently working on a front end design and scoping study which includes plans for the conversion of the existing unused electro-refinery to a 200k MT per annum electro-winning facility along with the installation of a 200k MT per annum solvent extraction plant. This new plant along with Luilu will enable KCC to increase copper production capacity to 310k MT of copper by 2015.

KCC also has a number of other mines and plants that may be operated initially or at a later stage in KCC's development.

Pursuant to its development plan, Katanga intends to accelerate pre-existing plans to ramp up production from 70k MT per annum to 150k MT per annum of copper by the end of the second quarter of 2011.

The primary development within the mining assets has been the dewatering and optimisation of KOV Open Pit, with a view to achieving the following:

- Accelerated ramp-up of ore production.
- Reduce the pre-strip requirement and the initial operational open pit strip ratio to provide a positive impact on the cash flow of the projects.
- Kamoto East and Oliveira ore body to be mined using KTO mine underground infrastructure.
- Mine planning to remain robust and flexible to meet ore requirements to achieve the Accelerated Development Plan to 150k MT per annum of copper whilst:
    - optimising future production and recoverability of resources; and
    - allowing for a further expansion of mining activities to support future production increases to 310k MT per annum of copper.

The primary development on the process side has been the refurbishment of existing facilities and infrastructure at KTC and Luilu, to be completed by the end of the second quarter of 2011 (compared with an original completion date of the end of the first quarter of 2013).

Based on current copper and cobalt spot prices and current operating cost assumptions in the development plan, it is expected that capital expenditures relating to the plan will be funded by existing cash balances and cash generated from operations.

At the time of the merger between Katanga and Nikanor, Glencore agreed to modify existing off-take agreements such that Glencore would purchase 100 per cent. of the quantity of copper and cobalt produced during the life of all mines owned or subsequently acquired by Katanga, with pricing linked to the LME.

MOPANI:

Mopani is an integrated mining and processing operation in the Copperbelt region of Zambia, producing copper and cobalt metal. In 2011, Mopani is expected to produce approximately 236k MT copper cathodes, of which approximately 111k MT will come from Mopani's mines while the rest will come from custom-treatment of copper concentrates from other mines, mainly Katanga, Mutanda and tolled third party sources. Mopani is also expected to produce approximately 2,200 MT cobalt metal in 2011.

Mopani is an integral part of Glencore's operations in Southern Africa. It can process oxide and sulphide copper-cobalt concentrates produced by Katanga and Mutanda. Mopani also produces sulphuric acid,

which is used in the leaching operations at Katanga and Mutanda. In the long term, once Mutanda and Kansuki reach full production levels, the sulphide concentrate produced at these minesis also expected to be processed at Mopani.

The operations are located in the cities of Kitwe and Mufulira and, as at 31 December 2010, the operations had approximately 7,500 permanent employees and approximately 6,400 contractors. Glencore owns 73.1 per cent. of Mopani, with the remainder of the business owned by First Quantum Minerals Ltd. (16.9 per cent.) and Zambia Consolidated Copper Mines Investment Holdings Plc (10 per cent.).

**Nkana:**

Nkana operations are located in Kitwe and consist of four underground mines, namely the Central Shaft, the South Ore Body Shaft, the Mindola Sub-vertical Shaft and the Mindola North Shaft. There are also four open pit mines (Mindola, Area A, Area D and Area J), a sulphide copper-cobalt concentrator, an oxide copper agitation leach-solvent extraction plant and a cobalt plant including a copper solvent extraction plant and an electro-winning tank house.

Nkana's mines contain copper-cobalt ore and have a mining capacity of approximately 3.9 million MT of ore per annum. Vertical crater retreat, sub-level caving longitudinal room and pillar and open stoping techniques are the predominant mining method used at the Nkana mines.

Mopani has started the construction of a new shaft at Nkana (the "Synclinorium Project") in order to mine an untapped ore resource containing approximately 115 million MT of copper ore. This project is expected to increase ore production at Nkana by 4.0 million MT per annum by 2018 and to extend the life of Nkana mining operations to at least 25 years. The total cost of the Synclinorium Project is estimated at U.S.$295 million and be funded from internally generated cashflows.

Open pit mining is currently undertaken in four areas (Mindola, Area A, Area D and Area J). Production has recently commenced in Area J while two new areas (Area K and Nose) are being drilled to define reserves and to develop a mining plan. The oxide ore produced from the open pits is processed in the agitation-leach plant.

The Nkana concentrator processes the sulphide ore mined in Nkana's underground and open pit mines and has a capacity of 12,000 MT per day. Separate copper and cobalt concentrates are produced from a bulk-flotation concentrate using a segregation process. The copper concentrate contains an average of 30 per cent. copper, whilst the cobalt concentrate typically contains an average of 10 per cent. copper and 1.8 per cent. cobalt. The copper concentrates produced at Nkana are then transported by road to Mufulira for smelting and refining.

Cobalt concentrates from Mopani's Nkana mine, Katanga and Mutanda, are processed directly at the Nkana cobalt plant. This plant has the flexibility to treat both sulphide and oxide concentrates. The current production capacity is 2,800 MT of cobalt metal per annum. This capacity is planned to be increased to 3,500 MT of cobalt metal per annum by 2020, or earlier if needed. The cobalt metal produced is at least 99.65 per cent. purity and its brands are listed with the LME. It also has a copper solvent extraction facility which recovers the copper contained in the cobalt concentrate.

Nkana has two other solvent extraction plants, which process copper from oxide ores from the Nkana open pit and in-situ leaching within the Central Shaft.

The copper electro-winning tank house at Nkana produces copper cathodes containing 99.95 per cent. copper purity from the solution streams produced by the solvent extraction plants. The cobalt electro-winning tank house produces drummed cobalt products in a similar manner to the copper electro-winning tank house.

Mopani has also begun construction of the TD52 project at Nkana, which involves leaching of an old tailings dam to extract the contained copper using solvent extraction and electro-winning. Production is expected to start in the third quarter of 2011.

**Mufulira:**

Mufulira operations consist of one main underground mine (Mufulira) and two portal mines (East and West), an oxide copper agitation leach solvent extraction plant, in-situ leaching, a sulphide copper concentrator, an Isasmelt smelter and a refinery.

Mufulira's mines have a mining capacity of approximately 1.9 million MT of ore per annum. The estimated life of mine is 11 years. Exploration is being performed in and around the current mining areas with the aim of increasing the mine's resources.

The Mufulira mine and West portal predominantly use the mechanised continuous retreat mining method. East portal uses the room and pillar with waste rock backfill. In-situ leaching of old underground stopes is also carried out.

The Mufulira concentrator treats all of the sulphide ore produced in the Mufulira mines, producing a copper concentrate containing an average of 41 per cent. copper. The concentrator has a capacity to process 8,350 MT of ore per day. In addition, there are three solvent extraction plants and the vat-leach plant, which recover copper from oxide ores mined at East and West portals, sourced from in-situ leaching or purchased from local miners.

The Mufulira smelter was commissioned in 2006 and uses Xstrata's ISASMELT technology to process sulphide copper concentrates. It processes all of the copper concentrate produced in the Mufulira and Nkana mines and also treats sulphide copper concentrates produced by other mines in the region as custom feed. The copper anodes coming from the smelter are then electro-refined in the Mufulira copper refinery to produce high quality copper cathodes (''MCM'' LME brand) with a copper purity of 99.99 per cent.

The sulphuric acid produced as a by-product of the smelting operations is either used in Mopani's oxide copper leaching operations or sold to other copper mines in the area, including Glencore's operations in the DRC. The acid plant has a production capacity of 1,150 MT per day.

The capacity of the smelter (620k DMT of concentrate per annum as at December 2010) is being expanded in a phased approach to 720k DMT of concentrate per annum by the end of 2012. This would include installation of new Peirce-Smith converters and building a new acid plant. The total cost of this project is estimated to be U.S.$112 million and it is expected to be funded by internally generated cashflows.

Glencore has a 100 per cent. off-take agreement with Mopani for the life of the mines, with ownership transferred to Glencore at the mine gate and pricing based on LME prices.

Mopani's metal production is exported and either trucked or transported by rail to the ports of Durban in South Africa or to Dar es Salaam in Tanzania, where it is shipped worldwide.

AR ZINC:

Glencore owns 100 per cent. of AR Zinc, an integrated zinc and lead mining operation in Argentina. AR Zinc's operations are at three locations and comprise the Aguilar underground and open pit mine and concentrator plant, the Palpala lead smelter (both located in Jujuy province), and the AR Zinc smelter, located in Rosario, Argentina. The current smelting capacities are 44k MT per annum of zinc metal and 14k MT per annum of lead metal. Lead/silver concentrates from the Aguilar mine are mainly treated at the Palpala smelter, with approximately 10k to 15k MT per annum of lead concentrates in excess of Palpala's capacity being exported to Glencore at spot prices on arm's length terms. The life of the mine is approximately four years based on reserves and ten years based on resources. AR Zinc plans to continue exploration with the aim of extending the life of the mine.

The zinc concentrate from the Aguilar mine is treated at the AR Zinc smelter. The zinc metal produced is shipped to consumers primarily in Argentina and Brazil. Approximately 70 per cent. to 75 per cent. of feed for the AR Zinc smelter is supplied by the concentrate from the Aguilar mine, with the remaining capacity being sourced from third party mines in Bolivia and Los Quenuales. AR Zinc also produces sulphuric acid as a by-product of its processing operations and sells this locally for the production of fertilisers and the chemical and paper industry. AR Zinc employs approximately 1,400 people.

To the extent that metal is not sold to local customers, the balance is purchased by Glencore at spot prices on arm's length terms. In 2010 Glencore purchased 47 per cent. of Aguilar mine lead concentrate output and 65 per cent. of the silver metal output. All zinc sold by AR Zinc in 2010 was sold to third parties. Lead metal and sulphuric acid produced is sold to third parties in Argentina and Brazil. In total, 77 per cent. of gross revenues were generated from third parties and 23 per cent. from Glencore in the year ended 31 December 2010.

COBAR:

Glencore owns 100 per cent. of Cobar, based in Australia, comprising a high grade underground copper mine and a concentrate plant. The plant throughput is approximately 1.1 million MT of ore per annum and Cobar produces approximately 180k DMT of copper concentrate per annum.

Cobar's current expected life of mine is approximately five years based on reserves and approximately 11 years based on resources, although Cobar has previously been able to extend its expected life of mine through exploratory drilling in the area covered by its concession. Cobar is currently finalising a feasibility study for a hoisting shaft extension, which will allow lower cost access to deeper resource in the mine by the beginning of 2013 for an estimated capital cost of U.S.$139 million. The shaft will also have potential to allow an increase in annual production by approximately 90k DMT. In addition, Cobar has entered into two joint ventures to explore tenements in the area.

Glencore is Cobar's sole customer through a 100 per cent. off-take agreement over the life of the mine. Glencore buys all of the concentrate via a profit sharing agreement with treatment charge and refining charge expressed as a percentage of contained metal.

LOS QUENUALES:

Glencore owns 97.1 per cent. of Los Quenuales, a zinc and lead producer in Peru with mining operations at Iscaycruz and Yauliyacu. The remaining 3 per cent. is indirectly listed on the Lima Stock Exchange. The Iscaycruz operations consist of underground and open pit mines and concentrator, producing zinc and lead concentrates and Los Quenuales is in the process of negotiating surface access rights to mine 5 million MT of zinc-bearing resource (it currently holds only sub-surface rights). The expected life of Iscaycruz is three years based on reserves and ten years based on resources. Yauliyacu consists of an underground mine and a concentrator plant, producing zinc and lead/silver concentrates. The expected life of Yauliyacu is two years based on reserves and 19 years based on resources. Current capacity of Los Quenuales is 330k MT of zinc concentrate and 40k MT of lead concentrate per annum. In order to preserve the value of high grade ore during a period of low prevailing zinc prices, the Iscaycruz mine was placed on care and maintenance in March 2009, and operations were restarted in April 2010. The Yauliyacu mine operated at full capacity throughout this period. Due to a high level of silver in its concentrates, the operation remained profitable at the then prevailing low prices. Los Quenuales employs approximately 3,100 full time staff and contractors.

Glencore has a life of mine off-take agreement covering 100 per cent. of production from both mines with pricing on arm's length terms.

PASAR:

Glencore owns 78.2 per cent. of Pasar, the sole copper smelter and refinery in the Philippines, with the remaining 22 per cent. owned by local investors. Pasar is located on the coast of Leyte Island, and owns its own port, which can accommodate vessels with a displacement of up to 50k dead weight tonnage, from which production is shipped mainly to south east Asian markets. In addition, the assets also include an auxiliary sulphuric acid plant and a dore plant which produces an alloy of gold and silver. Pasar also produces as by-products selenium, slag, iron concentrates and gypsum. Pasar's current smelter capacity is 720k MT per annum of concentrate and its current refinery capacity is 215k MT per annum of cathodes.

Glencore supplies Pasar with a proportion of its copper concentrate and purchases 100 per cent. of Pasar's copper cathode exports through an off-take agreement based on LME prices.

PORTOVESME:

Glencore owns 100 per cent. of Portovesme, a zinc and lead smelter located in Sardinia, Italy. Portovesme is Italy's only primary zinc and lead smelter and comprises a metallurgical integrated smelting complex, with both primary and secondary smelting activities, including an electrolytic plant, a lead smelter, waelz kilns and a lead and precious metals refinery. Due to market conditions, the waelz kilns, lead smelter and lead refinery were placed on care and maintenance in 2009. The waelz line restarted operations later that year but the lead smelter and refinery are still on care and maintenance. However, should market conditions allow, Glencore would consider reopening the plant.

The plant has a production capacity of 120k MT per annum of zinc metal, 60k DMT per annum of waelz oxides and 80k MT per annum of lead metal. Portovesme plans to invest U.S.$40 million in a new solvent extraction plant, which began construction in December 2010 and is expected to be completed in the third

quarter of 2012 resulting in an increase of zinc metal production to 140k MT. The solvent extraction plant will treat all the waelz oxide produced from EAF dust recycling, which will make Portovesme vertically integrated for 30k MT per annum of zinc.

In addition to its smelting complex, Glencore also intends to invest approximately U.S.$200 million in an adjoining wind farm power facility to provide low cost power to Portovesme. For this purpose, Portovesme also rents some 10,000 hectares of land surrounding its operations.

PUNITAQUI:

Glencore owns 100 per cent. of Punitaqui, a copper mine and concentrator in Chile, acquired by Glencore as a brownfield development in early 2010. Following rehabilitation works, commercial production commenced in late 2010 with the operation forecast to produce around 40k DMT of copper concentrates in 2011. Work is underway to complete JORC certification of resources, currently estimated to give a mine life of approximately five years.

SINCHI WAYRA:

Glencore owns 100 per cent. of Sinchi Wayra, a company which operates five mining units and concentrating facilities in the Oruro and Potosi regions of Bolivia and which employs approximately 2,600 people. One of these five mines, Bolivar, is operated as a 50:50 joint venture with the Bolivian state mining company, Comibol. Two of the mines, Porco and Colquiri, are run under a lease contract with Comibol. The fourth mine, Poopo, is run under a lease agreement with a local co-operative. The fifth mining unit, the Caballo Blanco group, consists of the wholly owned San Lorenzo/Colquechaquita and its operations are expected to end in the near future. In early 2010, Sinchi Wayra acquired into the Caballo Blanco group, two additional mines, Reserva and Tres Amigos. Both mines became operative in May 2010 and it is intended that these mines will replace the declining production levels at San Lorenzo/Colquechaquita. Collectively, the mines have a current capacity of 205k MT of zinc concentrate, 15k MT of lead concentrate and 6k MT of tin concentrate per annum. The expected life of the mines as a group, considering current production capacities, on average is two years based on reserves and seven years based on resources. Further to a capital expenditure estimated at approximately U.S.$65 million, management believes that annual output can potentially be increased to approximately 300k MT of zinc concentrate and 30k MT of lead concentrate by 2013. The plan is currently being considered further by management, but such a plan is expected to include a project to reprocess old tailings containing significant levels of zinc and tin at the Colquiri mine, together with works to remove processing and hoisting bottlenecks.

Glencore has a 100 per cent. off-take agreement for the life of the mine which is priced on an arm's length basis. Historically, a proportion of Sinchi Wayra's tin concentrates was sold locally to take advantage of lower costs of transportation but, since the fourth quarter of 2009, for commercial reasons, all sales have been made to Glencore.

XSTRATA:

The zinc/copper/lead commodity department benefits from Glencore's relationship with Xstrata. Please refer to Section I: "Information on Glencore—Relationship and commercial arrangements with Xstrata" for further information on Xstrata.

MUTANDA:

Glencore holds a 50 per cent. interest in Samref Congo Sprl which in turn holds an 80 per cent. interest in Mutanda Mining Sprl, the owner of the Mutanda concession. The remaining 20 per cent. in Mutanda Mining Sprl was recently acquired by Rowny Assets Limited from Gécamines. Glencore is the operator.

Mutanda Mining Sprl was granted its rights to the Mutanda concession under its incorporation in May 2001. As part of the mining review process in the DRC, Samref Congo and Gécamines agreed to amend the creation agreement which confirmed Mutanda's exploitation permit. Mutanda is a newly developed high grade copper and cobalt producer, with its operations located in the province of Katanga in the DRC. Mutanda is being developed to produce 110k MT per annum of copper and 23k MT per annum of cobalt contained in cobalt hydroxide as of 2012. Based on current oxide reserves and resources the life of Mutanda's mines collectively are expected to be at least 20 years. A further extension of the ore body in the form of sulphides lies below these reserves which is expected to significantly extend the economic life of the operations. As at 31 December 2010, Mutanda has 929 employees.

Mutanda's licence was granted in accordance with the DRC mining code. As such Mutanda has the right to automatically renew its licence for several further 15-year periods (the licence is first due for renewal in 2022). This will allow Mutanda sufficient time to exploit all available reserves, which is consistent with the concession agreement and the joint venture agreement originally concluded with Gécamines (to which Rowny Assets Limited has acceded in lieu of Gécamines).

Mutanda's updated resource indicates 299 MT of ore grading 1.48 per cent. copper and 0.59 per cent. cobalt. As mentioned above, significant high grade sulphide extensions have been intersected which are not included in these numbers. This, together with competent host rock, indicates the suitability for large-scale underground mining operations beyond the current 20-year mine plan.

Mutanda's existing and planned operations consist of:

- Three open pit mines (Central Open Pit, East Open Pit and Central North West Open Pit). It is expected that these three pits will be consolidated into one large open pit.
- A 20k MT SXEW copper plant was commissioned in the fourth quarter of 2010 at a cost of approximately U.S.$165 million. By 31 December 2010, Mutanda produced 1,851 MT of copper cathodes and as at January 2011 the plant was ramping up production in accordance with the planned commissioning schedule.
- A 40k MT SXEW plant which is expected to be commissioned during the third quarter of 2011, at an estimated cost of U.S.$321 million.

Both the 20k and 40k MT SXEW plants will include the following processes: crushing, screening, milling, pre-leaching, leaching, clarification and SXEW.

Mutanda is currently completing engineering and design works to expand the combined 60k MT per annum SXEW operations to 110k MT per annum. The initial cost estimate for the expansion is U.S.$103.8 million with an expected completion schedule of 15 months (the first quarter of 2012).

- A concentrate operation, which consists of a crusher, small dense medium separation and spiral plant. This operation produces an approximately 25 per cent. copper concentrate, which is onsold to Mopani for refining into copper cathodes, and a high grade cobalt concentrate (more than 6 per cent. Co) for export.
- An acid plant due to be commissioned in August 2011, at an estimated cost of U.S.$69 million. The acid plant is expected to have a daily capacity of 390 MT of sulphuric acid and 73 MT of liquid SO2. Liquid SO2 production will replace SMBS, a reagent used in cobalt leaching. This will enable significant cost savings of approximately U.S.$30 million per annum in reduced costs.

Glencore has a life of mine off-take agreement for all copper and cobalt product produced by Mutanda with pricing based to LME.

KANSUKI:

Glencore holds a 50 per cent. interest in Kansuki Investments Sprl which in turn holds a 75 per cent. interest in Kansuki Sprl, the owner of the Kansuki concession (thereby giving Glencore an effective interest of 37.5 per cent. in Kansuki). The remaining 25 per cent. in Kansuki was recently acquired by Biko Invest Corp. from Gécamines. Glencore is the operator.

Kansuki Sprl was granted its rights in the Kansuki concession under its incorporation in July 2010. Kansuki is a 185 square kilometre copper and cobalt pre-development project which borders the Mutanda concession.

Kansuki's licence was granted in accordance with the DRC mining code. As such Kansuki has the right to automatically renew its licence for several further 15-year periods (the licence is first due for renewal in 2022). This will allow Kansuki sufficient time to exploit all available reserves, which is consistent with the concession agreement and the joint venture agreement originally concluded with Gécamines (to which Biko Invest. Corp has acceded in lieu of Gécamines).

Exploration of the Kansuki concession by Kansuki Sprl has commenced and is ongoing (currently a total U.S.$4.5 million has been spent). Kansuki's updated resource model as at 31 December 2010 indicated 50.7 million MT of ore grading, 1.29 per cent. copper and 0.31 per cent. cobalt.

There is significant potential along a recognised 12 kilometre anomaly of which less than four kilometres has been drilled. No results from this drilling programme have been included in the above resource numbers. Based on the drilling results to date, it is expected that the existing resource numbers will double

once infill drilling along these four kilometres is completed. Regional exploration, such as induced polarisation surveys, has delineated a second anomaly of approximately six kilometres along a known mineralised zone bordering the eastern boundary of Mutanda.

Kansuki is currently completing its initial feasibility study for submission by June 2011 under the terms of its creation agreement. As operator of both the Mutanda and Kansuki concessions and due to their close proximity (adjacent to each other) the development of Kansuki to a currently estimated 100k MT per annum of copper production by Glencore is expected to be accelerated. Significant synergies are available to the operations, including shared management, power, tailings, infrastructure and the joint mining of the shared high grade copper ore body and preliminary discussions have begun with respect to a potential combination of the Mutanda and Kansuki operations.

Glencore has a life of mine off-take agreement for all copper and cobalt product produced by Kansuki. Pursuant to the off-take agreements, all terms are arm's length and pricing for copper prices is LME based.

NYRSTAR:

As at 31 December 2010, Glencore owned 7.8 per cent. of Nyrstar, a leading global multi-metals business producing significant quantities of zinc and lead as well as other products including silver, gold and copper. Nyrstar is listed on NYSE Euronext Brussels. On 25 February 2011, Nyrstar launched a rights offering at a ratio of seven new shares for ten rights. Glencore has participated in the rights offering as a result of which, as at 29 April 2011, the last practicable date prior to publication of the Prospectus, Glencore held 7.8 per cent. of Nystar. As at 29 April 2011 Nyrstar had a market capitalisation of U.S.$2.3 billion.

PERKOA:

The Perkoa project is a zinc mine under construction in Burkina Faso. Glencore's ownership interest in Perkoa will increase to 50.1 per cent. by 2012 through its joint venture with Blackthorn Resources. The project has a JORC reserve of 6.3 million MT at 13.9 per cent. zinc, and expected mine life of nine years and is managed by Glencore. Commercial production is expected to commence in the first half of 2012.

In addition, on 23 March 2011, it was announced that Glencore had acquired a stake of 13 per cent. in Blackthorn Resources (its joint venture partner in Perkoa). Provided Glencore's shareholding remains above 9.99 per cent., Glencore will have the support of Blackthorn Resources to nominate a representative to sit on its board. Any such appointment will be subject to the usual shareholder approvals.

RECYLEX:

Recylex is the third largest lead producer in Europe, expected to produce approximately 135k MT lead metal in 2011. The Company recycles more than 10 million lead batteries per annum to produce secondary lead and plastic. It also recycles approximately 180k MT of waste steel dust from electric arc furnaces and produces waelz oxides containing approximately 45k MT of secondary zinc metal. It has eight production sites and employs more than 650 people in France, Germany and Belgium. As at 29 April 2011, Recylex had a market capitalisation of U.S.$0.2 billion.

Glencore purchases lead metal from Recylex under a short- to medium-term off-take agreement. Glencore also purchases lead metal, lead intermediate products and waelz oxides from Recylex under spot arrangements based on LME prices. Glencore accounted for 17.8 per cent. of Recylex's sales in the year ended 31 December 2010.

VOLCAN:

Glencore currently owns 5.94 per cent. of Volcan, the second largest zinc producer in Peru. An agreement is in place between Glencore and Volcan for the purchase of zinc and lead concentrates under a multi-year contract. As at 29 April 2011, Volcan had a market capitalisation of U.S.$3.8 billion.

POLYMET:

Glencore currently owns an aggregate of 14,433,962 common shares of Polymet, representing 9.3 per cent. of the 154,525,791 common shares outstanding. In addition, Glencore has the right to exchange U.S.$27.6 million in debentures into an additional 6,887,783 common shares of Polymet, to exercise outstanding warrants for an additional three million common shares of Polymet at U.S.$2.00 per share, and to acquire an additional ten million common shares of Polymet pursuant to a private placement announced by Polymet, for a total of 34,321,745 common shares representing approximately 19.7 per cent. of Polymet's partially diluted common shares based on capitalised interest as at 31 December 2010.

Polymet, which plans to mine and process copper, nickel, cobalt, platinum and palladium and gold, is listed on the NYSE and the Toronto Stock Exchange and its operational headquarters are located in Hoyt Lakes, Minnesota. As at 29 April 2011, the last practicable date prior to publication of this Prospectus, Polymet had a market capitalisation of approximately U.S.$0.3 billion.

***Alumina/aluminium commodity department (industrial activities, Metals and Minerals business segment)***

*Overview*

The table below summarises information about the key alumina/aluminium producing industrial assets as at 31 December 2010:

| Company | Country | Commodity | Annual production capacity | Glencore's ownership interest | Remaining ownership interest | Any contractual relationship with Glencore |
|---|---|---|---|---|---|---|
| **Controlled:** | | | | | | |
| Columbia Falls . . . . | U.S. | Aluminium | 168k MT | 100% | — | Supply and purchase agreements |
| Sherwin Alumina . . | U.S. | Alumina | 1.6 million MT | 100% | — | Supply and purchase agreements |
| **Non-controlled:** | | | | | | |
| Century Aluminum . | U.S. | Aluminium | 896k MT | 44.0% (39.1% voting common stock) | Publicly traded on NASDAQ | Supply and purchase agreements |
| UC Rusal . . . . . | Russia | Alumina | 11.3 million MT | 8.75% | Publicly traded on HKSE, Euronext Paris, MICEX and RTS | Purchase agreements |
| | | Aluminium | 4.5 million MT | — | | Purchase agreements |

*Financial information*

The table below sets out selected financial information on the controlled aluminium/alumina industrial activities for the years ended 31 December 2008, 31 December 2009 and 31 December 2010. The information in this table has been extracted without material adjustment from Glencore's accounting books and records, which are unaudited:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* *(Unaudited)* | | |
| **Alumina/aluminium** | | | |
| Revenue . . . . . | 263 | 235 | 422 |
| Adjusted EBITDA pre-exceptional items[1][2] . . . . . | 34 | (117) | (9) |
| Adjusted EBIT pre-exceptional items[1][2] . . . . . | 22 | (125) | (17) |
| Capex . . . . . | 13 | 19 | 31 |

Notes:

(1) Excludes share of income from associates and dividends.

(2) 2009 negatively impacted by a U.S.$82 million charge related to natural gas hedges entered into by Sherwin Alumina to lock-in natural gas prices.

*Production*

The table below sets out the production of the controlled alumina/aluminium assets for the years ended 31 December 2008, 31 December 2009 and 31 December 2010:

| | Year ended 31 December | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | 2008 | | | 2009 | | | 2010 | | |
| | Production | Production using feed from own sources | Production using feed from third party sources | Production | Production using feed from own sources | Production using feed from third party sources | Production | Production using feed from own sources | Production using feed from third party sources |
| | | | | | *('000 MT)* | | | | |
| Columbia Falls *Aluminum* . . . | 74.9 | N/A | 74.9 | 16.5 | N/A | 16.5 | — | N/A | — |
| Sherwin Alumina *Alumina* . . . . . | 1,455 | N/A | 1,455 | 1,206 | N/A | 1,206 | 1,259 | N/A | 1,259 |

COLUMBIA FALLS:

Glencore owns 100 per cent. of Columbia Falls. Columbia Falls is an aluminium smelter in Montana in the U.S., which has a production capacity of 168k MT of primary aluminium per annum. The plant is currently idle.

SHERWIN ALUMINA:

Glencore owns 100 per cent. of an alumina refinery processing plant, Sherwin Alumina, which is located near Corpus Christi, Texas, in the U.S. The plant produces two main classes of products: smelter grade alumina (capacity of 1.4 million MT per annum) and hydrate chemical grade alumina (capacity of 0.2 million MT per annum). Glencore provides all of the bauxite Sherwin Alumina requires for its refinery and processing operations. Glencore also purchases and markets all of the alumina that Sherwin Alumina produces.

Alumina refining is a very energy intensive process. Given Sherwin Alumina's location on the U.S. Gulf coast, it utilises U.S. natural gas as its energy source. The competitive position of Sherwin Alumina has dramatically improved recently given the relatively low price of U.S. natural gas in comparison to other fuels used in the worldwide alumina refining industry. This development in conjunction with contractual arrangement for other raw materials that are linked to LME prices for aluminium (effectively creating a natural hedge) has allowed Sherwin Alumina to substantially improve its position on the global cost curve. In addition to this, Sherwin Alumina has made significant investments in its port infrastructure in 2010 in order to reduce fixed operating costs going forward.

CENTURY ALUMINUM:

Glencore owns a 44.0 per cent. stake in Century Aluminum, a company listed on the NASDAQ with aluminium smelting and refining operations in the U.S. and Iceland. As at 29 April 2011, the last practicable date prior to the publication of this Prospectus, Century Aluminum had a market capitalisation of U.S.$1.9 billion. Century Aluminum's smelting operations include three wholly owned smelters: Nordural in Iceland; Hawesville in Kentucky, U.S.; and Ravenswood in West Virginia, U.S., which have production capacities of 260k MT, 244k MT and 170k MT per annum, respectively. Century Aluminum also owns a 49.67 per cent. stake in the Mount Holly smelter in South Carolina, U.S., which has a production capacity of 222k MT per annum. Century Aluminum is currently constructing a greenfield aluminium plant, the Helguvik Project, in Iceland which is expected to have a production capacity in the range of 250k MT to 360k MT upon its completion.

Glencore provides alumina to Century Aluminum at prices which are referenced to the price of aluminium on the LME. Century Aluminum sells aluminium to Glencore on both a spot and long-term contract basis, with reference to LME prices. Century Aluminum is also party to separate ten-year and seven-year alumina tolling agreements in Iceland with Glencore for 90k MT and 40k MT, expiring in 2016 and 2014, respectively.

In addition, Glencore has entered into two cash-settled total return swaps over 9.8 per cent. of Century Aluminum's common shares. The swaps provide Glencore with additional economic exposure to changes in Century Aluminum's share price. The swaps have been entered into at prices of U.S.$9.72 and

U.S.$16.66 per common share and terminate in two years from September 2010 and March 2011, respectively. The counterparty to both swaps is a highly rated financial institution.

Glencore currently has two directors on the board of Century Aluminum (being Willy Strothotte and Daniel Goldberg) and has also designated an independent director (being Andrew Michelmore) as its appointee on the Century Aluminum board. In addition, Glencore has designated for nomination by the board of Century Aluminum a further independent director (being Terrence Wilkinson) and two directors (being Steven Kalmin and Steven Blumgart), each of whom will be standing for election at the Century Aluminum 2011 annual general meeting expected to be held in June 2011. Century Aluminum has agreed to publicly support and recommend the election of Mr Wilkinson, Mr Kalmin and Mr Blumgart at such annual general meeting.

UC RUSAL:

Glencore owns 8.75 per cent. of UC Rusal, a vertically-integrated upstream aluminium company listed on the HKSE, Euronext Paris and the Russian stock exchanges MICEX and RTS. As at 29 April 2011, the last practicable date prior to the publication of this Prospectus, UC Rusal had a market capitalisation of U.S.$23.2 billion. UC Rusal operates eight bauxite and nepheline ore mines, 12 alumina refineries (of which nine were in operation in the year ended 31 December 2010), 16 aluminium smelters, three foil mills, one cathode plant and packaging production centres along with power-generating facilities. UC Rusal employs more than 75,000 people, working in 19 countries, spanning five continents. UC Rusal's production capacities are 4.5 million MT of aluminium and 11.3 million MT of alumina per annum.

In addition to its mining and refining operations, UC Rusal also holds a 25 per cent. stake in Norilsk Nickel, the largest global producer of nickel and palladium.

UC Rusal supplies Glencore with alumina and aluminium through long-term supply contracts, pursuant to which, Glencore is UC Rusal's single largest purchaser of alumina and aluminium. Glencore is entitled to appoint one nominee to the UC Rusal board of directors, currently Ivan Glasenberg. In addition, Glencore has representation on the UC Rusal marketing committee, providing Glencore with visibility over global alumina and aluminium production and supply trends and a strong position from which to compete for business within the global markets for these products.

OTHER:

The alumina/aluminium commodity department is in discussions to acquire a stake in an alumina refinery. Should this proceed, it would not be a material acquisition.

***Ferroalloys/nickel/cobalt commodity department (industrial activities, Metals and Minerals business segment)***

*Overview*

The table below summarises information about the key ferroalloys/nickel/cobalt producing industrial assets as at 31 December 2010:

| Company | Country | Commodity | Annual production capacity | Glencore's ownership interest | Remaining ownership interest | Any contractual relationship with Glencore |
|---|---|---|---|---|---|---|
| **Controlled**: | | | | | | |
| Murrin Murrin[(1)] . . | Australia | Nickel<br>Cobalt | 40k MT<br>3.5k MT | 82.4% | 17.6% publicly traded | Purchase agreements |
| **Non-controlled**: | | | | | | |
| Xstrata . . . . . | UK/Switzerland | Nickel<br>Ferroalloys | 121KT<br>1,979 KT | 34.5% | 65.5% publicly traded on London Stock Exchange and SIX | Purchase agreements, agency agreements, marketing agreements, distribution agreements |

Note:

(1) Glencore holds its interest in Murrin Murrin via a direct 40 per cent. interest in Murrin Murrin and an indirect 70.6 per cent. interest in Minara, which holds the remaining 60 per cent. interest in Murrin Murrin. On 24 February 2011, Minara issued additional shares to employees, reducing Glencore's shareholding in Minara to 70.5 per cent. Effective ownership in Murrin Murrin consequently reduced to 82.3 per cent.

*Financial information*

The table below sets out selected financial information on the controlled ferroalloys/nickel/cobalt industrial activities for the years ended 31 December 2008, 31 December 2009 and 31 December 2010. The

information in this table has been extracted without material adjustment from Glencore's accounting books and records, which are unaudited:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* *(Unaudited)* | | |
| **Ferroalloys/Nickel/Cobalt** | | | |
| Revenue | 649 | 609 | 713 |
| Adjusted EBITDA pre-exceptional items[1] | 113 | 119 | 189 |
| Adjusted EBIT pre-exceptional items[1] | 13 | 21 | 79 |
| Capex | 138 | 10 | 67 |

Note:

(1) Excludes share of income from associates and dividends.

*Production*

The table below sets out production of the controlled ferroalloys/nickel/cobalt assets for the years ended 31 December 2008, 31 December 2009 and 31 December 2010:

| | Year ended 31 December | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | 2008 | | | 2009 | | | 2010 | | |
| **Murrin Murrin** | Production | Production using feed from own sources | Production using feed from third party sources | Production | Production using feed from own sources | Production using feed from third party sources | Production | Production using feed from own sources | Production using feed from third party sources |
| | *(MT)* | *(MT)* | *(MT)* | *(MT)* | *(MT)* | *(MT)* | *(MT)* | *(MT)* | *(MT)* |
| Nickel | 30,514 | 27,674 | 2,840 | 32,977 | 31,761 | 1,216 | 28,378 | 27,679 | 698 |
| Cobalt | 2,018 | 1,906 | 111 | 2,350 | 2,262 | 88 | 1,976 | 1,881 | 94 |

*Reserves and resources*

The table below sets out the total mine reserves and resources summary for the ferroalloys/nickel/cobalt commodity department:

| | | Reserves | | | Resources | | | |
|---|---|---|---|---|---|---|---|---|
| **Minara[1][2]** | Commodity | Proved | Probable | Total | Measured | Indicated | Inferred | Total |
| Murrin Murrin[1][2] | Ore ('000 MT) | 131,183 | 64,948 | 196,131 | 152,068 | 105,966 | 10,283 | 268,318 |
| | Nickel (%) | 1.05 | 1.04 | 1.05 | 1.03 | 0.99 | 0.9 | 1.01 |
| | Cobalt (%) | 0.078 | 0.079 | 0.078 | 0.074 | 0.076 | 0.058 | 0.074 |
| | Nickel Cut off grade | | | | 0.8% | 0.8% | 0.8% | |

Notes:

(1) As at 31 December 2010.

(2) Remaining mine life: at the current nameplate capacity of 40k MT per annum, the project's operation life is in excess of 50 years. Expiry date of relevant tenement: different tenure for each tenement, ranging from 13 February 2012 to 5 October 2031.

Competent Persons: the information relating to mineral resources is based on information compiled by Mr Stephen King and Mr David Selfe and has been prepared in accordance with the JORC Code. The information relating to ore reserves is based on information compiled by Mr Brett Fowler and has been prepared in accordance with the JORC Code. The information relating to metallurgical results is based on information compiled by Mr John O'Callaghan and has been prepared in accordance with the JORC Code. Mr Selfe, Mr King, Mr Fowler and Mr O'Callaghan all have sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which they are undertaking.

MURRIN MURRIN:

Glencore owns 70.6 per cent. of Minara, a nickel producer listed on the Australian Securities Exchange. Minara holds a 60 per cent. interest in the Murrin Murrin joint venture, which owns the Murrin Murrin nickel/cobalt project and which it also operates. As at 29 April 2011, the last practicable date prior to publication of this Prospectus, Minara had a market capitalisation of U.S.$1.0 billion. Glencore also owns 100 per cent. of Glenmurrin Pty Ltd., which holds the remaining 40 per cent. interest in the Murrin Murrin joint venture. Glencore, therefore, effectively owns 82.4 per cent. of Murrin Murrin through its interests in Minara and Glenmurrin Pty Ltd. Murrin Murrin is one of Australia's largest nickel producers and is one of the top ten producers of nickel in the world. The Murrin Murrin plant is projected to produce 33k MT to 37k MT of nickel and a quantity of cobalt proportionate to historic production in 2011. Its integrated operations include open pit mining and ore processing at the plant.

Glencore has off-take agreements with Minara and Glenmurrin Pty Ltd. for 100 per cent. of metal production which mature on 1 December 2011 and 30 June 2018, respectively. The off-take agreements supply Glencore with nickel produced by Murrin Murrin based on LME prices and cobalt produced by Murrin Murrin based on market sales prices. Glencore has taken steps to renew its off-take arrangements with Minara ahead of the expiry of the off-take agreement on 1 December 2011 and has agreed to renew its off-take agreement with effect from 1 December 2011 subject to approval from the independent shareholders of Minara at the Minara annual general meeting to be held on 13 May 2011.

XSTRATA:

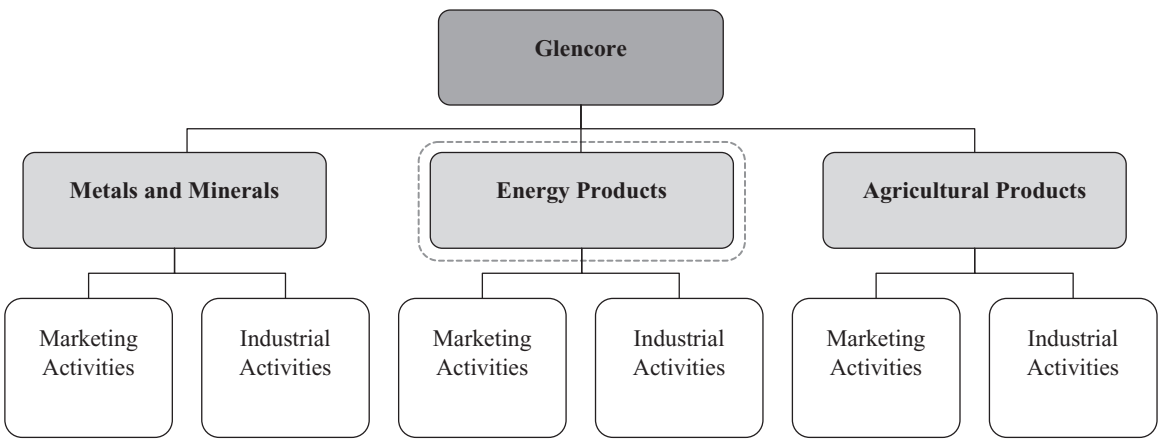
The ferroalloys/nickel/cobalt commodity department benefits from Glencore's relationship with Xstrata. Please refer to Section I: "Information on Glencore—Relationship and commercial arrangements with Xstrata" for further information on Xstrata.

OTHER:

The ferroalloy/nickel/cobalt commodity department is in discussions, along with a joint venture partner, to acquire certain manganese mining operations and production facilities, along with a long term marketing agreement and ore offtake contract. Should this proceed, it would not be a material acquisition.

**Energy Products**

**Introduction (Energy Products business segment)**



Glencore's Energy Products business segment markets crude oil and oil products (such as fuel oil, heating oil, gasoline, naphtha, jet fuel, diesel and liquefied petroleum gas), coal and coke. These commodities are marketed primarily through Glencore's offices in London, Baar, Stamford and Singapore, with key support from a number of other locations.

Selected key financial information in relation to the Energy Products business segment's marketing and industrial activities for the years ended 31 December 2008, 31 December 2009 and 31 December 2010 is set out below. This information has been extracted without material adjustment from Section VI: "Historical

Financial Information" except where marked as unaudited. Unaudited information has been extracted without material adjustment from Glencore's accounting records.

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| **Marketing Activities** | | | |
| Revenue (unaudited)[1] | 95,254 | 60,790 | 87,850 |
| Adjusted EBITDA pre-exceptional items[2] | 1,609 | 945 | 470 |
| Adjusted EBIT pre-exceptional items[2] | 1,609 | 945 | 450 |
| **Industrial Activities** | | | |
| Revenue (unaudited)[1] | 2,903 | 1,601 | 1,499 |
| Adjusted EBITDA pre-exceptional items[2][3][4] | 659 | 371 | 313 |
| Adjusted EBIT pre-exceptional items[2][3][4] | 549 | 322 | 189 |
| Share of income from associates and dividends (excl. Xstrata)[4] | (27) | 91 | 46 |
| Capex | 698 | 393 | 818 |
| **Total Energy** | | | |
| Revenue | 98,157 | 62,391 | 89,349 |
| Adjusted EBITDA pre-exceptional items[2][5] | 2,241 | 1,407 | 829 |
| Adjusted EBIT pre-exceptional items[2][5] | 2,131 | 1,358 | 685 |

Notes:

(1) Revenue is not split between Marketing and Industrial activities in the audited Historical Financial Information set out in Section VI of this document and is therefore marked as unaudited. Total segment and total Group revenue is audited.

(2) Includes corporate selling, general and administrative expenses, but excluding variable pool bonus accrual, which is recorded at group/corporate level.

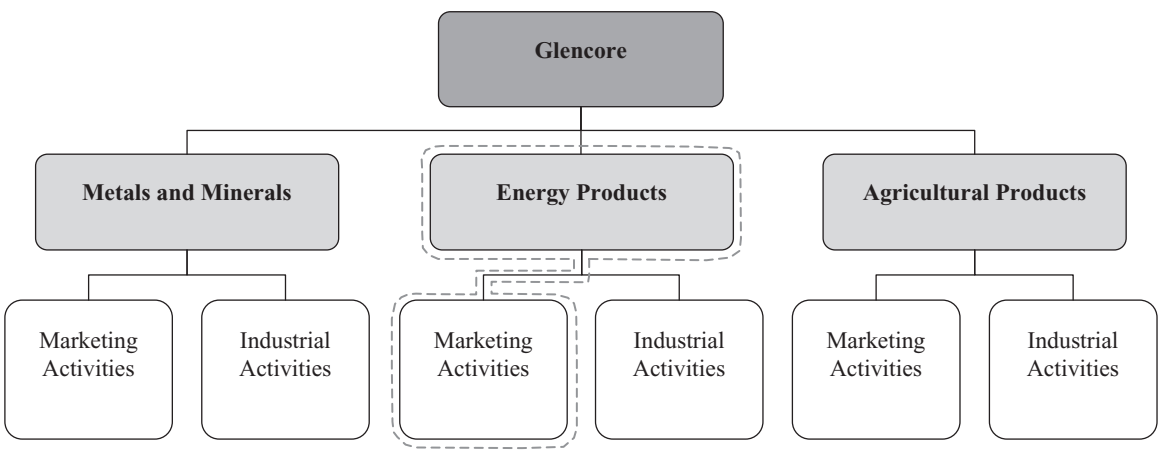
(3) Excludes share of income from associates and dividends.

(4) Adjusted EBITDA pre-exceptional items plus Share of income from associates and dividends and Adjusted EBIT pre-exceptional items plus Share of income from associates and dividends are audited.

(5) Includes share of income from associates and dividends.

The Energy Products business segment currently has some 800 direct employees globally (excluding individuals employed within Glencore's industrial activities), with approximately 340 based in London, 86 in Stamford, 107 in Singapore and 39 in Baar, with the remaining approximately 230 spread across 23 global office locations. This business segment also employs some 4,600 individuals globally in its industrial activities.

**Marketing activities (Energy Products business segment)**



The Energy Products business segment focuses on the following commodity departments: oil and coal/coke. The activities of Glencore's Energy Products business segment are supported by ownership interests in controlled and non-controlled coal mining and oil production operations as well as investments in strategic handling, storage and freight equipment and facilities. Glencore's energy products are marketed primarily through Glencore's offices in London, Baar, Stamford and Singapore, with key support from a number of other locations, including Beijing and Moscow, in order to take advantage of geographical opportunities. The global teams operate in an integrated manner.

The table below sets out the marketing volumes sold to third parties of each main commodity category handled by the Energy Products business segment for the years ended 31 December 2008, 31 December 2009 and 31 December 2010:

| Marketing volumes sold to third parties | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(million MT)* | | |
| Crude oil | 39.7 | 39.7 | 51.9 |
| Oil products | 68.7 | 69.3 | 66.9 |
| Thermal coal | 90.1 | 98.0 | 92.2 |
| Metallurgical coal | 5.6 | 7.7 | 8.0 |
| Coke | 1.5 | 0.3 | 0.7 |

Examples of marketing strategies for the Energy Products business segment include:

- Glencore uses its ability to store significant quantities of oil and oil products either on vessels or in on-land storage facilities to exploit time-dependent arbitrage opportunities created by higher forward prices (so-called carry trades in a contango-shaped market).
- Glencore uses its infrastructure and global information network to exploit arbitrage opportunities created by geographic price dislocations.
- Glencore leverages its blending capabilities in order to meet customers' product specifications in ways that maximise income, for example by blending cheaper products to create more valuable products or products that are demanded by more specific customers.
- Glencore uses its storage assets to ensure that it has physical oil available for delivery against its marketing obligations, limiting the economic downside risk that Glencore takes on sales of physical oil.
- Glencore uses its established relationships with significant players and the handling of significant volumes in geographically diverse regions to provide it with insight into local and global supply and demand dynamics, enabling Glencore rapidly to identify market trends or specific arbitrage opportunities.
- Glencore manages the source of supply of coal and coke from all key origins in order to maximise geographic arbitrage opportunities. Prodeco's supply of high-quality coal provides Glencore with the opportunity to export directly to specific markets in Europe and North America. Access to freight at competitive rates represents a key component in being able to seize geographic arbitrage opportunities.

***Oil commodity department (marketing activities, Energy Products business segment)***

*Overview*

The oil commodity department comprises marketing operations in crude oil, refined products, natural gas and freight, supported by access to a wide range of logistics, storage and industrial assets investments. Crude oil represents the most significant product supplied by physical volume. Oil products primarily include mid-distillates, gasoline, residuals, naphtha, natural gas and liquid petroleum gas.

*Market*

Glencore believes it is among the world's largest non-integrated physical suppliers of crude oil and oil products, supplying a physical volume of approximately 2.5 million bbls per day in 2010. This is a volume equivalent to some 3 per cent. of the world's oil consumption.

*Suppliers*

Glencore sources crude oil and oil products from a variety of supplier types. Its diverse supplier base includes the major integrated oil companies, NOCs, independent oil companies, other marketing companies and refineries. No off-take arrangement (other than that with its affiliate OAO RussNeft which accounted for some 4 per cent. of purchases in the year ended 31 December 2010) accounts for a significant proportion of total purchases. The top ten suppliers accounted for approximately 30 per cent. of the total purchases in the year ended 31 December 2010. Eight of the top ten suppliers in the year ended 31 December 2010 were also in the top ten suppliers in the year ended 31 December 2009.

*Customers*

There is a high degree of overlap between the crude oil and oil products customer and supplier base, particularly in respect of the major integrated oil companies. Five of the top ten suppliers in the year ended 31 December 2010 are also amongst the top ten customers. The top ten customers accounted for approximately 24 per cent. of sales in the year ended 31 December 2010. Seven of the top ten customers in the year ended 31 December 2010 were also in the top ten customers in the year ended 31 December 2009. Glencore's significant customers are the major integrated oil companies such as Shell, BP and ExxonMobil, as well as NOCs such as Indian Oil Corporation Ltd, Nigerian National Petroleum Company and Petróleos Mexicanos. In addition to the major integrated oil companies and NOCs, crude oil and oil products are sold to a diverse customer base, including utilities and oil refineries. While the percentage of term contracts is relatively small, this is largely consistent with the structure of the oil market and spot contracts are primarily with customers with whom relationships have been established and developed over a long time and are therefore considered similar in nature to term contracts due to their expected renewal. Glencore is also active in supplying natural gas to industrial consumers, with the gas delivered via pipeline in the U.S., the United Kingdom and other parts of Europe.

*Features of the market*

The marketing operations principally involve physical sourcing, storage, blending and distribution of oil. Paper transactions are also entered into for the purposes of hedging and/or taking or increasing exposures, within group limits and policies, where a physically-backed position exists. The availability of liquid electronic trading markets, covering the majority of the products marketed by the crude oil and oil products operations, enables marketers to hedge their physical oil activities as well as provide profit enhancing opportunities in relation to physical marketing strategies.

*Logistics*

Glencore's crude oil and oil products operations source their freight requirements through arrangements with Glencore's internal oil freight desk. Such voyages make up approximately 35 per cent. of voyages by revenue procured by the freight desk, with the balance undertaken for third parties. Glencore has a large and diversified fleet of 203 vessels as at 31 December 2010 operated under various short and long-term time charters and commercial management arrangements; of which 176 vessels are held under time charter, both from third party owners and from Glencore's own joint-venture and 100 per cent. equity interests, and another 27 vessels are commercially managed for third party owners (not leased or owned). The average remaining fixed charge hire period for the majority of 176 vessels under time charter was approximately two years at such date. In total, Glencore has equity interests in 41 vessels, which are delivered or currently under construction, with expected progressive delivery until March 2012. The majority of these vessels service Glencore's Energy Products business segment. Where Glencore part owns vessels through joint venture arrangements, its joint venture partners are typically responsible for the technical management of these vessels, while Glencore is typically responsible for the commercial management of these vessels under charter arrangements. Many vessels are flexible and can also handle vegetable and palm oils.

Glencore's logistical operations also include Chemoil, a leading supplier of marine fuels listed on the Singapore Stock Exchange. Glencore completed its acquisition of a 51.54 per cent. stake in March 2010. Chemoil's primary business is the marketing and supply of bunker fuel and fuel oil and it operates in major shipping ports around the globe and owns or leases key storage terminals amounting to a total of 1.5 million cubic metres.

Finally, Glencore's logistical operations are supported by its access to some 9.0 million cubic metres of storage capacity that it holds through a network of storage tanks and terminals that it owns interests in (including Chemoil) or leases from third parties. The portion of storage capacity in which Glencore has equity interests amounts to some 3.9 million cubic metres, comprised of a number of facilities in strategic locations around the world.

*Competitors*

Glencore's main competitors are Vitol Group, Trafigura Group, Mercuria Energy and Gunvor, all of which are largely asset-light (little, if any, upstream production) business models. Glencore also faces marketing competition from banks such as Morgan Stanley and Goldman Sachs, which have some infrastructure and no current oil production, although the large majority of their business activities involve derivatives and

not the physical sourcing and distribution of oil. Volumes captured by oil majors such as BP and Shell are also in direct competition with Glencore's marketing volumes, although their participation in the market increases overall volume and liquidity.

***Coal/coke commodity department (marketing activities, Energy Products business segment)***

*Overview*

The coal/coke commodity department is involved in the production and marketing of coal products. The marketing activities are supported by the industrial asset stakes, which provide both access to supply and market information.

*Market*

Glencore believes that it is the largest marketer of seaborne coal globally, supplying 100.9 million MT or approximately 11 per cent. of the seaborne coal market in the year ended 31 December 2010. Of the 100.9 million MT marketed, Glencore supplied 8.0 million MT of seaborne metallurgical coal or approximately 3 per cent. of the market and 92.2 million MT of thermal coal or approximately 13 per cent. of the market in the year ended 31 December 2010. Glencore also provided advisory and agency services in respect of a further 125.9 million MT of coal in the year ended 31 December 2010. The coal/coke commodity department's market share of principal, advisory and agency seaborne thermal coal for 2010 was approximately 28 per cent. while for seaborne metallurgical coal it was approximately 12 per cent. The department's share of principal, advisory and agency seaborne coal marketed was approximately 24 per cent. in the same year. In the coke market, Glencore believes that it has a significant position in China with approximately 17 per cent. share of Chinese coke exports.

*Suppliers*

In the year ended 31 December 2010, the coal/coke commodity department sourced approximately 25 per cent. of sales from its stakes in industrial assets. Glencore has maintained a relatively consistent and broad mix of key suppliers. The top ten suppliers accounted for approximately 52 per cent. of total purchases by volume in the year ended 31 December 2010. Eight of the top ten suppliers in the year ended 31 December 2010 were also in the top ten suppliers in the year ended 31 December 2009, reflecting long-term relationships.

Approximately 40 per cent. of the volumes purchased from the top ten suppliers in the year ended 31 December 2010 were under long-term contracts. Six of the top ten suppliers in the year ended 31 December 2010 were under long-term contracts.

Glencore also currently owns 34.5 per cent. of Xstrata, which has substantial coal mining operations in Australia, South Africa, Canada and Colombia, in respect of whose coal exports, Glencore provides advisory services. The main sources of Glencore's principal steam coal purchases are the coal mining companies in South Africa, Russia, Australia, Colombia, the U.S., Canada and Indonesia, accounting for most of the strategically important producing regions. Glencore's diversified supply base allows it to better manage the changing nature of coal demand and supply dynamics.

*Customers*

Glencore supplies thermal coal to a diverse geographic and industrial customer base, including major utilities in Spain, France, Italy, the United Kingdom, Hong Kong, China, Japan, Taiwan and South Korea. Glencore also sells coal to major cement producers, steel mills, chemical plants and other industrial users throughout the world. The top ten customers represented approximately 40 per cent. of sales in the year ended 31 December 2010. Six of the top ten customers in the year ended 31 December 2010 were also in the top ten customers in the year ended 31 December 2009. Glencore markets coal either on a principal basis, where it takes ownership of the coal, or on an agency/advisory basis, pursuant to a marketing agreement. The three primary marketing agreements are with Xstrata, which is a market advisory agreement until 2022, PT Kaltim Prima, the largest coal producer in Indonesia, which is a marketing agreement until 2021 and PT Arutmin Indonesia, which is a marketing agreement from November 2011 to September 2019. Approximately 20 per cent. of the volumes sold to the top ten customers in the year ended 31 December 2010 are under long-term sales agreements.

*Features of the market*

Whilst traditionally coal has been sold on a physical bilateral basis, without a supporting commodity exchange, in recent years, a sizeable coal paper derivatives market has developed, providing a spot and forward market for certain standard coal specifications. Glencore is able to transact in these markets in order to manage risks in relation to its physical supply of coal products.

*Logistics*

Glencore's coal operations employ a specialist freight team located in Baar and Singapore. This team uses its considerable immersion in the seaborne bulk freight market to source competitive freight from third party owners and carriers. The coal freight business operates four cape and two panamax size vessels on long-term time charter (between five and 15 years' duration) and owns two supramax vessels through joint ventures. In addition, the coal/coke department has access to 28 sets of paired tugs/barges on long-term time charter servicing Glencore's Indonesian coal transhipment operations.

The timing of procuring freight for coal operations is dictated primarily by physical coal sales activities, but also by global freight market dynamics at a point in time and/or forward expectations. Furthermore, geographic and time spreads are taken in order to allow the coal team to fully arbitrage relative value opportunities between the various origins and destinations of the underlying commodity. Maximum flexibility and optionality is thus sought to be maintained at all times. The operation manages freight from a combination of voyage and time charter based contracts, spot market bookings and derivative contracts which are primarily used to hedge physical freight exposure inherent in the overall position. Freight services are also supplied to third parties and are often sourced via joint venture agreements to enhance volume and gain timely market information in relation to industry trade patterns and rate developments.

Glencore's coal freight business has experienced significant growth from 1994 (3.3 million MT carried with 70 vessels) to 2010 (35.4 million MT carried with 485 vessels).

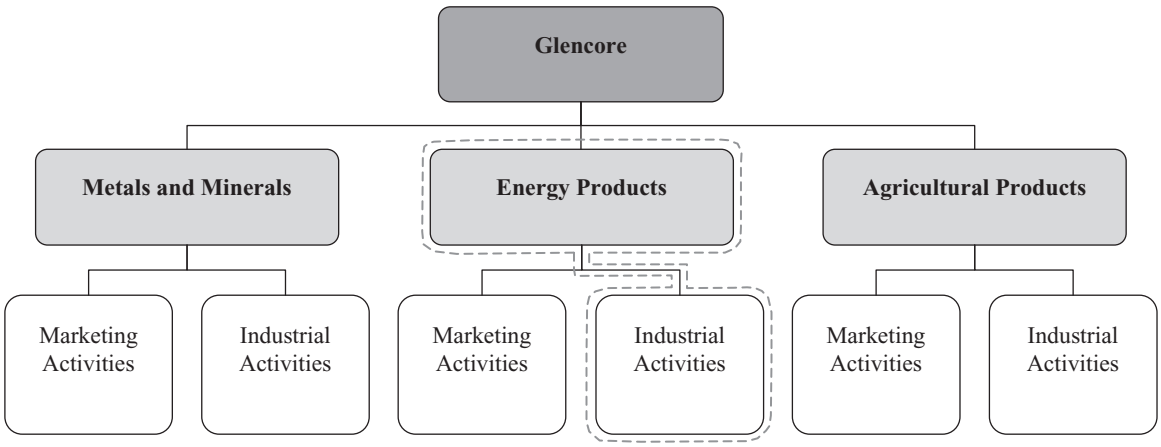
The coal/coke group logistical operations are further supported by access to the following storage/blending capacity that enable Glencore to meet specific customer requirements and optimise earnings:

- Calenturitas handling facility with capacity to crush 15 to 17 million MT per annum and a train loading and blending capacity of 22 to 23 million MT per annum.
- Richards Bay Coal Terminal and Maputo Port: Through its investment in Xstrata and Shanduka, Glencore has direct access to Richards Bay Coal Terminal in South Africa. Glencore also directly exports through the Maputo Port in Mozambique. Both of these terminals are natural blending facilities. Richards Bay Coal Terminal with approximately 9 million MT of stockpile capacity and Maputo with approximately 500k MT provide flexibility to stockpile material separately or alternatively on a single stockpile with increased capacity.
- Glencore also has access to facilities in ARA (Antwerp, Rotterdam and Amsterdam) and Russian ports.

*Competitors*

Glencore has no major competitors which share its integrated business model and operate worldwide and on its scale. Instead, its competitors are either producers which largely market their own product and have less geographic market depth and visibility, for example BHP Billiton or Anglo American plc, or companies that have relatively little production capacity and focus mainly on less integrated trading and/or consumer activities, for example Noble Group or power/utility companies.

**Industrial activities (Energy Products business segment)**



***Oil commodity department (industrial activities, Energy Products business segment)***

*Overview*

The table below summarises information about the key oil producing industrial assets as at 31 December 2010:

| Company | Country | Commodity | Annual production capacity | Glencore's ownership interest | Remaining ownership interest | Any contractual relationship with Glencore |
|---|---|---|---|---|---|---|
| **Controlled:** | | | | | | |
| Block I[1] | Equatorial Guinea | Oil and gas | —[2] | 23.75%[3] | 38% Noble Energy Inc.<br>27.55% Atlas Petroleum<br>5% GEPetrol<br>5.66% Osborne Resources Limited | Purchase agreements[4] |
| Block O[1] | Equatorial Guinea | Oil and gas | —[5] | 25%[3] | 45% Noble Energy Inc.<br>30% GEPetrol | Purchase agreements[4] |
| **Non-controlled**: | | | | | | |
| Various oil producing subsidiaries of RussNeft | Russia | Oil | 250,000 bbls/day | 40-49% | 51-60% RussNeft | Purchase agreements |

Notes:

(1) Blocks I and O are both parts of The West African Oil Assets' portfolio. These investments are structured as unincorporated joint ventures, in which each partner receives and markets its share of production.

(2) First production is scheduled for January 2012 at an estimated rate of 50,000 barrels per day.

(3) Glencore is entitled to a greater share of oil production than its percentage ownership of the joint venture as it recovers the carried interest/loans in relation to some of its partners.

(4) To be entered into not less than three months prior to first production.

(5) First production scheduled for the first quarter of 2014 at an estimated rate of 37,500 barrels per day.

*Financial information*

The table below sets out selected financial information on the controlled industrial activities of the oil industrial assets for the years ended 31 December 2008, 31 December 2009 and 31 December 2010. The information in this table has been extracted without material adjustment from Glencore's accounting books and records, which are unaudited:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| | *(Unaudited)* | | |
| **Oil/oil products** | | | |
| Revenue | 1,672 | 534 | 253 |
| Adjusted EBITDA pre-exceptional items[1][2] | 32 | 57 | (12) |
| Adjusted EBIT pre-exceptional items[1][2] | 28 | 49 | (24) |
| Capex | 350 | 144 | 514 |

Notes:

(1) Excludes share of income from associates and dividends.

(2) 2009 and 2010 includes U.S.$18 million and U.S.$40 million, respectively, of oil related exploration expenditures which were not able to be capitalised.

THE WEST AFRICAN OIL ASSETS:

Glencore has equity stakes in two oil and gas production sharing contracts offshore Equatorial Guinea, West Africa (Block I and Block O (the "Blocks")). Significant oil and gas reserves have been discovered in these Blocks following the initial discovery made in Block O in 2005. Two of the discoveries in the Blocks (Aseng and Alen) are under development and are adjacent fields that will benefit from shared infrastructure. In addition to the two development projects, there have been five other discoveries in the Blocks (Carmen, Diega (A-sand), Diega (B-sand), Felicita and Yolanda) and several similar prospects that remain to be drilled. To date, of the 11 exploration or appraisal wells drilled, ten have been successful. First oil is expected from the Block I Aseng field in the first quarter of 2012. Production in the Block O Alen field is expected to commence in the first quarter of 2014.

Blocks I and O form a key part of the Glencore exploration and production portfolio which also includes equity stakes in a further two blocks in Equatorial Guinea, two blocks in Cameroon, two blocks in Mali and one block in the Democratic Republic of Congo. The latest estimated reserves and resources for the Block O and I licences are as follows:

| | Reserves (MMstb)[1] | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Gross field | | | Glencore working interest[2] | | | Glencore net entitlement[3] | | |
| | 1P | 2P | 3P | 1P | 2P | 3P | 1P | 2P | 3P |
| Aseng field[4] | 97 | 113 | 131 | 23 | 27 | 31 | 27 | 30 | 32 |
| Alen field | 45 | 82 | 128 | 11 | 20 | 32 | 10 | 17 | 26 |

Notes:

(1) As at 31 December 2010. The reserves and resources information set out above were reviewed and approved by Gordon R Taylor of RPS, has been prepared in accordance with PRMS and has been extracted without material adjustment from the RPS Report in Section XIV: "Independent Technical Reports".

(2) Glencore working interest in Block O is 25 per cent. and Glencore working interest in Block I is 23.75 per cent.

(3) Glencore's net entitlement is its share of cost oil and profit oil calculated using the product sharing agreement terms.

(4) Includes oil and condensate.

| | Block I and Block O contingent resources (on-block)[1] | | | | | |
|---|---|---|---|---|---|---|
| | Gross field | | | Glencore working interest[2] | | |
| | 1C | 2C | 3C | 1C | 2C | 3C |
| **Liquids (MMstb)[3]** | | | | | | |
| Yolanda[4] | 3.3 | 5.2 | 7.5 | 0.8 | 1.2 | 1.8 |
| Felicita[4] | 1.8 | 3.2 | 5.5 | 0.4 | 0.8 | 1.4 |
| Diega (A-Sand)[4] | 3.3 | 6 | 10 | 0.8 | 1.4 | 2.4 |
| Diega (B-Sand)[4][5] | 24 | 52 | 99 | 5.7 | 12 | 24 |
| Carmen (B-Sand)[4] | 5.1 | 10 | 20 | 1.3 | 42 | 4.9 |
| **Gas (bscf)** | | | | | | |
| Aseng | 419 | 519 | 640 | 100 | 123 | 152 |
| Alen | 471 | 850 | 1,326 | 118 | 213 | 332 |
| Yolanda | 393 | 506 | 640 | 93 | 120 | 152 |
| Felicita | 49 | 71 | 104 | 12 | 18 | 26 |
| Diega (A-Sand) | 122 | 176 | 249 | 29 | 42 | 59 |
| Diega (B-Sand)[5] | 46 | 94 | 193 | 11 | 22 | 46 |
| Carmen (B-Sand) | 24 | 39 | 64 | 6 | 10 | 16 |

Notes:

(1) As at 31 December 2010. The reserves and resources information set out above were reviewed and approved by Gordon R Taylor of RPS, has been prepared in accordance with PRMS and has been extracted without material adjustment from the RPS Report in Section XIV: "Independent Technical Reports".

(2) Glencore working interest in Block O is 25 per cent. and Glencore working interest in Block I is 23.75 per cent.

(3) Includes oil and condensate.

(4) Yolanda and Diega (A-Sand) are 100 per cent. in Block I: Felicita and Carmen (B-Sand) 100 per cent. in Block O: Diega (B-Sand) is 90 per cent. in Block I and 10 per cent. in Block O.

(5) Glencore working interest assumes a 90/10 split between Block I and Block O.

| | Block I and Block O prospective resources (on-block)(Unrisked)[1] | | | | | | | | | |

| Carla | 369 | 707 | 1,327 | 277 | 566 | 1,128 | 68 | 138 | 275 | 23 |

Notes:

(1) As at 31 December 2010. The reserves and resources information set out above were reviewed and approved by Gordon R Taylor of RPS, has been prepared in accordance with PRMS and has been extracted without material adjustment from the RPS Report in Section XIV: "Independent Technical Reports".

(2) Glencore working interest in Block O is 25 per cent. and in Block I is 23.75 per cent.

(3) Sarah A, Isidora, Regina A and Sofia are 100 per cent. in Block I: Adriana NE 100 per cent. in Block O: Arabella 90/10 Block O/Block I, Carla 50/50 Block O/Block I.

(4) Glencore interest for Arabella and Carla are weighted averages of block working interests.

(5) Gas volumes include inerts.

RPS Energy Limited has carried out an independent verification of Glencore's economic valuation of the West African Oil Assets. Further details of this economic valuation are set out in the RPS Report in Section XIV: "Independent Technical Reports".

**Block I:**

The Block I licence area holds the Aseng oil field and the Yolanda gas condensate field, in addition to part of the Alen gas condensate field (shared 95 per cent./5 per cent. between Block O and Block I, respectively) and the Diega oil and gas discovery (shared approximately 10 per cent./90 per cent. between Block O and Block I, respectively). Numerous prospects have also been identified from 3D seismic data, which are analogous to the existing discoveries and fields and have a combined P10 estimated prospective resource of 464 million bbls of liquids and 1,281 bscf of wet gas.

Block I is operated by Noble Energy EG Ltd. ("Noble Energy"), which is part of the Noble Houston group of companies. Noble Houston is an U.S.-based independent energy company listed on the New York Stock Exchange.

The Aseng field was originally discovered in 2007 and appraised in 2008. Latest independent estimates of recoverable reserves on a 3P basis are 131 million bbls of oil and condensate liquids with a further 640 bcf of natural gas as contingent resources on a 3C basis. The Plan of Development ("POD") was approved in

June 2009 and development drilling on the field completed in September 2010. All completion operations are expected to be finished by early April 2011. The final development will comprise a sub-sea tie-back of the production wells via a fixed Floating Production, Storage and Off-take vessel ("FPSO") with gas and water re-injection for enhanced recovery from the reservoir.

First oil is expected from Block I in the first quarter of 2012, with daily production of 50,000 bbls per day from five production wells for the first two years, with production slowly declining thereafter. The FPSO is scheduled for arrival in September 2011. The total development costs of Aseng are estimated at U.S.$1.33 billion, with U.S.$819 million (gross) incurred to 31 December 2010 and the balance to be spent during 2011. Pursuant to the Farmout Agreement, Glencore's share (54 per cent.) of the remaining development capex is expected to be U.S.$276 million. Under the Block I production sharing agreement, each party has the right to lift their own share of the oil. The terms and process for the off-take of the oil produced will be governed by a lifting agreement which will be finalised between the equity partners not less than three months prior to first production.

Glencore has a 23.75 per cent. equity stake in Block I, which was acquired through a farm-out agreement (the "Farmout Agreement") with Atlas Petroleum International Limited ("Atlas"). The remaining equity interests are held by Noble Energy (38 per cent.), Atlas (27.6 per cent.), Osborne Resources Limited (5.7 per cent.) and the National Oil Company of the Republic of Equatorial Guinea (the Compañía Nacional De Petróleos de Guinea Ecuatorial or "GEPetrol") (5 per cent.). Under the terms of the Farmout Agreement, Glencore agreed to fund Atlas's share of costs to first oil in return for a 25 per cent. equity interest in Block I (of which a 1.25 per cent. revenue interest was subsequently assigned to GEPetrol) and the rights to market and recover such costs from Atlas's share of oil.

Glencore's exploration spending of U.S.$170 million has been incurred on Block I to 31 December 2010.

The full amount of the loan to Atlas Petroleum and accrued interest thereon will be repaid from Atlas Petroleum's 27.6 per cent. share of oil following commencement of production. As at 31 December 2010, the outstanding loan balance to Atlas Petroleum, including accrued interest, was U.S.$476 million.

**Block O:**

The Block O licence area holds 95 per cent. of the Alen gas condensate field, as well as an estimated 10 per cent. of the Diega oil and gas discovery, and 100 per cent. of the Felicita gas condensate and Carmen gas and oil discoveries. As with Block I, there are numerous prospects identified from 3D seismic data, which are analogous to the existing discoveries and fields and have a combined P10 prospective resource of 252 million bbls of liquids and 1,448 bscf of wet gas.

The Alen field was discovered in 2005 and appraised in 2007 with independently estimated reserves on a 3P basis of 128 million bbls of condensate and further contingent resources of 1,326 bcf of natural gas on a 3C basis.

The POD for the Alen field was approved by the Equatorial Guinea Ministry of Mines Industry and Energy on 11 January 2011. The field will have two bridge-linked platforms, which will be connected via sub-sea umbilicals to three production wells. Gas will initially be delivered to the platform where it will be stripped of condensate and re-injected back into the field via three sub-sea injection wells. The condensate liquids will be sent via a separate sub-sea pipeline to the Aseng FPSO for storage and off-take. First production is scheduled for the first quarter of 2014 with daily production anticipated to be 37,500 bbls per day for three years, with production declining slowly thereafter. Total development costs for Block O are estimated at U.S.$1.37 billion, to be incurred between 2010 and 2013, with U.S.$26 million incurred to 31 December 2010.

Glencore has a 25 per cent. equity stake in Block O, with the remaining equity being held by Noble Energy (45 per cent.) and GEPetrol (30 per cent.). In addition to its 25 per cent. equity stake, Glencore is carrying 3.6 per cent. of the share of costs of GEPetrol throughout the life of the project by way of an advance to GEPetrol. The costs of exploring and developing the asset are shared between Glencore (28.6 per cent.), Noble Energy (51.4 per cent.) and GEPetrol (20 per cent.).

Glencore's exploration spend on Block O to 31 December 2010 on a gross basis has been U.S.$71 million. Further exploratory drilling will continue in 2011 and 2012 to evaluate additional prospects and prove the reserves at the Carmen, Diega and Felicita fields.

As the Alen field straddles Block O and Block I, the equity interest holders in Block I will be compensated for gas condensate extracted from reserves within the Block I boundary under the terms of a unitisation

agreement which has been agreed between the partners. An FPSO cost-sharing agreement has also been finalised between the partners to cover the cost-sharing benefits resulting from the Alen field development utilising the Aseng FPSO and associated facilities for condensate storage and off-take.

As with Block I, the Block O production sharing agreement provides that each party has the right to lift their own share of the condensate. This process will be captured in a lifting agreement to be signed by the equity partners.

Block O is also operated by Noble Energy.

OAO RUSSNEFT:

Glencore has invested in the Russian upstream market with its partner OAO RussNeft, taking ownership interests in a diversified portfolio of oil producing assets. OAO RussNeft owns and operates a number of oil licences stretching from the Volga river in the west to the Siberian plains in the east. Glencore has acquired between 40 and 49 per cent. of the equity in a number of oil production subsidiaries of OAO RussNeft. OAO RussNeft is currently owned as to 49 per cent. by a number of associated companies of Mikhail Gutseriev, 49 per cent. by Sistema JSFC and 2 per cent. held by Sberbank of Russia, through its subsidiary.

The current aggregate production capacities of 100 per cent. of OAO RussNeft's operating subsidiaries comprise approximately 250,000 bbls per day (equivalent to 12.9 million MT per annum).

| **OAO RussNeft Production** | **No of fields** | **2008** | **2009** | **2010** |
|---|---|---|---|---|
| | | | *('000 MT)* | |
| West Siberian Group | 23 | 7,837 | 6,970 | 6,872 |
| Urals Group | 44 | 3,931 | 3,765 | 3,956 |
| Volga Group | 67 | 2,080 | 1,763 | 1,773 |
| Central Siberian Group | 8 | 397 | 189 | 288 |
| **Total** | **142** | **14,246** | **12,687** | **12,889** |

As at 1 January 2010, the latest independently assessed 2P reserves of OAO RussNeft production subsidiaries amounted to 2,030 million bbls. Assets in the subsidiaries include producing properties with an oil refining capacity of 4.8 million MT per annum.

At the end of 2010, OAO RussNeft's entire debt position (comprising U.S.$6.1 billion of debt owed to Glencore and Sberbank of Russia) was restructured, extending the loan periods out to 2020 and lowering the interest rates for both lenders, which will assist OAO RussNeft to free up additional cash flows for investment projects aimed at increasing its production. Glencore's loan portfolio was restated into one secured loan facility of U.S.$2,080 million, bearing an interest of nine per cent. per annum, with three per cent. paid quarterly and the remaining six per cent. payable along with the principal. Repayment is expected in monthly instalments over a three year period commencing in the fourth quarter of 2017, but in any event not before repayment of the debt owing to Sberbank of Russia. The facility is secured by various pledges of shares of members of the OAO RussNeft group. See paragraph 18.13 of Section X: "Additional Information" for further details in this respect.

Glencore also benefits from a renewable one year off-take agreement pursuant to which Glencore is entitled to 100 per cent. of the crude oil and oil products produced by these assets destined for export markets.

***Coal/coke commodity department (industrial activities, Energy Products business segment)***

*Overview*

The table below summarises information about the key coal producing industrial assets as at 31 December 2010:

| Company | Country | Commodity | Annual production capacity | Glencore's ownership interest | Remaining ownership interest | Any contractual relationship with Glencore |
|---|---|---|---|---|---|---|
| **Controlled**: | | | | | | |
| Prodeco | Colombia | Coal | 14.5 million MT[1] | 100% | — | Marketing agreement |
| Shanduka Coal | South Africa | Coal | 9 million run of mine MT | 70% | 30% Shanduka Resources (Pty) Limited[2] | Purchase agreements, marketing agreements |
| **Non-controlled**: | | | | | | |
| Xstrata | UK/Switzerland | Coal | 136,900 KT | 34.5% | 65.5% publicly traded on London Stock Exchange and SIX | Purchase agreements, agency agreements, marketing agreements, distribution agreements |
| Umcebo[3] | South Africa | Coal | 7.2 million run of mine MT | 43.66%[4] | 56.34% privately held | Marketing agreement |

Notes:

(1) Planned expansion to 20.7 million MT by 2015.

(2) Shanduka Resources recently announced its plans to acquire 51.9 per cent. of coal mining and services group Sentula Mining Limited in exchange for its 30 per cent. stakes in each of Kangra Coal and Shanduka Coal. The transaction is subject to various conditions precedent and is expected to be concluded towards the end of July 2011.

(3) Completion of the acquisition of this investment will not occur earlier than July 2011.

(4) Pending completion and subject to working capital and other adjustments which could potentially increase Glencore's ownership interest.

*Financial information*

The table below sets out selected financial information on the key controlled coal industrial activities for the years ended 31 December 2008, 31 December 2009 and 31 December 2010. The information in this table has been extracted without material adjustment from Glencore's accounting books and records, which are unaudited:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* *(Unaudited)* | | |
| **Prodeco** | | | |
| Revenue | 804 | 790 | 954 |
| Adjusted EBITDA pre-exceptional items | 426 | 218 | 278 |
| Adjusted EBIT pre-exceptional items | 349 | 206 | 199 |
| Statutory tax rate | 33% | 33% | 33% |
| Capex | 309 | 242 | 277 |
| **Other** | | | |
| Revenue | 427 | 277 | 292 |
| Adjusted EBITDA pre-exceptional items[1] | 201 | 96 | 47 |
| Adjusted EBIT pre-exceptional items[1] | 172 | 67 | 14 |
| Capex | 39 | 7 | 27 |
| **Total** | | | |
| Revenue | 1,231 | 1,067 | 1,246 |
| Adjusted EBITDA pre-exceptional items[1] | 627 | 314 | 325 |
| Adjusted EBIT pre-exceptional items[1] | 521 | 273 | 213 |

Note:

(1) Excludes share of income from associates and dividends.

*Production*

The tables below set out the production of the controlled coal industrial assets for the years ended 31 December 2008, 31 December 2009 and 31 December 2010:

| | Year ended 31 December | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | 2008 | | | 2009 | | | 2010 | | |
| **Production** | **Production and buy-in coal** | **Production** | **Buy-in coal** | **Production and buy-in coal** | **Production** | **Buy-in coal** | **Production and buy-in coal** | **Production** | **Buy-in coal** |
| | | | | | *('000 MT)* | | | | |
| Prodeco | 10,500 | 9,100 | 1,400 | 11,500 | 10,500 | 1,000 | 10,200 | 10,000 | 200 |
| Shanduka Coal | 12,260 | 11,719 | 541 | 12,114 | 11,761 | 353 | 9,474 | 9,052 | 422 |
| **Total production** | 22,760 | 20,819 | 1,941 | 23,614 | 22,261 | 1,353 | 19,674 | 19,052 | 622 |

*Reserves and resources*

The table below sets out the total attributable mine reserves and resources summary for the coal industrial assets as extracted from the Prodeco Report set out in Section XIV: "Independent Technical Reports":

| | | Coal reserves | | | Coal resources | | | |
|---|---|---|---|---|---|---|---|---|
| **Prodeco[1]** | **Commodity** | **Proved** | **Probable** | **Total** | **Measured** | **Indicated** | **Inferred** | **Total** |
| | | | | | *('000 MT)* | | | |
| Calenturitas[2] | Coal | 113,000 | 96,000 | 209,000 | 170,000 | 160.000 | 70,000 | 400,000 |
| La Jagua[3] | Coal | 106,000 | 22,000 | 128,000 | 117,000 | 23,000 | — | 140,000 |
| **Total** | Coal | 219,000 | 118,000 | 337,000 | 287,000 | 183,000 | 70,000 | 540,000 |

Notes:

(1) As at 31 December 2010. The information in the table above in relation to mineral reserves and resources is in compliance with the JORC Code and has been extracted without material adjustment from the Prodeco Report in Section XIV: "Independent Technical Reports".

(2) Remaining mine life: expected to be 20 years. Expiry date of relevant mining/concession licences: 2035.

(3) Remaining mine life: expected to be approximately 20 years. Expiry date of relevant mining/concession licences: CET and CDJ expiring between 2027 and 2038 and CMU expiring in 2014.

Competent Persons: The mineral reserves estimates set out above were reviewed and approved by Grant Walker of MMC. The mineral resources estimates set out above were reviewed and approved by Kerry Whitby of MBGS. The mineral reserves and resources estimates have been prepared in accordance with the JORC Code. Mr Walker and Mr Whitby are each Competent Persons as defined by JORC and have sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which they are undertaking.

| | | Coal reserves | | | Coal resources | | | |
|---|---|---|---|---|---|---|---|---|
| **Shanduka Coal[1][2]** | **Commodity** | **Proved** | **Probable** | **Total** | **Measured** | **Indicated** | **Inferred** | **Total** |
| | | | | | *('000 MT)* | | | |
| Graspan | Coal | 24,010 | 0 | 24,010 | 26,410 | 0 | 0 | 26,410 |
| Townlands | Coal | 14,630 | 0 | 14,630 | 16,090 | 0 | 0 | 16,090 |
| Steelcoal reserve | Coal | 9,010 | 0 | 9,010 | 22,680 | 0 | 0 | 22,680 |
| Lakeside | Coal | 4,490 | 0 | 4,490 | 7,980 | 0 | 0 | 7,980 |
| Leeuwfontein | Coal | 2,610 | 0 | 2,610 | 6,040 | 0 | 0 | 6,040 |
| Springlake | Coal | 14,100 | 0 | 14,100 | 5,679 | 2,772 | 6,539 | 14,990 |
| Springboklaagte | Coal | 0 | 0 | 0 | 39,905 | 51,970 | 2,765 | 94,640 |

Notes:

(1) As at 31 December 2010.

(2) Remaining mine life: individual mining operations have expected lifes ranging from five to 12 years, based on their reserves. However, the Springboklaagte deposit extends Shanduka Coal's expected life by approximately 20 to 25 years. Expiry date of relevant mining/concession licenses: different for each mine, ranging from January 2017 to December 2021 in respect of Graspan, Townlands, Steelcoal reserve, Lakeside and Springlake. Leeuwfontein is still what is known as an "old order right" or mining license, with applications pending for conversion into a "new order right" or mining license (only upon conversion will the expiry date be known). Springboklaagte is still a prospecting right, which are granted for five year periods and are renewable for a further three year period. The main prospecting right expires on 3 August 2011 and another smaller prospecting right (Kromdraai South) expires on 23 January 2012. Both are expected to be renewed.

Competent Persons: the mineral reserves and resources estimates set out above were reviewed and approved by NJ Denner and K Dippenaar of Gemecs (Pty) Ltd. The reserves and resources estimates have been prepared in accordance with SAMREC. Mr Denner and Mr Dippenaar are both Competent Persons as defined by SAMREC and each have sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which they are undertaking.

PRODECO:

Prodeco, a wholly owned subsidiary of Glencore, comprises Glencore's Colombian export thermal and metallurgical coal mining operations and associated infrastructure. It is involved in the exploration, production, transportation and shipment of high grade thermal and metallurgical coal from its mines to markets principally in Europe and the Americas. Prodeco consists of two open pit coal mining operations (the Calenturitas mine and the La Jagua complex), export port facilities (Puerto Zuñiga, which is fully operational, and Puerto Nuevo, which is under construction) and a 39.76 per cent. share in a company which holds the concession to the railway linking Prodeco's mines to the export ports.

Prodeco has a low-cost structure as it operates open cut mines and benefits from a superior quality coal which requires no washing. As at 31 December 2010, Prodeco had a saleable reserve base in excess of 337 million MT, with resources (measured, indicated and inferred) in excess of 540 million MT. Prodeco is currently the third largest producer of export thermal coal in Colombia, behind Cerrejón and Drummond Company, Inc.

Prodeco is going through a period of significant expansion, as coal production is planned to increase from 10 million MT per annum in 2010 to 19.9 million MT in 2013 and to 20.7 million MT per annum by 2015. This expansion, at an estimated capital cost of approximately U.S.$2.6 billion (of which approximately U.S.$1.5 billion has been spent on mining concessions, mining equipment, transport, port and other infrastructure as at 31 December 2010), is aimed at exploiting Prodeco's existing extensive reserve base to take advantage of demand for import coal in Europe and the Americas. The planned expansion is expected to have a significant positive impact on Prodeco's future revenues, cost structure and earnings. The ramp-up of production is dependent on fleet delivery, staffing and training and Glencore has been informed by the suppliers of certain items of equipment ordered as part of the ramp-up that delivery of those items will be delayed due to the infrastructure damage caused by the recent earthquake and tsunami in Japan. Glencore does not believe that these delays will have a material impact.

Prodeco has operational advantages in owning all its key operational infrastructure, including a railway (through its part ownership of the rail infrastructure concession and full ownership of rolling stock) and all mining equipment and facilities at its mine sites. Prodeco also owns Puerto Nuevo S.A., which is currently building a new public port in the area replacing Puerto Zuñiga when completed. Glencore's investment in such infrastructure has laid the foundation for Prodeco's low-cost mining operations.

**Calenturitas:**

The Calenturitas open pit coal mine is near the town of La Loma, in the Cesar State, northern Colombia, approximately 200 kilometres south of the Caribbean coast town of Santa Marta.

Prodeco was granted a 15-year mining concession licence for the Calenturitas mine in 2001 for a concession area of 6,677 hectares. In July 2004, Prodeco commenced production, extracting high-quality export thermal coal at the Calenturitas mine. In 2007, the mining concession was extended to 2035.

Calenturitas is an open cut mine from which low sulphur, high energy steam coal is extracted. The coal handling facility, which was completed in March 2009 at a cost of U.S.$65.2 million, has the capacity to crush 15 to 17 million MT per annum and a train loading and blending capacity of 22 to 23 million MT per annum. The blending capability of the coal handling facility enables Prodeco to blend coal to meet specific customer requirements, which enables it to optimise revenue streams.

Production of high-quality export thermal coal at the Calenturitas mine increased from 4.7 million MT in 2008 to 5.7 million MT in 2009. Production for the year ended 31 December 2010 was 5.2 million MT, hampered during the year mainly by extreme rain events (more than double average annual rainfall). An expansion of production of export thermal coal to 13.6 million MT per annum is planned to be completed by 2015. All the required infrastructure at the mine site is expected to be in place by the first half of 2011, with the ramp-up of production dependent on fleet delivery, staffing and training.

The Calenturitas mine's resource base as at 31 December 2010 was 400 million MT. The life of mine is currently expected to be 20 years.

**La Jagua Complex:**

The La Jagua open pit coal mining complex is located 20 kilometres east of Calenturitas in the Cesar State, northern Colombia. The complex is governed by five coal mining concessions held by separate companies, namely Carbones de La Jagua, S.A. ("CDJ"), Consorcio Minero Unido, S.A. ("CMU") and Carbones el Tesoro, S.A. ("CET"), all of which are wholly owned by Glencore.

The CDJ mine commenced operations in 1995 under the ownership of CI Carbones del Caribe, S.A. and Glencore purchased the mine in January 2005. The CMU mine commenced operations in 1990 under private ownership and was acquired by Glencore in August 2006. The CET mine commenced operations in 1997 under private ownership and was purchased by Glencore in May 2007.

The mining licences held by CDJ and CET expire between 2027 and 2038, while CMU's concession expires in 2014. Management expects that CMU's licence will be extended as it was included in the mine plan for the La Jagua complex approved by the Colombian government's mining agency ("Ingeominas"), which is valid until 2025.

The operations of CDJ, CMU and CET have been consolidated into one operation, with the approval of Ingeominas. This consolidation provides the La Jagua complex with operational efficiencies and allows for the complete reserve base to be mined, which would otherwise not have been possible if the five concessions had been mined separately. Through this consolidation, Prodeco has increased the minable reserves at this site by approximately 50 per cent.

Similar to the Calenturitas mine, the La Jagua complex is an open cut operation. However, in addition to low sulphur and high energy steam coal, high volatile metallurgical coal is also extracted at this site. Crushed coal is typically transported by truck to the new coal handling facility at the Calenturitas mine site where it is loaded into rail wagons and transported by rail to the port facility at Santa Marta. However, some coal is transported directly by truck to the port facilities at Santa Marta, but this is less common since the commissioning of the coal handling facility at Calenturitas in 2009.

Combined production of high-quality export thermal coal of the three mines comprising the La Jagua complex increased from 4.4 million MT in 2008 to 4.8 million MT in 2009. Production for the year ended 31 December 2010 was 4.8 million MT. Production in 2010 was also negatively affected by the extreme rainfalls in the country. As with Calenturitas, all the required mine site equipment and infrastructure is expected to be in place by the first half of 2011, with the ramp-up of production dependent on fleet delivery, staffing and training. The La Jagua complex is expected to be operating at a capacity of 7.1 million MT per annum by 2011.

The La Jagua resource base as at 31 December 2010 was 140 million MT. The life of mine is currently expected to be approximately 20 years.

**Fenoco Railway:**

In 2006, Prodeco, together with four other Colombian coal producing companies (Drummond Company, Inc., Carbones del César, S.A., Carbones del Caribe, S.A., and Carbones de los Andes, S.A.), acquired Fenoco S.A. ("Fenoco"). Prodeco's current shareholding in Fenoco is 39.76 per cent.

Fenoco is the holder of a 30-year railway concession (expiring in 2029) which links Santa Marta and the city of Chiriguana in the Cesar State. The railway passes within close proximity of Prodeco's mining operations and is used primarily for coal transportation, with the intention that it will be available for transporting other commodities in the future. Fenoco has entered into take or pay commitments with its shareholders in return for guaranteed availability and volume of annual rail capacity. The term of such commitment is ten years, but can be extended or reduced in connection with a mine's expected life.

Rolling stock for the railway is provided by Fenoco users according to their individual requirements. As at 31 December 2010, Prodeco owned 18 locomotive engines and 700 heavy haul wagons providing 14.5 million MT per annum of rail capacity between Calenturitas and Santa Marta, with anticipated capacity of 15.9 million MT per annum in 2011 (based of existing and expected operating conditions). Each train load between the mine and the port replaces 180 highway trucks a day, reducing costs and increasing capacity, whilst also improving safety and the local environment. The railway's coal transporting capacity is currently 45-50 million MT per annum.

The Fenoco shareholders have committed to expanding the railway to increase capacity to at least 80 million MT per annum, with the majority estimated to be completed by the end of 2011, subject to

government approvals. The total cost of the expansion is expected to be approximately U.S.$250 million (to be funded *pro rata* by the Fenoco shareholders between March 2006 and completion of the expansion, of which approximately U.S.$120 million had been spent as at 31 December 2010).

Prodeco has entered into a shareholders' agreement in relation to the management of Fenoco. Prodeco is entitled to appoint two out of five board members. It has a take or pay agreement with Fenoco with guaranteed capacity of 14.5 million MT for the year ended 31 December 2010.

**Port facilities:**

The two port facilities used by Prodeco for exporting coal are located near the city of Santa Marta on the Caribbean coast of Colombia; Puerto Zuñiga (owned by Prodeco) and Carbosan (independently owned). Prodeco is building a new port, Puerto Nuevo (wholly owned by Prodeco), to replace Puerto Zuñiga, with increased capacity.

Puerto Zuñiga is adjacent to the Simón Bolívar airport in Santa Marta and was historically operated under a private concession awarded by the Colombian government; this expired in March 2009, meaning that the fixed marine assets (principally the pier) reverted to the Colombian government. Prodeco was granted a temporary concession to operate Puerto Zuñiga, which was subsequently renewed in March 2010 and again in March 2011, each time for a year. The renewal of such temporary concession by the Colombian government is subject to Prodeco's compliance with the timetable submitted for the construction of a new port facility, Puerto Nuevo, and is expected to be granted annually until Puerto Nuevo is operational.

Puerto Nuevo, which will have an estimated design capacity of approximately 27 million MT per annum, is being constructed adjacent to the existing Drummond port to comply with the new government regulations on loading methods, which became effective from July 2010. Given the time required to construct a new port and install new infrastructure, Prodeco and all other Colombian coal port operators have been unable to fully comply with the new regulation. However, Glencore considers it extremely unlikely that the new regulation will be enforced before Puerto Nuevo is commissioned, on the basis that it has already received three extensions to its permission to use Puerto Zuñiga (which is not compliant with the new regulations and is to be replaced with Puerto Nuevo) from the Colombian government. Puerto Nuevo will lower Prodeco's costs due to its new direct loading system compared to the crane and barge operations used at Puerto Zuñiga today. It will be an all weather port, which is expected to result in additional savings for Prodeco.

In the year ended 31 December 2010, Prodeco had total port capacity of 19.7 million MT, comprising 17 million MT at Puerto Zuñiga and 2.7 million MT at the independently owned port, Carbosan in Santa Marta. Prodeco's contractual port facility arrangements with the Carbosan port are on a take or pay basis, the terms of which expire in 2013. Once Puerto Nuevo is commissioned (expected in the first half of 2013), Prodeco's total port capacity will increase to approximately 27 million MT per annum.

**Other:**

Prodeco has been impacted by some industrial activity in recent years, including a 38-day strike by employees at one of La Jagua's concessions in 2010. The level of union membership amongst Prodeco's employees, however, is generally low (except at CDJ, where 82 per cent. of the total direct workers are unionised). The strike at La Jagua was by the employees of CDJ and impacted this concession only. Management foresees an increasing level of membership in future years and it is likely that strike action will remain a key business risk. See "The maintenance of positive employee relations and the ability to attract and retain skilled workers is key to the successful operation of Glencore's industrial activities" in the Risk Factors in Section I: "Information Glencore", for further risks in this respect.

In addition, with Puerto Nuevo being constructed adjacent to the Drummond Port, discussions are ongoing concerning the common use of the access channel and turning basin for the ports. Opposition has been recently lodged with respect to some of Prodeco's requested amendments to its port concession. Prodeco does not consider that this opposition will have a material impact upon its construction timetable.

SHANDUKA COAL:

Glencore owns 70 per cent. of Shanduka Coal. The remaining 30 per cent. of Shanduka Coal is owned by Shanduka Resources (Pty) Limited, a South African Black Economic Empowerment entity. Shanduka Resources recently announced it plans to acquire 51.9 per cent. of coal mining and services group Sentula Mining Limited in exchange for its 30 per cent. stakes in each of Kangra Coal and Shanduka Coal. The

transaction is subject to various conditions precedent and is expected to be concluded towards the end of July 2011.

Shanduka Coal owns 100 per cent. of the Graspan Colliery and the Middelburg Townlands Colliery and Extension, located near Middelburg, South Africa, as well as the Springlake Colliery located near Newcastle, South Africa. These operating mines have an aggregate annual production capacity of 9 million run of mine MT. Shanduka Coal also owns 100 per cent. of the Leeuwfontein and Lakeside Collieries located near Kendal, South Africa, which are under care and maintenance pending further exploration, and the Bankfontein Colliery, the reserves of which have been exhausted and which is being prepared for closure. During 2009, Shanduka Coal acquired a 50 per cent. interest in the Springboklaagte deposit in South Africa, providing Shanduka Coal with an additional 95 million MT of attributable resources. The total reserves and resources (as at 31 December 2010) of Shanduka Coal (including attributable resources of Springboklaagte) are 69 million MT of reserves and 189 million MT of resources. Shanduka Coal's individual mining operations have expected lives ranging from five to 12 years, based on their existing reserves. However, the Springboklaagte deposit extends Shanduka Coal's expected life by approximately 20 to 25 years. In addition, Shanduka Coal is currently evaluating a number of other potential acquisitions to expand its resource base.

Shanduka Coal produces both higher quality thermal and anthracite coal suitable for the export market and lower quality thermal coal sold largely to Eskom, the South African parastatal electric utility entity.

Under the terms of a long-term marketing agreement, Glencore purchases Shanduka Coal's coal destined for the export market on a principal basis. In the year ended 31 December 2009 and 2010, Shanduka Coal sold 2.5 million MT and 1.5 million MT to Glencore, respectively. Glencore sells the coal both to domestic customers in South Africa and to the export market through the Richards Bay Coal Terminal, the largest export coal terminal in South Africa, the Port of Durban in South Africa and the Maputo port and Matola Coal Terminal located in Mozambique. Shanduka Coal currently has 439k MT per annum of committed export entitlement at Richards Bay Coal Terminal. In addition, during 2010, Glencore entered into a five-year commitment to export 1.7 million MT of coal per annum through the Maputo port and the Matola Coal Terminal.

Glencore also acts as marketing agent for Shanduka Coal's third party domestic coal sales, including its sales of lower quality coal to Eskom. In the years ended 31 December 2009 and 2010, Shanduka Coal sold 6.5 million MT and 6.0 million MT to third parties, respectively. Shanduka Coal is finalising an eight-year agreement with Eskom, against which Shanduka Coal is currently delivering 300k to 400k MT of coal per month to Eskom.

XSTRATA:

The coal/coke commodity department benefits from Glencore's relationship with Xstrata. Please refer to Section I: "Information on Glencore—Relationship and commercial arrangements with Xstrata" for further information on Xstrata.

UMCEBO:

In July 2010, Glencore agreed to acquire an effective 43.66 per cent. equity interest in Umcebo for an aggregate purchase price of ZAR908 million. The transaction is subject to certain conditions precedent, including the approval of the requisite regulatory authorities (the Department of Mineral Resources, the South African Competition Authorities and the South African Reserve Bank) and consent from certain third parties. Glencore's effective interest in Umcebo may increase due to certain purchase price adjustments included in the transaction agreements. In addition, Glencore has concluded an agreement with certain minority shareholders of a subsidiary of Umcebo to acquire their interests on closing of the transaction.

In recognition of its commitment to Umcebo, Glencore has, pending closing of the transaction and in order to facilitate Umcebo's funding needs, cash collateralised ZAR250 million of Umcebo's existing indebtedness. If the transaction is successfully implemented, the ZAR250 million will form part of the ZAR908 million purchase price and be converted into equity, with the result that Umcebo will be debt free. Should the transaction fail to close, the cash collateralised deposit will accrue interest and be repaid through a combination of coal deliveries by Umcebo to Glencore and proceeds realised from the sale of assets by Umcebo.

Subject to certain conditions precedent, Glencore will after the closing of the transaction be required to fund up to an additional ZAR646 million in the form of shareholder loans accruing interest at market related rates for the purposes of working capital, resource development and acquisitions, including the acquisition of the 47 per cent. interest in the Wonderfontein and Belfast projects that is held by a joint venture partner of Umcebo (Umcebo holds the other 53 per cent.). Glencore has also agreed with Umcebo that if Umcebo is able to purchase the abovementioned 47 per cent. interest in the Wonderfontein and Belfast projects from Umcebo's joint venture partner before the closing of the broader transaction, Glencore will fund that acquisition. If the broader transaction proceeds, this funding will be converted into a shareholders loan. If the broader transaction fails, the funding will either be applied to settle the purchase price for the 47 per cent. interest which Glencore will acquire from Umcebo or will be repaid by Umcebo to Glencore. The agreements with the vendors also provide that if the broader transaction fails, Glencore will, subject to certain conditions precedent, acquire from Umcebo its existing 53 per cent. interest in the Wonderfontein and Belfast projects.

A newly formed wholly owned and broad-based South African Black Economic Empowerment company has agreed to purchase an effective 26 per cent. equity interest in Umcebo. In order to facilitate this participation, including an amount of required third party bank funding, Glencore intends to provide a guarantee of up to ZAR250 million to such bank.

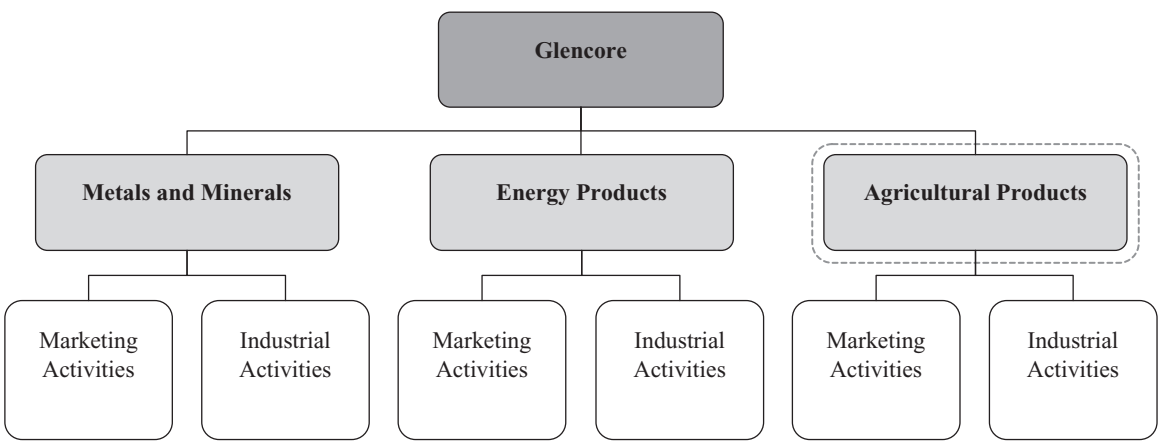
The transaction would secure access to an eventual 1.5 million MT of Richards Bay Coal Terminal Phase V export allocation and to long-life resources from South Africa's principal coal field in Mpumalanga, which has established infrastructure for the transport of export quality thermal coal. Glencore estimates attributable resources at Umcebo to be at least 860 million MT. Umcebo currently has three thermal complexes in operation (Middelkraal, Kleinfontein and Klippan), with an aggregate annual production capacity of 7.2 million run of mine MT. In addition, the Wonderfontein mine is scheduled to begin production in 2013, with a long-term annual production capacity of 3.6 million run of mine MT.

GLOBAL COAL LIMITED:

Glencore owns 19.7 per cent. of Global Coal Limited, which was founded by leading members of the world coal industry to promote the development of the coal markets through screen trading of standardised coal products via the globalCOAL trading platform. More than 80 million tonnes of physical thermal coal are traded annually on the globalCOAL trading platform by approximately 100 leading coal market participants.

**Agricultural Products**

**Introduction (Agricultural Products business segment)**



The Agricultural Products business segment focuses on the following commodities: grains (including wheat, maize and barley), oils/oilseeds, cotton and sugar. The activities of Glencore's Agricultural Products business segment are supported by investments in controlled and non-controlled storage, handling, processing and port facilities in strategic locations.

Selected key financial information in relation to the Agricultural Products business segment's marketing and industrial activities for the years ended 31 December 2008, 31 December 2009 and 31 December 2010 is set out below. This information has been extracted without material adjustment from Section VI: "Historical Financial Information" except where marked as unaudited. Unaudited information has been extracted without material adjustment from Glencore's accounting records.

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| **Marketing Activities** | | | |
| Revenue (unaudited)[1] | 12,057 | 6,793 | 8,238 |
| Adjusted EBITDA pre-exceptional items[2] | 579 | 304 | 659 |
| Adjusted EBIT pre-exceptional items[2] | 579 | 304 | 659 |
| **Industrial Activities** | | | |
| Revenue (unaudited)[1] | 1,337 | 1,789 | 2,180 |
| Adjusted EBITDA pre-exceptional items[2][3][4] | 95 | 85 | 88 |
| Adjusted EBIT pre-exceptional items[2][3][4] | 84 | 48 | 39 |
| Share of income from associates and dividends (excl. Xstrata)[4] | 15 | (7) | 19 |
| Capex | 102 | 116 | 71 |
| **Total Agricultural** | | | |
| Revenue | 13,394 | 8,582 | 10,418 |
| Adjusted EBITDA pre-exceptional items[2][5] | 689 | 382 | 766 |
| Adjusted EBIT pre-exceptional items[2][5] | 678 | 345 | 717 |

Notes:

(1) Revenue is not split between Marketing and Industrial activities in the audited Historical Financial Information set out in Section VI of this document and is therefore marked as unaudited. Total segment and total Group revenue is audited.

(2) Includes corporate selling, general and administrative expenses, but excluding variable pool bonus accrual, which is recorded at group/corporate level.

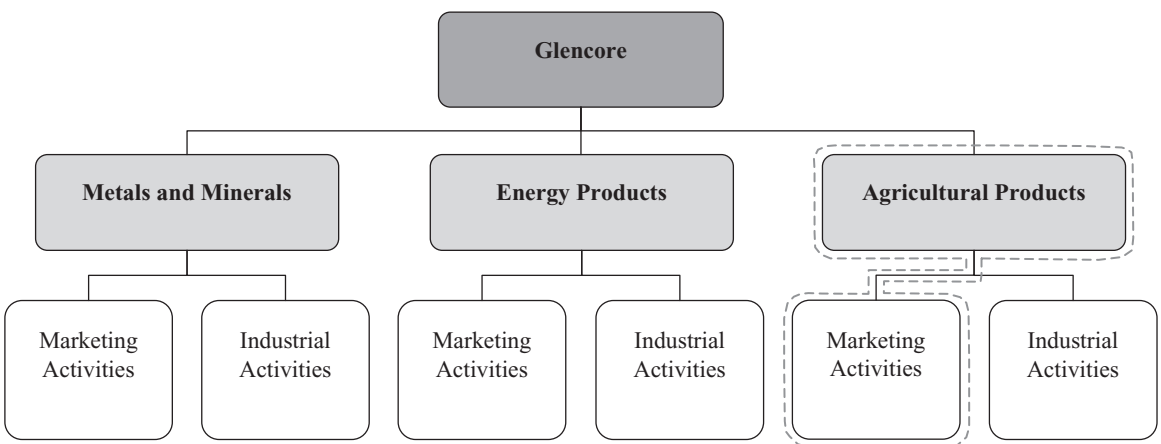
(3) Excludes share of income from associates and dividends.

(4) Adjusted EBITDA pre-exceptional items plus Share of income from associates and dividends and Adjusted EBIT pre-exceptional items plus Share of income from associates and dividends are audited.

(5) Includes share of income from associates and dividends.

The Agricultural Products business segment has approximately 946 employees globally (excluding individuals employed within Glencore's industrial or farming activities) with some 158 staff located at Glencore's Rotterdam office and a further approximately 788 employees spread across 16 main offices in key global procurement locations, with particularly large staff numbers present in Russia and Ukraine. This business segment also employs approximately 7,200 individuals globally in its industrial activities.

**Marketing Activities (Agricultural Products business segment)**



The table below sets out the marketing volumes sold to third parties of each main commodity category handled by the Agricultural Products business segment for the years ended 31 December 2008, 31 December 2009 and 31 December 2010:

| | Marketing volumes sold to third parties | | |
|---|---|---|---|
| | 2008 | 2009 | 2010 |
| | *(million MT)* | | |
| Grains | 20.5 | 19.8 | 20.9 |
| Oil/oilseeds | 8.6 | 8.1 | 9.4 |
| Cotton | 0 | 0 | 0.2 |
| Sugar | 0.9 | 1.0 | 0.5 |

Examples of Glencore's marketing strategies for the Agricultural Products business segment include:

- Glencore's access to in-land and port elevators and silos enables Glencore to procure and store sizeable quantities of commodities and seek to exploit time, product and geographic arbitrage opportunities as they present themselves. This access also enables volumes, supplied by a large number of small local suppliers, to be aggregated in storage facilities in order to optimise origination margin. In addition, this access provides capacity and reliability in supply to Glencore's end customers without dependence on third party logistics.
- With respect to grains, Glencore leverages its long-term relationships with suppliers and its access to the infrastructure needed to access local markets to exploit geographic arbitrage opportunities, that is, by sourcing grains in a lower cost geographic area, using its skill and network to handle all logistics, financing and risk managements aspects, and then selling the product into a higher margin geographic area.
- With respect to oil and oilseeds, Glencore leverages its ownership of processing facilities and relationships with key processors, which enable Glencore to operate in correlated commodities and market their price differentials, that is, to determine whether Glencore can make a greater margin by selling an unprocessed commodity or by processing a commodity and then selling the processed commodity, and acting accordingly.
- With respect to sugar, Glencore leverages its global statistical research and analysis and local knowledge (for example, Glencore has been active in local Russian and Indian markets for 15 to 20 years marketing domestic sugar as well as processing and marketing imported sugar) into marketing strategies covering flat price, origin basis, raws spreads, whites spreads and white sugar arbitrage.

*Overview*

The Agricultural Products business segment originates and markets grains (including wheat, barley and corn), oil/oilseeds (including most edible oils, biodiesel and their source seeds/beans), cotton and sugar.

*Market*

The Agricultural Products business segment is estimated to have accounted for approximately 8.7 per cent. of the addressable market for grains in 2010, with significant market share in Europe, the CIS and Australia. In oils/oilseeds, Glencore believes that the Agricultural Products business segment accounted for approximately 4.5 per cent. of the addressable market in 2010, with significant market share in South America for oil/oilseed and in Europe for rapeseed and biodiesel.

*Suppliers*

The suppliers to the Agricultural Products business segment are farmers, farming co-operatives, processing plants, local exporters and global merchants. Individual commodity traders such as Cargill are the largest suppliers, representing in aggregate approximately 20 per cent. of the physical volumes that Glencore marketed during the year ended 31 December 2010. Glencore typically transacts with these third party commodity merchants as liquidity providers on a spot basis and generally does not have long-term supply contracts with them. The only top five supplier which is not a commodity merchant is Vicentin, Argentina's largest soybean crusher and producer of soy oil most of which is supplied under long-term contract. The remaining supply base (including farmers) is very diversified and fragmented. The Agricultural Products business segment generally enters into commitments to buy agricultural products only as part of specific

marketing strategies within the course of a crop season. The segment's owned or partly owned farming operations produce approximately 0.7 million MT of commodities annually and therefore constitute a minor part of the business segment's throughput of 31 million MT in 2010.

With respect to grains, Glencore typically buys grain from farmers at local spot prices for delivery to silos. Whilst occasionally grain from Australian or European farmers is procured pursuant to forward agreements, the business segment does not generally have long-term supply contracts in place with farmers, though it does have long-term relationships with important suppliers. Global markets, particularly on the supply side, are highly fragmented and, in many countries, Glencore procures grain directly from the farmer. North Africa, the Middle East and Asia are the prime importers.

With respect to oils/oilseeds, Glencore originates and physically ships approximately 25 per cent. of the physical volumes of oils/oilseed that it markets. Glencore processes, handles and markets oils (including most edible oils and biodiesel) and their source seeds/beans with sourcing primarily from Argentina, Brazil, Australia, EU and Ukraine.

Glencore entered the cotton business at a time when numerous traditional and single commodity players were exiting the industry due to the market disruptions of 2008. This lack of competition was seen as an opportunity for another major player. Another attraction was the fact that both the supplier and customer bases in cotton were highly fragmented. Finally, the cotton business fitted well within the existing office network where Glencore could leverage off its existing marketing expertise.

With respect to cotton, Glencore markets mainly unprocessed product, with sourcing primarily from West Africa, the U.S., India and Brazil.

With respect to sugar, Glencore markets both raw sugar and white sugar, and processes raw sugar into white sugar. Glencore is supplied a small portion of its sugar by farming operations which Glencore owns or in which it has an interest with sourcing primarily from Thailand, Brazil and Guatemala.

The top ten suppliers of agricultural products accounted for approximately 22 per cent. of the total agricultural products purchased in the year ended 31 December 2010. Seven of the top ten suppliers in the year ended 31 December 2010 were also in the top ten suppliers for the year ended 31 December 2009. Three of the top ten suppliers in the year ended 31 December 2010 were under long-term contracts consistent with the structure of the market.

*Customers*

Glencore's customers are the processing industry (food, consumer goods and animal feed), local importers, government purchasing entities and competing global marketers. The Agricultural Products business segment's top ten customers accounted for around 28 per cent. of total sales volumes by value during the year ended 31 December 2010. Contracts with customers in the food industry are negotiated bilaterally on a case-by-case basis, whilst contracts with governmental purchase bodies are usually tendered. Glencore estimates that it is awarded at least part of the tender in at least half of the agricultural tenders in which it participates and, where it is unsuccessful, it is sometimes able to supply part of the tender to the successful applicant. The Agricultural Products business segment does not enter into long-term contracts with these customers.

*Features of the market*

Liquid derivatives markets exist for the majority of the key commodities that the business segment markets, such as wheat, corn, soyoil, rapeseed and cotton, for example CBOT (Chicago), MATIF (Paris) and NYMEX (New York). These key products are also used as relative proxies for other products which the segment markets, such as barley and sunflower oil, in respect of which a liquid derivatives market does not currently exist, and Glencore is accordingly able to hedge, albeit imperfectly and/or partially, the risk on these physical commodities' positions using such proxy forward agreements and exchange traded futures. Glencore is also very active in ICE (New York) for global sugar futures trading and hedging as well as in local futures exchanges for sugar in India, Russia and, more recently, China.

*Logistics*

Physical flows of product are shipped via trucks, trains and vessels. Glencore owns approximately 250 train wagons in the CIS and partially owns 80 train wagons in the EU. In addition, Glencore ships product by vessel, including having approximately 30 short- and 60 medium-term charters with a maximum duration of

two years. Logistical planning and chartering of dry-bulk seaborne trade is performed in-house by a freight desk which provides initial quotes for the freight associated with each shipment. The in-house freight desk trades and hedges freight and shipping capacity positions for both the department's dry-bulk shipping needs and for third parties (approximately 50 per cent. is for third parties). Glencore's logistical assets also include in-land and port elevators and silos and train wagons. The elevators and silos are located in Argentina, Australia, Brazil, Estonia, Hungary, Kazakhstan, Paraguay, Poland, Romania, Russia, Ukraine and Uruguay. Logistics assets are particularly important in the CIS as third party logistics assets typically have insufficient capacity and are not sufficiently reliable. Glencore's elevators have a combined storage capacity of around 1 million MT per annum and its silos have a combined storage capacity of 3.8 million MT per annum. The table below sets out the total in-land and port elevators and silo capacity held by the Agricultural Products business segment for the years ended 31 December 2008, 31 December 2009 and 31 December 2010:

| | Year ended 31 December | | |
|---|---|---|---|
| **Aggregate capacity[1]** | **2008** | **2009** | **2010** |
| | | *('000 MT)* | |
| Port elevators | 970 | 970 | 1,000 |
| Silos | 3,800 | 3,800 | 3,800 |
| **Total** | 4,770 | 4,770 | 4,800 |

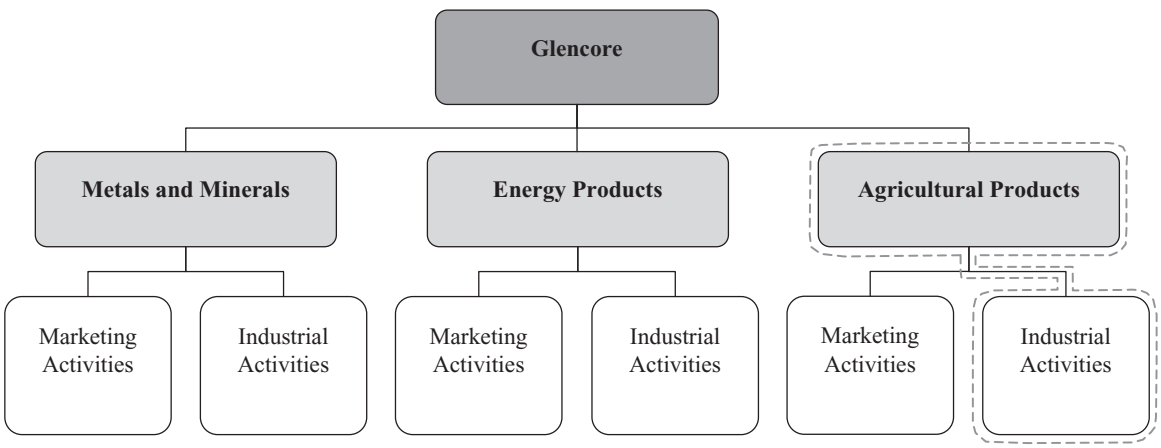
Note:

(1) These figures represent the capacity across the aggregate portfolio of some 90 elevators and silos held by the Agricultural Products business segment.

*Competitors*

Glencore has three categories of competitors: large multinational merchants (Cargill, ADM, Bunge and Louis Dreyfus Group), smaller, more regionally focused merchants (includes Noble Group and Nidera) and local companies with a single country focus, primarily in Russia, Ukraine, Argentina and Australia.

**Industrial activities (Agricultural Products business segment)**



*Overview*

The table below summarises information about key Agricultural Products producing industrial assets as at 31 December 2010:

| Company | Country | Commodity | Annual production capacity | Glencore's ownership interest | Remaining ownership interest | Any contractual relationship with Glencore |
|---|---|---|---|---|---|---|
| **Controlled**: | | | | | | |
| Moreno | Argentina | Oilseed crushing | 1.9 million MT | 100% | — | N/A |
| Ponta Pora | Brazil | Oilseed crushing | 350,000 MT | 100% | — | Toll agreement |
| OMEZ | Ukraine | Sunseed crushing | 250,000 MT | 80% | 20% privately held | Toll agreement |
| Lubmin | Germany | Rapeseed crushing | 140,000 MT | 100% | — | Toll agreement |
| | | Biodiesel production | 60,000 MT | | | |
| Biopetrol | Germany and Netherlands | Biodiesel production | 1,000,000 MT | 60.3% | Publicly traded on Frankfurt Stock Exchange | N/A |
| Advanced Organic Materials | Argentina | Biodiesel production | 50,000 MT | 50% | 50% privately held | N/A |
| Mills | Argentina, Brazil and Uruguay | Flour/rice production | 1,500,000 MT | 50-100% | — | N/A |
| Farming | Australia, Argentina, Kazakhstan, Paraguay, Russia and Ukraine | Farming activities on owned and leased land | 270,000 hectares | 50-100% | Any minority ownership is privately held | N/A |
| Rio Vermelho | Brazil | Ethanol and sugar cane crushing | 1.2 million MT | 76% | 24% privately held | N/A |
| **Non-controlled**: | | | | | | |
| Renova | Argentina | Biodiesel | 480,000 MT | 33.3% | 33.3% Vicentin and 33.3% Molinos | Toll agreement |

*Financial information*

The table below sets out selected financial information on the controlled industrial activities of the Agricultural Products business segment for the years ended 31 December 2008, 31 December 2009 and 31 December 2010. The information in this table has been extracted without material adjustment from Glencore's accounting books and records, which are unaudited:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* *(Unaudited)* | | |
| **Agricultural** | | | |
| Revenue | 1,337 | 1,789 | 2,180 |
| Adjusted EBITDA pre-exceptional items[(1)] | 95 | 85 | 88 |
| Adjusted EBIT pre-exceptional items[(1)] | 84 | 48 | 39 |
| Capex | 102 | 116 | 71 |

Note:

(1) Excludes share of income from associates and dividends.

*Farming production*

The tables below sets out farming production of the controlled assets of the Agricultural Products business segment for the years ended 31 December 2008, 31 December 2009 and 31 December 2010:

**Total Farming Production of Major Commodities by Country/Commodity MT**

| | Australia | | | Argentina | | | Paraguay | | | Russia | | | Ukraine | | | Kazakhstan | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | 2008 | 2009 | 2010 | 2008 | 2009 | 2010 | 2008 | 2009 | 2010 | 2008 | 2009 | 2010 | 2008 | 2009 | 2010 | 2008 | 2009 | 2010 |
| Wheat | 37,116 | 49,426 | 100,739 | 22,131 | 26,857 | 7,243 | 4,406 | 4,058 | 3,722 | 109,262 | 114,298 | 124,096 | 85,625 | 91,215 | 81,782 | N/A | 41,498 | 17,725 |
| Barley | 20,385 | 17,793 | 2,801 | 1,437 | 3,591 | 477 | N/A | N/A | N/A | 15,439 | 10,588 | 6,350 | 47,544 | 66,274 | 49,268 | N/A | 6,454 | 729 |
| Corn | N/A | N/A | N/A | 60,930 | 34,067 | 53,836 | 7,487 | 9,609 | 5,689 | 10,506 | 12,287 | 8,935 | 56,167 | 7,884 | 43,288 | N/A | N/A | N/A |
| Rapeseeds | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | 421 | 2,812 | 6,149 | 16,701 | 13,922 | N/A | N/A | N/A |
| Sunflower seeds | N/A | N/A | N/A | 69,320 | 48,228 | 34,943 | N/A | N/A | N/A | 9,838 | 6,929 | 7,516 | 7,952 | 7,313 | 11,729 | N/A | N/A | N/A |

***Farming Assets:***

Glencore's farming assets are mainly concentrated in the CIS, Australia, Paraguay and Argentina. Glencore owns or part owns the land as full owner or on long-term leases. These activities enable the department to source its products at local prices, provide valuable information on the expected crop yields and enable Glencore to build closer relationships with other farmers in the respective regions.

***Processing Assets:***

Access to or ownership of processing assets enables Glencore to take advantage of the various price differentials for agricultural commodities. The largest of these assets is Moreno in Argentina, of which Glencore owns 100 per cent. Moreno's main activity is to produce and export edible oils and meal. Moreno's facilities include three sunseed/soybean crushing plants in Necochea, Daireaux and Villegas in Argentina with a combined capacity of 1.9 million MT per annum. In 2007, Moreno started a biodiesel facility as a joint venture. The plant became fully operational in 2008 and its current capacity is 0.5 million MT per annum. In addition, Glencore owns, or part owns, crushing facilities with a combined capacity of 740k MT per annum in Brazil, Ukraine and Germany, including:

- a 100 per cent. interest in Ponta Pora, a Brazilian oilseed crushing plant with production capacity of 350k MT per annum;
- a 100 per cent. interest in Lubmin, a German rapeseed crushing plant with capacity of 140k MT per annum;

- an 80 per cent. interest in OMEZ, a Ukrainian sunseed crushing plant with capacity of 250k MT per annum;
- a 40 per cent. share of production rights in a crushing plant through its stake in a joint venture with Vicentin and Molinos in Argentina which is expected to be operational in 2012 and which will have a capacity of 5 million MT per annum;
- a 76 per cent. stake in Rio Vermelho, a stand-alone distillery located in state of Sao Paulo (Brazil), with a sugarcane crushing capacity of 1.2 million per annum. Currently only produces hydrous fuel ethanol (approximately 95,000 $m^3$/season); and
- a soft seed crushing facility with a capacity of 500k MT is currently under construction in Hungary with an expected start-up date in the fourth quarter of 2011.

Glencore has the following other production interests outside the crushing business:

- a 60.3 per cent. stake in the Swiss company Biopetrol Industries AG owning four biodiesel production facilities;
- a 33.3 per cent. stake in Renova, an Argentinean biodiesel producer;
- rice/wheat mills with a combined capacity of 1,500k MT per annum in Argentina, Brazil and Uruguay; and
- a share in two biodiesel production facilities in Argentina with a combined capacity of 530k MT per annum.

The Agricultural Products business segment's medium-term investment is focused on increasing processing capacity in oil/oilseeds at origin, which is mainly in South America.

**Relationship and commercial arrangements with Xstrata**

***Overview of Xstrata***

Glencore owns 34.5 per cent. of Xstrata, is its largest shareholder. As at 29 April 2011 (being the last practicable date prior to publication of the Prospectus), Glencore currently has two directors on the board of Xstrata (being Willy Strothotte and Ivan Glasenberg). Willy Strothotte will resign from the board of directors of Xstrata with effect from the date of the Xstrata Annual General Meeting (expected to be held on 4 May 2011) and Ivan Glasenberg will stand for re-election as a director at this meeting. In accordance with the Relationship Agreement (as described below), Glencore has also nominated Aristotelis Mistakidis and Tor Peterson as directors to the Xstrata board (who are subject to election by the shareholders of Xstrata at the Xstrata Annual General Meeting).

Shares in Xstrata are listed on the Official List of the FSA, admitted to trading on the London Stock Exchange's market for listed securities and admitted to listing on the SIX. As at 29 April 2011, being the last practicable date prior to the publication of this Prospectus, the market capitalisation of Xstrata was approximately U.S.$75.4 billion. Xstrata is a member of the FTSE 100, an index that comprises the 100 "most highly capitalised UK-domiciled blue chip companies".

Xstrata is the fourth largest diversified mining group in the world by revenue with top five industry positions in copper, export thermal coal, export coking coal, ferrochrome, zinc, nickel and vanadium. In addition, Xstrata has recycling facilities, additional exposures to platinum, gold, cobalt, lead and silver and a suite of global technologies, many of which are industry leaders. Xstrata's operations and projects span 19 countries: Argentina, Australia, Brazil, Canada, Chile, Colombia, the Dominican Republic, Germany, Ireland, New Caledonia, Norway, Papua New Guinea, Peru, the Philippines, South Africa, Spain, Tanzania, the United Kingdom and the U.S.

Xstrata mines and processes physical commodities that are marketed by Glencore's Metals and Minerals and Energy Products business segments. Its business is organised in the following five principal business units:

*Xstrata Alloys:* Xstrata is the world's largest producer of ferrochrome and one of the world's leading producers of primary vanadium, with integrated mining and smelting facilities in South Africa. In South Africa, Xstrata also mines and concentrates platinum group metals.

*Xstrata Coal:* On a managed basis, Xstrata is the world's largest producer of export thermal coal, one of the largest producers of export semi-soft/pulverised coal injection coal and among the top five producers of export coking coal. It has interests in 30 operating coal mines in Australia, South Africa and Colombia.

*Xstrata Copper:* Xstrata is a fully-integrated producer of copper metal and concentrate and is one of the world's five largest producers of mined copper, with mining and mineral processing operations in Argentina, Australia, Canada, Chile and Peru. Xstrata also has a portfolio of mine development projects at various stages of evaluation in Argentina, Australia, Chile, the Philippines, Papua New Guinea and Peru.

*Xstrata Nickel:* Xstrata is one of the world's five largest producers of nickel and one of the largest recyclers and processors of nickel and cobalt-bearing materials. Its operations include mines and processing facilities in Australia, Canada, Norway and the Dominican Republic.

*Xstrata Zinc:* Xstrata is one of the world's largest producers of zinc and also produces lead and silver. Xstrata Zinc incorporates zinc smelting operations in Spain, Germany and Canada, interests in four operating mines, a mine project and a lead smelter in Australia, a lead refining plant in the United Kingdom, interests in the Antamina copper and zinc mine in Peru, two zinc mines, a lead smelter and refinery and a minority interest in a zinc smelter in Canada.

In addition to its five principal business units, Xstrata also operates Xstrata Process Support and Xstrata Technology, mining and processing technology businesses with operations in Australia, Canada, Chile and South Africa.

***Financial information***

The table below sets out certain financial information relating to Xstrata for the years ended 31 December 2008, 2009 and 2010. Such information has been extracted without material adjustment from Xstrata's Annual Report 2010.

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million, except per share amounts)* | | |
| Revenue | 27,952 | 22,732 | 30,499 |
| Operating profit (before exceptional items) | 7,249 | 4,369 | 7,654 |
| Attributable profit | 3,595 | 661 | 4,688 |
| Dividends per share (U.S.$) | .10 | .08 | .25 |
| Total assets | 55,314 | 63,824 | 69,709 |
| Net assets | 24,399 | 34,919 | 42,021 |
| Cash and cash equivalents as at 31 December | 1,156 | 1,177 | 1,722 |

***The Relationship Agreement***

Xstrata is party to the Relationship Agreement with Glencore dated 20 March 2002. The Relationship Agreement regulates the continuing relationship between the parties. In particular, it ensures that:

- Xstrata is capable of carrying on its business independently of Glencore as a controlling shareholder (as such term is defined in the Relationship Agreement);
- transactions and relationships between Glencore (or any of its subsidiaries or affiliates) and Xstrata are at an arm's length and on normal commercial terms;
- Glencore shall be entitled to nominate up to three directors or (if lower or higher) such number of directors equal to one less than the number of directors who are independent directors (which means a director who is not a director, officer or employee of any member of Glencore and is free from any business or other relationship with Glencore or any of its associates, which could materially interfere with the exercise of his independent judgment in matters concerning Glencore); and
- directors of Xstrata nominated by Glencore shall not be permitted to vote on any board resolution, unless otherwise agreed by the independent directors, to approve any aspect of Xstrata's involvement in or enforcement of any arrangements, agreements or transactions with Glencore or any of its subsidiaries or affiliates.

It is expressed that the Relationship Agreement terminates in the event that Glencore ceases to be a controlling shareholder of Xstrata following a sale or disposal of shares in Xstrata or if Xstrata ceases to be listed on the Official List and traded on the London Stock Exchange.

***Operational agreements between Glencore and Xstrata***

*Alloys*

Xstrata Alloys entered into a ferrochrome marketing agreement with Glencore on 21 April 1995, appointing Glencore as its exclusive worldwide marketing agent for the sale of Xstrata Alloys and Merafe's entire production of ferrochrome, other than ferrochrome sold into the U.S., Canada and certain Asian countries. The agreement continues for as long as Xstrata Alloys and Merafe produces ferrochrome. Glencore is obliged to use its best endeavours to arrange sales at prevailing market rates, subject to initial agreement and approval by Xstrata Alloys and Merafe prior to effecting the sale. Glencore assists Xstrata Alloys in negotiating sales contracts with third parties. Glencore is entitled to receive an agency fee of 3.5 per cent. on FOB sales revenues and an additional fee of 0.75 per cent. on FOB sales revenues for assuming the risk of non-payment by customers on this material. Glencore assumes 60 per cent. of the risk of non-payment by customers in relation to ferrochrome sales.

If, at any time, Xstrata Alloys and Merafe notifies Glencore that it is able to find purchasers for its production at prices higher than those generally obtainable by Glencore, Xstrata Alloys may, unless Glencore is able to obtain similar prices, sell its products in the market. Glencore is nevertheless entitled to an agency fee of 3.5 per cent. of FOB sales revenue in respect of such sales. Glencore is also entitled to receive a U.S.$50,000 monthly fee in connection with market analysis and certain administrative tasks it performs for Xstrata Alloys. Interest is charged by Xstrata Alloys on single monthly settlements made by Glencore, and Glencore charges interest on any selling expenses incurred on behalf of Xstrata Alloys at LIBOR and a margin of 150 basis points.

Ferrochrome sold into the U.S. and Canada is distributed by Glencore Ltd and Glencore Canada Inc., respectively, under two distribution agreements. These agreements continue indefinitely, with both parties having the right to terminate the agreement on 12 months' notice. The percentage of distribution fees payable by Xstrata in respect of ferrochrome sold under the distribution agreement is substantially the same as the commission paid in respect of ferrochrome sold under the marketing agreement.

Mitsui & Co. Ltd is the appointed distributing agent for ferrochrome sales into China, Japan and South Korea up to a maximum of 105,000 tonnes per annum. A change in distributing agent for sales into these countries must be done with the consent of Glencore.

Xstrata Alloys entered into a chrome ore marketing agreement with Glencore in July 2010, appointing Glencore as its exclusive worldwide marketing agent for the sale of Xstrata Alloys and Merafe entire production of chrome ore. The agreement is for a fixed term ending 20 May 2011. Glencore is entitled to receive an agency fee of 2 per cent. on FOB sales revenues loading port value, Glencore assumes 100 per cent. of the risk of non-payment by customers in relation to chrome ore sales. Interest is charged by Xstrata Alloys on single monthly settlements by Glencore at LIBOR and a margin of 150 basis points.

In December 1997, Xstrata entered into a 20-year marketing agreement with Glencore in respect of Rhovan's and Vantech's (closed in 2004) entire production of vanadium, other than vanadium sold into the U.S. and Canada.

Glencore is obliged to use its best endeavours to arrange sales of vanadium pentoxide and ferrovanadium to customers at prevailing market rates, subject to initial agreement and approval by Xstrata Alloys prior to effecting the sale. Xstrata Alloys is obliged to pay to Glencore an agency fee of 3.5 per cent. on FOB sales revenues and an additional fee of 1.5 per cent. on FOB sales revenues for assuming the risk of non-payment by customers on this material. Glencore assumes 100 per cent. of the risk of non-payment by customers in relation to vanadium sales.

If, at any time, Xstrata Alloys notifies Glencore that it is able to find purchasers for its production at prices higher than those generally obtainable by Glencore, Xstrata Alloys may, unless Glencore is able to obtain similar prices, sell its products in the market. Glencore is nevertheless entitled to the 3.5 per cent. agency fees described above in respect of such sales. Interest is charged by Xstrata Alloys on single monthly settlements made by Glencore, and Glencore charges interest on any selling expenses incurred on behalf of Xstrata Alloys at LIBOR and a margin of 150 basis points.

Vanadium pentoxide and ferrovanadium sold into the U.S. and Canada is distributed by Glencore Ltd and Glencore Canada Inc., respectively, under two distribution agreements. The distribution agreements have the same term as the marketing agreement and, consequently, the percentage of distribution fees payable by Xstrata in respect of vanadium pentoxide and ferrovanadium is substantially the same as the

commission paid in respect of vanadium pentoxide and ferrovanadium sold under the marketing agreement.

*Coal*

In 2002, Xstrata entered into a 20-year market advisory agreement with Glencore with fee reviews at the end of every fifth year of the agreement. Pursuant to this agreement, Glencore acts as Xstrata's market adviser with respect to its export production of coal (other than for Xstrata Coal's share of production from the Cerrejón thermal coal operation in Colombia). The fee payable to Glencore is U.S.$0.50 per attributable tonne of coal exported by Xstrata from Australia or South Africa.

In 2010, Xstrata entered into market standard forward commodity price derivatives for 1,070,000 tonnes (2009: 4,455,000 tonnes) and bought market standard forward commodity price derivatives for 385,000 tonnes (2009: nil tonnes) with Glencore as counterparty. During the year ended 31 December 2010, 3,360,000 sold tonnes and 385,000 bought tonnes were delivered (2009: 3,180,000 tonnes were sold). At 31 December 2010, 965,000 tonnes (2009: 3,255,000 tonnes) were contracted with Glencore for delivery in 2011 and 2012. These derivatives are on arm's length terms and conditions and are included within derivative financial assets and liabilities.

During the year ended 31 December 2010, nil tonnes were borrowed from Glencore (2009: 2,550 tonnes) and nil tonnes owed to Glencore at 31 December 2010 (2009 nil tonnes) on arm's length terms and conditions.

In April 2010, Xstrata entered into a five-year fuel supply agreement with Glencore to supply diesel fuels to coal mines and cattle stations in New South Wales and Queensland. Under this supply agreement U.S.$147 million (2009: U.S.$111 million) worth of fuel was delivered during the year ended 31 December 2010. The supply agreement is on arm's length terms and prices change monthly according to the world market price per barrel (U.S.$/BBL).

In February 2010, Cerrejón entered into a five-year fuel supply agreement with Glencore to supply diesel fuels. The Group's share of the fuel purchases for the year ended 31 December 2010 was U.S.$65 million (2009: U.S.$44 million). The supply agreement is on arm's length terms and prices change for each shipment according to the world market price per barrel (U.S.$/BBL).

All coal purchases and sales with Glencore are on arm's length terms and conditions.

*Copper*

Xstrata Copper has entered into an "evergreen" service agreement with Glencore with a 12-month cancellation notice for the supply of advice, support and assistance with regard to its marketing and operational hedging activities.

Copper cathode sales agreements were entered into between Xstrata Copper Canada/Xstrata Copper North Chile/Xstrata Commodities Middle East and Glencore for the period 1 January to 31 December 2010. All sales were based on either spot or benchmark terms in accordance with prevailing market conditions. These agreements have been replaced with new annual contracts for 2011, based on either spot or benchmark terms in line with prevailing market conditions.

Xstrata Copper (Minera Alumbrera Limited) has entered into a five-year frame contract with Glencore on an "evergreen" basis. The sales terms for the copper concentrate are negotiated annually on arm's length terms and conditions. Minera Alumbrera Limited, on occasions, sells concentrate to Glencore at prevailing spot market prices.

Copper concentrate purchase agreements were entered into between Xstrata Copper North Chile and Glencore for a four-year frame contract commencing 1 January 2007. All purchases are based on benchmark terms in accordance with prevailing market conditions. This is an "evergreen" contract after 2010 and therefore continues to be in place.

Copper concentrate sales agreements were entered into between Xstrata Copper Tintaya and Glencore for the period 1 January to 31 December 2010. All sales are based on either spot or benchmark terms in accordance with prevailing market conditions. As these sales agreements are spot contracts Glencore expects to replace these for 2011 based on prevailing market conditions.

A copper concentrate sales agreement was entered into between Xstrata Commodities Middle East and Glencore for a three-year period effective from 1 June 2008 and "evergreen" thereafter on benchmark

terms. Xstrata Commodities Middle East also sells concentrate to Glencore based on a spot basis on occasions throughout the year at prevailing market terms.

Xstrata Copper North Queensland has entered into a sales agreement with Glencore for copper concentrate for a three-year period effective from 1 June 2008 and "evergreen" thereafter. This agreement is based on annual benchmark terms.

Copper blister and anode sales agreements were entered into between Xstrata Commodities Middle East and Glencore between April and December 2010 at benchmark or spot terms. These agreements have been replaced with a copper blister annual contract for 2011 on benchmark terms.

A molybdenum concentrate spot sales contract was entered into between Mineral Alumbrera Limited and Glencore in 2010 on market-related terms.

A molybdenum concentrate contract was entered into between Xstrata Norte Exploraciones y Servicios Limitada and Minerales del Sur S.A. for 2010 off-take Collahuasi tonnes on market-related terms. Glencore is in the process of renewing this contract for 2011.

All sales transactions with Glencore are on arm's length terms and conditions.

*Nickel/Cobalt*

Xstrata Nickel has entered into long-term purchase agreements with Glencore for copper-cobalt white alloy raw material feeds to the Sudbury smelter in Canada and Nikkelverk refinery in Norway. Contracts include both a metal purchase and a sale component for cobalt. The term of the contracts are to the end of 2011, continuing indefinitely thereafter unless terminated by either party with six months' notice given not earlier than 1 July 2011. Pricing terms are based on prevailing market rates. Other short-term or one-time feed purchase agreements were entered into with Glencore, with pricing terms based on prevailing market rates. During 2010, Xstrata Nickel purchased from Glencore 102 tonnes of nickel, 109 tonnes of copper, 15 tonnes of cobalt and 66 kilograms of PGM's (2009: 287 tonnes, 563 tonnes, 250 tonnes, and nil kilograms, respectively). In addition, during 2010, Xstrata Nickel sold to Glencore 64 tonnes of cobalt (2009: 297 tonnes)[(1)].

In March 2007, Xstrata Nickel entered into sole distributorship agreements with Glencore, for its nickel, cobalt and ferronickel production. These agreements continue until 31 December 2012 and are automatically renewed for successive three year periods unless terminated by either party with not less than 12 months' notice prior to the end of the original term or any renewal terms, or unless Xstrata Nickel permanently ceases production of these metals. The nickel and cobalt distribution agreement was extended, only in respect of nickel, for a further five year term on 15 April 2011 and a revised premia structure will take effect only in respect of nickel as of 1 January 2013. These amendments with respect to nickel are subject to board approval by Xstrata. Xstrata Nickel, at its sole discretion, may cease, suspend or reduce production at any time. Glencore is obliged to distribute the products with all due care and diligence and shall cultivate and maintain good relations with purchasers and potential purchasers in accordance with sound commercial principles and taking into account Xstrata Nickel's business principles. All sales terms and conditions are set on an arm's length basis. For nickel and cobalt sales, the price basis is the month following the month of delivery. For ferronickel sales, the price basis is the quotational period provided for in customer contracts. Accordingly, provisionally priced nickel, cobalt and ferronickel revenues are subject to final price adjustments due to future price changes. During 2010, Xstrata Nickel sold to Glencore 92,139 tonnes of nickel (2009: 88,457 tonnes), 3,104 tonnes of cobalt (2009: 3,066 tonnes) and nil tonnes of ferronickel (2009: 236 tonnes). In addition, Glencore prepays monthly to Xstrata Nickel in two equal instalments 100 per cent. of the value of the month's planned production. The prepayment balance as at 31 December 2010 amounted to U.S.$36 million (2009: U.S.$49 million).

Xstrata Nickel sells refined copper to Glencore on arm's length terms and conditions under spot arrangements, which are based on prevailing market rates. During 2010, Xstrata Nickel sold to Glencore 3,698 tonnes of copper (2009: 1,547 tonnes). Effective for the period 1 January to 31 December 2011,

(1) The contract with Xstrata Nickel for the sale of cobalt is a toll conversion and sale contract. Under the terms of such contract Glencore is able to sell excess cobalt concentrate which it might not otherwise have the capacity to process to a subsidiary of Xstrata and then buy back a portion of the processed cobalt metal. 50 per cent. of the material purchased by Xstrata Nickel is sold onto its subsidiary production operations and the remaining 50 per cent. is toll converted into cobalt metal by such subsidiary. The converted metal is then returned to the Glencore Group in accordance with the terms and conditions of the agreement between the Glencore Group and Xstrata Nickel. All transactions are completed in accordance with contracted terms and on an arm's length basis. The sale of cobalt to Xstrata Nickel is treated as a normal sale in the Group's accounts and the metal returned is treated as a normal purchase.

Glencore has agreed to purchase, on a monthly basis, all copper production not otherwise sold by Xstrata Nickel under long-term contracts.

In April 2011, Xstrata Nickel and Glencore agreed the principal terms of a sole sub-distributorship arrangement in relation to 100 per cent. of the ferronickel production from the Koniambo ore body in New Caledonia, a project owned jointly by Xstrata Nickel and Société Minière du Sud Pacifique, the development arm of the North Province of New Caledonia, where Xstrata Nickel holds the exclusive marketing rights for all products. The terms agreed are binding on the parties subject to the satisfaction of certain conditions, which are expected to be satisfied during 2011. The sub-distributorship arrangement is expected to continue until 31 December 2017 and will be automatically renewed for successive three-year periods, unless and until terminated by either party by written notice no less than one year prior to the end of the initial term or any renewal term. In addition, the arrangement will be capable of earlier termination due to, among other things, material breach by, or the insolvency of, either party. Xstrata Nickel will also have the right to temporarily cease, suspend or reduce delivery of ferronickel at any time following the provision of reasonable notice to Glencore and for whatever reason. All sales terms and conditions between Xstrata Nickel and Glencore are on an arm's length basis.

*Zinc*

On 1 January 2007, Xstrata Zinc renewed a service agreement for a period of three years which shall continue in effect thereafter unless terminated by any of the parties giving the other prior written notice of no less than 12 calendar months with Glencore (the Xstrata Zinc Service Agreement), under the terms of which Glencore provides advice and assistance with respect to pricing and structural issues regarding hedging and the optimisation of internal flows of raw materials. The fees to be paid by Asturiana under the Asturiana Service Agreement are U.S.$2 million per annum.

In 2010, Xstrata Zinc agreed to supply Glencore with 255,000 tonnes (2009: 315,000 tonnes) of SHG zinc slabs and CGG ingots from San Juan de Nieva and Nordenham smelters based on market prices plus the respective FOB/CPT market premium. The terms for the replacement 2011 annual contract are currently being finalised—shipments continue to be made as normal under this arrangement.

In 2010, Xstrata Zinc Canada agreed to supply Glencore with approximately 14,600 tonnes (2009: 63,700 tonnes) of SHG zinc slabs and jumbos based on market prices plus the respective delivery duty paid (DDP) premium. This contract has been replaced with an annual contract for 2011 based on market terms.

In 2010, Britannia Refined Metals agreed to supply Glencore with between 12,000 and 18,000 tonnes of lead metal ingots. The agreement is "evergreen" in nature. In addition, Britannia Refined Metals agreed to supply Glencore with a separate additional 7,500 tonnes of lead metal ingots. Both agreements are based on market prices plus the respective ex-works market premium.

In 2010, Xstrata Zinc Canada made agreements to supply Glencore with approximately 18,300 tonnes (2009: 32,000 tonnes) of lead metal ingots and jumbos. All agreements are based on market prices plus the respective DDP premium. These agreements have been replaced with an annual contract for 2011 based on market terms.

In 2010, Mt Isa Mine had an evergreen contract to supply 80,000 tonnes to Glencore (2003: 80,000 tonnes).

In 2010 Xstrata Zinc sold 300,000 tonnes of zinc concentrate to Glencore under an evergreen swap contract. In return, Xstrata Zinc purchased from Glencore 300,000 tonnes of various zinc concentrate qualities delivered to Xstrata Zinc smelters (2009: 300,000 tonnes). In addition, Xstrata Zinc sold 50,000 tonnes to Glencore under a time swap agreement.

In 2010, Xstrata Zinc sold to Glencore 158,000 tonnes of zinc concentrate under various spot sales contracts from Mt Isa Mine, Antamina, McArthur River and other zinc concentrate qualities.

In 2010, Xstrata Zinc had an agreement to supply Glencore 247,000 tonnes of McArthur River bulk concentrate on an evergreen basis (2009: 245,000 tonnes). Further to the aforementioned agreement, an additional 65,000 tonnes of McArthur River and Brunswick Mine bulk concentrate were sold under annual contracts.

During 2010, Xstrata Zinc Canada purchased 25,000 tonnes of lead concentrates from Glencore for delivery to the Belledune lead smelter under various spot contracts.

All evergreen and annual zinc concentrate and bulk concentrate contracts are based on recognised annual industry benchmark treatment charges and related terms for price participation and silver payables. Spot contracts are negotiated at prevailing market terms.

*Technology*

In 2006, Xstrata Technology was contracted to install a copper ISASMELT furnace, a lead ISASMELT furnace and an IsaProcess copper refinery at Kazzinc, a Glencore subsidiary for U.S.$99 million. The project commenced in May 2006 and will be commissioned late 2011. This transaction with Kazzinc is on arm's length terms and conditions.

Approximately 6.5 per cent. of Glencore's total purchases were attributable to purchases from Xstrata for the year ended 31 December 2010.

**Worldwide office network**

***Organisation***

The three business segments described above report to management at the corporate level and are supported by the finance, legal, risk, human resource and compliance departments. All activities related to a specific commodity, including physical marketing activities, hedging, logistics and industrial investments, are managed by the business segment that covers the particular commodity.

Glencore's finance department is headed by the Chief Financial Officer based at Glencore's head office in Baar. Finance and accounting staff in each principal location (Baar, London, Rotterdam, Stamford, Singapore and Beijing) handle the day-to-day finance and accounting tasks related to the business activities conducted out of that location. The proximity of local finance and accounting staff to Glencore's marketing and logistics activities is important in order to ensure prompt and professional handling of the finance and accounting activities related to the specific commodity. The head office finance staff handle (i) funding activities based on Glencore's corporate credit, such as syndicated loan facilities and debt capital market transactions, (ii) co-ordination of the worldwide treasury, hedging and credit and exposure management activities, (iii) presentation of Glencore's financial statements to investors and rating agencies, (iv) relationships with its investors and with rating agencies and (v) assets and liabilities management of its consolidated balance sheet and compliance with covenants. The head office accounting staff are responsible for (a) financial accounting, including the preparation of the financial statements of the legal entities, (b) preparation of Glencore's consolidated financial statements, (c) management information related to the performance of each individual business segment, (d) reporting throughout the entire group, (e) tax issues and (f) the worldwide relationship with its independent auditors.

***Office network***

Relationships with producers and consumers of raw materials are the responsibility of senior employees who receive support from Glencore's global network of more than 50 offices in more than 40 countries. As shown below, these offices are located in major American, European, Asian, African and Middle Eastern natural resources producing and consuming markets. Some of these offices also oversee local logistics, including supervision of shipments, initial quality control, local authority liaison and shipping

documentation. As at 31 December 2010, Glencore's global marketing network comprised the following offices:

| Europe | CIS | Asia/Australia | Americas | Middle East and Africa |
|---|---|---|---|---|
| Avon | Baku | Beijing | Asuncion | Casablanca |
| Baar | Kiev | Brisbane | Bogota | Dubai |
| Bucharest | Moscow | Ho Chi Minh City | Buenos Aires | Johannesburg |
| Budapest | Odessa | Jakarta | Calgary | Maputo |
| Gdansk | | Kolkata | Cancun | |
| Istanbul | | Manila | Clarksville | |
| London | | Melbourne | Hamilton | |
| Madrid | | Mumbai | Houston | |
| Milan | | New Delhi | La Paz | |
| Rotterdam | | Seoul | Lima | |
| Sofia | | Shanghai | Los Olivos | |
| Thame | | Singapore | Mexico City | |
| Zagreb | | Sydney | Montevideo | |
| | | Taipei | Pittsburgh | |
| | | Tokyo | Quito | |
| | | | Rio De Janeiro | |
| | | | Santiago | |
| | | | Sao Paulo | |
| | | | Stamford | |

Glencore believes its global office network significantly enhances its worldwide sourcing and distribution capabilities. It also secures key competitive advantages by enabling Glencore to penetrate and maintain a presence in local markets, identify strategic investment opportunities, develop excellent knowledge of trading conditions and counterparty quality, and respond quickly to changes in market practices and characteristics. Glencore's close proximity to its suppliers and customers is one of its key strengths.

**Tax residency**

The Company is incorporated and registered in Jersey as a public company limited by shares under the Jersey Companies Law. The Company is headquartered in Baar, Switzerland and the Swiss tax authorities have confirmed that, on the assumption that the affairs of the Company are conducted as the Directors intend, they will regard the Company as a resident of Switzerland for the purposes of Swiss taxation law. Further, as set out in Note (4) of Section VII: "Unaudited Pro Forma Financial Information", the Restructuring will crystallise Swiss tax deductions of U.S.$4,785 million and will result in a deferred tax asset in Glencore International with a value of U.S.$444 million (net of other tax adjustments). Glencore's effective tax rate results primarily from the location of the Glencore Group's individual operations in differing tax jurisdictions relative to Glencore's historic corporate tax jurisdiction, Switzerland. Glencore's industrial operations are taxed at local rates in the jurisdictions where the relevant operating subsidiaries are located. It is not intended that the Company will be tax resident in any other jurisdiction.

**Employees, employee relations and employee benefits**

As at 31 December 2010, Glencore employed 2,772 people worldwide, excluding employees in the operations of its industrial assets. The employees include managers, support staff and employees in the offices. The following table indicates the distribution of Glencore's employees by geographic region:

***Employees by geographic region***

| | As at 31 December 2010 |
|---|---|
| **Region** | |
| Europe | 1,241 |
| U.S. | 260 |
| Latin America | 176 |
| Africa | 59 |
| Asia | 400 |
| Australia | 56 |
| CIS | 580 |
| **Total** | **2,772** |

As at 31 December 2010, 54,884 people were employed by Glencore's industrial assets.

*Employee relations*

Generally, the Directors believe that Glencore enjoys good labour relations across its group. Glencore's direct employees are not unionised. Some employees in the operations of Glencore's industrial assets are unionised. Glencore believes that it and its industrial assets have a positive and constructive relationship with these unions. However, as in any business in which there is union involvement, there is a risk that Glencore's operations could be affected by disputes with unions (see "Risk Factors—Other risks relating to Glencore—The maintenance of positive employee relations and the ability to attract and retain skilled workers is key to the successful operation of Glencore's industrial activities"). Glencore minimises the risk of such disputes by ensuring that the management of Glencore and of the industrial assets maintains a frequent and open dialogue with the unions.

*Employee benefits*

Glencore's remuneration to employees includes salaries, bonuses and selective equity participation. Bonuses are generally discretionary based on the individual performance of the employee and the overall performance of Glencore. Benefits may include pensions, health insurance, life insurance and other allowances depending on the role of the employee and applicable law.

Please refer to Section X: "Additional Information" for further information on pensions and employee share plans.

**Properties**

Glencore leases its headquarters in Baar, Switzerland, as well as offices in major locations such as London, Rotterdam, Stamford and Singapore under long-term lease agreements.

**Environment, health and safety**

Glencore is committed to conducting its business activities in a manner that will safeguard the health and safety of all employees and protect the environment. Glencore's industrial assets, as well as marketing and logistics activities, are subject to a range of EHS laws and regulations. For its operations (industrial assets and marketing logistics), Glencore has EHS policies and management programmes in place to manage and ensure compliance as well as to track and improve overall performance with the applicable local and international EHS laws and regulations. Glencore's EHS policies, management programmes and reporting schemes seek to identify areas of non-compliance or areas for general improvement. These measures are also used to identify deficiencies by providing appropriate information and specialist advice to determine appropriate corrective actions.

Glencore's EHS policies and management systems are embedded into Glencore Corporate Practice programme ("GCP"). The GCP principles apply to Glencore's marketing activities and to all controlled industrial assets. GCP was designed to address the key non-financial aspects of Glencore's business activities that are important to its success and are indirectly linked to its overall financial performance, which are:

- health and safety;
- environment;
- community relations;
- human resources;
- impact on society and economies; and
- compliance.

These points are addressed in the form of commitments (a) to employees, the environment, communities in which Glencore operates, customers and investors; and (b) to adhere to good practice in compliance, communication and reporting. GCP meets internationally accepted good practice standards for corporate governance and management of non-financial activities.

In practice, GCP adds non-financial aspects to internal corporate reporting requirements, covering performance on societal, environmental and compliance indicators. Depending on the report subject matter, GCP may require annual or monthly internal reporting or, for critical incidents, reporting within 24 hours. Glencore will also make annual public reports on GCP itself, which will follow the latest

guidelines of the Global Reporting Initiative, an initiative which aims to create conditions for the transparent and reliable exchange of sustainability information.

Glencore encourages employees to ensure that customers, suppliers, agents, service providers and contractors comply with GCP where possible. Glencore also uses its influence to raise awareness and consideration of the basic principles within its joint ventures and entities in which its has non-controlling stakes.

Where GCP applies, employees are required to understand and comply with the principles. Glencore's managers are responsible for ensuring compliance, carrying out periodic assessments, management reviews and reviews of corrective action plans. Glencore applies appropriate controls, scaled for different levels of materiality in different areas of the group, and regularly benchmarks its achievements against targets and expectations, taking corrective action where necessary.

***Environmental impact***

In order to manage and limit the environmental impact of its controlled-extractive activities, the Glencore Group has established environmental management systems which are used to monitor environmental aspects of the operations undertaken by Glencore Group. Glencore's controlled-extractive assets carry out internal and external environmental audits from time to time. See the Prodeco MER, Mopani MER, Katanga MER and Kazzinc MER in Section XIV: "Independent Technical Reports" for further details of the environmental assessments carried out on Glencore's key industrial assets.

In common with other natural resources and mineral processing companies, despite its best efforts, Glencore's operations cannot always prevent adverse effects on the environment and surrounding communities. Such unfortunate situations may occur even though Glencore's controlled-extractive assets are managed in compliance with local laws, regulations and project-specific permits and environmental management plans. Typical issues in this regard include sulphur dioxide emissions caused by installations such as smelter furnaces or converter units, dust emissions from smelters, tailings dams or traffic on unpaved roads. Mining and ore processing always have a high demand for water which creates a challenge of ensuring a sufficient water supply (sometimes in arid regions) and managing effluents to preserve the quality of surface or ground waters. Project development may make land-clearing necessary, which can negatively impact biodiversity and change landscapes. Waste rocks and tailings usually occur on a large-scale and, if not used for backfill, they need to be disposed in a safe and environmentally friendly manner.

Glencore also looks to promote environmental awareness in its non-controlled industrial activities and works in partnership with its customers, suppliers and service providers to limit the overall impact along the entire supply chain. Glencore's marketing and logistics operations also need to actively manage certain issues to seek to prevent damage to the environment and surrounding communities.

Besides the environmental aspects of industrial assets, Glencore's marketing and logistics operations also need to actively manage certain issues to prevent damage to the environment and surrounding communities. For example, failure in the logistics of crude oil or petroleum products can result in major environmental impact with huge reputational and financial damages. Therefore, Glencore's time charter fleet for crude oil and petroleum products is regularly inspected according to international maritime standards and has to meet certain technical criteria (for example, double hull) before being qualified to transport Glencore's products. All of this ensures sea- and cargo-worthiness and reduces the risk of failure to a tolerable minimum.

Glencore's products placed in the market are in many cases covered by national and international product safety and dangerous goods regulations. Any failure in complying with these obligations could result in a delay of Glencore's product delivery, loss of insurance coverage, business interruption for Glencore's customers, administrative or criminal sanctions and in extreme cases (temporarily) banning from a marketplace. Glencore has management systems in place to ensure compliance with applicable product safety and dangerous goods regulations. For example, Glencore provides service providers within the supply chain as well as its customers with supporting product information and documentation to allow them to take appropriate steps in relation to safe transportation, handling and use of Glencore's products.

Glencore acknowledges that managing the environmental compliance and impact of Glencore's operations is a dynamic process as the international and local regulatory environment is changing regularly.

***Health and safety***

Glencore is committed to the health and safety of Glencore employees and contractors and surrounding communities. Glencore's operations developed, implemented and maintain health and safety management systems and programmes which meet international standards and applicable regulatory requirements. These are tailored to the specific needs of Glencore's operations and activities. Performance is regularly monitored by tracking injuries, lost days, fatalities and near-miss events. This information is used as the basis for continuous improvement programmes, training and improvement of the integrity and safety of work places as well as mobile or stationary equipment.

***Communities***

Glencore believes that its business activities, and in particular its mining operations, contribute in the medium and long term to local development of communities. In addition to monetary distribution of wealth (e.g. direct employment, taxes or royalties), Glencore adds value by procurement of products and services, investments in infrastructure and involvement in local social and development projects.

Initiatives are usually adapted to local situations and needs. They can either be single projects or programmes with long-term commitments. Areas of activity include, for example, education, sports, child care, medical care, culture, environment or even public provision of utilities for the surrounding communities. Glencore works in partnership with local authorities and communities to ensure effectiveness, efficiency and acceptance of each of these programmes.

Glencore seeks to maximise the share of its locally hired staff, to the extent possible, which results in positive employment opportunities in the surrounding communities. Glencore believes that, besides all the accompanying community programmes and projects, creating employment opportunities for the community is one of the major contributions to local development and wealth. This is especially relevant when Glencore operates in remote areas with limited employment opportunities and development challenges.

Although Glencore seeks to prevent local communities from adverse social impact caused by its activities, these cannot always be completely mitigated. In such an event and whenever possible, Glencore strives at least to minimise these effects and seeks to find fair compensation.

***Insurance***

Glencore maintains a number of key insurance policies that it believes are commercially appropriate to cover the risks associated with its business operations. All of Glencore's insurance policies are placed in external insurance markets with global and local insurers as appropriate and have bespoke terms to reflect Glencore's requirements. Deductibles are generally kept at a low level, ranging from zero to approximately U.S.$1 million (except for one of the industrial assets, which has a deductible of U.S.$20 million). The vast majority of Glencore's insurance policies are underwritten through Lloyd's and other major European and international insurance companies. Glencore maintains an insurance portfolio that covers both physical assets and liability exposures.

Glencore's global insurance policies cover its subsidiaries and its industrial assets (subject to some local insurance cover), and are purchased centrally by the Glencore Group. Glencore's principal global insurance policies include property damage and business interruption (specific to certain copper and zinc assets), charterer's legal liability, marine cargo, excess oil pollution liability, political risk (in respect of oil in storage and/or in transit only), offshore liabilities, piracy, general third party liability and directors' and officers' liability insurance. In addition, Glencore provides insurance and assistance in relation to its shipping subsidiaries and arranges coverage in respect of various owned vessels for relevant shipping risks such as hull and machinery losses or damage, loss of hire and third party liability and expenses claims from owning or operating ships as principal. Insurance for the majority of co-owned vessels is arranged by Glencore's joint venture partner/co-owner, such terms and conditions and underwriter's security ratings subject to approval by Glencore. Insurance policies for its industrial assets are typically purchased locally on an individual asset basis, with Glencore covering material losses in excess of local limits. All material and locally purchased policies are held centrally by the Glencore Group. These policies include property damage and business interruption, general third party liability and directors' and officers' liability, charterer's legal liability and marine cargo liability, where applicable. However, many of Glencore's material industrial assets, such as Mopani, Prodeco, Kazzinc, Mutanda and Katanga rely on the Glencore Group's global coverage for certain risks as opposed to effecting its own local insurance cover placed in each local territory. Where local coverage is currently in place in respect of an industrial asset, such as the

property damage and business interruption cover for Prodeco, Kazzinc and Mutanda, Glencore considers whether to cover such asset under the global policy, and it is intended that these three assets will be covered by the relevant global policy in 2011.

Glencore has relationships with a number of insurance brokers that have been selected for their better market representation in particular classes of insurance or relationships with either local or international underwriters. By using different brokers, Glencore believes that it receives better service in respect of policy placements, premium costs, advice and assistance on claims. Brokers are generally remunerated on a commission basis. Although Glencore does not set its own minimum financial security ratings in respect of insurers or brokers, it verifies and confirms ratings and suitability during the course of renewal discussions.

**Legal and compliance**

Glencore has policies and procedures to manage legal risks and address regulatory requirements and other compliance obligations. Glencore has a centralised group legal department that sets legal policy for the Glencore group, supervises the Glencore Group's overall legal function and provides legal services to all areas of the Glencore Group's business activities. In addition, there are some smaller legal teams that support specific business activities and offices, such as the freight and oil legal team in London and the agricultural legal team in Rotterdam. Furthermore, many of the larger Glencore local operating units, such as Kazzinc by way of example, have a local legal function.

Glencore also has a group compliance department that sets compliance policy for the Glencore Group and seeks to supervise the group's overall compliance function. The group compliance department ensures adherence with relevant laws and regulations through an awareness and review process. In addition, the compliance department has put in place a number of manuals to give the business guidance in a number of areas, including money laundering, conflicts of interest, sanctions, bribery and corrupt payments and confidentiality. Many of Glencore's local operating units also have dedicated compliance personnel to address applicable regulatory requirements and these report to the group compliance department.

While Glencore believes that its internal policies and procedures have been effective in the past, in preparing to become a publicly listed company, Glencore has reviewed and updated its internal policies and procedures to ensure it continues to have an appropriately high level of corporate governance, accountability and risk management and that such policies and procedures are properly documented and communicated. The UK Corporate Governance Code sets out the standards of good practice in relation to board leadership and effectiveness, remuneration, accountability and relationship with shareholders. Glencore has in place all the applicable UK requirements under the UK Corporate Governance Code, including the establishment of independent, effective audit and remuneration committees and the formal documentation of the terms of responsibility and scope of its internal audit procedures.

The Glencore Group's legal and compliance departments assist the Glencore Group in monitoring its overall liability profile associated with legal and regulatory matters, including liabilities that may be associated with the Glencore Group's historical activities.

Glencore is of the view that, in the context of the Glencore Group taken as a whole, there have been no material breaches of any material applicable laws and regulations.

**Risk management and financial risk management**

Risk management and control spans across Glencore's organisational structure. Glencore's Board has been and will further be involved in the risk management of the Glencore Group at a strategic level. Glencore's CEO engages in an ongoing interrogatory exchange with the management team as a primary oversight of group risk, supported in this function by the Group Risk Management team, multi-sourced risk reporting and the Chief Risk officer. This support, amongst other things, relates to consolidated risk reporting, co-ordination of group and departmental VaR, stress, scenario and other testing, reviewing and challenging the evaluation models and, in conjunction with departmental teams, input parameters used by commodity departments. The departments and Group Risk team further engage in a dialogue concerning general aspects of risk management policy and reporting. The internal audit and compliance and business ethics committees also play key roles in managing group operational risk and verifying process controls.

Glencore's business could be impacted by various external factors, for example political events and unfavourable actions by governments, natural catastrophes and operational disruptions. In addition, Glencore's activities expose it to a variety of financial risks: market risk (including commodity price risk, interest rate risk and currency risk), credit risk (including performance risk) and liquidity risk. Glencore's

overall risk management programme focuses on the unpredictability of financial markets and seeks to protect its financial security and flexibility by using derivative financial instruments substantially to hedge these risks. Among others, Glencore monitors its commodity price risk exposure using a VaR computation and assesses the open positions, which are those subject to price risks, including inventories of these commodities. Glencore's finance and risk professionals, working in co-ordination with the commodity departments, monitor, manage and report regularly to management on the financial risks and exposures Glencore is facing. Responsibility for reviewing the overall effectiveness of Glencore's system of internal controls and risk management systems lies with the audit committee.

Please refer to Section II: "Directors and Corporate Governance" for further information on the audit committee and to Section IV: "Operating and Financial Review" for further information on financial risk management.

**IT Systems**

Glencore's IT systems environment is based on the three primary elements of its organisation: the Glencore Group; the marketing operations; and the industrial assets. The Glencore IT department is structured so that it is vertically aligned to the marketing operations of the commodity departments, with horizontal coordination of the IT functions across the Glencore Group. The support and management of the IT systems within the industrial assets is performed by the relevant local teams, with the support and advice from the Glencore IT department based in Baar, London, Rotterdam, Singapore and Stamford. Glencore believes this structure enables it to react more quickly to market changes and enhances Glencore's ability to manage its activities in an efficient, reliable and timely fashion.

Glencore's business-critical software applications such as traffic/marketing, accounting and finance are based on integrated standard components. Glencore's core business processes are supported by a combination of in-house developed and off-shelf purchased applications and are continuously adapted to the newest business needs. All of these applications are managed from Glencore's headquarters in Baar and are available to all the major locations, but some commodity-specific applications are supported by the applicable marketing site, such as agriculture in Rotterdam. The Glencore Global Accounting Programme ("GGAP") is a new programme intended to provide Glencore with improved facilities over decision making, assembling resources and financial control. The implementation of a third party specialist, SAP AG, as enabler for GGAP is intended to provide greater reliability and accuracy of financial information and better support for the diverse information requirements from across the Glencore Group. The programme will be managed centrally in Baar and will replace the current local accounting application used by Glencore's main marketing sites in Baar, London, Singapore, Rotterdam and Stamford. Glencore has sought to establish structures and process to ensure GGAP is delivered on time and to budget and GGAP is scheduled to be released in three separate phases: Baar is due to go live in mid-2011; London, Singapore and Stamford in the third quarter of 2011; and Rotterdam in the first quarter of 2012.

In addition to GGAP, a number of other key IT projects are currently underway within the Glencore Group, such as the replacement of the current systems and operational processes supporting the oil commodity department and the new IT system to be implemented in the Energy Products business segment by 2013. Glencore is continuously expanding and upgrading its communications network in response to the growing need to link its worldwide staff electronically and to store, organise and make available to its staff the increasing volume of data transmitted within the global network.

Glencore's IT network architecture is based on a wide area network that interconnects three of its main marketing sites, namely Baar, London and Stamford, and is designed with built-in resilience through the use of dual connections operated by two separate suppliers. This configuration allows Glencore to provide an efficient and highly available service to its employees. Mechanisms which facilitate the restoration of Glencore systems in the event that they become unavailable are also in place. Glencore has its own IT department with approximately 170 employees worldwide, which excludes people employed in the operations of its industrial assets, focused on providing customised business solutions to the changing needs of Glencore's business and providing smooth operation of IT systems.

**Dividend policy**

Glencore will adopt a progressive dividend policy with the intention of maintaining or increasing its total ordinary dividend each year.

Glencore's earnings come from a diverse range of consolidated marketing and industrial activities, as well as from its ownership of stakes in other companies such as Xstrata, where the Company receives cash flow

in the form of dividends. The Board expects that its dividend policy will reflect this diversity as well as the various growth opportunities open to the Company.

The Board intends to maintain a strong balance sheet to ensure Glencore can continue to invest in organic growth and take advantage of strategic opportunities as they arise. The Board will monitor Glencore's future investment activities against alternative uses of capital, which could include ordinary dividends, special dividends or share buy-backs.

Dividends are expected to be declared by the Board semi-annually, with interim dividends announced with Glencore's half-year results and final dividends announced with Glencore's preliminary full year results. Interim dividends are expected to represent approximately one-third of the total dividend for any year. Dividends will be declared and paid in U.S. dollars, although Shareholders will be able to elect to receive their dividend payments in pounds sterling, Euros or Swiss Francs based on the exchange rates in effect at the date of payment. Shareholders on the Hong Kong branch register will receive their dividends in Hong Kong dollars.

The Directors currently expect to declare an interim dividend of U.S.$350 million in August 2011 concurrent with publication of the interim results for the six months to 30 June 2011.

As described more fully in Section IX: "Taxation", once cumulative dividends and other distributions paid by the Company exceed the aggregate of its nominal capital and Qualifying Reserves (as described in Section IX: "Taxation"), dividends and other distributions paid by the Company will be subject to Swiss federal withholding tax on the cash amount of the distribution at the then prevailing rate. The current rate of Swiss federal withholding tax is 35 per cent..

**FTSE eligibility**

Following discussions with FTSE, it is anticipated that Glencore will be included in the FTSE 100 under the fast entry rule (that is, at close of business on the first day of official trading).

**Reasons for the Global Offer and use of proceeds**

The net proceeds from the Global Offer receivable by the Company are estimated to be pounds sterling, U.S. dollar and Hong Kong dollar amounts equivalent in aggregate to U.S.$7,456 million after deduction of estimated underwriting commissions and estimated expenses of the Global Offer (assuming the maximum amount of the Underwriter's incentive commission and the discretionary elements of the fees of the Company's other advisers will be paid and including applicable VAT), assuming the Over-Allotment Option is not exercised and the Offer Price is set at the mid-point of the Offer Price Range and exchange rates as at 29 April 2011 (being the last practicable date prior to the publication of this Prospectus). If the Over-Allotment Option were to be exercised in full, the estimated net proceeds from the Global Offer receivable by the Company would increase to U.S.$8,439 million (estimated U.S. dollar equivalent of proceeds to be received in pounds sterling and Hong Kong dollars and assuming the Offer Price is set at mid-point of the Offer Price Range). The Company will not receive any portion of the proceeds resulting from the sale of the Sale Shares by the Selling Shareholder in the Global Offer (other than where proceeds are paid to Glencore International in respect of tax liabilities settled by the Company on behalf of certain Existing Shareholders where the Glencore group has a withholding tax or other legal obligation to do so and in certain cases to repay a small tranche of outstanding loans extended by companies within the Glencore Group).

The Directors believe that the Global Offer, together with Admission, will assist in positioning Glencore for the next stage of its development, as they will (in equal order of priority):

- provide further resources to invest in future organic and acquisition growth opportunities and improve the financial flexibility of the Company;
- enhance the profile of the Company with existing and potential suppliers and customers; and
- provide the Company with a permanent equity capital base and existing shareholders with a market for their Ordinary Shares going forward.

The Company currently intends to apply the proceeds from the Global Offer in the following order of priority:

- use of approximately U.S.$2.2 billion of the net proceeds from the Global Offer towards meeting the cash portion of the consideration payable to Verny, pursuant to the Kazzinc SPAs (further details of

which are set out in Section X: "Additional Information") in respect of Glencore's proposed acquisition of additional stakes in Kazzinc;

- use of approximately U.S.$5 billion of the net proceeds from the Global Offer towards meeting its budgeted total aggregate capital expenditure for the next three calendar years (ending 31 December 2013). Items falling within this include funding of significant expansion projects in respect of Kazzinc (estimated capital expenditure of: U.S.$834 million), Mopani (estimated capital expenditure of: U.S.$512 million), Prodeco (estimated capital expenditure of: U.S.$919 million), the West African Oil Assets (estimated capital expenditure of: U.S.$791 million) and Glencore's other industrial assets (estimated capital expenditure of: U.S.$900 million), further information in relation to which is set out in the Prospectus (Section I: "Information on Glencore"). Glencore will continue to assess its capital expenditure plans on an annual basis; and
- in order to reduce its cost of borrowing and improve financial flexibility, use of a portion of any proceeds that are not applicable to, or immediately required, for these purposes to reduce drawings under the U.S.$11,905 million revolving credit facilities and repay various other debt obligations of the Glencore Group. Should growth opportunities arise in the future, Glencore could either draw down any remaining facilities or put in place new facilities.

**Current Trading and Prospects**

**Introduction**

Glencore's operating and financial performance over the first quarter of 2011 continued to benefit from improved market conditions as also experienced in the final months of 2010.

**Marketing**

Marketing operations began 2011 strongly with performance for the first quarter of 2011 in line with management expectations. In particular, following a challenging 2010, the oil division reported substantially improved results, more in line with 2009 performance, due to increased arbitrage opportunities as a result of market volatility and tighter supply conditions.

**Industrial**

Glencore's consolidated industrial activities and associates delivered a substantially improved performance over the first quarter of 2011, primarily on the back of a strong commodity price environment but also assisted by year-on-year production increases at many operations. Operating costs and capital expenditures, including expansion related capital expenditures, were broadly in-line with management expectations.

**Summary and outlook**

Overall, Glencore's businesses performed in line with management's expectations over the first quarter of 2011. Strong market conditions experienced in the first quarter are continuing into the second quarter of 2011. Despite recent events in Japan and the Middle East, the Directors remain confident that economic activity and commodity demand remain robust and Glencore remains well positioned for 2011. In this regard, the Directors reconfirm Glencore's previously announced intention to declare an interim dividend of U.S.$350 million in August 2011 concurrent with publication of the interim results for the six months to 30 June 2011.

## SECTION II: DIRECTORS AND CORPORATE GOVERNANCE

### Board of Directors

The Directors of the Company are as follows:

| Name | Age | Position |
|---|---|---|
| Simon Murray | 71 | Independent Chairman |
| Ivan Glasenberg | 54 | Chief Executive Officer |
| Steven Kalmin | 40 | Chief Financial Officer |
| Peter Coates | 65 | Independent Non-Executive Director |
| Leonhard Fischer | 48 | Independent Non-Executive Director |
| Anthony Hayward | 53 | Senior Independent Non-Executive Director |
| William Macaulay | 65 | Independent Non-Executive Director |
| Li Ning | 54 | Independent Non-Executive Director |

*Chairman*

**Simon Murray, aged 71 (Independent Non-Executive Chairman)**

Simon Murray was appointed to the Board with effect from 28 April 2011. Mr Murray is currently the chairman of GEMS Limited, a private equity investment group operating across Asia, which he founded in 1998. Mr Murray worked for Jardine Matheson from 1966 to 1980, where he was responsible for their engineering business and trading operations, after which he set up his own company, Davenham Investments, a project advisory company. In 1984, Mr Murray joined Hutchison Whampoa as the group managing director, a post in which he served until 1993 and during which period he led the group's entry into the mobile telecommunication business, developed the group's energy business and expanded its container and port operations. Mr Murray continued to serve as a member of the board of Hutchison Whampoa until May 2007. From 1994 to 1997, Mr Murray was the executive chairman of Deutsche Bank Group for the Asia Pacific region with responsibility for the supervision of operations of 80 offices in 17 countries in the region. Mr Murray is a member of the board of directors of a number of public companies including IRC Limited, Essar Energy plc, Cheung Kong (Holdings) Limited, Orient Overseas (International) Ltd., Wing Tai Properties Limited, Greenheat Group Limited, Compagnie Financière Richemont SA, and Sino Forest Corporation. Mr Murray was a non-executive director of Vodafone Group Plc between July 2007 and July 2010. In 1993, Mr Murray was appointed a CBE in honour of his contribution to the Hong Kong community. Mr Murray has also been awarded the Order of Merit of the French Republic and is a Chevalier de la Légion d'honneur. He holds an honorary B.A. degree in law from Bath University and attended the Stanford Executive Programme (SEP) in the U.S.

*Executive Directors*

**Ivan Glasenberg, aged 54 (Chief Executive Officer)**

Ivan Glasenberg joined Glencore in April 1984 and has been Chief Executive Officer of Glencore since January 2002. Mr Glasenberg was appointed to the Board on 14 March 2011. Mr Glasenberg first worked in the coal/coke commodity department in South Africa for three years as a marketer, responsible for sourcing coal in South Africa and then in Australia for two years as head of the coal/coke commodity division, Asia, responsible for sourcing and marketing coal in regions including Australia, Asia and South Africa. Between 1988 and 1989, he was based in Hong Kong as manager and head of Glencore's Hong Kong and Beijing offices, as well as head of coal marketing in Asia, where his responsibilities included overseeing the Asian coal marketing business of Glencore and managing the administrative functions of the Hong Kong and Beijing offices. In January 1990, he became director of the coal/coke commodity department, responsible for the worldwide coal business of Glencore for both marketing and industrial assets, and remained in this role until he became Chief Executive Officer in January 2002. Mr Glasenberg is a Chartered Accountant of South Africa and holds a Bachelor of Accountancy from the University of Witwatersrand. Mr Glasenberg also graduated in 1983 from the University of Southern California with an M.B.A. degree. He is currently a director of Minara as well as Xstrata and UC Rusal. Before joining Glencore, he worked for five years at Levitt Kirson Chartered Accountants in South Africa.

**Steven Kalmin, aged 40 (Chief Financial Officer)**

Steven Kalmin joined Glencore in September 1999, starting in the Sydney office in Glencore's coal industrial unit, which was subsequently sold to Xstrata, as general manager of finance and treasury functions. Mr Kalmin was appointed to the Board on 14 March 2011. Mr Kalmin moved to Glencore's Baar head office in October 2003 to oversee Glencore's accounting and reporting functions and became Chief Financial Officer as of the end of June 2005. Mr Kalmin holds a Bachelor of Business from the University of Technology, Sydney and is a member of the Institute of Chartered Accountants of Australia and the Financial Services Institute of Australasia. He is also currently a director of various companies within the Glencore Group. Before joining Glencore, he worked for nine years at Horwath Chartered Accountants in Sydney, leaving the firm as a director.

***Independent Non-Executive Directors***

**Peter Coates, aged 65 (Independent Non-Executive Director)**

Peter Coates was appointed to the Board with effect from 14 April 2011. He is currently a non-executive director and chairman of Santos Ltd., and a non-executive director of Amalgamated Holdings Limited. Until recently, he was a non-executive director and chairman of Minara Resources Limited, having been appointed to the chair on 9 May 2008. During his executive career in the resource industry spanning more than 40 years, Mr Coates occupied many senior positions in resource companies associated with the mining of a cross section of commodities including silver, lead, zinc, nickel, iron ore, bauxite and coal. Prior to his retirement as an executive in December 2007, Mr Coates was the chief executive of Xstrata's coal business. He joined Xstrata in 2002 when Glencore sold its Australian and South African coal assets to Xstrata for cash and shares simultaneous with Xstrata's primary listing and capital raising in London. From January 2008 to June 2009 Mr Coates was non-executive chairman of Xstrata Australia. Mr Coates is a past chairman of the Minerals Council of Australia, the NSW Minerals Council and the Australian Coal Association. He was appointed to the Office of the Order of Australia in June 2009 and was recently awarded the Australasian Institute of Mining and Metallurgy Medal for 2010. He holds a Bachelor of Science degree in Mining Engineering from the University of New South Wales.

**Leonhard Fischer, aged 48 (Independent Non-Executive Director)**

Leonhard Fischer was appointed to the Board with effect from 14 April 2011. He was appointed the chief executive officer of RHJ International S.A. in January 2009, having been the co-chief executive officer from May 2007. He has been a member of the board of directors of RHJ International S.A. since 18 September, 2007. He is also chief executive officer of the Kleinwort Benson Group and is a member of the board of directors at Julius Baer Gruppe AG (formerly Julius Bär Holding AG), as well as at AXA Konzern AG, Germany and Arecon AG (vice president of the board) and was previously a non-executive director and member of the audit committee at 3W Power Solutions S.A. (formerly Germany 1 Acquisition Limited, the holding company of AEG Power Solutions). Mr Fischer was chief executive officer of Winterthur Group from 2003 to 2006 and a member of the executive board of Credit Suisse Group from 2003 to March 2007. He joined Credit Suisse Group from Allianz AG, where he had been a member of the management board and head of the Corporates and Markets Division. Prior to this, he had been a member of the executive board of Dresdner Bank AG in Frankfurt. He holds an M.A. in Finance from the University of Georgia.

**Anthony Hayward, aged 53 (Senior Independent Non-Executive Director)**

Anthony Hayward was appointed to the Board with effect from 14 April 2011. He was group chief executive of BP plc from 2007 to 2010 having joined BP in 1982 as a rig geologist in the North Sea. Following a series of technical and commercial roles in Europe, Asia and South America, he returned to London in 1997 as a member of the upstream executive committee. He became group treasurer in 2000, chief executive for BP upstream activities and member of the main board of BP in 2003. Tony is a board member of TNK-BP and a partner of AEA Investors. Mr Hayward is also a fellow of the Royal Society of Edinburgh and holds honorary doctorates from the University of Edinburgh, Aston University and the University of Birmingham. He studied geology at Aston University in Birmingham and completed a PhD at Edinburgh University.

**William Macaulay, aged 65 (Independent Non-Executive Director)**

William E. Macaulay was appointed to the Board with effect from 14 April 2011. He is the chairman and chief executive officer of First Reserve Corporation, a private equity investment firm focused on the energy industry, and has been with First Reserve since its founding in 1983. Prior to joining First Reserve he was a co-founder of Meridien Capital Company, a private equity buyout firm. From 1972 to 1982, he was with Oppenheimer & Co., Inc., where he served as director of corporate finance with responsibility for managing Oppenheimer's buyout business. He also served as general partner and member of the management committee, as well as president of Oppenheimer Energy Corporation. Mr Macaulay is chairman of the board of Dresser-Rand, Inc. and also is a director of Weatherford International Ltd., as well as serving on numerous private energy company boards. In addition, he serves as chairman of the board of the Rogosin Medical Institute and chairman of the advisory board of the City University of New York. Mr Macaulay holds a B.B.A. degree, Magna Cum Laude in Economics from City College of New York and an M.B.A. from the Wharton School of the University of Pennsylvania. He also has received an Honorary Doctor of Humane Letters degree from Baruch College.

**Li Ning, aged 54 (Independent Non-Executive Director)**

Li Ning was appointed to the Board with effect from 14 April 2011. He has been an executive director of Henderson Land Development Company Limited since 1992. He was also an executive director of Henderson Investment Company Limited from 1990 to 2010. He has also been an executive director of Hong Kong (Ferry) Holdings Company Limited since 1989. Prior to joining the Henderson Group, he began his career in the banking industry with Chekiang First Bank Limited. Mr Li holds a B.Sc. degree from Babson College. Mr Ning also graduated in 1983 from the University of Southern California with an M.B.A. degree.

**Key employees**

The other key employees of the Glencore group are as follows:

| Name | Age | Position |
|---|---|---|
| Alex Beard | 43 | Director oil |
| Steven Blumgart | 37 | Co-director alumina/aluminium |
| Stuart Cutler | 51 | Co-director ferroalloys/nickel/cobalt |
| Gary Fegel | 37 | Co-director alumina/aluminium |
| Giles Jones | 43 | Chief Risk Officer |
| Chris Mahoney | 52 | Director agricultural products |
| Richard Marshall | 56 | General Counsel |
| Daniel Francisco Maté Badenes | 47 | Co-director zinc/copper/lead |
| Aristotelis Mistakidis | 49 | Co-director zinc/copper/lead |
| Tor Peterson | 46 | Director coal/coke |
| Christian Wolfensberger | 40 | Co-director ferroalloys/nickel/cobalt |

**Alex Beard**, aged 43 (director oil commodity department), joined Glencore in May 1995 working in the oil commodity department as a marketer, responsible primarily for the CIS region and gaining expertise in high sulphur crudes. He was appointed director of the oil commodity department in February 2007, overseeing all of Glencore's crude oil and oil products marketing, shipping, exploration and production and other oil-related investments, as well as being a director of Chemoil and various other Glencore Group companies. Mr Beard holds an MA degree in biochemistry from Oxford University. Before Glencore, he worked for five years for BP in its crude oil department.

**Steven Blumgart**, aged 37 (co-director alumina/aluminium commodity department), joined Glencore in Baar, Switzerland in October 1998, where he worked until April 2002 in the coal/coke commodity department, responsible for its industrial assets, before moving on to the alumina/aluminium commodity department. Since January 2006, Mr Blumgart has been co-director of Glencore's alumina/aluminium commodity department, overseeing alumina and industrial asset activities, which involves managing the department's alumina marketing operations and industrial asset acquisition and operating activities. He completed his Bachelor of Commerce (Tax Honours) degree from the University of Witwatersrand, and is a South African Chartered Accountant. In addition, Mr Blumgart holds the Chartered Financial Analyst designation. Prior to joining Glencore, Steven worked for three years at Grant Thornton Kessel Feinstein in Johannesburg.

**Stuart Cutler**, aged 51 (co-director ferroalloys/nickel/cobalt commodity department), joined Glencore in April 1995. He started in the Johannesburg office where he worked on the South African base metals and ferroalloys desk. From January 1997 to July 1999, he managed the Johannesburg office with overall responsibility for managing the South African base metals and ferroalloys marketing desk and the administrative functions of the office. In August 1999, Mr Cutler joined the nickel/cobalt commodity department in Baar, which merged with the ferroalloys department in 2001, gaining expertise in the bulk alloys industry, including chrome and extensive experience in its marketing operations. He became co-director of the department in November 2005, jointly overseeing the marketing business and industrial assets of the department, including strategy and operations. Mr Cutler holds a B. Proc degree from the University of Witwatersrand. Prior to joining Glencore, Mr Cutler was an attorney and notary public of the Supreme Court of South Africa and a barrister and solicitor of the High Court of New Zealand, and worked as a litigation partner at South African law firm, Werksmans.

**Gary Fegel**, aged 37 (co-director alumina/aluminium commodity department), joined Glencore in January 2001 in the alumina/aluminium commodity department gaining expertise in logistics, LME and physical marketing. In January 2006, he was appointed as co-director of Glencore's alumina/aluminium commodity department, overseeing the worldwide aluminium business, which involves the buying, marketing and logistics of the metal as well as hedging and risk management. Mr Fegel holds an M.B.A. degree from the University of St. Gallen. Before Glencore, he worked for UBS for four years and Credit Suisse for one year in their respective derivatives departments, being based in Zurich, London and New York.

**Giles Jones**, aged 43 (Chief Risk Officer), joined Glencore in February 1990 in the oil commodity department, with responsibility for crude oil and products futures and swaps hedging until mid-1994, and then worked as a physical fuel oil marketer, where his responsibilities included negotiating supply contracts and arbitrage strategies. Mr Jones became head of global oil derivatives marketing in January 2007, gaining further expertise in across-the-barrel futures, swaps and options marketing, and his overall responsibilities included price curve setting and market exposure monitoring within the department. Between January 2010 and January 2011, he was chief risk officer of the oil commodity department, leading a team of more than 40 people globally. Mr Jones was appointed as the Chief Risk Officer of Glencore Group in February 2011. As Chief Risk Officer, Mr Jones is responsible for the Glencore Group's overall risk management function. Mr Jones holds an LLB (Honours) in law from University College London.

**Chris Mahoney**, aged 52 (director Agricultural Products business segment), joined Glencore in September 1998. From September 1998 until November 2002, he was responsible for Glencore's agricultural product activities in the CIS, South Africa and South America. In November 2002, he became director of the Agricultural Products business segment, overseeing all global farming, logistics, processing and marketing businesses, responsible for both strategy and operations. Mr Mahoney holds an MA degree from Oxford University. Before Glencore, he spent 17 years with Cargill, being based in the UK, the U.S., Singapore and Switzerland, and held various management positions in sugar and grain, gaining expertise in the agricultural products industry and marketing operations.

**Richard Marshall**, aged 56 (General Counsel), joined Glencore as General Counsel in April 2005. As General Counsel, Mr Marshall has responsibilities for overseeing the Glencore Group's overall legal and compliance function. Prior to joining Glencore, Mr Marshall was a partner at Cadwalader Wickersham & Taft LLP in London between September 2003 and March 2005 and a partner at Mallesons Stephen Jaques in Sydney between 1984 and July 2003. Prior to becoming a partner at Mallesons Stephen Jaques, he was an associate in the firm's Sydney office between 1979 and 1984. Mr Marshall completed his law society finals at the College of Law in London in 1978 and was admitted as a solicitor in England and Wales in the same year. He was also admitted as a solicitor in New South Wales, Australia in 1979. He has been an associate member of the Law Society of New South Wales, Australia since 2003.

**Daniel Francisco Maté Badenes**, aged 47 (co-director zinc/copper/lead commodity department), joined Glencore in October 1988, starting in Glencore's Madrid office, gaining expertise in metals transactions and logistics in Spain and North Africa. After three years in Madrid, he joined the zinc/lead commodity department in Switzerland in August 1991, which merged with the copper department in February 2002, where he was responsible for the zinc and lead concentrates desk for Spain, North Africa and South America, before being appointed in charge of worldwide zinc and lead concentrates marketing. Mr Maté has been co-director of the zinc/copper/lead commodity department since February 2000, jointly overseeing the marketing business and industrial assets of the department, including strategy and

operations. He is also a director of Volcan. Mr Maté holds a Bachelors degree in economics from Universidad Comercial de Deusto, Spain and a Bachelors degree in law from Deusto University of Spain.

**Aristotelis Mistakidis**, aged 49 (co-director zinc/copper/lead commodity department), joined Glencore in March 1993 in the zinc/lead commodity department, which merged with the copper department in February 2002, where he was responsible for, and gained expertise in, price and risk management and zinc and lead marketing. He has been co-director of the zinc/copper/lead commodity department since February 2000, jointly overseeing the marketing business and industrial assets of the department, including strategy and operations. He is also a director of Katanga and Recylex and is chairman of Mopani. Mr Mistakidis holds a B.Sc. Economics degree from London School of Economics. Before Glencore, he worked at Cargill for six years, where he worked in and gained experience in the non-ferrous metals industry.

**Tor Peterson**, aged 46 (director coal/coke commodity department), joined Glencore in January 1992 as a marketer and has been working in the coal/coke commodity department ever since, gaining expertise in marketing and coal assets, responsible for various regions including Colombia, Russia and Europe. In January 2002, he was appointed as director of the coal/coke commodity department, succeeding Ivan Glasenberg who moved into the Chief Executive Officer role, and he is responsible for overseeing the global marketing business and industrial assets of the department, including strategy and operations. Mr Peterson holds a Bachelor degree in political science and French from Duke University. Before Glencore, he worked for five years for Phibro-Salomon Inc. as a marketer, being based in New York, London and the Ivory Coast.

**Christian Wolfensberger**, aged 40 (co-director ferroalloys/nickel/cobalt commodity department), joined Glencore in December 1994, starting in the trade finance department in Switzerland, where he was responsible for arranging financing for global trades. In January 1996, Mr Wolfensberger joined the ferroalloys/nickel/cobalt commodity department in its traffic team, responsible for managing marketing data and logistics, before becoming in charge of the nickel desk, gaining expertise in physical marketing operations. He became co-director of the ferroalloys/nickel/cobalt commodity department in November 2005, jointly overseeing the marketing business and industrial assets of the department, including strategy and operations. He holds an MBA degree from the University of St. Gallen.

**Description of ownership structure**

Glencore has historically been entirely owned by its employees. Glencore believes that this ownership structure has been an important element of its successful growth since inception. Additionally, assuming no conversion of the Convertible Bonds the Over-Allotment Option is not exercised, the Kazzinc Consideration Shares have not been issued and the Offer Price is set at the mid-point of the Offer Price Range, the number of Ordinary Shares in issue following the Global Offer will be 6,893,292,886, and of these 83.6 per cent. will be held by Existing Shareholders. Consequently, the Company will continue to be primarily owned by Existing Shareholders upon Admission. This ownership structure aligns the interests of Shareholders and employees and has fostered a culture of excellence, teamwork and accountability. In addition, employee ownership helps Glencore to attract new employees of the highest calibre and to retain and motivate existing employees. The fact that Glencore's employees have a significant amount of capital invested in Glencore, with overall compensation structured in favour of longer-term incentives, motivates it to take a long-term view of Glencore's overall performance and to protect the capital of Glencore. Glencore believes that its consistent profitability, the long-term tenure of its management team and its prudent risk management policies have been a direct result of its employee ownership structure.

To continue the strong culture within Glencore based on employee ownership, the Company has put in place two new employee share plans – the Glencore Performance Share Plan and the Glencore Deferred Bonus Plan. These plans are in addition to the annual short-term bonus arrangements in place for the Glencore employees.

No awards have been granted under these plans to date. It is not proposed to make any awards in calendar year 2011 other than awards to new hires and any top-up awards to existing employees necessary to reflect their level of seniority and/or performance in line with their peers (where such top-up awards, if any, are not expected to be material).

Under the Glencore Performance Share Plan, awards of Ordinary Shares will be granted to employees who have already demonstrated excellent performance over a sustained period. It is currently intended that awards granted to Executive Directors will vest after a three-year period subject to the satisfaction of the

agreed performance condition(s), continued employment and clawback and that awards granted to other employees will vest in annual tranches over a five-year period subject only to continued employment and clawback.

Under the Glencore Deferred Bonus Plan, a proportion of annual bonus payable to the Executive Directors will be deferred as an award of shares. It is currently intended that such award will vest over three years subject to continued employment and clawback.

The number of shares which may be issued, or committed to be issued under the Glencore Performance Share Plan and Glencore Deferred Bonus Plan in any 10 year period will not exceed (i) 10 per cent. of the Company's issued ordinary share capital, in respect of any employee share plans operated by the Company; and (ii) 5 per cent. of the Company's issued ordinary share capital, in respect of discretionary employee share plans adopted by the Company. As at the date of Admission, the Company will only have discretionary employee share plans in existence. Shares issued, or committed to be issued, before Admission will not be counted for either of these limits.

The principal features of the Glencore Performance Share Plan and the Glencore Deferred Bonus Plan are summarised under "Glencore employee share plans" in Section X: "Additional Information".

**Corporate governance**

***The Board structure***

At Admission, the Board will consist of the Non-Executive Chairman, two Executive Directors and five Non-Executive Directors. The Company regards this as an appropriate Board structure.

The Company regards all of its Non-Executive Directors as independent Non-Executive Directors within the meaning of "independent" as defined in the Code and free from any business or other relationship which could materially interfere with the exercise of their independent judgement. This view was taken having regard to all facts including those below. William Macaulay is chairman and chief executive of First Reserve Corporation ("First Reserve"). First Reserve is the holder of a tranche of the U.S.$2.3 billion Convertible Bonds due 2014 issued by Glencore Finance (Europe) S.A.. Peter Coates was until recently the independent non-executive chairman of Minara, a company listed on the Australian Securities Exchange and 70.6 per cent. owned by Glencore, and was previously a non-executive chairman of Xstrata Australia and a former chief executive of Xstrata Coal, part of Xstrata plc, a listed entity in which Glencore holds a 34.5 per cent. interest. Mr Coates joined Xstrata in 2002 with Glencore's coal assets in Australia and South Africa when they were sold to Xstrata for cash and shares simultaneous with Xstrata's primary listing and capital raising in London.

The Directors support high standards of corporate governance. Following Admission, the Company will comply with the Code. The Company is compliant, as at the date of this document and will continue to comply with the standards expected of them as directors of a Jersey company.

The Directors have established an audit committee, a remuneration committee, a nominations committee, and an environment, health and safety committee.

***Audit committee***

The audit committee will be chaired by Leonhard Fischer and its other members are Peter Coates and William Macaulay. The audit committee will meet not less than twice a year and will have responsibility for, among other things, monitoring the integrity of Glencore's financial statements and reviewing its summary financial statements. It will oversee Glencore's relationship with its external auditors and review the effectiveness of the external audit process. The committee will give due consideration to laws and regulations, the provisions of the Code and the requirements of the Listing Rules. It will also have responsibility for reviewing the effectiveness of Glencore's system of internal controls and risk management systems. The ultimate responsibility for reviewing and approving the interim and annual financial statements remains with the Directors. The Directors consider that Leonhard Fischer has recent and relevant financial experience. Further details are set out in his biography under the heading "Board of Directors". The audit committee will also be responsible for reviewing, updating and presenting to the Board Glencore's policies on risk management in relation to Glencore's marketing and operational activities.

***Remuneration committee***

The remuneration committee is chaired by William Macaulay and its other members are Leonhard Fischer and Anthony Hayward. The remuneration committee will meet not less than once a year and will have responsibility for making recommendations to the Board (i) on Glencore's policy on the remuneration of management and (ii) for the determination, within agreed terms of reference, of the remuneration of the Chairman and of specific remuneration packages for each of the Executive Directors and the members of management, including pension rights and any compensation payments. The remuneration committee will also ensure compliance with the Code in this respect.

***Nominations committee***

The nominations committee is chaired by Anthony Hayward and its other members are Simon Murray, Ivan Glasenberg and Li Ning. The committee will meet not less than once a year and will, with effect from Admission, have responsibility for making recommendations to the Board on the composition of the Board and its committees and on retirements and appointments of additional and replacement Directors and ensuring compliance with the Code.

***Environment, health and safety committee***

The environment, health and safety committee is chaired by Peter Coates and its other members are Ivan Glasenberg, Anthony Hayward and Michael Fahrbach (the Glencore employee currently responsible for Glencore's environmental, health and safety issues). The committee will meet not less than once a year and will be responsible for formulating and recommending to the Board Glencore's policy on health and safety as well as environmental, security and local community issues as they affect Glencore's operations.

## SECTION III: SELECTED HISTORICAL FINANCIAL AND OTHER INFORMATION

### Historical financial information

*The following selected historical financial data at 31 December 2008, 2009 and 2010 and for each of the three years in the period ended 31 December 2010 has been extracted without material adjustment from the historical consolidated financial information contained in Section VI: "Historical Financial Information" that has been prepared on the basis described in the footnotes to the historical financial information, except for the Non-IFRS Measures, which are defined as explained in "Presentation of Information" and have each been calculated as set out in this Section III. The information in this Section III should be read in conjunction with Section IV: "Operating and Financial Review" and Section VI: "Historical Financial Information" all appearing elsewhere in this Prospectus. Investors should read the whole of this Prospectus before making an investment decision and not rely solely on the summarised information in this Section III.*

### Income statement data

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| Revenue | 152,236 | 106,364 | 144,978 |

Notes:

(1) Adjusted EBITDA consists of revenue less cost of goods sold and selling and administrative expenses plus share of income from associates and jointly controlled entities and dividends as disclosed on the face of the consolidated statement of income plus depreciation and amortization.

(2) Adjusted EBITDA pre-exceptional items consists of Adjusted EBITDA as defined above, excluding exceptional items. Exceptional items represent significant items of income and expense which, due to their financial impacts, nature or the expected infrequency of the events giving rise to them, have been separated for internal reporting and analysis of Glencore's results. Exceptional items mainly include impairment charges on inventories and other assets.

(3) Adjusted EBIT consists of revenue less cost of goods sold and selling and administrative expenses plus share of income from associates and jointly controlled entities and dividends as disclosed on the face of the consolidated statements of income.

(4) Adjusted EBIT pre-exceptional items consists of Adjusted EBIT as defined above, excluding exceptional items. Exceptional items represent items of income and expense, which, due to their financial impacts, nature or the expected infrequency of the events giving rise to them, have been separated for internal reporting and analysis of Glencore's results. Exceptional items mainly include impairment charges on inventories and other assets.

(5) Adjusted EBITDA, Adjusted EBIT, Adjusted EBITDA pre-exceptional items and Adjusted EBIT pre-exceptional items are not typically measures of operating income, operating performance or liquidity under IFRS; however, Glencore has presented these measures in this Prospectus as Glencore understands that some investors use these measures to determine a company's ability to service indebtedness and fund ongoing capital expenditure and dividends. Investors should not consider these measures in isolation, or as a substitute for income from operations, income for the year, cash flows from operating activities, as determined in accordance with IFRS, as an indicator of operating performance.

The following table is a composition of the key line items on the face of the consolidated statement of income that comprises Adjusted EBIT and reconciles Adjusted EBIT pre exceptional items, Adjusted EBITDA and Adjusted EBITDA

pre-exceptional items for the periods indicated. A reconciliation to net income before attribution is provided in the Adjusted financial information by business segment section of Section III:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| Revenue | 152,236 | 106,364 | 144,978 |
| Cost of goods sold | (147,565) | (103,133) | (140,467) |
| Selling and administrative expenses | (850) | (839) | (1,063) |
| Share of income from associates and jointly controlled entities | 1,067 | 82 | 1,829 |
| Dividend income | 238 | 12 | 13 |
| Adjusted EBIT | 5,126 | 2,486 | 5,290 |
| Addback exceptional items | 1,086 | 821 | 0 |
| Adjusted EBIT pre-exceptional items | 6,212 | 3,307 | 5,290 |
| Addback depreciation and amortisation | 575 | 622 | 911 |
| Adjusted EBITDA pre-exceptional items | 6,787 | 3,929 | 6,201 |
| Deduct exceptional items excluded above | (1,086) | (821) | 0 |
| Adjusted EBITDA | 5,701 | 3,108 | 6,201 |

(6) Gross debt includes Current borrowings, Non-current borrowings and commodities sold with agreements to repurchase. It excludes amounts owing under the Prodeco call option arrangement and other financial liabilities. Net debt is gross debt less cash and cash equivalents, marketable securities and Glencore's assessment of readily marketable inventories. In calculating the illustrative allocation of borrowings to the marketing activities, Glencore has estimated what it believes to be the reasonable amount of borrowings attributable to funding the marketing activities' working capital requirements at the relevant period end date, with particular reference to the level of inventories, net cash margining and other accounts receivable and payable. The balance of group borrowings is allocated to industrial activities. See "—Notional allocation of debt and interest expense—Total gross debt outstanding".

(7) In calculating the illustrative allocation of interest expense to the marketing activities, Glencore has taken into consideration the average amount of borrowings illustratively allocated to marketing activities as described in the preceding paragraph for the relevant period, what Glencore believes to be the appropriate distribution of funding tenors for the categories of funded assets within the marketing activities, and the average rate of interest incurred by the group during the relevant period on borrowings of the relevant tenor and interest basis. The balance of group interest expense is allocated to industrial activities. See "—Notional allocation of debt and interest expense—Illustrative gross interest expense allocation between Marketing and Industrial activities".

(8) Funds From Operations ("FFO") equals cash provided by operating activities before working capital changes less tax and net interest payments plus dividends received.

(10) Current capital employed is current assets, presented before assets held for sale, less accounts payable, other financial liabilities and income tax payable.

**Additional financial information**

In the following three sections (non-current assets summary, notional allocation of debt and interest expense, and non-controlling interests' share of gross debt), additional information is provided, which Glencore considers relevant to assist in the understanding of overall performance and underlying value contributors of its integrated business model.

**1. Non-current assets summary as at 31 December 2010**

The following table provides a summary of the carrying value of non-current assets in the Group's balance sheet, comprising the assets disclosed and detailed in this Prospectus and the remaining being primarily, investments and loans extended in support of Glencore's growth in marketing and industrial activities of the respective segment.

| | Book value as at 31 December 2010 |
|---|---|
| | *(U.S.$ million) (unaudited, except total lines)* |
| **Property, plant and equipment** | |
| Industrial assets covered by MERs[1] | 7,877 |
| Other core industrial assets[2] | 1,712 |
| Listed subsidiaries[3] | 1,672 |

Notes:

(1) Kazzinc, Mopani, Katanga and Prodeco.

(2) E&P Portfolio, Sherwin, Shanduka, Los Quenuales, Portovesme, Sinchi Wayra, A R Zinc, Pasar, Cobar and Punitaqui.

(3) Murrin Murrin, Chemoil and Biopetrol.

(4) Includes farming, crushing and storage operations.

(5) Majority oil vessels plus storage facilities.

(6) Includes Columbia Falls.

(7) Xstrata, Century Aluminum and Recylex.

(8) Including Novoshirokinskoe (within Kazzinc), Mutanda and Fenoco (within Prodeco).

(9) Mainly shipping assets (U.S.$357 million) and various logistics operations. Due to the staggered delivery schedule of vessels up to 2012, no meaningful earnings have been reported in the historical period.

(10) Primarily operations and exploration/development projects in Africa.

(11) Various agricultural operations.

(12) Including UC Rusal, Volcan, Nyrstar and Polymet. Earnings from investment in UC Rusal only recognised via dividends, which last occurred in 2008.

(13) Comprising project loans/loans to equity partners in Mutanda and E&P Portfolio, which will be repaid from the future expected cashflows generated by these projects.

(14) Interest bearing at 9 per cent. (3 per cent. cash, 6 per cent. delayed payment terms). Please see Section I: "Information on Glencore" for further details. Russneft interest has comprised the largest individual component of interest received during the historical period.

(15) Including U.S.$200 million secured loan to PT Bakrie & Brothers Tbk.

**2. Notional allocation of debt and interest expense**

Most of Glencore's indebtedness is incurred centrally with the proceeds then applied to marketing or industrial activities as required.

Glencore does not allocate borrowings or interest to its three operating segments or its marketing and industrial activities. However, to assist investors in assessing the profitability of its marketing and industrial activities separately, Glencore has prepared an illustrative allocation of its borrowings and interest expense between the marketing and industrial activities based on the methodology described below. Notwithstanding Glencore's belief in its reasonableness, the allocation of borrowings and interest expense between Glencore's marketing and industrial activities shown below is illustrative only and should not be considered representative of the level of indebtedness or interest expense such activities had, in the past, or would have had, if they were stand-alone businesses or that Glencore will have in the future.

In calculating the illustrative allocation of borrowings to the marketing activities, Glencore has estimated what it believes to be the reasonable amount of borrowing capacity attributable to marketing activities at the relevant period end date, with particular reference to the level of inventories, net cash margining and other accounts receivable and payable. The balance of group borrowings is allocated to industrial activities.

In calculating the illustrative allocation of interest expense to the marketing activities, Glencore has taken into consideration the average amount of borrowings illustratively allocated to marketing activities as described in the preceding paragraph for the relevant period, what Glencore believes to be the appropriate distribution of funding tenors for the categories of funded assets within the marketing activities, and the average rate of interest incurred by the group during the relevant period on borrowings of the relevant tenor and interest basis. The balance of group interest expense is allocated to industrial activities.

*Illustrative debt funding allocation between Marketing and Industrial activities*

| | Group As at 31 December 2010 | Allocated to | | As at 31 December 2010 | Illustrative Marketing | | |
|---|---|---|---|---|---|---|---|
| | | Marketing Activities | Industrial Activities | | % Debt funding[3] | Debt funded | Equity funded |
| | | | | *(U.S.$ million) (unaudited)* | | | |
| Cash, cash equivalents and marketable securities | 1,529 | | X | | | | |
| Production inventories | 2,805 | | X | | | | |
| Readily marketable inventories | 14,331 | X | | 14,331 | 85% | 12,181 | 2,150 |
| Other inventories | 257 | X | | 257 | 20% | 51 | 206 |
| Net receivables/(payables) excluding cash margining | (172) | X | | (172) | 80% | (137) | (35) |
| Net brokers (cash margin only) | 2,753 | X | | 2,753 | 90% | 2,478 | 275 |
| Net fair value of trade related financial instruments | (2,084) | X | | (2,084) | 85% | (1,771) | (313) |
| Other net assets/liabilities[1][2] | 404 | X | X | 165 | 20% | 33 | 132 |
| **Current capital employed**[2] | 19,823 | | | 15,250 | | 12,835 | 2,415 |

Notes:

(1) Allocated between marketing activities and industrial assets based on percentage split per underlying accounting records and nature of the balance.

(2) Includes assets and liabilities held for sale.

(3) Based on the terms of Glencore's existing dedicated facilities which finance a portion of its receivables and marketing inventory.

*Total gross debt outstanding*

| | As at 31 December 2009[2] | As at 31 December 2010 | 2010 average[1] |
|---|---|---|---|
| | | *(U.S.$ million) (unaudited)* | |
| Marketing activities | 10,197 | 12,835 | 10,460 |
| Industrial activities[3] | 13,869 | 17,781 | 15,663 |
| **Total gross debt** | **24,066** | **30,616** | **26,123** |

Notes:

(1) Based on quarterly averages.

(2) The gross debt amounts allocated to marketing and industrial activities as at 31 December 2009 is based upon the same methodologies as the calculation of gross debt for such activities as at 31 December 2010. See "Illustrative debt funding allocation between Marketing and Industrial activities" above.

(3) Including Glencore's stake in Xstrata.

*Illustrative gross interest expense allocation between Marketing and Industrial activities*

| | 2010 |
|---|---|
| | *(U.S.$ million) (unaudited)* |
| Average variable funding rate[1]— Marketing | 2.86% |
| Blended residual funding rate[2]—Industrial | 6.51% |
| **Variable rate interest expenses** | |
| Allocated to Marketing activities[3] | 299 |
| Allocated to Industrial activities[3] | 252 |
| **Total variable rate interest expense[4]** | **551** |
| **Fixed-rate interest expense** | |
| Allocated to Marketing activities[5] | — |
| Allocated to Industrial activities[5] | 627 |
| **Total fixed-rate interest expense** | **627** |
| **Interest expense** | |
| Allocated to Marketing activities | 299 |
| Allocated to Industrial activities | 879 |
| **Total interest expenses[4]** | **1,178** |

Notes:

(1) The average variable funding rate was calculated based on the actual weekly average variable rate incurred during 2010.

(2) The blended residual funding rate is the average rate attributable to industrial activities, representing the residual interest expense allocated to industrial activities as a percentage of its average gross debt allocation.

(3) The allocation of variable rate interest was done based upon the 2010 average variable gross debt outstanding for marketing and industrial activities at the average variable funding rate.

(4) Excluding U.S.$39 million of capitalised borrowing costs written off.

(5) The allocation of fixed rate interest expense was entirely to Glencore's industrial activities, as Glencore does not utilise fixed-rate borrowings in its marketing activities. Such borrowings are typically long-term public bonds to better match the maturity profile of Glencore's industrial assets.

### 3. Non-controlling interests' share of gross debt

Certain subsidiaries in which Glencore does not hold a 100 per cent. interest in are funded either directly with third party debt or indirectly from Glencore and its third party debt. Glencore's gross consolidated debt is reported below, before any adjustment for the non-controlling interests' share of the gross debt. The table below sets out the debt of the main industrial subsidiaries in which Glencore holds a less than 100 per cent. interest and Glencore's attribution of such debt to the non-controlling interests in proportion to their shareholdings.

| | Total[1] | Non-controlling interest in subsidiary | Non-controlling interests' share of gross debt |
|---|---|---|---|
| | | *(U.S.$ million) (unaudited)* | |
| Mopani Group | 601 | 27% | 162 |
| Katanga Mining Limited | 120 | 26% | 31 |
| Kazzinc[2] | 1,071 | 49% | 525 |
| Minara Resources Ltd | 23 | 29% | 7 |
| Shanduka Coal (Pty) Limited | 48 | 30% | 14 |
| Biopetrol Industries AG | 72 | 40% | 29 |
| Rio Vermelho Acucar e Alcool SA | 20 | 24% | 5 |
| **Total** | 1,955 | | 773 |

Notes:

(1) Includes external debt and group funding.

(2) Glencore has agreed with Verny to acquire additional stakes in Kazzinc. These purchases will increase its ownership from 50.7 per cent. to 93.0 per cent. for a total transaction consideration of $3.2 billion. Subject to the satisfaction of certain conditions, the consideration will be settled through the issuance of U.S.$1 billion of Ordinary Shares at the Offer Price (such issuance expected to occur at the earlier of UK Admission and satisfaction of applicable conditions precedent) and U.S.$2.2 billion in cash (to be paid in tranches between October and December 2011). See Section X: "Additional Information" for further details of these purchases and the terms of the Kazzinc SPAs.

**Adjusted financial information**

Glencore believes that its overall business performance cannot be judged solely on its historical financial information contained in Section VI: "Historical Financial Information", which has been prepared in accordance with IFRS. Glencore looks at the performance of its business on an adjusted basis, or before exceptional items. Exceptional items represent significant items of income and expense which, due to their nature or the expected infrequency of the events giving rise to them, are separated for internal reporting and analysis of Glencore's results. Glencore believes this provides the entity and investors with a better understanding and comparative basis of its underlying financial performance.

**Exceptional items**

The table below sets forth, for the year ended 31 December 2008, certain selected line items extracted without material adjustment from the historical financial information contained in Section VI: "Historical Financial Information", and the aggregate effect of certain exceptional items on such historical financial information, and on the non-IFRS measures of Adjusted EBITDA and Adjusted EBIT as defined in "Presentation of Information".

| 2008 | Historical financial information (audited) | Exceptional items (unaudited) | Pre-exceptional financials (unaudited) |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| **Revenue** | 152,236 | 0 | 152,236 |

| Share of income from associates and jointly controlled entities | 1,067 | 415[2] | 1,482 |
| Gain/(loss) on sale of investments—net | 7 | (7)[3] | 0 |
| Other income/(expense)—net | (2,960) | 2,763[4] | (197) |
| Dividend income | 238 | 0 | 238 |
| Interest income | 298 | 0 | 298 |
| Interest expense | (1,135) | 0 | (1,135) |
| **Income before income taxes and attribution** | 1,336 | 3,843 | 5,179 |
| Income tax expense | (268) | (87)[5] | (355) |
| **Income before attribution** | 1,068 | 3,756 | 4,824 |
| Attribution to profit participation shareholders | (677) | 0 | (677) |
| **Income for the year** | 391 | 3,756 | 4,147 |
| **Adjusted EBITDA (audited)** | 5,701 | 1,086 | 6,787 |
| **Adjusted EBIT (audited)** | 5,126 | 1,086 | 6,212 |

Notes:

(1) Inventory net realisable value adjustments of U.S.$435 million and severance and other adjustments of U.S.$237 million recognised in the Metals and Minerals business segment.

(2) Glencore's share of asset impairment charges booked directly by Xstrata (U.S.$389 million) and Century Aluminum (U.S.$26 million).

(3) Net gain realised in relation to a number of immaterial disposals of investments.

(4) Impairment charges in relation to investments in associates and other investments and property, plant and equipment.

(5) Tax-related adjustments related to the above exceptional charges.

In 2008, Glencore recognised U.S.$3,756 million of exceptional items, including U.S.$2,763 million related to asset impairments, following Glencore's regular review of asset carrying values. These recorded impairments were brought on by the rapid and severe impacts arising from the global financial crisis, which ultimately resulted in substantially lower commodity prices. Specifically, U.S.$1.7 billion of the impairment expense was booked against the Xstrata and Century Aluminum carrying values, with the remaining balance relating to the various other cumulative impairments arising primarily from decisions taken to curtail and/or suspend various mining or expansion activities.

Also in 2008, Glencore recognised negative provisional pricing adjustments of U.S.$211 million at Glencore's industrial operations and inventory net realisable value adjustments of U.S.$435 million, as a result of the severe and rapid decrease in commodity prices in the final quarter of 2008. While the vast

majority of Glencore's marketing inventories are contractually sold or hedged, the remaining inventory, primarily relating to those commodities where terminal hedging markets do not exist or are very limited, was subject to inventory net realisable value adjustments of U.S.$341 million (included in the U.S.$435 million above).

In addition, Glencore's share of income from its associate Xstrata included various impairment charges booked directly by Xstrata totalling U.S.$415 million.

The table below sets forth, for the year ended 31 December 2009, certain selected line items extracted without material adjustment from the historical financial information contained in Section VI: "Historical Financial Information" and the aggregate effect on such historical financial information and on the non-IFRS measures of Adjusted EBITDA and Adjusted EBIT as defined in "Presentation of Information".

| 2009 | Historical financial information (audited) | Exceptional items (unaudited) | Pre-exceptional financials (unaudited) |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| **Revenue** | 106,364 | 0 | 106,364 |
| Cost of goods sold | (103,133) | 60[1] | (103,073) |
| Selling and administrative expenses | (839) | 0 | (839) |

| Other income/(expense)—net | 35 | 303[4] | 338 |
| Dividend income | 12 | 0 | 12 |
| Interest income | 267 | 0 | 267 |
| Interest expense | (854) | 0 | (854) |
| **Income before income taxes and attribution** | 1,967 | 1,091 | 3,058 |
| Income tax expense | (238) | 0 | (238) |
| **Income before attribution** | 1,729 | 1,091 | 2,820 |
| Attribution to profit participation shareholders | (650) | 0 | (650) |
| **Income for the year** | 1,079 | 1,091 | 2,170 |
| **Adjusted EBITDA (audited)** | 3,108 | 821 | 3,929 |
| **Adjusted EBIT (audited)** | 2,486 | 821 | 3,307 |

Notes:

(1) Inventory net realisable value adjustments of U.S.$30 million and severance and other adjustments of U.S.$30 million recognised in the Metals and Minerals business segment.

(2) Glencore's share of asset impairment charges booked directly by Xstrata (U.S.$736 million) and Century Aluminum (U.S.$25 million).

(3) Gain on the disposal of the East Tennessee Zinc operations (U.S.$97 million) offset by a loss on disposal of the 51 per cent. interest in Refineria de Cartagena S.A. and a dilution loss, following Xstrata's 2009 capital raising, which saw Glencore's effective ownership in Xstrata reduce from 35.2 per cent. to 34.9 per cent.

(4) Expenses associated with the Prodeco call option arrangement with Xstrata.

In 2009, Glencore recognised U.S.$1,091 million of exceptional items, which consisted primarily of its share of asset impairment charges booked directly by Xstrata (U.S.$736 million) and Century Aluminum (U.S.$25 million) and costs related to the Prodeco call option (U.S.$303 million). In March 2009, Xstrata acquired Glencore's Colombian Coal Group (Prodeco) for U.S.$2 billion and concurrently granted an option to Glencore to repurchase Prodeco within 12 months for U.S.$2.25 billion plus profits accrued during the option period and the net balance of any cash invested. Given the repurchase option, the Prodeco business, consolidated by Glencore, was not de-recognised and the fair value of the proceeds was accounted for as a liability. As at 31 December 2009, U.S.$303 million of expenses were accrued under this option arrangement.

The table below sets forth for the year ended 31 December 2010 certain selected line items extracted from the historical financial information contained in Section VI: "Historical Financial Information", and the aggregate effect of certain exceptional items on such historical financial information, and on the non-IFRS measures of Adjusted EBITDA and Adjusted EBIT as defined in "Presentation of Information".

| 2010 | Historical financial information (audited) | Exceptional items (unaudited) | Pre-exceptional financials (unaudited) |

| **Adjusted EBITDA (audited)** | 6,201 | 0 | 6,201 |
| **Adjusted EBIT (audited)** | 5,290 | 0 | 5,290 |

Notes:

(1) Net of exceptional expenses of U.S.$1,038 million and exceptional income of U.S.$1,182 million as detailed below.

(2) U.S.$39 million write-off of capitalised borrowing costs.

In 2010, Glencore recognised a net U.S.$99 million of exceptional items. Exceptional expenses of U.S.$1,038 million primarily arose from negative mark to market fair value movements on certain fixed price forward coal sale contracts relating to Prodeco's future production that will be physically delivered that did not qualify for "own use" or cash flow hedge treatment (U.S.$790 million) and U.S.$225 million from the Prodeco call option transaction entered into in 2009 described above. The expenses were offset with exceptional income of U.S.$1,182 million resulting from the reversal of impairments incurred in 2008 against Glencore's interest in Xstrata following an upward revision of long-term base metals and coal price assumptions (U.S.$674 million), a net gain of U.S.$462 million arising from the revaluation of previously held interests in Vasilkovskoje Gold following the acquisition of the remaining 60 per cent. interest not previously owned and a net gain of U.S.$46 million arising from the debt amendment and restatement and impairment of Russneft related loans and investment, respectively.

**Adjusted financial information by business segment**

*Glencore is organised and operated on a worldwide basis in three major business segments—Metals and Minerals, Energy Products and Agricultural Products, reflecting the structure used by Glencore's management to assess the performance of Glencore. The following selected historical financial data as at 31 December 2008, 2009 and 2010 and for each of the three years in the period ended 31 December 2010 have been extracted without material adjustment from the historical financial information contained in Section VI: "Historical Financial Information" that has been prepared on the basis described in the footnotes to the historical financial information, with the exception of the Non-IFRS Measures, which are defined in "Presentation of Information" and calculated in Section VI: "Historical Financial Information".*

### Discussion of market price trends

#### *Metals and Minerals*

*Zinc*

Global zinc demand surged to 12.7 million MT in 2010 after being severely depressed in 2009 by weak macroeconomic conditions and significant de-stocking as manufacturers reduced inventories in response to weak demand. Global vehicle production rebounded strongly in 2010, up by more than 20 per cent. compared to the previous year, led by China where vehicle output rose by approximately 30 per cent. during 2009, exceeding U.S. output levels. Chinese construction and infrastructure growth continued, providing support for zinc demand in that region, while construction activity in Europe and the U.S. was much more muted.

Against this background, LME zinc prices traded in the range of U.S.$2,000 to U.S.$2,500/MT for most of 2010, though dipping below U.S.$2,000/MT from May to July, reflecting a sell-off in global markets. The average LME price for 2010 was U.S.$2,160/MT compared with an average price of U.S.$1,658/MT in 2009.

*Copper*

Global copper demand grew rapidly during 2010 on the back of a rebound in economic growth. China continued to lead global copper demand growth as stimulus measures first introduced by the government in 2009 continued throughout the year, driving strong end-use demand for copper. Global copper mine supply failed to keep pace with demand growth during 2010, despite mine restarts encouraged by high copper prices. As a result of these drivers, copper price averaged U.S.$7,947/MT in the six months ended 31 December 2010 and closed the year at a high of U.S.$9,650/MT on a cash basis, having risen significantly from its low point in mid-2010. In the first two months of 2011, copper prices continued to rise, averaging U.S.$9,533/MT and U.S.$9,881/MT, in January and February, respectively. These increases were due to the continued shortages of supply in the market.

*Lead*

Global demand for lead rose to 8.8 million MT in 2010, as strong Chinese consumption continued to drive global demand growth. Lead consumption throughout the rest of Asia benefitted from China's strength, though this was partly offset by declining demand in Western Europe. Chinese consumption was fuelled by demand for both automotive batteries and stationary batteries used in backup power supply systems, telecommunication networks and renewal energy storage applications. In this context, LME lead prices traded between U.S.$2,000/MT and U.S.$2,600/MT for most of 2010, though prices dropped below this range between May and July as a result of a sell-off in global markets. The average LME price for 2010 was U.S.$2,148/MT, 24 per cent. higher than an average of U.S.$1,719/MT in 2009.

*Gold*

Gold price volatility remained high in 2010, with the price ranging from U.S.$1,045/oz to U.S.$1,431/oz during the year. The average market price for the year of U.S.$1,225/oz was an all-time high. The financial crisis of 2008, the subsequent slow pace of the economic recovery and government stimulus measures adopted in response by the largest developed economies, including the United States, the Eurozone and Japan, has resulted in large fiscal deficits in these jurisdictions. These deficits have triggered concerns of sovereign debt defaults, particularly in the Eurozone. Furthermore, the monetary policies put in place by the world's most prominent central banks remain very accommodative in an attempt to increase the rate of economic growth and reduce unemployment levels, with short-term U.S. interest rates at historic lows. Gold has historically played an important role as a constant measure of value. The continuing uncertain macroeconomic environment and loose monetary policies have resulted in gold performing its traditional role as a store of value. Consequently, gold has continued to be viewed as a safe haven investment, which has resulted in a strong increase in investment demand.

*Aluminium*

Demand for aluminium has continued to improve throughout 2010, driven by strong economic activity in Asia, South America and both Central and Eastern Europe. Demand in the U.S. and Japan stabilised in the third quarter following a run-up in consumption driven by the automotive and engineered products sectors. Underlying demand for consumer products, including packaging and beverage cans, has continued to support the rolled products segment. As a result of a more balanced market, aluminium prices continued their recovery during 2010: the average price in the six months ended 31 December 2010 was 4 per cent. higher. at U.S.$2,216/MT than an average of U.S.$2,130/MT in the six months ended 30 June 2010. The yearly average in 2010 was U.S.$2,173/MT – up 30 per cent. from U.S.$1,668/MT in 2009.

*Nickel*

Global demand for nickel improved during 2010 due to continuing growth in China and economic recovery in developed markets. The increasing intensity of nickel usage in China helped to mitigate the impact of the financial crisis on demand and continues to favourably impact global consumption of nickel. In developed markets, economic recovery, together with restocking by stainless steel processors and consumers during the year, also contributed to the recovery in nickel demand from the stainless steel sector. The LME cash settlement nickel was volatile during 2010 ranging between U.S.$17,200/MT and U.S.$27,900/MT to average U.S.$21,800/MT, which is 49 per cent. higher than the average in 2009. The overall positive price trend over 2010 could also be partially attributed to the year-long strike at Vale's nickel operations. Nickel prices continued to rise in early 2011, with average prices reaching

U.S.$25,621/MT and U.S.$28,412/MT in January and February, respectively, following the increase in demand caused by improving economic conditions.

***Energy Products***

*Oil*

Dated Brent crude for 2010 averaged U.S.$78.50/bbl, approximately 28 per cent. above 2009's average of U.S.$61.50/bbl. Prices traded in a relatively narrow band of U.S.$70-80/bbl for most of the year before rising in the fourth quarter. Prices exceeded U.S.$90/bbl per barrel in December 2010, the highest level since October 2008.

The price pattern was dominated by the supply and storage overhang that existed from the prior year. However, as the year progressed, this overhang diminished as global oil consumption rebounded due to the recovery in the global economy and several one-time factors. Growth was more pronounced in China. The relative stability in crude oil prices for much of the year also reflected the stability of OPEC crude oil supply and its ability to manage prices through quota fixing throughout 2010. Commercial oil inventories in the OECD remained high for much of the year, creating an environment of low European refinery margins, which caused lower refinery utilisation, before falling in the fourth quarter as the global supply-balance began to tighten.

*Thermal coal*

The tightening global supply-demand balance during 2010 resulted in strengthening thermal coal prices in the second half of 2010 in both the Pacific and Atlantic markets, as well as the Chinese domestic market. Spot coal prices in the Pacific market largely traded in the range of U.S.$90 to U.S.$100/MT FOB for most of the year, before strengthening in mid-November and reaching a high of U.S.$129/MT at the end of December 2010. Benchmark contract prices for the 2010 Japanese Financial Year and mid-year contracts negotiated in March and September, respectively, were both settled at U.S.$97.75/MT, while 2011 contracts negotiated in December settled at U.S.$115/MT. On a global basis, the McCloskey's Coal Price Index Report averaged U.S.$87/MT in the six months ended 30 June 2010 and U.S.$96/t in the six months ended 31 December 2010, reflecting the above-mentioned pattern of progressively tightening supply-demand balance. Prices have continued to rise, reaching U.S.$123/t and U.S.$118/t in January and February of 2011, respectively, caused by continued tightness in the market.

***Agricultural Products***

Prices of key agricultural products rose sharply in the six months ended 31 December 2010 as a result of continued strong demand from the PRC for oil seeds, the Middle East for grains and a number of weather-related supply problems, notably from drought in Russia in the summer of 2010. The Chicago Board of Trade wheat price increased by 36 per cent. from an average of U.S.¢482/bushel in the six months ended 30 June 2010 to an average of U.S.¢658/bushel in the six months ended 31 December 2010, while the Chicago Board of Trade soya bean price increased by 15 per cent. from an average of U.S.¢956/bushel in the six months ended 30 June 2010 to an average of U.S.¢1,103/bushel in the six months ended 31 December 2010. Early 2011 saw significant fluctuations in the price of wheat, corn and cotton due to concerns about regional weather conditions and supply in the market.

**Marketing volumes sold to third parties**

The following table sets out the approximate volumes of each of Glencore's main commodities that were sold to third parties through Glencore's marketing business in each of the years ended 31 December 2008, 2009 and 2010.

| | Unit | 2008 | 2009 | 2010 |
|---|---|---|---|---|
| **Metals and Minerals** | | | | |
| Zinc metal | m MT | 1.0 | 1.3 | 1.7 |
| Zinc concentrates | m MT | 2.6 | 2.5 | 2.4 |
| Copper metal | m MT | 1.4 | 1.4 | 1.4 |
| Copper concentrates | m MT | 2.2 | 2.0 | 1.8 |
| Lead metal | m MT | 0.2 | 0.4 | 0.3 |
| Lead concentrates | m MT | 0.5 | 0.5 | 0.6 |
| Gold | 000 oz | 447 | 578 | 589 |
| Silver | 000 oz | 13,604 | 11,422 | 8,527 |
| Alumina | m MT | 6.5 | 5.8 | 6.7 |
| Aluminium | m MT | 2.4 | 3.2 | 3.9 |
| Ferroalloys (including agency) | m MT | 1.8 | 2.2 | 2.6 |
| Nickel | 000 MT | 156.9 | 175.3 | 193.9 |
| Cobalt | 000 MT | 25.5 | 23.7 | 17.9 |
| Iron ore | m MT | 0.9 | 4.8 | 9.3 |
| **Energy Products** | | | | |
| Crude oil | m MT | 39.7 | 39.7 | 51.9 |
| Oil products | m MT | 68.7 | 69.3 | 66.9 |
| Thermal coal | m MT | 90.1 | 98.0 | 92.2 |
| Metallurgical coal | m MT | 5.6 | 7.7 | 8.0 |
| Coke | m MT | 1.5 | 0.3 | 0.7 |
| **Agricultural Products** | | | | |
| Grains | m MT | 20.5 | 19.8 | 20.9 |
| Oil/oilseeds | m MT | 8.6 | 8.1 | 9.4 |
| Cotton | m MT | 0 | 0 | 0.2 |
| Sugar | m MT | 0.9 | 1.0 | 0.5 |

**Total industrial asset production**

The following table sets out the total production in each of Glencore's key commodities for which Glencore has production assets.

| | Year ended 31 December[1] | | |
|---|---|---|---|
| | 2008 Production | 2009 Production | 2010 Production |
| | | *('000 MT)* | |
| **Metals and Minerals** | | | |
| Zinc metal | 446 | 437 | 446 |
| Zinc concentrates | 565 | 227 | 390 |
| Copper metal | 419 | 464 | 476 |
| Copper concentrates | 155 | 184 | 185 |
| Lead metal | 179 | 121 | 115 |
| Lead concentrates | 60 | 34 | 46 |
| Gold ('000 toz) | 183 | 238 | 348 |
| Silver ('000 toz) | 7,618 | 6,286 | 6,731 |
| Aluminium | 74.9 | 16.5 | — |
| Alumina | 1,455 | 1,206 | 1,259 |
| Cobalt | 2.2 | 3.8 | 4.5 |

Note:

(1) Production figures represent the total production from a particular mine or operation for the entire year of operation, regardless of Glencore's percentage ownership of that mine or operation.

*The following discussion of Glencore's financial condition and results of operations should be read in conjunction with Section I: "Information on Glencore", Section XIII: "Information on Commodities" and Glencore's historical financial information as of and for the years ended 31 December 2008, 31 December 2009 and 31 December 2010, including the schedules and notes thereto and the reports thereon, which appear in Section VI: "Historical Financial Information". The historical financial information referred to in this discussion has been prepared in accordance with IFRS as explained in Section VI: "Historical Financial Information". The financial information considered below has been extracted from Section VI: "Historical Financial Information".*

*The following discussion of Glencore's results of operations and financial conditions contains forward-looking statements. Glencore's actual results could differ materially from those that it discusses in these forward-looking statements. Factors that could cause or contribute to such differences include those discussed below and elsewhere in this Prospectus, particularly in "Risk Factors" and "Information regarding forward-looking statements" in "Presentation of Information".*

**Overview**

Glencore is a leading integrated producer and marketer of natural resources, with worldwide activities in the marketing of metals and minerals, energy products and agricultural products and the production, refinement, processing, storage and transport of these products. Glencore operates on a global scale, marketing and distributing physical commodities sourced from third party producers and own production to industrial consumers, such as those in the automotive, steel, power generation, oil and food processing industries. Glencore also provides financing, logistics and other services to producers and consumers of commodities. Glencore's long experience as a commodity merchant has allowed it to develop and build upon its expertise in the commodities which it markets and cultivate long-term relationships with a broad supplier and customer base across diverse industries and in multiple geographic regions. Glencore's marketing activities are supported by investments in industrial assets operating in Glencore's core commodities. Glencore's industrial, geographical, commodity, supplier and customer diversity, in combination with its long-term supplier and customer relationships, has enabled Glencore to operate profitably even during periods in which a particular commodity, industry, customer or geographic region may be experiencing some weakness. In addition, Glencore's marketing operations are less correlated to commodity prices than its industrial operations, which makes Glencore's earnings less volatile than those of producers of metals and mining products and energy products that do not also have marketing and logistics operations.

As a marketer, Glencore is able to differentiate itself from other production entities as, in addition to focusing on minimising costs and maximising operational efficiencies, Glencore focuses on maximising returns from the entire supply chain, taking into account its extensive and global third party supply base, its logistics, risk management and working capital financing capabilities, extensive market insight, business optionality, its extensive customer base, strong market position and penetration in more commodities and economies of scale. In contrast, this is not the business model of Glencore's mainly industrial competitors who are generally not set up to exploit the full range of value added margin and arbitrage opportunities which exist throughout the commodity supply chain.

Glencore's consolidated revenues for the years ended 31 December 2009 and 31 December 2010 were U.S.$106,364 million and U.S.$144,978 million, and its income before attribution for the years ended 31 December 2009 and 31 December 2010 were U.S.$1,729 million and U.S.$4,106 million. As at 31 December 2010, Glencore's total assets amounted to U.S.$79,787 million. Measured by revenues, Glencore believes it was one of the world's largest privately held companies during this period.

In relation to its addressable market, Glencore believes it is one of the world's largest physical suppliers of third party sourced commodities in respect of the majority of the metals and minerals which it markets, among the world's largest non-integrated physical suppliers of crude oil and oil products, as well as the world's largest participant in the supply of seaborne steam coal, including attribution of the volumes under a number of exclusive advisory and agency arrangements with, amongst others, its associate company Xstrata. Glencore believes it is among the world's leading suppliers of sugar and one of the leading exporters of grain from Europe, the CIS and Australia.

Prior to UK Admission, Glencore will complete the Restructuring whereby the holding companies of the Glencore Group will be reorganised for the purposes of listing on the London and Hong Kong Stock Exchanges.

**Basis of presentation**

Unless indicated otherwise, financial information in this Prospectus has been prepared in accordance with IFRS issued by the International Accounting Standards Board (the "IASB") and as adopted for use in the EU. Glencore has adopted all of the new and revised Standards and Interpretations issued by the IASB and the International Financial Reporting Interpretations Committee (the "IFRIC") and as adopted by the EU that are relevant to its operations and effective for accounting periods beginning on 1 January 2010 and that are expected to be applied for the accounting period beginning on 1 January 2011. In addition, Glencore adopted IFRS 8 "Operating Segments" which requires disclosure of certain information relating to Glencore's operating segments pending the filing of its financial statements with a securities commission for the purpose of issuing shares to the public. The adoption of these new and revised Standards and Interpretations did not have a material impact on the recognition and measurement of reported amounts.

**Segmental reporting**

Glencore conducts its operations through three business segments: Metals and Minerals, Energy Products and Agricultural Products. For further details on each business segment, see Section I: "Information on Glencore".

- The Metals and Minerals business segment focuses on the following commodity departments: zinc/copper/lead, alumina/aluminium and ferroalloys/nickel/cobalt/iron ore. In addition, the business segment also markets some gold, silver, tin and other by-products such as sulphuric acid. The activities of Glencore's Metals and Minerals business segment are supported by ownership interests in controlled and non-controlled industrial assets such as mining, smelting, refining and warehousing operations.
- The Energy Products business segment focuses on the following commodity departments: oil and coal/coke. The activities of Glencore's Energy Products business segment are supported by ownership interests in controlled and non-controlled coal mining and oil production operations as well as investments in strategic handling, storage and freight equipment and facilities.
- The Agricultural Products business segment focuses on the following commodities: grains (including wheat, maize and barley), oils/oilseeds, cotton and sugar. The activities of Glencore's Agricultural Products business segment are supported by investments in controlled and non-controlled storage, handling, processing and port facilities in strategic locations.

**Recent developments**

In January 2011, Glencore issued CHF225 million (U.S.$235 million) 3.625 per cent. bonds due April 2016, increasing the size of its CHF bond series to CHF825 million. The proceeds from this bond issue were used to redeem U.S.$300 million out of U.S.$700 million 8 per cent. perpetual notes on 6 February 2011. In February 2011, Glencore concluded a new one year committed U.S.$600 million European oil receivables borrowing base facility, now fully drawn. Recently, Glencore replaced the previous 364 day U.S.$1,375 million and the U.S.$515 million Asian focused tranche revolving credit facilities with two new 364 day revolving credit facilities for U.S.$2,925 million and U.S.$610 million, both with a one year term extension option at the borrower's discretion. In addition, Glencore extended the final maturity of U.S.$8,340 million out of the U.S.$8,370 million medium term revolver for a further year to May 2014. In aggregate, the three tranches represent an increase in committed available liquidity of U.S.$1,645 million. All of these transactions form part of Glencore's ordinary course financing activities.

Glencore has agreed with Verny to acquire additional stakes in Kazzinc. These purchases will increase its ownership from 50.7 per cent. to 93.0 per cent. for a total transaction consideration of U.S.$3.2 billion. Subject to satisfaction of certain conditions, which include receipt of applicable regulatory approvals and the occurrence of UK Admission, consideration for these purchases will be settled through the issuance of U.S.$1 billion of Ordinary Shares at the Offer Price (such issuance expected to occur at the earlier of UK Admission and satisfaction of applicable conditions precedent) and U.S.$2.2 billion in cash (to be paid in tranches between October and December 2011). The acquisition of these additional stakes is expected to be completed by the end of December 2011. The terms of the acquisition have been negotiated on an arm's length basis and the price and structuring of the consideration in respect of these purchases is based on Glencore's detailed valuation of Kazzinc. In addition, Glencore's stake in Kazzinc may be further increased to 99.4 per cent. through the exercise of a put or call option in respect of Verny Investments' remaining 6.4 per cent. interest in Kazzinc, which is conditional on amongst other things, an initial public offering of Kazzinc's gold assets. Glencore will, subject to its commercial decision based on prevailing

market conditions, use reasonable commercial endeavours to seek listing for the appropriate entity subject to such entity's eligibility for listing. See Section X: "Additional Information" for further details of these purchases and the terms of the Kazzinc SPAs. Glencore believes its increased stakes in Kazzinc will simplify the ownership structure as Kazzinc seeks to complete the expansion across its base metals mining and processing operations and its Altyntau gold division. This consolidation of Glencore's interests in Kazzinc will provide an enhanced platform for regional expansion and growth opportunities.

The acquisition, if completed, will be accounted for under IAS 27 *Consolidated and Separate Financial Statements* as an equity transaction (a transaction with owners in their capacity as owners) and on the date of completion will result in a net decrease in total equity on Glencore's consolidated statement of financial position of U.S.$2.2 billion equating to the cash component of the consideration. There will be no change to the underlying assets and liabilities of Kazzinc in Glencore's consolidated statement of financial position. Following the date of closing, an additional 42.3 percent of Kazzinc's income thereafter will be attributable to equity holders of Glencore with the remaining 7.0 per cent. being attributed to the non controlling interests in Kazzinc.

**Factors affecting results of operations and financial condition of Glencore**

Glencore is primarily engaged in the physical marketing and production of commodities on a worldwide basis. Glencore's results of operations are primarily affected by global macroeconomic trends, commodity prices, impact of freight rates, marketing volumes, production volumes, the financial performance of associates and other investments, production costs and efficiency and exceptional items. Each of these key factors is discussed below.

***Identifying and responding to global macroeconomic trends and exploiting physical commodity arbitrage opportunities as they arise***

Glencore's long-term experience in the commodities markets has allowed it to build up extensive market knowledge and insight. Glencore believes that being a major global physical marketer of commodities with leading market positions in its key commodities enables it to, among other things, maintain knowledge of local market supply and demand dynamics and respond quickly to changes in market conditions and characteristics and gain significant insight into trade flows and marketing requirements. This enables Glencore to have continuous price discovery of the commodities it produces and/or markets and rapid identification and investigation of arbitrage opportunities in respect of those commodities. In addition, Glencore's industrial assets are strategically important to, among other things, generate additional market information, including local information in the countries and regions in which the industrial assets are based.

Many of the physical commodity markets in which Glencore operates are fragmented or periodically volatile. As a result, discrepancies generally arise in respect of the prices at which the commodities can be bought or sold in different forms, geographic locations or time periods, taking into account the numerous relevant pricing factors, including freight and product quality. These pricing discrepancies can present Glencore with arbitrage opportunities whereby Glencore is able to generate profit by sourcing, transporting, blending, storing or otherwise processing the relevant commodities. Whilst the strategies used by Glencore's business segments to generate such margin vary from commodity to commodity, the main arbitrage strategies can be generally described as being geographic, product and time-related. See Section I: "Information on Glencore" for information related to these strategies. Glencore's ability to successfully identify and implement marketing strategies to take advantage of potential arbitrage opportunities throughout the physical commodity supply chain will impact its results of operations. Failure of such opportunities to present themselves or Glencore's inability to exploit such opportunities will negatively impact its results of operations.

Arbitrage opportunities are generally enhanced by global and regional price volatility and instability in the various commodities markets resulting in market disequilibrium. Glencore believes that, in periods where price components for a particular commodity or group of commodities display relative volatility and, therefore, uncertainty, the number of arbitrage opportunities in such commodities tends to increase, and, in particular, during periods of market tightness (e.g. when inventory levels are low). These market conditions offer additional opportunities to take advantage of the resulting decoupling in premium and discount structures. Conversely, in periods of reduced volatility in commodity prices, Glencore's marketing business tends to have fewer profitable arbitrage opportunities. A relatively flat marketing environment generally reduces price dislocation and, in turn, the number of arbitrage opportunities. Glencore also, from time to time, takes unhedged positions in a particular commodity (within Group limits and policies),

based on its understanding of market dynamics and expectation of future price and/or spread movements. For further discussion of Group policies regarding hedging and risk management, please see "—Financial risk management".

Glencore's marketing activities engage in base supply chain activities that generally provide regular generation of income. These base supply chain activities tend to have a balancing effect against the potential volatility in results as Glencore seeks to take advantage of event-driven arbitrage and/or price risk activities. In addition to the informational advantages Glencore enjoys via its global network, its significant market share and logistics capabilities in many commodities allows it to move quickly in response to arbitrage opportunities, exploiting not only the opportunities afforded by fluctuations and disequilibrium in commodity prices, but the underlying supply and demand dynamics as well.

The results of operations of Glencore's marketing activities for 2008, 2009 and 2010 were impacted by, among other things, the individual business segments' arbitrage opportunities, which are dependent, in part, on the strength of the markets, the price of the relevant commodities and the overall marketing environment (contango or backwardation) that existed at any given time during that period.

***Commodity prices***

Commodity prices are influenced by many factors, including the supply of and demand for commodities, speculative activities by market participants, global political and economic conditions and related industry cycles and production costs in major producing countries. While producers are clearly unable to dictate market prices directly, events such as the withdrawal of commodity production capacity (as was seen in relation to supply to the carbon and stainless steel industries in 2009 when end user demand reduced significantly) and various attempts to capture market share by individual producers could have an effect on market prices. Commodity prices may move in response to changes in production capacity in a particular market, for example, as a new asset comes online or when a large producer experiences difficult operational issues or is impacted by a natural disaster. Furthermore, the producers' actual average realised prices can be affected by contractual arrangements, production levels and hedging strategies. Prices of Glencore's main commodity products, including zinc, copper, lead, ferroalloys, nickel, cobalt, crude oil/oil products, coal, grains, sugar and edible oils can vary significantly as actual and anticipated supply and demand fluctuates. Price variations and market cycles have historically influenced the financial performance of Glencore and are expected to continue to do so in the future.

There are clearly commodity specific fundamentals and events which affect the demand and supply dynamics and pricing outlook for each individual commodity; however, the prices of most metals and energy commodities which Glencore produces and markets have generally followed macroeconomic trends and tend to be relatively closely correlated. Commodity prices were broadly strong during the first half of 2008, falling significantly in the final quarter of 2008, as the global financial crisis took hold. Prices were generally subdued in the first half of 2009 and then, following a brief period of stabilisation, started to progressively increase throughout 2010, as a result of a strengthening and stimulated global economy which drove increased demand for many commodities, particularly in Asia. During the lower points of the cycle, when market conditions were at their most difficult, production capacity was reduced in many commodities, together with significant deferral of capital expenditure. During such time, Glencore also reduced its production levels and delayed capital expenditure at certain of its industrial assets, including placing its Iscaycruz zinc mine (part of Los Quenuales) on care and maintenance during 2009 in response to the unfavourable price environment.

Prices of commodities marketed and produced in Glencore's Agricultural Products business segment similarly experienced a very difficult pricing environment from the second half of 2008 and continuing into the first half of 2009. Increases in prices in the second half of 2009 were not universally sustained into the first half of 2010, with average prices of rice, soya, corn, cotton and soya bean oil reducing in the first half of 2010. For additional detail on average market prices for the main commodities that Glencore markets, please see Section III: "Selected Historical Financial and Other Information."

The impacts that fluctuating commodity prices have on Glencore's business differ between its marketing activities and industrial activities.

- Marketing activities: In a market environment in which prices for a particular commodity are higher on average, the premiums/margins that Glencore generates in its physical marketing operations relating to such commodity as a result of geographical, time and quality imbalances tend to be higher. Glencore also generally benefits from fluctuating market prices, rather than long periods of stable prices, as it seeks to physically arbitrage such resulting price differentials. As prices of commodities

rise, Glencore has higher working capital financing requirements over the same quantity of commodities in question. During periods of falling commodity prices, the opposite applies in that Glencore will require less working capital financing for its marketing activities.

- Industrial activities: Higher prices will be particularly favourable to the profitability of Glencore in respect of such commodities which Glencore produces at its industrial assets or are produced by its associated companies and other investees. Similarly, low prices will negatively impact Glencore's industrial activities and could result in such activities incurring losses.

A significant downturn in the price of commodities, as was the case during the fourth quarter of 2008 and much of 2009, generally results in a decline in Glencore's profitability during such a period and could potentially result in a devaluation of inventories and impairments. See "—Exceptional Items". Although the impact of a downturn on commodity prices affects Glencore's marketing and industrial activities, the impact on its industrial activities is generally greater, as the profitability in the industrial activities is more directly exposed to price risk due to its higher level of fixed costs, while Glencore's marketing activities are ordinarily substantially hedged in respect of price risk and principally operate a margin-based model.

***Impact of freight rates***

Glencore's oil freight desk has a large and diversified fleet of 203 vessels as at 31 December 2010, operated under various short-term and long-term time charters and commercial management arrangements, with an average remaining fixed charge hire period of approximately three years at such date. In total, Glencore has equity interests in 41 vessels, which are delivered or currently under construction and are expected to be progressively delivered by March 2012. Glencore's freight desk contributes to the marketing results of its business segments, providing immediate access to vessels, which can represent a significant time advantage in exploiting short-term marketing opportunities. Having its own freight desk also gives Glencore greater visibility over world trade flows at a particular moment. Due to its internal requirements and the Directors' belief in Glencore's ability to achieve vessel utilisation above average industry levels, Glencore generally has a long position in fleet time chartering, thereby creating a significant exposure to fluctuations in spot freight rates. However, given the nature of the freight market and limited opportunities to hedge all freight price risk, Glencore is generally exposed to some degree of future freight price movements on its long-term time charters, not otherwise subject to hedge, re-let with a third party or to satisfy its own marketing needs.

The combination of a decline in demand for energy products towards the end of 2008 and surplus capacity in the market led to a significant decline in wet freight rates, which reached a low point in the middle of 2009. While rates recovered to some extent towards the end of 2009, there has yet to be a sustained improvement and rates in 2010 remained suppressed relative to historical levels. As a result, Glencore's freight desk experienced losses in 2008, 2009 and 2010, which adversely affected the Energy Products business segment.

***Marketing volumes***

The volume of commodities marketed by Glencore is a key driver of the results of operations of Glencore's marketing activities. The volume of commodities Glencore markets is dependent on its ability to source and finance the purchase of commodities and its ability to then sell these commodities to new and existing customers.

For further details on the volumes of each of Glencore's key commodities that were sold to third parties through Glencore's marketing business in each of the years ended 31 December 2008, 31 December 2009 and 31 December 2010, please see Section III: "Selected Historical Financial and Other Information."

Although volumes of commodities sold is a key factor in understanding the scale of Glencore's marketing activities and resulting market position and base earnings potential, as noted above, it is also important to assess the potential of additional value added services and arbitrage opportunities at various times and Glencore's ability to capitalise on such opportunities, on the back of its market presence. There may also be a lag effect in the relationship between earnings and sale volume; for example, by storing oil and selling forward at a higher price in a future period, Glencore is able to generate profits without increasing the volumes sold in the current period.

***Production volumes***

Production volume has a substantial effect on the results of operations of Glencore's industrial activities. Glencore can sell all of its production, so its industrial asset revenue generally fluctuates as a result of changes in realised prices and production volumes. Production volume is dependent on Glencore's production capacity, which is expected to increase for certain commodities, based on Glencore's expansion and development project plans. Per unit production costs are also significantly affected by changes in production volume as, prima facie, higher volumes reduce per unit production costs, given the generally high fixed cost mix in Glencore's industrial activities business. Therefore, Glencore's production levels are a key factor in determining its overall competitiveness and profitability.

For more detail on the total production of the controlled industrial assets in each of Glencore's key commodities, please see Section III: "Selected Historical Financial and Other Information".

Average commodity prices for most of the commodities Glencore produces were significantly lower during 2009 compared to 2008, resulting in lower earnings for Glencore's industrial assets. In this environment, Glencore scaled back production at certain industrial assets, resulting in lower production volumes during 2009. In addition, Glencore's production facilities are periodically stopped for planned repairs and maintenance, as well as unplanned repairs and maintenance due to power outages, flooding, equipment failures, accidents and other reasons, which temporarily reduces Glencore's production volume. See "Risk Factors—Risks relating to Glencore's industrial activities—Glencore's industrial activities involve a number of operating risks and hazards, many of which are outside Glencore's control".

Glencore has planned capital expenditures for significant expansion projects to increase the production volumes of its industrial asset portfolio, which are further described in Section I: "Information on Glencore".

***Financial performance of associates and other investments***

Glencore's results of operations are affected by the financial performance of its associates and other investments, with Glencore's share of income from associates and jointly controlled entities and dividends received from interests in other investments contributing directly to Glencore's income before income taxes and attribution. Glencore has investments in both listed and non-listed associates, as well as other investments primarily comprising of its 8.8 per cent. interest in UC Rusal, which has at certain times in the past been a significant contributor to Glencore's dividend income. For the years ended 31 December 2008, 31 December 2009 and 31 December 2010, Glencore's share of income from associates and jointly controlled entities and dividends received from other investments was U.S.$1,305 million, U.S.$94 million and U.S.$1,842 million, respectively. The table below sets forth, for the years ended 31 December, Xstrata's and others' contribution to Glencore's income for the year indicated. For further details on Glencore's associates and other investments, please see notes 7 and 8 to Section VI: "Historical Financial Information."

| **Selected Associate income and dividends** | **2008** | **2009** | **2010** |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| | *(unaudited)* | | |
| Xstrata[(1)] | 1,147 | 88 | 1,729 |
| Other share of income from associates and jointly controlled entities | (80) | (6) | 100 |
| Dividends from UC Rusal | 232 | 0 | 0 |
| Other dividend income | 6 | 12 | 13 |
| | 1,305 | 94 | 1,842 |

Note:

(1) Glencore held a 35.2 per cent., 34.9 per cent. and 34.5 per cent. effective interest in Xstrata as at 31 December 2008, 2009 and 2010, respectively.

The carrying value of Glencore's interest in Xstrata on its balance sheet as at 31 December 2008, 2009 and 2010 was U.S.$10,305 million, U.S.$12,380 million and U.S.$14,616 million, respectively. Carrying value represents the initial cost of Glencore's investment in Xstrata, adjusted for Glencore's share of movements in Xstrata's net income and other equity related items less any impairment in the value of the investment. For additional information on Xstrata and its relationship with Glencore, please see Section I: "Information on Glencore."

***Exceptional items***

During the period under review, management has identified exceptional items that due to their financial impact nature or expected infrequency of the events giving rise to them, such as gains on sale of investments and impairments of the carrying value of assets, are separated for internal reporting and analysis of Glencore's results to provide a better understanding and comparative basis of the underlying financial performance. These items had a significant impact on Glencore's reported results from operations during the period under review and similar items could have a significant impact on Glencore's reported income in future periods. Many of these exceptional items appear in Glencore's financial statements under "Other income/(expense)—net". The most significant exceptional items identified by management were as follows:

- In 2010, Glencore recognised U.S.$99 million of exceptional expenses, including U.S.$790 million of negative mark to market adjustments associated with fixed price forward coal sales contracts that did not qualify for "own use" or cash flow hedge accounting, U.S.$225 million of Prodeco call option expenses (see below) offset by U.S.$674 million of impairment reversals following the rebound in market conditions and underlying valuation assumptions associated with Glencore's investment in Xstrata and U.S.$462 million related to the revaluation of the initial 40 per cent. interest in Vasilkovskoje Gold immediately prior to the acquisition of the remaining 60 per cent. interest.
- In March 2009, Xstrata acquired Glencore's Colombian Coal Group (Prodeco) for U.S.$2 billion, and concurrently granted Glencore an option to repurchase Prodeco within 12 months for U.S.$2.25 billion plus profits accrued during the option period and the net balance of any cash invested. The sale of Prodeco to Xstrata with the option for Glencore to repurchase at a specified price was undertaken in connection with Xstrata's 2009 rights issue. The transaction allowed Glencore to participate in Xstrata's rights issue by paying with assets rather than cash, thus ensuring the maintenance of Glencore's investment grade credit rating. Glencore's directors considered this transaction to be in the interests of Glencore and in line with its stated strategies and Xstrata's reasoning for the transaction is fully documented in its shareholder circular published in connection with shareholder approval required for such transaction. Since Glencore held a fixed price repurchase option over Prodeco, the conditions for de-recognition or disposal of Prodeco were not met under IFRS and, as a consequence, Prodeco's operations continued to be reflected in the Consolidated Financial Statements, while the proceeds were deferred and recognised as a liability. In March 2010, Glencore exercised its option to repurchase Prodeco from Xstrata. In the year ended 31 December 2010, U.S.$225 million (2009: U.S.$303 million) of option and related expense has been recognised under this arrangement.
- In 2009, Glencore recognised U.S.$1,091 million of exceptional expenses, including U.S.$736 million and U.S.$25 million related to Glencore's share of asset impairment charges booked directly by Xstrata and Century Aluminum, respectively, and U.S.$303 million related to the Prodeco call option as described in the prior paragraph.
- The rapid and severe impacts arising from the global financial crisis in the latter part of 2008 resulted in a substantial fall in commodity prices, which, together with the increased uncertainty in financial and credit markets, led Glencore to defer various projects and curtail or shut some production output. This backdrop led to impairments being recorded against the carrying value of certain assets and investments. Glencore recognised U.S.$3,756 million of exceptional expenses in the year ended 31 December 2008, including inventory net realisable value adjustments of U.S.$435 million and impairment charges of U.S.$2,763 million. Of this amount, U.S.$2,161 million was attributable to impairments related to Glencore's interest in Xstrata, Century Aluminum and UC Rusal, with the balance related to various other cumulative impairments arising primarily from decisions taken to curtail and/or suspend various mining or expansion activities.

For more details on the impact of exceptional items on Glencore's financial results, please see Part III: "Selected Historical Financial and Other Information" and Section VI: "Historical Financial Information".

Please see the financial table in Section III: "Selected Historical Financial and Other Information" setting forth for the three years ended 31 December 2010 certain selected line items extracted without material adjustment from the historical financial information contained in Section VI: "Historical Financial Information", certain items which Glencore considers exceptional (as described therein) and the aggregate effect on such historical financial information of such exceptional items.

*Production costs and efficiency*

As commodity prices themselves are outside of Glencore's control, the competitiveness and sustainable long-term profitability of its industrial asset portfolio depends significantly on its ability to closely manage costs and maintain a broad spectrum of low-cost, efficient operations. Costs associated with the operation of Glencore's industrial assets can be broadly categorised into labour costs and other on-site expenses, including power and equipment costs. Production costs are heavily influenced by the extent of ongoing development required, ore grades, mine planning, processing technology, logistics, energy and supply costs and the impact of exchange rate fluctuations on costs of operations. All of Glencore's industrial assets are, to varying degrees, affected by increases in costs for labour and fuel. Unit production costs are also significantly affected by production volumes and therefore production levels are frequently a key factor in determining the overall cost competitiveness of Glencore's industrial activities.

Glencore's industrial assets experienced higher mining and processing costs during the third quarter of 2008, particularly in connection with labour and energy, which continued to rise throughout 2008. As production costs continued to increase and commodity prices collapsed in the fourth quarter of 2008, Glencore's industrial assets incurred a loss, post-exceptional items, for this quarter. In response, management initiated a number of cost-saving measures, including putting some assets into care and maintenance, curtailing production at others and seeking efficiencies and synergy opportunities with nearby operations. These measures led to reduced production costs in 2009 compared to 2008.

**Description of key income statement line items**

*Revenues*

Glencore generates revenue from the sale of physical commodities and marketing advisory and related services. In most instances, sales revenue is recognised when title to the product passes to the customer, which could be delivery into the vessel on which it is shipped, a destination port or the customer's premises. As commodity prices are often volatile, Glencore believes that overall revenues are neither a reliable nor a relevant indicator of the performance of Glencore or of the individual business segments. Instead, Glencore believes that Adjusted EBIT/EBITDA (revenue less costs of goods sold and selling and administrative expenses plus share of income from associates and jointly controlled entities and dividends as disclosed on the face of the statement of income plus, in the case of Adjusted EBITDA, depreciation and amortisation) are key measures to evaluate the operating performance of Glencore and, to a lesser extent, Adjusted EBIT/EBITDA margin percentage in respect of only Glencore's industrial activities.

For certain commodities, the sales price is determined on a provisional basis at the date of sale, as the final selling price is subject to movements in market prices up to the date of final pricing, normally ranging from 30 to 180 days after initial booking. Revenue on provisionally priced sales is recognised based on the estimated fair value of the total consideration receivable. The revenue adjustment mechanism embedded within provisionally priced sales arrangements has the character of a commodity derivative. Accordingly, the fair value of the final sales price adjustment is re-estimated continuously and changes in fair value are recognised as an adjustment to revenue. In all cases, fair value is estimated by reference to forward market prices.

Glencore records revenues in its physical commodity marketing business on a gross basis, rather than on the basis of the net margin or premiums received. Revenue earned from marketing advisory and related services represented less than 0.1 per cent. of total revenues in 2008, 2009 and 2010, respectively and the remaining 99.9 per cent. of the Group's revenue in each period was attributable to purchase and off take agreements.

*Cost of goods sold*

Cost of goods sold primarily includes the following:

- cost of marketing inventories sold and related distribution and storage costs;
- cost of extracting, refining and processing products related to the consolidated industrial assets, including personnel costs and depreciation and amortisation of property, plant and equipment and reserves;
- unrealised gains and losses from changes in the fair value of marketing inventories;
- unrealised gains and losses from changes in the fair value of derivatives held to hedge movements in commodity prices; and
- other operating expenses.

Cost of goods sold also includes, as required, write-downs of inventories where such inventories are carried at the lower of cost or net realisable value.

***Selling and administrative expenses***

Selling and administrative expenses represent costs that are primarily semi-fixed in nature and attributable to Glencore's marketing activities, with the exception of the variable bonus pool. Payroll expenditure is the largest component of this line item, with the variable bonus pool constituting a significant part of the payroll expenditure. The variable bonus pool is correlated with the profitability of Glencore's marketing operations and certain of its industrial activities comprising 10 per cent. of profits before tax from Glencore's marketing activities and 10 per cent. of profits after tax from certain of its industrial activities. Following the Restructuring, non cash expenses associated with share awards under the Glencore Performance Share Plan and Glencore Deferred Bonus Plan will also be included in Selling and administrative expenses. PSP Awards and Bonus Awards may be satisfied using new issued shares, treasury shares or shares purchased in the market. However, the number of shares which may be issued, or committed to be issued, in any 10 year period will not exceed (i) 10 per cent. of the Company's issued ordinary share capital, in respect of any employee share plans operated by the Company; and (ii) 5 per cent. of the Company's issued ordinary share capital, in respect of discretionary employee share plans adopted by the Company. As at the date of Admission, the Company will only have discretionary employee share plans in existence. Shares issued, or committed to be issued, before Admission will not be counted for either of these limits.

***Share of income from associates and jointly controlled entities***

Share of income from associates and jointly controlled entities represents income from associates and jointly controlled entities in which Glencore exercises significant influence or joint control that are accounted for using the equity method. Significant influence is the power to participate in the financial and operating policy decisions of the investee but is not control over those policies. Significant influence is presumed if Glencore holds between 20 per cent. and 50 per cent. of the voting rights, unless evidence exists to the contrary. Joint control is the contractually agreed sharing of control over an economic entity where strategic and operating decisions require unanimous decision making.

Equity accounting involves Glencore recording its share of the entity's net income and equity. Glencore's interest is initially recorded at cost and is subsequently adjusted for Glencore's share of changes in net assets of the entity less any impairment in the value of individual investments.

***Gain/(loss) on sale of investments—net***

Gain/(loss) on sale of investments—net comprises the net gain/loss on the sale of subsidiaries and other investments.

***Other income/(expense)—net***

Other income/(expenses)—net includes impairments, gains/losses on movements in fair value on interests in investments classified as held for trading, foreign exchange gains/losses, and gains/losses on disposals of property, plant and equipment and other non-operational related income or expenses.

***Dividend income***

Dividend income reflects distributions of earnings in respect of Glencore's stakes in non-controlled and non-equity accounted entities. Dividend income is recognised when a right to receive a payment has been established, it is probable that the economic benefits will flow to Glencore and the amount of income can be measured reliably. Historically, dividends from UC Rusal have been the largest contributor to dividend income.

***Interest income***

Interest income reflects interest received from cash deposits and loans extended by Glencore. Interest income is recognised when a right to receive a payment has been established, it is probable that the economic benefits will flow to Glencore and the amount of income can be measured reliably. Interest income is accrued on a time basis, by reference to the principal outstanding and at the applicable effective interest rate.

*Interest expense*

Interest expense comprises interest incurred on Glencore's fixed- and floating-rate borrowings.

*Income tax expense*

Income tax expense consists of current and deferred income taxes. Current taxes represent income taxes expected to be payable based on enacted or substantively enacted tax rates at the balance sheet date and expected current taxable income and any adjustment to tax payable in respect of previous years. Deferred taxes are recognised for temporary differences between the carrying amounts of assets and liabilities in the financial statements and the corresponding tax base is used in the computation of taxable profit, using enacted or substantively enacted income tax rates. For further detail on deferred tax accounting, see Section VI: "Historical Financial Information".

The difference between Glencore's statutory tax rate and the Group's effective tax rate results primarily from the location of the Group's operations in differing tax jurisdictions relative to Glencore's tax jurisdiction, Switzerland. The Group's effective tax rate excludes income from associates and dividend income, which are recorded post tax. Intergroup transactions are conducted on an arm's length basis and incorporate all relevant terms and conditions such as reference price and applicable adjustments for quality, logistical and related services consistent with similar transactions conducted with third parties. While the Group, in the past, has been reviewed regarding compliance with tax and transfer pricing regulations, any resulting disputes were satisfactorily resolved with no material adverse impact on the Group and it currently has no material outstanding tax or transfer pricing disputes. There have been certain matters (e.g. overestimated production costs and transfer pricing issues) raised in relation to the amount of tax payable by Mopani (73.1 per cent. owned by Glencore) in a draft provisional report prepared by advisers for the Zambian Revenue Authority. Mopani is confident that the amount of tax that it has paid has been correctly calculated and discussions continue with the Zambian Revenue Authority and all other interested parties to clarify and resolve these matters whether or not any assessments are issued. However, even if these matters are not resolved satisfactorily as Mopani expects, the Directors believe this would not have a material adverse impact on the Glencore Group.

*Attribution to profit participation shareholders*

Prior to the Restructuring, Glencore had issued to employees Glencore non-voting profit participation certificates ("PPCs") with no nominal value, enabling the employees to participate in a portion of the attributable income accumulated during the period that such employees held the PPCs. The PPCs attribute Glencore's net income pro rata based on the 150,000 shares issued. As described in note 14 to Section VI: "Historical Financial Information", on cessation of employment the accumulated amounts attributed to an Ordinary PPC holder are reclassified into non-current borrowings, as Ordinary profit participation certificates and paid in instalments over a period of five years. Following the Restructuring, all outstanding PPCs including profit entitlements accumulated thereunder will have been converted to Ordinary Shares and attribution will no longer be made to employee shareholders through the PPCs. Where the employment of a PPC holder has ceased prior to the Restructuring, the relevant Ordinary profit participation certificates will have been reclassified in this way and will not participate in the Restructuring. The borrowings into which they have been reclassified will remain payable in accordance with this five-year payment schedule.

**Results of operations**

*Adjusted EBIT*

Adjusted EBIT is the net result of revenue less cost of goods sold and selling and administrative expenses plus share of income from associates and jointly controlled entities and dividends as disclosed on the face of the consolidated statement of income. Adjusted EBIT is used by management as the key measure to assess the performance of the business segments as it reflects the net margin earned by the marketing and industrial activities of the business segment. Although Adjusted EBIT is not typically a measure of operating income, operating performance or liquidity under IFRS, the Directors have presented Adjusted EBIT in this Prospectus because they believe Adjusted EBIT is used by some investors to determine a company's ability to service indebtedness and fund ongoing capital expenditure and dividends. Adjusted EBIT should not, however, be considered in isolation or as a substitute for income from operations as determined in accordance with IFRS, or for cash flows from operating activities as determined in

accordance with IFRS, or as an indicator of operating performance. The following table sets forth a reconciliation of Adjusted EBIT to income for the year for the periods indicated:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| Revenue | 152,236 | 106,364 | 144,978 |
| Cost of goods sold | (147,565) | (103,133) | (140,467) |
| Selling and administrative expenses | (850) | (839) | (1,063) |
| Share of income from associates and jointly controlled entities | 1,067 | 82 | 1,829 |
| Dividend income | 238 | 12 | 13 |
| Adjusted EBIT | 5,126 | 2,486 | 5,290 |
| Interest expense—net | (837) | (587) | (936) |
| (Loss)/gain on sale of investments—net | 7 | 33 | (6) |
| Other (expense)/income—net | (2,960) | 35 | (8) |
| Income before income taxes and attribution | 1,336 | 1,967 | 4,340 |
| Income tax expense | (268) | (238) | (234) |
| **Income before attribution** | **1,068** | **1,729** | **4,106** |
| Attribution to profit participation shareholders | (677) | (650) | (2,460) |
| **Income for the year** | **391** | **1,079** | **1,646** |

Adjusted EBIT for the year ended 31 December 2010 was U.S.$5,290 million, a 113 per cent. increase from U.S.$2,486 million, including exceptional items, in the year ended 31 December 2009. This increase was primarily due to the stronger contributions from both our industrial activities and our marketing activities. Contributions from our industrial asset activities were up 219 per cent. to U.S.$2,953 million over 2009. Average prices for our key metals produced (in particular, copper, zinc and nickel) were approximately 30 per cent. to 45 per cent. higher over the year. The contribution from our marketing activities was up approximately 50 per cent. to U.S.$2,337 million over 2009.

Adjusted EBIT for the Metals and Minerals business segment was U.S.$2,561 million for the year ended 31 December 2010, a 165 per cent. increase from U.S.$966 million, including exceptional items, for the year ended 31 December 2009. The contribution of the sizeable industrial asset portfolio of this segment benefited from stronger metals prices. Improving market sentiment and conditions in the important automotive and construction industries resulted in substantially increased volumes and corresponding income generated within the ferroalloys, nickel and aluminium commodity groups' marketing activities compared to the challenging conditions of 2009.

Adjusted EBIT for the Energy Products business segment was U.S.$685 million for the year ended 31 December 2010, a 49 per cent. decrease from U.S.$1,358 million, including exceptional items, for the year ended 31 December 2009. This decrease was primarily due to the relatively stable oil price environment and a poor wet freight market which prevailed for most of the year. In addition, the contribution of coal industrial assets was affected by certain infrequent events, most notably a lengthy strike at one of the coal mines in Colombia and extreme wet weather conditions that affected operations at both our Colombian and South African operations. These impacts on 2010 earnings within the energy products segment are expected to recede in 2011 with a return to more "normal" market and operating conditions. The contribution from industrial activities was further impacted by U.S.$40 million of oil exploration expenses (2009: U.S.$26 million), incurred as part of the ongoing build-up of the promising West African E&P portfolio, which was not able to be capitalised. Production and earnings from the portfolio are expected from the first quarter of 2012.

Adjusted EBIT for the Agricultural Products business segment was U.S.$717 million for the year ended 31 December 2010, a 108 per cent. increase from U.S.$345 million, including exceptional items, for the year ended 31 December 2009. This increase was primarily due to tight and dislocated market conditions. These resulted primarily from severe weather conditions which severely affected supply from the traditionally strong export markets such as Russia, Ukraine and Australia.

Corporate primarily relates to Glencore's equity accounted interest in Xstrata and the variable pool bonus accrual, the net result of which was up U.S.$1,510 million to U.S.$1,327 million compared to 2009. This was mainly owing to an increase in Xstrata's earnings, which reflected higher commodity prices.

Adjusted EBIT for the year ended 31 December 2009, including exceptional items, was U.S.$2,486 million, a 51 per cent. decrease from U.S.$5,126 million in the year ended 31 December 2008, due to lower

contributions from each business segment, owing to the weak prevailing global economic backdrop, particularly during the first half of 2009. This decrease was primarily due to lower contributions from the Energy Products business segment, which benefited from strong market conditions during most of 2008 and significantly lower contributions from investments in associates and other investments, which, in addition to lower core earnings in 2009, recorded sizeable impairment charges. Glencore's share of such impairments amounted to U.S.$736 million.

Adjusted EBIT from the Metals and Minerals business segment, including exceptional items, was U.S.$966 million for the year ended 31 December 2009, a 24 per cent. decrease from U.S.$1,273 million for the year ended 31 December 2008. This decrease was due to a U.S.$253 million reduction in marketing activities' contribution and lower earnings from industrial activities (including the significantly lower contributions from investments in associates and other investments), each as a result of lower overall market sentiment and demand brought on by the global financial crisis. In particular, metals (aluminium, chrome, nickel, etc.) supplying the automotive, construction and steel industries, amid severe production cutbacks, generally suffered lower sales volumes and prices in the first half of 2009. Customer performance issues on certain coal related contracts also had an adverse impact on the financial results of that department during 2009.

Adjusted EBIT for the Energy Products business segment, including exceptional items, was U.S.$1,358 million for the year ended 31 December 2009, a 36 per cent. decrease from U.S.$2,131 million for the year ended 31 December 2008. This decrease was due to a U.S.$664 million (41 per cent.) lower contribution from marketing activities and a U.S.$109 million (21 per cent.) lower contribution from industrial activities. The marketing activities were supported by volatility and contango structures that were particularly strong during most of 2008 and only in the earlier part of 2009, where after volatility and arbitrage opportunities substantially reduced. Glencore also suffered significant loss of profits during 2009, mainly in its coal business, due to a number of instances of contract non-performance by various counterparties. While these instances of non-performance impacted the results of the coal business during the period, each of the relevant contracts was subsequently renegotiated on satisfactory terms and Glencore continues to do business with each of the counterparties. The oil marketing results were further hampered in 2009 by the poor performance of its freight division, which, due to its generally long overall position in time charters, suffered in an environment of sharply lower spot freight rates. The decrease in industrial asset contribution was due primarily to the impact of lower coal prices on the earnings of Prodeco and Shanduka.

Adjusted EBIT for the Agricultural Products business segment, including exceptional items, was U.S.$345 million for the year ended 31 December 2009, a 49 per cent. decrease from U.S.$678 million for the year ended 31 December 2008. This decrease was due to a U.S.$275 million (47 per cent.) lower contribution from marketing activities and a U.S.$58 million (59 per cent.) lower contribution from industrial activities. In 2009, grain volatility and prices were substantially lower than 2008, which reduced the number of arbitrage opportunities. In addition, lower processing volumes were not fully offset by cost deductions due to the semi-fixed nature of the cost base for Glencore's processing operations, which has adversely impacted the segment's industrial results.

Corporate primarily relates to Glencore's equity accounted interest in Xstrata and the variable pool bonus accrual, the net result of which was down U.S.$1,227 million from U.S.$1,044 million in 2008 to U.S.$(183) million in 2009, primarily due to lower average commodity prices during the period and recognition of Glencore's share of impairment charges booked directly by Xstrata.

**Year ended 31 December 2010 compared with year ended 31 December 2009**

***Revenue***

Glencore's revenue for the year ended 31 December 2010 was U.S.$144,978 million, a 36 per cent. increase from revenues of U.S.$106,364 million in the year ended 31 December 2009. This increase was primarily due to significantly higher average commodity prices for most of the commodities Glencore marketed during 2010 compared to 2009. Higher year-on-year average prices were most notable in nickel (49 per cent.), copper (46 per cent.), thermal coal (42 per cent.), aluminium (30 per cent.), zinc (30 per cent.) and crude oil (29 per cent.), contributing to an overall increase in revenues of U.S.$38,614 million. In addition, Glencore saw increases in the volumes of several of its key commodities including crude oil (31 per cent.) and alumina (15 per cent.). Given the relatively high revenue proportion of Glencore's oil business, the increase in average oil prices was the largest driver of the total revenue increase in 2010.

*Cost of goods sold*

Cost of goods sold for the year ended 31 December 2010 was U.S.$140,467 million, a 36 per cent. increase from U.S.$103,133 million in the year ended 31 December 2009. This increase was primarily due to the higher commodity prices noted above and the resulting impact on the purchases of the respective commodities.

*Selling and administrative expenses*

Selling and administrative expenses for the year ended 31 December 2010 were U.S.$1,063 million, a 27 per cent. increase from U.S.$839 million in the year ended 31 December 2009. This increase was primarily due to higher variable payroll costs, consistent with the increased earnings in 2010.

*Share of income from associates and jointly controlled entities*

Share of income from associates for the year ended 31 December 2010 was U.S.$1,829 million, up from U.S.$82 million in the year ended 31 December 2009. The 2009 balance was negatively impacted by impairment charges recorded by the underlying associates, Glencore's share being U.S.$761 million. Adjusting for these exceptional items, there was still a greater than twofold increase over the prior year mainly due to higher earnings at Xstrata, which in turn reflected improved commodity prices.

*Gain/(loss) on sale of investments—net*

Loss on sale of investments for the year ended 31 December 2010 was U.S.$6 million, compared to a gain of U.S.$33 million in the year ended 31 December 2009. The loss in 2010 was due to the disposal of certain non-core investments.

*Other income/(expense)—net*

Net other expense for the year ended 31 December 2010 was U.S.$8 million, compared to a net other income of U.S.$35 million in the year ended 31 December 2009. The net amount primarily comprised U.S.$790 million negative mark to market adjustments related to certain fixed price forward coal sales contracts of Prodeco's future production. These forward contracts did not qualify for "own use" or cash flow hedge accounting. The net amount for 2010 also included U.S.$225 million of Prodeco call option expenses, offset by U.S.$674 million of impairment reversals associated with Glencore's investment in Xstrata following the rebound in market conditions and underlying valuation assumptions. It also included U.S.$462 million revaluation adjustment on the initial 40 per cent. interest in Vasilkovskoje Gold immediately prior to the acquisition of the remaining 60 per cent. interest in February 2010.

*Dividend income*

Dividend income for the year ended 31 December 2010 was U.S.$13 million, an 8 per cent. increase from U.S.$12 million in the year ended 31 December 2009.

*Interest Income*

Interest income for the year ended 31 December 2010 was U.S.$281 million, a 5 per cent. increase from U.S.$267 million in the year ended 31 December 2009. This increase was primarily due to the impact on the interest received from higher average cash balances on hand and various loans extended, including to companies within the RussNeft Group.

*Interest expense*

Interest expense for the year ended 31 December 2010 was U.S.$1,217 million, a 43 per cent. increase from U.S.$854 million in the year ended 31 December 2009, or up 38 per cent., pre-exceptional items, taking into account U.S.$39 million of capitalised borrowing costs written off in 2010. This increase was primarily due to higher average debt levels and, to a lesser extent, the incremental cost impact of a higher long-term, fixed-rate funding mix.

Excluding exceptional items, interest expense on floating-rate debt increased by U.S.$93 million to U.S.$551 million from U.S.$458 million in 2009. Floating-rate debt is predominantly used to fund fast turning and liquid working capital, the funding cost of which is taken into account in transactional pricing and terms and accordingly "recovered" in adjusted marketing EBIT.

Interest expense on fixed-rate funding was U.S.$627 million in 2010, an increase of U.S.$231 million over 2009. The net increase is due to the Convertible, Euro and Swiss Franc/Perpetual bond issuances in December 2009, March 2010 and October 2010, respectively.

***Income before income taxes and attribution***

Income before income taxes and attribution for the year ended 31 December 2010 was U.S.$4,340 million, a 121 per cent. increase from U.S.$1,967 million for the year ended 31 December 2009. This increase was primarily due to increased contributions from industrial asset activities which increased more than threefold following price increases in the respective commodities along with increased contributions from the marketing activities that increased 50 per cent. compared to 2009 following improvements in global demand and market sentiment.

***Income tax expense***

Income tax expense for the year ended 31 December 2010 was U.S.$234 million, largely in line with U.S.$238 million incurred over the year ended 31 December 2009. The effective tax rate, excluding share of income from associates which is recorded post-tax, was 9.3 per cent. compared to 12.6 per cent. for 2009. The lower rate is due to the recognition of unrecognised tax losses following a review of business plans, primarily at Katanga, partly offset by the recognition of additional deferred tax expense in relation to the corporate tax rate increase in Kazakhstan from 15 per cent. to 20 per cent.

***Attribution to profit participation shareholders***

Attribution to profit participation shareholders for the year ended 31 December 2010 was U.S.$2,460 million compared to U.S.$650 million, an increase of 278 per cent. This increase was consistent with the increased allocatable income in 2010.

***Income for the year***

Income for the year ended 31 December 2010 was U.S.$1,646 million, a 53 per cent. increase from U.S.$1,079 million for the year ended 31 December 2009. This increase was primarily due to a recovery in worldwide commodity prices and market sentiment over 2010 which led to improved conditions from most of our business segments as well as our share of income from associates.

**Year ended 31 December 2009 compared with year ended 31 December 2008**

***Revenue***

Glencore's revenue for the year ended 31 December 2009 was U.S.$106,364 million, a 30 per cent. decrease from revenues of U.S.$152,236 million in the year ended 31 December 2008. This decrease was primarily due to significantly lower average commodity prices for most of the commodities Glencore marketed during 2009 compared to 2008. While worldwide commodity prices generally saw a recovery in the second half of 2009, the very weak start to the year lead to an overall decline in the average price of commodities from 2008 to 2009. Lower year-on-year average prices were most notable in thermal coal (approximately 42 per cent.), oil (approximately 36 per cent.), aluminium (approximately 35 per cent.), wheat (approximately 33 per cent.), nickel (approximately 31 per cent.) and copper (approximately 26 per cent.), contributing to an overall decrease in revenues of U.S.$45,872 million. Commodity volumes remained largely stagnant over the period and, as a result, the decrease in the average price of oil, the largest contributor to revenue, and any associated movements, over 2009 were the primary drivers of the decrease in revenue compared to 2008.

***Cost of goods sold***

Cost of goods sold for the year ended 31 December 2009 was U.S.$103,133 million, a 30 per cent. decrease from U.S.$147,565 million in the year ended 31 December 2008. This decrease was primarily due to the lower commodity prices noted above and the resulting impact on the purchases of the respective commodities. To a much lesser extent, the decrease was also attributable to lower production costs at Glencore's industrial activities resulting from cost cutting measures across the group, including scaling back production at certain industrial assets.

***Selling and administrative expenses***

Selling and administrative expenses for the year ended 31 December 2009 were U.S.$839 million, a 1 per cent. decrease from U.S.$850 million in the year ended 31 December 2008. The variable bonus pool accrual, one of the significant components of selling and administrative expenses, decreased by U.S.$27 million for the year ended 31 December 2009 from 2008.

***Share of income from associates and jointly controlled entities***

Share of income from associates for the year ended 31 December 2009 was U.S.$82 million, a 92 per cent. decrease from U.S.$1,067 million in the year ended 31 December 2008. This decrease was primarily due to lower earnings at Xstrata and Century Aluminum which were primarily driven by a fall in commodity prices, volumes of commodities sold and impairment charges recorded by these entities.

***Gain/(loss) on sale of investments—net***

Gain on sale of investments for the year ended 31 December 2009 was U.S.$33 million and U.S.$7 million in the year ended 31 December 2008. The gain in 2009 related to the disposal of the East Tennessee Zinc operations (U.S.$97 million), offset by a dilution loss, following Xstrata's 2009 capital raising, which saw Glencore's effective ownership in Xstrata reduce from 35.2 per cent. to 34.9 per cent.

***Other income/(expense)—net***

Net other income for the year ended 31 December 2009 was U.S.$35 million, compared to net other expense of U.S.$2,960 million in the year ended 31 December 2008. The net other expense in 2008 related primarily to impairments booked against the carrying value of assets and investments. Specifically, U.S.$1.7 billion of the impairment expense was booked against the Xstrata and Century Aluminum carrying values, with the remaining balance relating to the various other cumulative impairments arising primarily from decisions taken to curtail and/or suspend various mining or expansion activities.

The net other income in 2009 comprised primarily a net increase in the fair value of other investments accounted for at fair value offset by U.S.$303 million of expenses incurred in relation to the Prodeco call option arrangement. In March 2009, Xstrata acquired Glencore's Columbian Coal Group (Prodeco) for U.S.$2 billion and concurrently granted Glencore an option to repurchase Prodeco within 12 months for U.S.$2.25 billion plus profits accrued during the option period and the net balance of any cash invested. Since Glencore held a fixed repurchase option over Prodeco, the conditions for de-recognition or disposal of Prodeco were not met under IFRS and, as a consequence, Prodeco's operations continued to be reflected in the consolidated financial statements, while the proceeds were deferred and recognised as a liability. As at 31 December 2009, U.S.$303 million of option and related expense had been accrued under this arrangement.

***Dividend income***

Dividend income for the year ended 31 December 2009 was U.S.$12 million, a 94 per cent. decrease from U.S.$238 million in the year ended 31 December 2008. This decrease was primarily due to the cessation of dividends from UC Rusal, which had previously been the primary contributor to dividend income.

***Interest income***

Interest income for the year ended 31 December 2009 was U.S.$267 million, a 10 per cent. decrease from U.S.$298 million in the year ended 31 December 2008. This decrease was primarily due to lower average short-term rates noted below and their impact on the interest received on cash and various loans extended.

***Interest expense***

Interest expense for the year ended 31 December 2009 was U.S.$854 million, a 25 per cent. decrease from U.S.$1,135 million in the year ended 31 December 2008. This decrease was primarily due to lower average short term U.S. dollar interest rates over 2009 compared to 2008 as prime lending rates were cut in response to the global financial crisis. One-month U.S. dollar LIBOR averaged 0.33 per cent. during 2009, compared to 2.68 per cent. in 2008.

The lower base interest rate, partially offset by a general increase in corporate credit spreads, resulted in a net decrease in interest expense on floating rate debt of U.S.$307 million to U.S.$458 million in 2009 from

U.S.$765 in 2008. Floating-rate debt is predominantly used to fund relatively fast turning and liquid working capital, the funding cost of which is generally taken into account in transactional pricing and terms and accordingly "recovered" in adjusted marketing EBIT.

Interest expense on fixed rate funding was U.S.$396 million in 2009, an increase of U.S.$26 million over 2008. The net increase was primarily due to the full year impact of the Eurobonds issued during 2008, partly offset by interest "savings" on bonds repurchased during the year.

***Income before income taxes and attribution***

Income before income taxes and attribution for the year ended 31 December 2009 was U.S.$1,967 million, a 47 per cent. increase from U.S.$1,336 million for the year ended 31 December 2008. This increase was primarily due to the presence of "Other income" for 2009 as opposed to the large "Other expense" in 2008.

***Income tax expense***

Income tax expense for the year ended 31 December 2009 was U.S.$238 million, an 11 per cent. decrease from U.S.$268 million in the year ended 31 December 2008. This decrease was primarily due to the relative contribution of Glencore's foreign operations to its effective tax rate. The effective tax rate was affected by the significant impairments taken in 2008 that did not carry any tax benefits.

***Attribution to profit participation shareholders***

Attribution to profit participation shareholders for the year ended 31 December 2009 was U.S.$650 million compared to U.S.$677 million in 2008, a decrease of 4 per cent. This decrease was primarily due to a net lower allocatable income over the period.

***Income for the year***

Income for the year ended 31 December 2009 was U.S.$1,079 million, a 176 per cent. increase from U.S.$391 million for the year ended 31 December 2008. This increase was primarily due to the adverse impact on income in 2008 caused by the exceptional items recognised in relation to Glencore's interests in Xstrata and Century Aluminum. Please see "Other income/(expense)—net" above. Glencore also benefited from a general recovery in worldwide commodity prices over the second half of 2009 as well as the realisation of cost savings from the cost cutting measures implemented by management during the global financial crisis.

**Liquidity and capital resources**

***Overview***

Glencore's businesses are capital intensive (capital expenditure for industrial activities and working capital for marketing activities). To date, Glencore has funded its operations through borrowings and equity growth via retention of profits. Glencore's funding requirements are generally correlated with movements in commodity prices and the extent of business opportunities. Increasing commodity prices primarily lead to increased funding requirements for Glencore's marketing activities, but may also lead to increased cash flow from its industrial activities along with acquisitions and/or capital expenditures in Glencore's industrial activities as Glencore looks to increase production in a higher commodity price environment. In a falling commodity price environment, Glencore will generally generate less cash flow from its industrial activities but will also require lower working capital funding in its marketing activities. In these circumstances, it may choose to also defer discretionary capital expenditure and shut or curtail production of certain assets.

***Cash flows***

The following table summarises Glencore's cash flows for the periods indicated:

| | Year ended 31 December | | |
|---|---|---|---|
| | 2008 | 2009 | 2010 |
| | *(U.S.$ million)* | | |
| Cash generated/in operating activities before working capital changes | 4,587 | 3,095 | 4,234 |
| Total working capital changes | 2,560 | (5,279) | (2,998) |
| Net income tax and interest paid | (1,187) | (826) | (1,125) |
| Net cash generated/(used) by operating activities after working capital changes, net interest and income tax | 5,960 | (3,010) | 111 |
| Net cash used by investing activities | (2,950) | (1,164) | (4,755) |
| Net cash generated/(used) by financing activities | (2,842) | 4,208 | 5,247 |
| Net increase in cash and cash equivalents | 168 | 34 | 603 |
| Cash and cash equivalents at beginning of period | 658 | 826 | 860 |
| Cash and cash equivalents at end of period | 826 | 860 | 1,463 |

*Net cash generated by operating activities before working capital changes*

Net cash generated by operating activities before working capital changes was U.S.$4,234 million in 2010, U.S.$3,095 million in 2009 and U.S.$4,587 million in 2008.

*Total working capital changes*

Amounts invested in working capital were U.S.$(2,998) million in 2010 compared to an investment of U.S.$(5,279) million in 2009 and a release of U.S.$2,560 million in 2008. Working capital requirements in 2010 included the payment of U.S.$303 million in relation to the exercise of the Prodeco call option. The remaining investment was primarily due to movements in commodity prices affecting the carrying value of inventory, trade receivables and margin calls with copper, zinc, oil and wheat prices increasing by 21 per cent., 13 per cent., 14 per cent., and 18 per cent., respectively, over the final quarter of 2010. The primary drivers of the recent working capital investment by Glencore, namely higher prices, are generally beneficial for Glencore's trends in future profit and debt coverage, most clearly identifiable in the industrial asset portfolio. In a flat or declining price environment, such as in 2008, the cash margining component of working capital will reduce as inventory is sold and any corresponding hedges closed out.

*Net cash generated/(used) by operating activities after working capital changes, net interest and income tax*

Net cash generated/(used) by operating activities after working capital changes, net interest income and income tax was U.S.$111 million in 2010, U.S.$(3,010) million in 2009 and U.S.$5,960 million in 2008.

*Net cash (used) by investing activities*

Net cash (used) by investing activities was U.S.$(4,755) million, U.S.$(1,164) million and U.S.$(2,950) million in 2010, 2009 and 2008, respectively. Net cash flows used by investing activities relate to capital expenditures at Glencore's industrial activities, as well as the acquisition and sale of investments and the movement in long-term loans. Capital expenditures in 2008, 2009 and 2010 mainly included coal expansion activities at Prodeco, building a new copper smelter at Kazzinc, the procurement of various new oil freight vessels, as well as funding extended to Vasilkovskoje Gold to develop the largest known gold deposit in Kazakhstan. In addition, cash flows used by investing activities in 2009 reflected Glencore's participation in a capital raising by Katanga, Century Aluminum partially offset by the sale of Glencore's 51 per cent. interest in the Cartagena oil refinery. The level of cash flows used by investing activities reduced in the year ended 31 December 2009, as compared to the year ended 31 December 2008, as management was more cautious in deploying capital and prioritised higher return projects in light of the global economic downturn. The net outflow in 2010 primarily related to the U.S.$2,000 million base settlement of the 2009 Xstrata rights issue via exercise of the Prodeco call option, the acquisition of a 51.5 per cent. stake in Chemoil and a 100 per cent. stake in Pacorini Metals, the provision of a U.S.$200 million secured loan to PT Bakrie Group (secured by a 4.7 per cent. equity ownership interest in PT Bumi Resources); and the continued capital expenditure programs in respect of Vasilkovskoje Gold's start up, upstream oil development projects in West Africa, the development of the Mutanda copper/cobalt mine and production

expansions at Katanga and Prodeco. The production growth initiatives (primarily coal, copper, gold and oil) are all expected to progressively result in substantially enhanced income and cashflow generating potential in future periods.

*Net cash generated/(used) by financing activities*

Net cash generated/(used) by financing activities was U.S.$5,247 million, U.S.$4,208 million and U.S.$(2,842) million in 2010, 2009 and 2008, respectively. In 2009 and 2010, financing requirements increased primarily as a result of the increase in commodity prices and resulting impacts on working capital funding and to fund the ongoing capital expenditure and investments noted above. Over 2008, cash inflows resulted from the sharp decrease in commodity prices over the fourth quarter which in turn was used to repay debt.

**Discussion of balance sheet items**

Total assets were U.S.$79,787 million as at 31 December 2010, representing an increase of 20 per cent. from U.S.$66,276 million as at 31 December 2009. Current assets increased from U.S.$38,725 million in 2009 to U.S.$44,296 million in 2010. The adjusted current ratio (current assets over current liabilities, both adjusted to exclude other financial liabilities) at 31 December 2010 was 1.26 compared to 1.37 at 31 December 2009. This reduction is primarily attributable to the Xstrata secured bank loans (U.S.$2,292 million) and the 2011 Eurobond (U.S.$765 million) moving from non-current borrowings to current borrowings. Excluding the Xstrata secured bank loans from current borrowings, which Glencore is currently in discussion with banks regarding extension/refinancing with a new long-term tenor, results in an adjusted current ratio of 1.37, consistent with the corresponding prior year period. Non-current assets increased from U.S.$27,551 million in 2009 to U.S.$35,491 million as at 31 December 2010, primarily due to the first time consolidation of Vasilkovskoje Gold, following its full acquisition by Kazzinc, the reclassification of Prodeco from "assets held for sale" and the capital expenditure and project funding programmes noted above.

Production inventories consist of materials, spare parts, work in process and finished goods held by the production entities. Marketing inventories comprise inventories sourced and held for marketing activity purposes. Glencore has a number of dedicated facilities which finance a portion of its marketing inventories. In each case, the inventory has been retained on our balance sheet with the proceeds received recognised as either short-term debt, commodities sold with agreements to repurchase or trade advances from buyers, depending upon its funding nature.

As at 31 December 2010, 98 per cent., or U.S.$14,331 million, of total trading inventories were contractually sold or hedged (readily marketable inventories), compared to 98 per cent., or U.S.$12,945 million, at 31 December 2009. Readily marketable inventories are inventories that Glencore considers to be readily convertible into cash, due to their liquid nature, widely available markets, and the fact that any associated price risk is covered either by a physical sale transaction, or a hedge transaction on a commodity exchange or with a highly rated counterparty. Given the highly liquid nature of these inventories, which represent a significant share of current assets, Glencore believes it is appropriate to consider them together with cash equivalents in analysing net debt levels and trends and computing certain debt coverage ratios.

In addition, accounts receivable form a significant portion of Glencore's assets. Glencore has entered into certain arrangements to finance a portion of its receivables. In each case, the receivable has been retained on our balance sheet with the proceeds received recognised as current borrowings (see Section VI: "Historical Financial Information").

After taking into account these readily marketable inventories, net debt was U.S.$14,756 million as at 31 December 2010, an increase of U.S.$4,570 million from U.S.$10,186 million as at 31 December 2009 with the exercise of the Prodeco call option accounting for a substantial part of the increase, some U.S.$2.4 billion including all cash components in 2010. The ratio of net debt to Adjusted EBITDA pre-exceptional items improved from 2.59 in 2009 to 2.38 in 2010. Current capital employed, together with listed investments (at carrying value), exceeded total debt by U.S.$4,483 million in 2010 compared to U.S.$6,198 million in 2009.

Equity, reserves and amounts attributable to profit participation shareholders as at 31 December 2010 were U.S.$19,613 million, an increase of U.S.$2,927 million (18 per cent.) compared with U.S.$16,686 million as at 31 December 2009.

*Capital resources and financing initiatives*

Glencore's business requires high levels of working capital funding and significant liquidity. Glencore's primary financial objective is to maintain a strong financial profile in line with an investment grade rating, including having access to sufficient amounts of liquidity to finance its operations and planned growth. Glencore believes that the current level of its cash flow from operations, its existing credit facilities, the liquidity and quality of its current trading assets, the high level of readily marketable inventories and the self-liquidating nature of its physical marketing activities, together with its ability to access international bank and debt capital markets allow Glencore to finance all of its existing and currently planned business needs, including working capital requirements and payments due on its outstanding indebtedness and contractual obligations. Glencore expects to repay its long-term debt obligations through cash from operations and/or future financings.

Glencore's short-term debt generally finances its current assets, comprising inventories and trade receivables, which are either self-liquidating or otherwise subject to a high rate of turnover. Glencore meets these financing requirements by maintaining appropriate levels of cash reserves and ensuring that it has sufficient headroom under its committed revolving credit facilities. It is Glencore's policy to maintain a minimum level of committed liquidity headroom of U.S.$3 billion to meet all expected and unexpected cash requirements of its business. The liquidity headroom is provided in the form of cash, undrawn committed revolving credit facilities and marketable securities. Of the U.S.$4,220 million headroom as at 31 December 2010, U.S.$2,691 million was provided by the undrawn committed revolving credit facilities. Glencore has alternative sources of headroom which are not included in these figures, e.g. liquidity can be raised quickly through Glencore's listed investments, either by using them as security for loans or by selling them and Glencore has undrawn uncommitted facilities which are not included in the reported headroom.

For additional detail on the indebtedness of the Group, including the position as at 28 February 2011, please see Section V: "Capitalisation and Indebtedness Statement".

**Indebtedness**

As at 31 December 2010, Glencore had the following principal indebtedness outstanding:

| Facility/Programme | Initial issue/ current rollover | Amount issued or outstanding 31 December 2010 |
|---|---|---|
| | | *(U.S.$ million)* |
| 2014 144A Notes | 950 | 946 |
| 2011 Eurobonds (€600 million) | 739 | 765 |
| 2013 Eurobonds (€850 million) | 1,078 | 1,080 |
| 2015 Eurobonds (€750 million) | 1,200 | 968 |
| 2017 Eurobonds (€1,250 million) | 1,708 | 1,677 |
| 2019 Sterling Bond (GBP 650 million) | 1,266 | 999 |
| 2016 Swiss Bond (CHF 600 million) | 593 | 639 |
| 2014 Convertible bonds | 2,300 | 2,132 |
| Xstrata secured bank loan | 2,800 | 2,292 |
| Perpetual Notes | 1,050 | 1,027 |
| Purchase of profit participation certificates | 1,855 | 1,855 |
| Committed syndicated revolving credit facilities | 10,260 | 7,259 |
| U.S. commercial paper | 1,000 | 310 |
| Committed secured inventory/receivables facility | 1,700 | 1,700 |
| Committed secured receivables facilities | 700 | 700 |
| Bilateral inventory repurchase agreements | 888 | 888 |
| Other bank loans | 4,895 | 4,895 |
| Total | | 30,132 |
| Commodities sold with agreements to repurchase | 484 | 484 |
| Total borrowings | | 30,616 |
| Less: cash and cash equivalents and marketable securities | | 1,529 |
| Net funding | | 29,087 |

*Description of principal indebtedness*

*144A Notes*

The 144A Notes consist of U.S.$950 million 6 per cent. coupon Notes due 2014. The Notes are recognised at amortised cost at an effective interest rate of 6.15 per cent. per annum.

*Xstrata secured bank loans*

The Xstrata secured bank loans comprise two facilities with a total amount of U.S.$2,800 million, with U.S.$2,300 million outstanding at 31 December 2010 and 2009. Both facilities mature in September 2011. The facilities have been accounted for as secured bank loans which bear interest at a rate of U.S.$ LIBOR plus a margin. As at 31 December 2010, U.S.$4,199 million (2009: U.S.$4,188 million; 2008: U.S.$2,739 million) of the carrying value of Glencore's investment in Xstrata was pledged as security.

*Convertible bonds*

In December 2009, Glencore issued U.S.$2 billion 5 per cent. coupon convertible bonds due December 2014. The bonds are convertible at the option of investors into a certain percentage of Glencore's equity upon a qualifying IPO or upon other pre-determined qualifying events. The bonds contain several embedded derivatives which IFRS requires be accounted for separately, the most significant of these being that if the bonds have not been converted and no qualifying event occurs, they will be redeemed at maturity at 108.1 per cent. of their nominal amount. In addition, if a qualifying IPO or other pre-determined qualifying events have not occurred prior to December 2012, bondholders may, subject to Glencore having achieved a "pre-exceptional" consolidated net income of U.S.$3.5 billion in the preceding 12 months or in the event that Glencore is acquired for cash consideration, put the bonds back to Glencore at an amount which achieves a cumulative annualised return of 20 per cent. Payment in this regard could occur from mid-2013 at the earliest.

The bonds consist of a liability component and an equity component. The fair values of the liability component (U.S.$1,923 million) and the equity component (U.S.$77 million) were determined, using the residual method, at issuance of the bonds. The liability component is measured at amortised cost at an effective interest rate of 6.69 per cent. per annum. At issuance and each subsequent period end, the embedded derivatives were concluded to have a fair value of U.S.$ nil due to the probability weighting attributed to the related conditions. During the first half of 2010, U.S.$300 million of additional convertible bonds, convertible into 0.84 per cent. of the Company's equity, were issued under the same terms and conditions as those issued in December 2009 with the equity component equalling U.S.$12 million and the liability component equalling U.S.$288 million. The Global Offering is a qualifying IPO which will allow holders of the bonds to convert. Conversion by all holders would amount to 6.25 per cent. of the Company's pre-Offering equity as at 31 December 2010.

*Euro, sterling and Swiss Franc bonds*

Glencore has issued bonds denominated in Euro, Sterling and Swiss Francs where, upon issuance, the principal amounts and the future interest payments were swapped into their U.S. dollar equivalent. The details of amounts issued and outstanding are as follows:

| | Maturity | Initial U.S.$ equivalent | U.S.$ fixed interest rate in % | 2008 | 2009 | 2010 |
|---|---|---|---|---|---|---|
| €600 million 5.375% coupon bonds | Sep 2011 | 739 | 5.78 | 834 | 817 | 765 |
| €850 million 5.250% coupon bonds | Oct 2013 | 1,078 | 6.60 | 1,171 | 1,154 | 1,080 |
| €750 million 7.125% coupon bonds | April 2015 | 1,200 | 6.86 | 1,031 | 1,030 | 968 |
| €1,250 million 5.250% coupon bonds | March 2017 | 1,708 | 6.07 | 0 | 0 | 1,677 |
| Eurobonds total | | 4,725 | | 3,036 | 3,001 | 4,490 |
| GBP 650 million 6.5% coupon bonds | Feb 2019 | 1,266 | 6.58 | 920 | 1,013 | 999 |
| CHF 600 million 3.625% coupon bonds | April 2016 | 593 | 4.87 | 0 | 0 | 639 |
| **Total** | | 6,584 | | 3,956 | 4,014 | 6,128 |

*Perpetual notes*

The perpetual notes consisted of U.S.$700 million 8 per cent. perpetual notes, callable after February 2011 at par. In December 2010, Glencore announced its intention to call U.S.$300 million of the outstanding notes. This partial redemption was subsequently completed on 6 February 2011.

In October 2010, Glencore issued U.S.$350 million 7.5 per cent. perpetual notes, callable after October 2015 at par.

*Ordinary profit participation certificates*

Profit participation certificates ("PPC") bear interest at six-month U.S.$ LIBOR and in the event of certain triggering events (see Section VI: "Historical Financial Information"), all PPCs would be subordinated to unsecured lenders. From 1 January 2011 to the date of the Restructuring, in accordance with existing agreements and past practice, Glencore redeemed and reclassified as borrowings a certain number of PPCs from profit participation shareholders representing an aggregate amount of approximately U.S.$268 million. These interests were held by employees who ceased employment with Glencore during this period. The amounts will be paid in installments over a period of five years with interest payable at six month U.S.$ LIBOR. See Note 14 to Section VI: "Historical Financial Information".

*Committed revolving credit facilities*

In May 2010, Glencore replaced the previous 364-day U.S.$815 million revolving credit facility with a new 364-day U.S.$1,375 million facility with a one year term out option at Glencore's discretion as well as a 364-day U.S.$515 million Asian focused tranche. In addition, Glencore replaced the U.S.$8,180 million medium-term revolving credit facility with a new three-year revolving credit facility of U.S.$8,370 million and cancelled the U.S.$6,650 million forward start facility concluded in 2009. Funds drawn under the medium-term revolving credit facility which are used to finance current working capital are classified as current debt, while the portion drawn to fund non-current assets is classified as non-current debt. Up to U.S.$1 billion of the medium-term tranche may be used as liquidity back up for Glencore's corporate U.S. commercial paper programme.

**Liquidity**

Glencore maintains adequate liquidity through its committed credit facilities, diversified funding sources and fast-turning, liquid working capital. As at 31 December 2010, Glencore had available headroom (in the form of cash, undrawn committed facilities and marketable securities) exceeding U.S.$4,220 million, which, is above its U.S.$3,000 million internal target. Glencore reflects two further sources of liquidity in its internal definition of net debt, namely marketable securities and readily marketable inventory. Readily marketable inventory comprises inventory that is readily convertible into cash due to their liquid nature, widely available markets and the fact that any associated price risk is covered. This includes, for example, LME-approved inventory (such as copper or aluminium) held at LME warehouses.

Certain debt arrangements require compliance with specific financial covenants related to current ratio and a maximum long-term debt to tangible net worth ratio. As at 31 December 2010, there was adequate headroom available under both of these covenants. No credit facilities or funding programmes include rating triggers which would accelerate repayment obligations in the event of a credit rating downgrade.

In light of Glencore's extensive funding activities in the public debt capital markets, maintaining its investment grade ratings is a priority for Glencore. Glencore promotes an ongoing dialogue with both its rating agencies with a view to maintaining its investment grade ratings. On 18 April 2011, Moody's confirmed Glencore's issuer rating of Baa2 (negative) and, on 14 April 2011, Standard & Poor's confirmed Glencore's long-term corporate rating of BBB− (stable).

The following table shows Glencore's gearing ratio as at 31 December 2010:

| | As at 31 December 2010 |
|---|---|
| | *(U.S.$ million) (unaudited)* |
| Interest-bearing loans and borrowings | 30,132 |
| Commodities sold with agreements to repurchase | 484 |
| Less: cash and cash equivalents and marketable securities | (1,529) |
| Less: readily marketable inventories[(1)] | (14,331) |
| Net debt | 14,756 |
| Invested capital[(2)] | 22,507 |
| Equity and net debt | 37,263 |
| Gearing ratio (Invested capital[(2)]/Invested capital[(2)] and net debt) | .60 |

Notes:

(1) Readily marketable inventories comprises inventory that is readily convertible into cash due to their liquid nature, widely available markets and the fact that any associated price risk is covered.

(2) Invested capital is the sum of equity capital, non-controlling interests, reserves and amounts attributable to profit participation shareholders.

***Inventories***

Production inventories consist of materials, spare parts, work in process and finished goods held by the production entities, whereas marketing inventories are commodities held by the marketing entities. Marketing inventories were U.S.$14,588 million, U.S.$13,179 million and U.S.$6,294 million for the years ended 31 December 2010, 2009 and 2008, respectively. The increase in inventories over the track record period, in particular the significant movement between 2008 and 2009, was due to the large fluctuation in commodity prices as a result of the onset of the financial crisis. Marketing inventories include readily marketable inventories of U.S.$14,331 million (2009: U.S.$12,945; 2008: U.S.$5,877 million). Movements in these inventories were largely driven by the movement in commodity prices. Readily marketable inventories are inventories that Glencore considers to be readily convertible into cash due to their very liquid nature, widely available markets and the fact that the price risk is covered either by a physical sale transaction or hedge transaction on a commodity exchange or with a highly rated counterparty.

Glencore utilises a number of dedicated financing facilities to finance portions of its marketing inventories, further diversifying its funding sources and providing it with cost effective funding. In each case, the inventory has not been derecognised as the Group retains the principal risks and rewards of ownership. The proceeds received are recognised as either current borrowings, commodities sold with agreements to repurchase or trade advances from buyers, depending upon their funding nature.

**Capital expenditure and contractual obligations**

Capital expenditure for the acquisition of property, plant and equipment is generally funded through the cash flow generated by the respective industrial entities. As at 31 December 2010, U.S.$787 million (2009: U.S.$815 million; 2008: U.S.$967 million), 100 per cent. of which relates to expenditure to be incurred over the next year, was contractually committed for the acquisition of property, plant and equipment. Glencore has also expanded its operations and production through acquisitions.

Certain of Glencore's exploration tenements and licences require it to spend a minimum amount per year on development activities, a significant portion of which would have been incurred in the ordinary course of operations. As at 31 December 2010, U.S.$404 million (2009: U.S.$284 million; 2008: U.S.$262 million) of such development expenditures are to be incurred, of which 36 per cent. are for commitments to be settled over the next year.

Glencore procures seagoing vessel/chartering services to meet its overall marketing objectives and commitments. At year-end, Glencore has committed to future hire costs to meet future physical delivery and sale obligations and expectations of U.S.$2,608 million (2009: U.S.$2,185 million; 2008: U.S.$2,880 million), 50 per cent. of which are for services to be received over the next two years.

The following table shows a breakdown of the capital expenditures for Glencore for the years ended 31 December 2008, 31 December 2009 and 31 December 2010 and projected capital expenditure through 2015:

| | 2008 | 2009 | 2010 | Projected total capital expenditure through 2013 | Projected total capital expenditure through 2015 |
|---|---|---|---|---|---|
| | | | *(U.S.$ million)* | | |
| | | | *(unaudited)* | | |
| Kazzinc | 568 | 367 | 350 | 834 | 1,320 |
| Katanga | N/A | 62 | 221 | 1,044 | 1,298 |
| Mopani | 137 | 58 | 130 | 512 | 744 |
| Prodeco | 309 | 242 | 277 | 919 | 1,152 |
| West African Oil Assets | 54 | 37 | 238 | 791 | 813 |
| Other | 807 | 350 | 674 | 900 | N/A |
| **Total** | **1,875** | **1,116** | **1,890** | | |

In addition to capital expenditure at Glencore's existing industrial assets, Glencore made acquisitions in 2010 to expand its activities, including increasing its effective ownership interest in Vasilkovskoje Gold and finalising the purchase of a majority stake in Chemoil.

As shown in the table above, Glencore has significant expansion projects in progress which are further described in Section I: "Information on Glencore".

***Contractual obligations***

As part of Glencore's ordinary sourcing and procurement of physical commodities and other ordinary marketing obligations, the selling party may request that a financial institution act as either (i) the paying party upon the delivery of product and qualifying documents through the issuance of a letter of credit or (ii) the guarantor by way of issuing a bank guarantee accepting responsibility for Glencore's contractual obligations. As at 31 December 2010, U.S.$8,956 million (2009: U.S.$7,178 million; 2008: U.S.$5,450 million) of such commitments have been issued on behalf of Glencore, which will be settled simultaneously upon physical delivery of the commodity.

The following table sets out Glencore's total future commitments to settle contractual obligations as at 31 December 2010:

| | | Payment due by period | | | |
|---|---|---|---|---|---|
| | Total | Less than 1 Year | 1–2 Years | 2–5 Years | More than 5 Years |
| | | | *(U.S.$ million)* | | |
| Capital expenditure for acquisition of property, plant and equipments | 787 | 787 | 0 | 0 | 0 |
| Exploration tenements and licences | 404 | 147 | 41 | 27 | 189 |
| Seagoing vessels/chartering services | 2,608 | 743 | 553 | 867 | 445 |
| Letters of credit | 8,956 | 8,956 | 0 | 0 | 0 |
| Operating office and warehouse/storage lease obligations | 473 | 97 | 74 | 151 | 151 |
| **Total** | 13,228 | 10,730 | 668 | 1,045 | 785 |

In addition to the future commitments illustrated in the table above, Glencore also has the potential future obligations described below, which are dependent upon the evaluation and final approval for each development.

Prodeco currently exports the majority of its coal through Puerto Zuñiga, which operates under a private concession awarded by the Columbian government. The concession expired in March 2009; however, the Colombian government has continued to grant Prodeco the right to use the port under annual lease agreements. To comply with new government regulations on loading methods, which became effective from July 2010, and to alleviate the uncertainty of the annual concession renewal process associated with Puerto Zuñiga, Prodeco has initiated the construction of a new, wholly owned, port facility ("Puerto Nuevo") which has been contracted at a cost of U.S.$528 million and is expected to be commissioned over the first

half of 2013. If the concession does not continue to be extended, Prodeco's export capability would be curtailed, which could significantly impact operations until Puerto Nuevo is operational. As at 31 December 2010, U.S.$55 million of the estimated initial investment has been incurred.

In August 2010, Glencore acquired an ultimate 37.5 per cent. interest in the Kansuki concession, a 180 square kilometre copper and cobalt pre-development project which borders Glencore's partly owned Mutanda concession in the DRC. In exchange, Glencore has (i) an obligation to finance the first U.S.$400 million of development related expenditures, if any, as and when such expenditure is incurred, (ii) the right to operate the operations, and (iii) a life of mine off-take agreement for all copper and cobalt produced by Kansuki. In addition, one of the partners in Kansuki has the right to sell an additional 18.75 per cent. ultimate interest to Glencore at the then calculated equity value of the operation, at the earlier of the date the operation produces a minimum annual 70,000 metric tonnes of copper and August 2013. Kansuki is currently completing its initial feasibility study for submission by June 2011. As at 31 December 2010, U.S.$11 million of development expenditure had been incurred.

In November 2010, Glencore and Blackthorn Resources Limited completed a joint venture agreement to develop the Perkoa Zinc Project ("Perkoa") located in Burkina Faso, Africa. Under the terms of the agreement, Glencore will obtain a 50.1 per cent. effective ownership in Perkoa in exchange for (i) an obligation to finance the first U.S.$80 million of development-related expenditures, if any, as and when such expenditure is incurred, (ii) the right to operate the operations, and (iii) a life of mine off-take agreement for all zinc produced by Perkoa. As at 31 December 2010, U.S.$ nil million of development expenditure had been incurred.

Glencore has agreed with Verny to acquire additional stakes in Kazzinc. These purchases will increase its ownership from 50.7 per cent. to 93.0 per cent. for a total transaction consideration of U.S.$3.2 billion. Subject to satisfaction of certain conditions, which include receipt of applicable regulatory approvals and the occurrence of UK Admission, consideration for these purchases will be settled through the issuance of U.S.$1 billion of Ordinary Shares at the Offer Price (such issuance expected to occur at the earlier of UK Admission and satisfaction of applicable conditions precedent) and U.S.$2.2 billion in cash (to be paid in tranches between October and December 2011). The acquisition of these additional stakes is expected to be completed by the end of December 2011. The terms of the acquisition have been negotiated on an arm's length basis and the price and structuring of the consideration in respect of these purchases is based on Glencore's detailed valuation of Kazzinc. In addition, Glencore's stake in Kazzinc may be further increased to 99.4 per cent. through the exercise of a put or call option in respect of Verny Investments' remaining 6.4 per cent. interest in Kazzinc, which is conditional on amongst other things, an initial public offering of Kazzinc's gold assets. See Section X: "Additional Information" for further details of these purchases and the terms of the Kazzinc SPAs.

***Off-balance sheet arrangements***

Glencore has no off-balance sheet entities or off-balance sheet arrangements.

***Contingent liabilities***

The amount of corporate guarantees in favour of associated and third parties as at 31 December 2010, was U.S.$69 million (2009: U.S.$73 million; 2008: U.S.$66 million). Glencore has also pledged U.S.$113 million of its investment in UC Rusal as a guarantee against certain borrowings of UC Rusal.

***Litigation***

Glencore deals with over 7,200 suppliers and customers. In the ordinary course of its business, Glencore is from time to time involved in commercial disputes as both claimant and defendant. Certain legal actions, other claims and unresolved disputes are pending against Glencore. Whilst Glencore cannot predict the results of any litigation, it believes that it has meritorious defences against those actions or claims. Glencore believes the likelihood of any liability arising from these claims to be remote and that the liability, if any, resulting from any litigation will not have a material adverse effect on its consolidated income, financial position or cash flows.

***Environmental contingencies***

Glencore's operations, predominantly those arising from the ownership in industrial assets, are subject to various environmental laws and regulations. Glencore is in compliance with those laws and regulations.

Glencore accrues for environmental contingencies when such contingencies are probable and reasonably estimable. Such accruals are adjusted as new information develops or circumstances change. Recoveries of environmental remediation costs from insurance companies and other parties are recorded as assets when the recoveries are virtually certain. At this time, Glencore is unaware of any material environmental incidents at its locations.

**Financial risk management**

***Overview***

Glencore's business could be impacted by various external factors, including a major global economic downturn which would in turn result in significantly lower commodity prices and demand, as well as political events and unfavourable actions by governments, natural catastrophes, operational disruptions and financial risks. It is Glencore's policy and practice to identify and, where appropriate and practical, to actively manage such risks. Glencore has in place the appropriate commodity trading risk management systems and believes that these, together with its VaR computation, are the most appropriate measure of its marketing risk management analysis. Glencore does not engage in any material speculative trading activities.

Glencore's objectives in managing its capital base include preserving its overall financial health and strength for the benefit of all stakeholders and safeguarding its ability to continue as a going concern, while generating sustainable long-term profitability.

Glencore's activities expose it to a variety of financial risks: market risk (including commodity price risk, interest rate risk and currency risk), credit risk, performance risk and liquidity risk. Glencore's overall risk management programme focuses on the unpredictability of financial markets and seeks to protect its financial security and flexibility by using derivative financial instruments to substantially hedge these risks. Glencore's finance and risk professionals, working in co-ordination with the commodity departments, monitor, manage and report regularly to management on the financial risks and exposures facing Glencore. There have been no material changes during this year in the exposures to the financial risks faced by Glencore or the manner in which Glencore manages and measures them. Certain debt arrangements require compliance with specific financial covenants related to working capital and current ratio and a maximum long-term debt to tangible net worth ratio. During the period under review, Glencore has complied with these requirements.

***Market risks***

Glencore is exposed to price movements for the inventory it holds and for the products it produces, which are not held to meet priced-forward contract obligations. Glencore manages a significant portion of this exposure through futures and options transactions on worldwide commodity exchanges, or in OTC markets, to the extent available. For further details please see Section VI: "Historical Financial Information".

Glencore has entered into futures transactions to hedge the price risk of future-specific operating expenditures. These transactions were identified as cash flow hedges. The fair value of these derivatives is as follows:

| | Notional amounts | | Recognised fair values | | Average maturity |
|---|---|---|---|---|---|
| | Buy | Sell | Assets | Liabilities | |
| | | | *(U.S.$ million)* | | |
| Commodity futures—2008 | 0 | 391 | 0 | 75 | 2010 |
| Commodity futures—2009 | 0 | 195 | 0 | 41 | 2011 |
| Commodity futures—2010 | 0 | 187 | 0 | 75 | 2012 |

To the extent Glencore purchases commodities or related assets for delivery to a customer, a downturn in the price of those assets could result in losses to Glencore. To the extent Glencore agrees to sell commodities to a customer, an increase in the price of those assets could result in losses to Glencore, as Glencore seeks to acquire the underlying commodities in a rising market. In order for Glencore to mitigate the risks associated with commodity price fluctuations and the potential losses associated therewith, Glencore has implemented marketing policies designed to substantially hedge these risks. Glencore's marketing activities involve a significant number of purchase and sale transactions involving various commodities. The vast majority of Glencore's long positions (where it has physical commodities or has

agreed to buy physical commodities) are offset by short positions (where Glencore has agreed to sell physical commodities). Similarly, Glencore's short positions are typically offset by long positions. Glencore may also take some long or short positions which are not offset or which are not completely offset by short or long positions, as the case may be (such positions are called open positions). It does this when it thinks it has sufficient visibility over trends in the market and when the position has been approved through the required risk management channels.

For additional information about Glencore's commodity price risk management, see Section I: "Information on Glencore".

One of the tools used by Glencore to monitor its open position and limit its primary market risk exposure, namely commodity price risk related to its physical marketing activities, is the use of a value at risk ("VaR") computation. VaR is a risk measurement technique, which estimates the potential loss that could occur on risk positions as a result of movements in risk factors over a specified time horizon, given a specific level of confidence. The VaR methodology is a statistically defined, probability based approach that takes into account market volatilities, as well as risk diversification by recognising offsetting positions and correlations between commodities and markets. In this way, risks can be measured consistently across all markets and commodities and risk measures can be aggregated to derive a single risk value. Glencore has set a consolidated VaR limit (one day 95 per cent.) of U.S.$100 million representing 0.55 per cent. of Glencore shareholders' funds.

Glencore's VaR computation currently covers its business in the key base metals (aluminium, nickel, zinc, copper, lead, etc), coal, oil/natural gas and the main risks in the Agricultural Products business segment (grain, oilseeds, sugar and cotton) and assesses the open-priced positions which are those subject to price risk, including inventories of these commodities. Due to the lack of a liquid terminal market, Glencore previously did not include a VaR calculation for alumina or ferroalloy commodities, however, it monitored the market risk in respect of these commodities via the regular reporting of net open volumetric positions. For further detail see Section VI: "Historical Financial Information".

During 2009, certain commodities, such as coal, which Glencore markets and accounts for at fair value were not included in the VaR calculation, as well established and liquid price points were not available. The positions are reported on the daily position sheets and, assuming the net position as at the balance sheet date was outstanding for the whole year, market prices were 5 per cent. higher/lower and all other variables held constant, Glencore's profit and equity for the year ended 31 December 2009 would decrease/increase by U.S.$30.0 million (2008 increase/decrease by U.S.$14.0 million).

The Group has a one day, 95 per cent. VaR limit of U.S.$100 million and during the year ended 31 December 2010, the actual one day 95 per cent. VaR level was approximately U.S.$43 million. This means that the Group manages its open positions in its marketing operations such that it does not put itself at risk of losing more than U.S.$100 million over the course of one day, to a 95 per cent. statistical level of certainty, and during the year ended 31 December 2010, the Group's marketing operations' open positions, based upon a statistical certainty of 95 per cent., never exceeded potential losses of U.S.$43 million on any given day, on average for the year. In addition, Glencore conducts regular stress testing on its marketing portfolio. Daily position sheets are distributed and monitored and weekly VaR simulations are run to determine potential future exposure. The table below shows 95 per cent. and 99 per cent. VaR levels at year end and averaged for each of the years ended 31 December 2008, 2009 and 2010.

| | Year end | | Average | |
|---|---|---|---|---|
| | 95% | 99% | 95% | 99% |
| | *(U.S.$ million)* | | | |
| 2008 | 53.1 | 79.3 | 50.1 | 70.7 |
| 2009 | 27.6 | 39.2 | 26.4 | 37.3 |
| 2010 | 58.1 | 79.7 | 42.5 | 60.1 |

VaR does not purport to represent actual gains or losses in fair value on earnings to be incurred by Glencore, nor does Glencore claim that these VaR results are indicative of future market movements or representative of any actual impact on its future results. VaR should always be viewed in the context of its limitations; notably, the use of historical data as a proxy for estimating future events, market illiquidity risks and tail risks. Glencore recognises these limitations, and thus complements and continuously refines its VaR analysis by analyzing forward looking stress scenarios and back testing calculated VaR against actual movements arising in the next business week. Glencore regularly backtests its VaR to establish that

it is a statistically adequate reflection of realised gains and losses and the inherent "riskiness" of the marketing portfolio as a whole.

Glencore's future cash flows related to its forecast energy and minerals production are also exposed to commodity price movements. Glencore manages this exposure through a combination of portfolio diversification, occasional shorter-term hedging via futures and options transactions and insurance products and the continuous internal monitoring, reporting and quantification of the underlying operations' estimated valuations.

***Interest rate risk***

Glencore is exposed to various risks associated with the effects of fluctuations in the prevailing levels of market interest rates on its assets and liabilities and cash flows. Matching of assets and liabilities is utilised as the dominant method to hedge interest rate risks. Floating-rate debt is predominantly used to fund fast-turning working capital and interest internally charged on the funding of this working capital and is based on U.S.$ LIBOR and, accordingly, prevailing market interest rates are continuously factored into transactional pricing and terms.

Assuming the amount of floating-rate liabilities at the balance sheet date were outstanding for the whole year, interest rates were 50 basis points higher/lower and all other variables held constant, Glencore's profit and equity for the year ended 31 December 2010 would decrease/increase by U.S.$91 million (2009: decrease/increase by U.S.$71 million; 2008: increase/decrease by U.S.$64 million).

***Currency risk***

Glencore's reporting currency and the functional currency of the majority of Glencore's operations is the U.S. dollar, as this is assessed to be the principal currency of the economic environment in which Glencore operates. Transactions in foreign currencies are converted into the functional currency of each entity using the exchange rate prevailing at the transaction date. Monetary assets and liabilities outstanding at year end are converted at year-end rates. The resulting exchange differences are recorded in the consolidated statement of income. The exchange rates between relevant local currencies and the U.S. dollar have historically fluctuated, and the translation effect of such fluctuations could affect Glencore's results and financial condition. However, Glencore does not believe that it is materially exposed to non-U.S. dollar currency risk.

Glencore's debt-related payments (both principal and interest) are denominated in or swapped into U.S. dollars. The majority of Glencore's operating expenses are incurred in U.S. dollars, with the remainder being incurred in a mix of currencies, of which the Swiss Franc, pounds sterling, Australian dollar and Euro are the predominant non-U.S. dollar currencies.

Glencore has issued Euro-denominated, Swiss Franc-denominated and pounds sterling-denominated bonds (see Section VI: "Historical Financial Information"). Cross-currency swaps were taken out to hedge the currency risk on the principle and related interest payments of these bonds. These contracts were designated as cash flow hedges of the foreign currency risks associated with the bonds. The fair value of these derivatives is as follows:

| | Notional amounts | | Recognised fair values | | Average maturity |
|---|---|---|---|---|---|
| | Buy | Sell | Assets | Liabilities | |
| | | | *(U.S.$ million)* | | |
| Cross currency swap agreements—2008 | 0 | 4,283 | 0 | 384 | 2015 |
| Cross currency swap agreements—2009 | 0 | 4,283 | 0 | 48 | 2015 |
| Cross currency swap agreements—2010 | 0 | 6,584 | 0 | 185 | 2015 |

***Credit risk***

Financial assets which potentially expose Glencore to concentrations of credit risk consist principally of cash and cash equivalents, marketable securities, receivables and advances, derivative instruments and long-term advances and loans.

Glencore actively and continuously monitors the credit quality of its counterparties through internal reviews and a credit scoring process which includes, where available, public credit ratings. Balances with counterparties not having a public investment grade or equivalent internal rating are typically enhanced to

investment grade through the extensive use of credit enhancement products, such as letters of credit or insurance products. Glencore has a diverse customer base, with no customer representing more than 3.4 per cent. (2009: 2.3 per cent.; 2008: 2.8 per cent.) of its trade receivables or accounting for more than 3.0 per cent. of its revenues over the year ended 31 December 2010 (2009: 2.8 per cent.; 2008: 3.7 per cent.).

***Performance risk***

Performance risk arises from the possibility that physical industrial counterparties may not be willing or able to meet their future contractual sale or purchase obligations to or from Glencore. Glencore undertakes the assessment, monitoring and reporting of performance risk within its overall credit management process. Glencore's market breadth and diversified customer base as well as the standard pricing mechanism in the majority of Glencore's commodity portfolio, which does not fix prices beyond three months (with the exception of coal which is marketed under annual pricing agreements) ensure that performance risk is adequately mitigated. The commodity industry is continuing a trend towards shorter fixed price contract periods, in part to mitigate against such potential performance risk, but also due to the development of more transparent and liquid spot markets, e.g. coal and iron ore and associated derivative products and indexes.

***Liquidity risk***

Liquidity risk is the risk that Glencore is unable to meet its payment obligations when due, or that Glencore is unable, on an ongoing basis, to borrow funds in the market on an unsecured, or even secured, basis at an acceptable price to fund actual or proposed commitments. Prudent liquidity risk management implies maintaining sufficient cash and cash equivalents through the availability of adequate committed funding facilities. Glencore has set itself a minimum liquidity target of U.S.$3 billion to be maintained at all times. Glencore's credit profile, diversified funding sources and committed credit facilities ensure that sufficient liquid funds are maintained to meet its liquidity requirements. As part of its liquidity management, Glencore closely monitors and plans for its future capital expenditure and proposed investments, as well as credit facility refinancing/extension requirements.

As at 31 December 2010, Glencore had available committed undrawn credit facilities, cash and cash equivalents and marketable securities exceeding U.S.$4,220 million (2009: U.S.$3,826 million; 2008: U.S.$5,255 million). The maturity profile of Glencore's financial liabilities based on the contractual terms is as follows:

| 2010 | After 5 years | Due 3–5 years | Due 2–3 years | Due 1–2 years | Due 0–1 years | Total |
|---|---|---|---|---|---|---|
| | | | *(U.S.$ million)* | | | |
| Borrowings | 4,152 | 4,974 | 7,094 | 2,031 | 11,881 | 30,132 |
| Expected future interest payments | 668 | 949 | 766 | 800 | 834 | 4,017 |
| Commodities sold with agreements to repurchase | 0 | 0 | 0 | 0 | 484 | 484 |
| Accounts payable | 0 | 0 | 0 | 0 | 16,145 | 16,145 |
| Other financial liabilities | 0 | 739 | 288 | 955 | 6,084 | 8,066 |
| Liabilities held for sale | 0 | 0 | 0 | 0 | 45 | 45 |
| **Total** | 4,820 | 6,662 | 8,148 | 3,786 | 35,473 | 58,889 |
| **Current assets** | | | | | 44,296 | 44,296 |

**Critical accounting policies, key judgements and estimates**

The preparation of the financial information contained in this Prospectus requires the Directors to make estimates and assumptions that affect the reported amounts of assets and liabilities as well as the disclosure of contingent assets and liabilities as at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. The estimates and associated assumptions are based on historical experience and other factors that are considered to be relevant. Actual outcomes could differ from those estimates.

Glencore has identified the following areas as being critical to understanding Glencore's financial position, as they require the Directors to make complex and/or subjective judgements and estimates about matters that are inherently uncertain.

***Valuation of derivative instruments***

Derivative instruments are carried at fair value and Glencore evaluates the quality and reliability of the assumptions and data used to measure fair value in the three hierarchy levels, as prescribed by IFRS 7. Fair values are determined in the following ways: externally verified via comparison to quoted market prices (level 1); by using models with externally verifiable model inputs (level 2); or by using alternative procedures such as comparison to comparable instruments and using models with unobservable market inputs requiring Glencore to make market-based assumptions. At 31 December 2008, 2009 and 2010, the majority of these financial instruments were verified externally. Where the model was not validated and/or the inputs were not verified due to the lack of appropriate market quotations, the fair values were actively reviewed by management. For additional information regarding fair value, see Section VI: "Historical Financial Information".

***Depreciation and amortisation of mineral and petroleum rights and project development costs***

Mineral and petroleum rights and project development costs are amortised using the units of production method ("UOP"). The calculation of the UOP rate of amortisation, and therefore the annual amortisation charge to operations, can fluctuate from initial estimates. This could generally result when there are significant changes in any of the factors or assumptions used in estimating mineral or petroleum reserves, notably changes in the geology of the reserves and assumptions used in determining the economic feasibility of the reserves. Such changes in reserves could similarly impact the useful lives of assets depreciated on a straight-line basis, where those lives are limited to the life of the project, which in turn is limited to the life of the proven and probable mineral or petroleum reserves. Estimates of proven and probable reserves are prepared by independent experts in extraction, geology and reserve determination. Assessments of UOP rates against the estimated reserve base and the operating and development plan are performed regularly.

***Impairments***

Investments in associates, jointly controlled entities and other investments, long-term advances and loans and property, plant and equipment, goodwill and other intangible assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying value may not be fully recoverable or at least annually for goodwill or other intangible assets of indefinite life. If an asset's recoverable amount is less than the asset's carrying amount, an impairment loss is recognised. Future cash flow estimates which are used to calculate the asset's value in use are based on expectations about future operations primarily comprising estimates about production and sales volumes, commodity prices, reserves, operating, rehabilitation and restoration costs and capital expenditures. Changes in such estimates could impact recoverable values of these assets. Estimates are reviewed regularly by management.

***Restoration, rehabilitation and decommissioning costs***

A provision for future restoration, rehabilitation and decommissioning costs requires estimates and assumptions to be made around the relevant regulatory framework, the magnitude of the possible disturbance and the timing, extent and costs of the required closure and rehabilitation activities. To the extent that the actual future costs differ from these estimates, adjustments will be recorded and the income statement could be impacted. The provisions including the estimates and assumptions contained therein are reviewed regularly by management.

***Provisions***

The amount recognised as a provision, including tax, legal, contractual and other exposures or obligations, is the best estimate of the consideration required to settle the related liability, including any related interest charges, and taking into account the risks and uncertainties surrounding the obligation. Glencore assesses its liabilities and contingencies based upon the latest information available, relevant tax laws and other appropriate requirements.

***Fair value***

In addition to recognising derivative instruments at fair value, as discussed above, an assessment of fair value of assets and liabilities is also required in accounting for other transactions most, notably business combinations and disclosures related to fair values of financial assets and liabilities. In such instances, fair

value measurements are estimated based on the amounts for which the assets and liabilities could be exchanged at the relevant transaction date or reporting period end, and are therefore not necessarily reflective of the likely cashflow upon actual settlements. Where fair value measurements cannot be derived from publicly available information, they are estimated using models and other valuation methods. To the extent possible, the assumptions and inputs used take into account externally verifiable inputs. However, such information is by nature subject to uncertainty, particularly where comparable market-based transactions rarely exist.

## SECTION V: CAPITALISATION AND INDEBTEDNESS STATEMENT

The following table shows the capitalisation of Glencore as at 31 December 2010.

| | As of 31 December 2010 |
|---|---|
| | *(U.S.$ million)* |
| **Current debt** | |
| Guaranteed | 0 |
| Secured | 6,064 |
| Unguaranteed/unsecured | 5,505 |
| Subordinated and unsecured | 796 |
| **Non-current debt** | |
| Guaranteed | 0 |
| Secured | 0 |
| Unguaranteed/unsecured | 17,192 |
| Subordinated and unsecured | 1,059 |
| **Total debt** | 30,616 |
| **Equity and invested capital** | |
| Share capital | 46 |
| Reserves and retained earnings | 5,378 |
| Non controlling interests | 2,894 |
| **Total equity** | 8,318 |
| Amounts attributable to profit participation shareholders | 14,189 |
| **Total equity and invested capital** | 22,507 |
| **Total capitalisation** | 51,123 |

This statement of capitalisation has been prepared under IFRS using policies that are consistent with those used in preparing Glencore's combined historical financial information for the year ended 31 December 2010.

The following table shows the net indebtedness of Glencore as at 28 February 2011.

| | As of 28 February 2011 |
|---|---|
| | *(U.S.$ million)* |
| Cash | 1,387 |
| Deposits and Treasury Bills | 1,605 |
| Trading/Marketable securities | 44 |
| **Liquidity** | 3,036 |
| Current bank debt | 9,448 |
| Current portion of non-current debt | 3,991 |
| **Current financial debt** | 13,439 |
| **Net current financial indebtedness** | 10,403 |
| Non-current bank loans | 9,676 |
| Bonds issued | 9,586 |
| Other non-current loans | 1,149 |
| **Non-current financial indebtedness** | 20,411 |
| **Net financial indebtedness** | 30,814 |

There is no indirect or contingent indebtedness.

4 May 2011

Dear Sirs

**Glencore International plc**

We report on the financial information relating to Glencore International AG (the "Operating Company") and its subsidiaries (together with the Operating Company, the "Operating Group") set out in Section VI: "Historical Financial Information" of the prospectus dated 4 May 2011 of Glencore International plc (the "Company" and, together with its subsidiaries, the "Group") prepared in connection with the Company's admission to listing on the premium segment of the Official List of the Financial Services Authority and admission to trading on the London Stock Exchange of the ordinary shares of the Company (the "UK Listing") (the "UK Prospectus") and having regard to the waivers granted by the Stock Exchange of Hong Kong Limited (the "HKSE") in connection with the secondary listing of the ordinary shares of the Company on the Main Board of the HKSE (the "HK Listing") (the "HK Prospectus"), (the UK Prospectus and HK Prospectus together being the "Investment Circular"). It is intended that the Company will acquire the entire issued share capital of the Operating Company prior to the implementation of the UK Listing. This financial information has been prepared for inclusion in the

UK Prospectus on the basis of the accounting policies set out in note 1 to the Historical Financial Information. This report is required by Annex I item 20.1 of Commission Regulation (EC) No 809/2004 (the "Prospectus Directive Regulation"), and is given for the purpose of complying with that requirement and for no other purpose.

**Responsibilities**

The Directors of the Company are responsible for preparing the Historical Financial Information on the basis of preparation set out in Note 1 to the Historical Financial Information and in accordance with the International Financial Reporting Standards (the "IFRS") as issued by the International Accounting Standards Board (the "IASB") and adopted for use in the EU.

It is our responsibility to form an opinion as to whether the Historical Financial Information gives a true and fair view, for the purposes of the UK Prospectus, and to report our opinion to you.

Save for any responsibility arising under Prospectus Rule 5.5.3R(2)(f), Chapter 4 of the Rules Governing the Listing of Securities of the Stock Exchange of Hong Kong Limited (the "HK Listing Rules") and the Companies Ordinance (Cap. 32) of the Laws of Hong Kong (the "Companies Ordinance"), except where waivers have been granted by the HKSE, to any person as and to the extent there provided, to the fullest extent permitted by law, we do not assume any responsibility and will not accept any liability to any other person for any loss suffered by any such other person as a result of, arising out of, or in accordance with this report or our statement, required by and given solely for the purposes of complying with Annex I item 23.1 of the Prospectus Directive Regulation, consenting to its inclusion in the Investment Circular.

Our responsibilities in relation to the UK Prospectus relate only to the UK Listing and our responsibilities in relation to the HK Prospectus relate only to the HK Listing.

**Basis of opinion**

We conducted our work in accordance with the Standards for Investment Reporting issued by the Auditing Practices Board in the United Kingdom. Our work included an assessment of evidence relevant to the amounts and disclosures in the Historical Financial Information. It also included an assessment of significant estimates and judgements made by those responsible for the preparation of the Historical Financial Information and whether the accounting policies are appropriate to the entity's circumstances, consistently applied and adequately disclosed.

We planned and performed our work so as to obtain all the information and explanations which we considered necessary in order to provide us with sufficient evidence to give reasonable assurance that the Historical Financial Information is free from material misstatement, whether caused by fraud or other irregularity or error.

Our work has not been carried out in accordance with auditing or other standards and practices generally accepted in jurisdictions outside the United Kingdom, including the United States of America, and accordingly, should not be relied upon as if it had been carried out in accordance with those standards and practices.

In connection with the use of this report in the HK Listing, it should be noted that this report has been provided with regard to the waivers granted by the HKSE.

**Opinion**

In our opinion, the Historical Financial Information gives, for the purposes of the Investment Circular, a true and fair view of the state of affairs of the Group as at the dates stated and of its profits, cash flows and changes in equity for the periods then ended in accordance with the basis of preparation set out in Note 1 and in accordance with IFRS issued by the IASB and adopted for use in the EU.

**Declaration**

For the purposes of Prospectus Rule 5.5.3R(2)(f), we are responsible for this report as part of the UK Prospectus and declare that we have taken all reasonable care to ensure that the information contained in this report is, to the best of our knowledge, in accordance with the facts and contains no omission likely to

affect its import. This declaration is included in the UK Prospectus in compliance with Annex I item 1.2 and Annex III item 1.2 of the Prospectus Directive Regulation.

Yours faithfully

Deloitte LLP
Chartered Accountants

The accompanying Notes are an integral part of the Historical Financial Information.

## NOTES TO THE HISTORICAL FINANCIAL INFORMATION

### 1 Basis of Preparation and Accounting Policies

**Basis of preparation**

The Historical Financial Information presents the consolidated financial results, cash flows and financial position of Glencore International AG (the "Company") and its subsidiaries (together "Glencore", the "Group") for the three years ended 31 December 2010, prepared in accordance with the accounting policies set out below. It excludes the current shareholder parent entities of the Company, being Glencore Holding AG and Glencore LTE AG (the "Parents"), the operations, assets and liabilities of which are limited solely to their holdings of shares in the Company and are therefore considered immaterial to the presentation of the Historical Financial Information. The operations, assets and liabilities of Glencore International plc, the entity that will be inserted as the new holding company and ultimate parent entity of the Group on completion of the transaction, are not taken into account in the Historical Financial Information.

The Historical Financial Information is prepared under the historical cost convention, except for the revaluation to fair value of certain financial assets, liabilities and marketing inventories. All amounts are expressed in millions of U.S. dollars, unless otherwise stated, consistent with the predominant functional currency of Glencore's operations.

The accounting policies adopted are in accordance with International Financial Reporting Standards (the "IFRS") issued by the International Accounting Standards Board (the "IASB") and interpretations of the International Financial Reporting Interpretations Committee ("IFRIC") and as adopted by the EU, effective for Glencore's reporting for the year ended 31 December 2010.

**Changes in accounting policies and comparability**

Glencore has adopted all of the new and revised standards and interpretations issued by the IASB and IFRIC and as adopted by the EU that are relevant to its operations and effective for accounting periods beginning on 1 January 2010 and that are expected to be applied for the accounting period beginning on 1 January 2011. In addition, Glencore adopted IFRS 8 "Operating Segments" which requires disclosure of certain information relating to Glencore's operating segments pending the filing of its financial statements with a securities commission for the purpose of issuing shares to the public. The adoption of these new and revised standards and interpretations did not have a material impact on the recognition and measurement of reported amounts. Glencore early adopted the requirements of IFRS 3 (Revised) "Business Combinations" and Amendments to IAS 27 "Consolidated and Separate Financial Statements" and consequently there were no significant changes in accounting policies in 2010, other than disclosures and presentation standards.

At the date of authorisation of the Historical Financial Information, the following standards and interpretations applicable to Glencore were issued but not yet effective:

IFRS 9 Financial Instruments (as amended in 2010)

IAS 24 Related Party Disclosures (revised 2009)

IFRIC 19 Extinguishing Financial Liabilities with Equity Instruments

Amendment to IFRS 3 (2008)—Business Combinations

Amendment to IFRS 7—Transfers of Financial Assets

Amendment to IAS 32—Classification of Rights Issues

Amendment to IFRIC 13—Customer Loyalty Programmes

Amendment to IFRIC 14—IAS 19: The Limit on a Defined Benefit Asset, Minimum Funding Requirements and their Interaction—November 2009 Amendment with respect to Voluntary Prepaid Contributions

Amendment to IAS 12—Income Taxes: Recovery of Underlying Assets

The Directors anticipate that the adoption of these standards and interpretations in future periods will not have a material impact on the financial information of Glencore, other than additional note disclosures.

**Principles of consolidation**

The consolidated Historical Financial Information of Glencore includes the accounts of Glencore International AG, a Swiss domiciled company with its registered office at Baarermattstrasse 3, CH-6341 Baar, (the "Company and parent entity") and its subsidiaries. A subsidiary is an entity that is ultimately controlled by the Company. Control is the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities. Control is usually assumed where Glencore ultimately owns or controls more than 50 per cent. of the voting rights, unless evidence exists to the contrary. The results of subsidiaries acquired or disposed of during the year are consolidated from the effective date of acquisition or up to the effective date of disposal, as appropriate. All intercompany balances, transactions and unrealised profits are eliminated.

Non-controlling interests in subsidiaries are identified separately from Glencore's equity and are initially measured either at fair value or at the non-controlling interests' proportionate share of the fair value of the acquiree's identifiable net assets. Subsequent to acquisition, the carrying amount of non-controlling interests is the amount of those interests at initial recognition plus the non-controlling interests' share of subsequent changes in equity. Total comprehensive income is attributed to non-controlling interests even if this results in the non-controlling interests having a deficit balance.

Changes in Glencore's interests in subsidiaries that do not result in a loss of control are accounted for as equity transactions with any difference between the amount by which the non-controlling interests are adjusted and the fair value of the consideration paid or received being recognised directly in equity and attributed to owners of Glencore.

**Investments in associates, jointly controlled entities and joint venture operations**

Associates and jointly controlled entities (together "Associates") in which Glencore exercises significant influence or joint control are accounted for using the equity method. Significant influence is the power to participate in the financial and operating policy decisions of the investee, but is not control over those policies. Significant influence is presumed if Glencore holds between 20 per cent. and 50 per cent. of the voting rights, unless evidence exists to the contrary. Joint control is the contractually agreed sharing of control over an economic entity where strategic and operating decisions require unanimous decision making.

Equity accounting involves Glencore recording its share of the Associate's net income and equity. Glencore's interest in an Associate is initially recorded at cost and is subsequently adjusted for Glencore's share of changes in net assets of the Associate, less any impairment in the value of individual investments. Where Glencore transacts with an Associate, unrealised profits and losses are eliminated to the extent of Glencore's interest in that Associate.

Changes in Glencore's interests in Associates are accounted for as a gain or loss on disposal with any difference between the amount by which the carrying value of the Associate is adjusted and the fair value of the consideration received being recognised directly in the statement of income.

Where Glencore undertakes activities under joint venture operation or asset arrangements, Glencore reports such interests using the proportionate consolidation method. Glencore's share of the assets, liabilities, income, expenses and cash flows of jointly controlled operations or asset arrangements are consolidated with the equivalent items in the Historical Financial Information on a line-by-line basis.

**Business combinations**

Acquisitions of subsidiaries and businesses are accounted for using the acquisition method of accounting, whereby the identifiable assets, liabilities and contingent liabilities (identifiable net assets) are measured on the basis of fair value at the date of acquisition. Acquisition-related costs are recognised in the statement of income as incurred.

Where a business combination is achieved in stages, Glencore's previously held interests in the acquired entity are remeasured to fair value at the acquisition date (i.e. the date Glencore attains control) and the resulting gain or loss, if any, is recognised in the statement of income.

Where the fair value of consideration transferred for a business combination exceeds the fair values attributable to Glencore's share of the identifiable net assets, the difference is treated as purchased goodwill, which is not amortised, but is reviewed annually for impairment and when there is an indication of impairment. Any impairment identified is immediately recognised in the statement of income. If the fair

value attributable to Glencore's share of the identifiable net assets exceeds the consideration transferred, the difference is immediately recognised in the statement of income.

Similar procedures are applied in accounting for the purchases of interests in Associates. Any goodwill arising from such purchases is included within the carrying amount of the investment in Associates, but not amortised thereafter. Any excess of Glencore's share of the net fair value of the Associate's identifiable net assets over the cost of the investment is included in the statement of income in the period of the purchase.

The main operating and finance subsidiaries and industrial investments of Glencore are listed in Note 28.

**Non-current assets held for sale and disposal groups**

Non-current assets and assets and liabilities included in disposal groups are classified as held for sale if their carrying amount will be recovered principally through a sale transaction rather than through continuing use, they are available for immediate disposal and the sale is highly probable. Non-current assets held for sale are measured at the lower of their carrying amount or fair value less costs to sell.

**Revenue recognition**

Revenue is recognised when the seller has transferred to the buyer all significant risks and rewards of ownership of the assets sold. Revenue excludes any applicable sales taxes and is recognised at the fair value of the consideration received or receivable to the extent that it is probable that economic benefits will flow to Glencore and the revenues and costs can be reliably measured. In most instances, sales revenue is recognised when the product is delivered to the destination specified by the customer, which is typically the vessel on which it is shipped, the destination port or the customer's premises.

For certain commodities, the sales price is determined on a provisional basis at the date of sale, as the final selling price is subject to movements in market prices up to the date of final pricing, normally ranging from 30 to 180 days after initial booking. Revenue on provisionally priced sales is recognised based on the estimated fair value of the total consideration receivable. The revenue adjustment mechanism embedded within provisionally priced sales arrangements has the character of a commodity derivative. Accordingly, the fair value of the final sales price adjustment is re-estimated continuously and changes in fair value are recognised as an adjustment to revenue. In all cases, fair value is estimated by reference to forward market prices.

Interest and dividend income is recognised when the right to receive payment has been established; it is probable that the economic benefits will flow to Glencore and the amount of income can be measured reliably. Interest income is accrued on a time basis, by reference to the principal outstanding and at the applicable effective interest rate.

**Foreign currency translation**

Glencore's reporting currency and the functional currency of the majority of its operations is the U.S. dollar as this is assessed to be the principal currency of the economic environment in which they operate.

***Foreign currency transactions***

Transactions in foreign currencies are converted into the functional currency of each entity using the exchange rate prevailing at the transaction date. Monetary assets and liabilities outstanding at year end are converted at year-end rates. The resulting exchange differences are recorded in the consolidated statement of income.

***Translation of financial information***

For the purposes of consolidation, assets and liabilities of group companies whose functional currency is in a currency other than the U.S. dollar are translated into U.S. dollars using year-end exchange rates, while their statements of income are translated using average rates of exchange for the year. Goodwill and fair value adjustments arising from the acquisition of a foreign operation are treated as assets and liabilities of the foreign operation and are translated at the closing rate. Translation adjustments are included as a separate component of shareholders' equity and have no statement of income impact to the extent that no disposal of the foreign operation has occurred.

**Securitisations**

Glencore may obtain sources of liquidity by securitising certain of its receivables which generally result in the legal sale of these assets to special purpose entities (the "SPEs") which, in turn, issue securities to investors. After securitisation, Glencore continues to maintain customer relationships and provide servicing for the receivables transferred to the SPEs.

In accounting for such securitisations, two key accounting determinations are made:

An evaluation is made as to whether the securitisation entity should be considered a subsidiary of Glencore and be included in Glencore's consolidated financial information or whether the entity is sufficiently independent that it does not need to be consolidated. For all securitisations in which Glencore participates, an evaluation is made of whether Glencore controls the entity.

Where the securitisation entity is not considered a subsidiary, an evaluation is then made as to whether Glencore has transferred the rights to the cash flows, risks and rewards of ownership and control of the underlying assets, thus qualifying it for derecognition and a sale under IFRS. If a transfer of assets meets the derecognition and sale requirements, the assets are removed from Glencore's consolidated financial information. If the conditions for derecognition and sale are not met, the transfer is considered to be a secured borrowing, the assets remain in the consolidated financial information and the proceeds are recognised as a liability.

**Repurchase agreements**

Glencore enters into repurchase transactions where it sells certain marketing inventories, but retains all or a significant portion of the risks and rewards relating to the transferred inventory. Repurchase transactions are treated as collateralised borrowings, whereby the inventories are not derecognised from the statement of financial position and the cash received is recorded as a corresponding obligation within the statement of financial position as "commodities sold with agreements to repurchase" or, if the repurchase obligation is optional, within "trade advances from buyers".

**Borrowing costs**

Borrowing costs are generally expensed as incurred, except where they relate to the financing of construction or development of qualifying assets, in which case they are capitalised up to the date when the qualifying asset is ready for its intended use.

**Retirement benefits**

Glencore operates various pension schemes in accordance with local requirements and practices of the respective countries. The annual costs for defined contribution plans that are funded by payments to separate trustee administered funds or insurance companies equal the contributions that are required under the plans and are accounted for as an expense. Glencore uses the projected unit credit actuarial method to determine the present value of its defined benefit obligations and the related current service cost and, where applicable, past service cost. Actuarial gains and losses are recognised in the statement of income over the average remaining service lives of employees. Past service cost is recognised immediately to the extent that the benefits are already vested, and otherwise is amortised on a straight-line basis over the average period until the benefits become vested.

**Income taxes**

Income taxes consist of current and deferred income taxes. Current taxes represent income taxes expected to be payable based on enacted or substantively enacted tax rates at the period end and expected current taxable income, and any adjustment to tax payable in respect of previous years. Deferred taxes are recognised for temporary differences between the carrying amounts of assets and liabilities in the financial information and the corresponding tax bases used in the computation of taxable profit, using enacted or substantively enacted income tax rates. Deferred tax assets and unused tax losses are only recognised to the extent that their recoverability is probable. Deferred tax assets are reviewed at each reporting period end and amended to the extent that it is no longer probable that the related benefit will be realised. To the extent that a deferred tax asset not previously recognised fulfils the criteria for recognition, an asset is recognised. Deferred tax assets and liabilities are offset when they relate to income taxes levied by the same authority and Glencore has both the right and the intention to settle its current tax assets and liabilities on a net or simultaneous basis. The tax effect of certain temporary differences is not recognised

principally with respect to the initial recognition of an asset or liability (other than those arising in a business combination or in a manner that initially impacted accounting or taxable profit) and temporary differences relating to investments in subsidiaries and associates to the extent that Glencore can control the timing of the reversal of the temporary difference and it is probable the temporary difference will not reverse in the foreseeable future. Deferred tax is provided in respect of fair value adjustments on acquisitions. These adjustments may relate to assets such as extraction rights that, in general, are not eligible for income tax allowances.

Royalties, extraction taxes and other levies/taxes are treated as taxation arrangements when they have the characteristics of an income tax, including being imposed and determined in accordance with regulations established by the respective government's taxation authority.

Current and deferred tax are recognised as an expense or income in the statement of income, except when they relate to items that are recognised outside the statement of income (whether in other comprehensive income or directly in equity) or where they arise from the initial accounting for a business combination.

**Exploration and evaluation expenditure**

Exploration and evaluation expenditure relates to costs incurred on the exploration and evaluation of potential mineral and petroleum resources and includes costs such as researching and analysing historical exploration data, exploratory drilling, trenching, sampling and the costs of pre-feasibility studies. Exploration and evaluation expenditure for each area of interest, other than that acquired from the purchase of another company, is charged to the statement of income as incurred, except when the expenditure will be recouped from future exploitation or sale of the area of interest and it is planned to continue with active and significant operations in relation to the area, or at the reporting period end, the activity has not reached a stage which permits a reasonable assessment of the existence of commercially recoverable reserves, in which case the expenditure is capitalised. Purchased exploration and evaluation assets are recognised at their fair value at acquisition if purchased as part of a business combination.

Capitalised exploration and evaluation expenditure is recorded as a component of mineral and petroleum rights in property, plant and equipment.

All capitalised exploration and evaluation expenditure is monitored for indications of impairment. Where a potential impairment is indicated, an assessment is performed for each area of interest or at the cash generating unit level. To the extent that capitalised expenditure is not expected to be recovered, it is charged to the statement of income.

**Development expenditure**

When commercially recoverable reserves are determined and such development receives the appropriate approvals, capitalised exploration and evaluation expenditure is transferred to construction in progress. Upon completion of development and commencement of production, capitalised development costs are transferred to deferred mining costs and depreciated using the unit of production method.

**Property, plant and equipment**

Property, plant and equipment are stated at cost, being the fair value of the consideration given to acquire or construct the asset, including directly attributable costs required to bring the asset to the location or to a condition necessary for operation and the direct cost of dismantling and removing the asset, less accumulated depreciation and any accumulated impairment losses.

Property, plant and equipment is depreciated to its estimated residual value over the estimated useful life of the specific asset concerned, or the estimated remaining life of the associated mine, field or lease, if shorter. Depreciation commences when the asset is available for use.

The major categories of property, plant and equipment are depreciated on a unit of production and/or straight-line basis as follows:

| | |
|---|---|
| Buildings | 10-45 years |
| Land | not depreciated |
| Plant and equipment | 3-20 years |
| Mineral rights and development costs | unit of production |

Assets under finance leases, where substantially all the risks and rewards of ownership transfer to the Group as lessee, are capitalised and amortised over their expected useful lives on the same basis as owned assets or, where shorter, the term of the relevant lease. All other leases are classified as operating leases, the expenditures for which, are charged against income over the accounting periods covered by the lease term.

**Deferred stripping costs**

Stripping costs incurred in the development of a mine (or pit) before production commences are capitalised as part of the cost of constructing the mine (or pit) and subsequently amortised over the life of the mine (or pit) on a unit of production basis. Production stripping costs are deferred when the actual stripping ratio incurred significantly exceeds the expected long-term average stripping ratio and are subsequently amortised when the actual stripping ratio falls below the long-term average stripping ratio. Where the ore is expected to be evenly distributed, waste removal is expensed as incurred.

**Mineral and petroleum rights**

Mineral and petroleum reserves, resources and rights (together "Mineral Rights") which can be reasonably valued, are recognised in the assessment of fair values on acquisition. Mineral Rights for which values cannot be reasonably determined are not recognised. Exploitable Mineral Rights are amortised using the unit of production method over the commercially recoverable reserves.

**Restoration, rehabilitation and decommissioning**

Restoration, rehabilitation and decommissioning costs arising from the installation of plant and other site preparation work, discounted to their present value, are provided for and capitalised at the time such an obligation arises. The costs are charged to the statement of income over the life of the operation through depreciation of the asset and the unwinding of the discount on the provision.

Costs for restoration of subsequent site disturbance, which is created on an ongoing basis during production, are provided for at their net present values and charged to the statement of income as extraction progresses.

**Other investments**

Equity investments, other than investments in Associates, are recorded at fair value unless such fair value is not reliably determinable, in which case they are carried at cost. Changes in fair value are recorded in the statement of income unless they are classified as available for sale, in which case fair value movements are recognised in other comprehensive income and are subsequently recognised in the statement of income when realised by sale or redemption, or when a reduction in fair value is judged to be a significant or prolonged decline.

**Impairment**

Investments in Associates and other investments, advances and loans and property, plant and equipment are reviewed for impairment whenever events or changes in circumstances indicate the carrying value may not be recoverable. If there are indicators of impairment, a review is undertaken to determine whether the carrying amounts are in excess of their recoverable amounts. An asset's recoverable amount is determined as the higher of its fair value less costs to sell and its value in use. Such reviews are undertaken on an asset-by-asset basis, except where assets do not generate cash flows independent of other assets, in which case the review is undertaken at the cash generating unit level.

Where a cash generating unit, or group of cash generating units, has goodwill allocated to it, or includes intangible assets which are either not available for use or which have an indefinite useful life (and which can only be tested as part of a cash generating unit), an impairment test is performed at least annually or whenever there is an indication that the carrying amounts of such assets may be impaired.

If the carrying amount of an asset exceeds its recoverable amount, an impairment loss is recorded in the income statement to reflect the asset at the lower amount.

An impairment loss is reversed in the statement of income if there is a change in the estimates used to determine the recoverable amount since the prior impairment loss was recognised. The carrying amount is increased to the recoverable amount, but not beyond the carrying amount net of depreciation or amortisation which would have arisen if the prior impairment loss had not been recognised. Goodwill impairments and impairments of available for sale equity investments are not reversed.

**Provisions**

Provisions are recognised when Glencore has a present obligation, as a result of past events, and it is probable that an outflow of resources embodying economic benefits that can be reliably estimated will be required to settle the liability.

**Inventories**

The majority of marketing inventories are valued at fair value less costs to sell with the remainder valued at the lower of cost or net realisable value. Unrealised gains and losses from changes in fair value are reported in cost of goods sold.

Production inventories are valued at the lower of cost or net realisable value. Cost is determined using the first-in first-out ("FIFO") or the weighted average method and comprises material costs, labour costs and allocated production related overhead costs. Financing and storage costs related to inventory are expensed as incurred.

**Financial instruments**

Financial assets are classified as either financial assets at fair value through profit or loss, loans and receivables, held-to-maturity investments or available for sale financial assets, depending upon the purpose for which the financial assets were acquired. Financial assets are initially recognised at fair value on the trade date, including, in the case of instruments not recorded at fair value through profit or loss, directly attributable transaction costs. Subsequently, financial assets are carried at fair value (other investments, derivatives and marketable securities) or amortised cost less impairment (accounts receivable and advances and loans). Financial liabilities, other than derivatives, are initially recognised at fair value of consideration received net of transaction costs, as appropriate, and subsequently carried at amortised cost.

**Convertible bonds**

At the date of issue, the fair value of the liability component is determined by discounting the contractual future cash flows using a market rate for a similar non-convertible instrument. The liability component is recorded as a liability on an amortised cost basis using the effective interest method. The equity component is recognised as the difference between the fair value of the proceeds as a whole and the fair value of the liability component and it is not subsequently remeasured.

**Derivatives and hedging activities**

Derivative instruments, which include contracts to sell or purchase commodities that do not meet the own use exemption, are initially recognised at fair value when Glencore becomes a party to the contractual provisions of the instrument and are subsequently remeasured to fair value at the end of each reporting period. Fair values are determined using quoted market prices, dealer price quotations or using models and other valuation techniques, the key inputs for which include current market and contractual prices for the underlying instrument, time to expiry, yield curves, volatility of the underlying instrument and counterparty risk.

Gains and losses on derivative instruments for which hedge accounting is not applied, other than the revenue adjustment mechanism embedded within provisionally priced sales, are recognised in cost of goods sold.

Those derivatives qualifying and designated as hedges are either (i) a Fair Value Hedge of the change in fair value of a recognised asset or liability or an unrecognised firm commitment, or (ii) a Cash Flow Hedge of the change in cashflows to be received or paid relating to a recognised asset or liability or a highly probable transaction.

A change in the fair value of derivatives designated as a "Fair Value Hedge" is reflected together with the change in the fair value of the hedged item in the statement of income.

A change in the fair value of derivatives designated as "Cash Flow Hedge" is initially recognised as a Cash Flow Hedge reserve in shareholders' equity. The deferred amount is then released to the statement of income in the same periods during which the hedged transaction affects the statement of income. Hedge ineffectiveness is recorded in the statement of income when it occurs.

When a hedging instrument expires or is sold, or when a hedge no longer meets the criteria for hedge accounting, any cumulative gain or loss existing in equity at that time remains in shareholders' equity and is recognised in the statement of income when the committed or forecast transaction is ultimately recognised in the statement of income. However, if a forecast or committed transaction is no longer expected to occur, the cumulative gain or loss that was recognised in equity is immediately transferred to the statement of income.

A derivative may be embedded in a "host contract". Such combinations are known as hybrid instruments and, at the date of issuance, the embedded derivative is separated from the host contract and accounted for as a stand-alone derivative if the criteria for separation are met. The host contract is accounted for in accordance with its relevant accounting policy.

**Critical accounting policies, key judgements and estimates**

The preparation of the Historical Financial Information requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities as well as the disclosure of contingent assets and liabilities at the date of the financial information and the reported amounts of revenues and expenses during the reporting period. The estimates and associated assumptions are based on historical experience and other factors that are considered to be relevant. Actual outcomes could differ from those estimates.

Glencore has identified the following areas as being critical to understanding Glencore's financial position as they require management to make complex and/or subjective judgements and estimates about matters that are inherently uncertain:

***Valuation of derivative instruments***

Derivative instruments are carried at fair value and Glencore evaluates the quality and reliability of the assumptions and data used to measure fair value in the three hierarchy levels, Level 1, 2 and 3, as prescribed by IFRS 7. Fair values are determined in the following ways: externally verified via comparison to quoted market prices in active markets ("Level 1"); by using models with externally verifiable inputs ("Level 2"); or by using alternative procedures such as comparison to comparable instruments and/or using models with unobservable market inputs requiring Glencore to make market-based assumptions ("Level 3"). For more details, refer to Note 23.

***Depreciation and amortisation of mineral and petroleum rights and project development costs***

Mineral and petroleum rights and project development costs are amortised using the unit of production method (the "UOP"). The calculation of the UOP rate of amortisation, and therefore the annual amortisation charge to operations, can fluctuate from initial estimates. This could generally result when there are significant changes in any of the factors or assumptions used in estimating mineral or petroleum reserves, notably changes in the geology of the reserves and assumptions used in determining the economic feasibility of the reserves. Such changes in reserves could similarly impact the useful lives of assets depreciated on a straight-line basis, where those lives are limited to the life of the project, which, in turn is, limited to the life of the proven and probable mineral or petroleum reserves. Estimates of proven and probable reserves are prepared by experts in extraction, geology and reserve determination. Assessments of UOP rates against the estimated reserve base and the operating and development plan are performed regularly.

***Impairments***

Investments in Associates and other investments, advances and loans and property, plant and equipment, goodwill and other intangible assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying value may not be fully recoverable or at least annually for goodwill and other indefinite life intangible assets. If an asset's recoverable amount is less than the asset's carrying amount, an impairment loss is recognised. Future cash flow estimates which are used to calculate the asset's fair value are based on expectations about future operations primarily comprising estimates about production and sales volumes, commodity prices, reserves, operating, rehabilitation and restoration costs and capital expenditures. Changes in such estimates could impact recoverable values of these assets. Estimates are reviewed regularly by management.

***Restoration, rehabilitation and decommissioning costs***

A provision for future restoration, rehabilitation and decommissioning costs requires estimates and assumptions to be made around the relevant regulatory framework, the magnitude of the possible disturbance and the timing, extent and costs of the required closure and rehabilitation activities. To the extent that the actual future costs differ from these estimates, adjustments will be recorded and the statement of income could be impacted. The provisions, including the estimates and assumptions contained therein are reviewed regularly by management.

***Provisions***

The amount recognised as a provision, including tax, legal, contractual and other exposures or obligations, is the best estimate of the consideration required to settle the related liability, including any related interest charges, taking into account the risks and uncertainties surrounding the obligation. The Group assesses its liabilities and contingencies based upon the best information available, relevant tax laws and other appropriate requirements.

***Fair value***

In addition to recognising derivative instruments at fair value, as discussed above, an assessment of fair value of assets and liabilities is also required in accounting for other transactions, most notably business combinations and disclosures related to fair values of financial assets and liabilities. In such instances, fair value measurements are estimated based on the amounts for which the assets and liabilities could be exchanged at the relevant transaction date or reporting period end, and are therefore not necessarily reflective of the likely cashflow upon actual settlements. Where fair value measurements cannot be derived from publicly available information, they are estimated using models and other valuation methods. To the extent possible, the assumptions and inputs used take into account externally verifiable inputs. However, such information is by nature subject to uncertainty, particularly where comparable market-based transactions rarely exist.

**2 Segment Information**

Glencore is organised and operates on a worldwide basis in three core business segments—metals and minerals, energy products and agricultural products, with each business segment responsible for the marketing, sourcing, hedging, logistics and industrial investment activities of their respective markets and reflecting the structure used by Glencore's management to assess the performance of Glencore.

The business segments' contributions to the Group are primarily derived from the net margin or premium earned from physical marketing activities (net sale and purchase of physical commodities), provision of marketing and related value added services and the margin earned from industrial asset activities (net resulting from the sale of physical commodities over the cost of production and/or other cost of sales) and comprise the following underlying key commodities:

- Metals and minerals: Zinc, copper, lead, alumina, aluminium, ferro alloys, nickel, cobalt and iron ore, including smelting, refining, mining, processing and storage-related operations of the relevant commodities.
- Energy products: Crude oil, oil products, steam coal and metallurgical coal supported by investments in coal mining and oil production operations, ports, vessels and storage facilities.
- Agriculture products: Wheat, corn, barley, rice, oilseeds, meals, edible oils, biodiesel, cotton and sugar supported by investments in storage, handling, processing and port facilities.
- Corporate and other: Statement of income amounts represent Glencore's share of income related to Xstrata and other unallocated Group related expenses (mainly variable pool bonus accrual). Balance sheet amounts represent Group related balances.

The financial performance of the segments is principally evaluated with reference to Adjusted EBIT/EBITDA which is the net result of revenue less cost of goods sold and selling and administrative expenses plus share of income from associates and jointly controlled entities and dividends as disclosed on the face of the consolidated statement of income. Furthermore, given that funding costs in relation to working capital employed in the marketing activities are sought to be "recovered" via transactional terms, the performance of marketing activities is also assessed at a net income level.

The accounting policies of the operating segments are the same as those described in the summary of significant accounting policies. Glencore accounts for inter-segment sales and transfers as if the sales or transfers were to third parties, i.e. at current market prices. Exceptional items represent significant items of income and expense which, due to their financial impact, nature or the expected infrequency of the events giving rise to them, have been separated for internal reporting and analysis of Glencore's results.

| Oceania | 1,322 | 1,332 | 1,293 |
| | 20,080 | 21,726 | 28,854 |

Notes:

(1) Revenue by geographical destination is based on the country of incorporation of the sales counterparty.

(2) Non-current assets are non-current operating assets other than financial instruments and deferred tax assets.

## 3 (Loss)/Gain on Sale of Investments

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| Gain on sale of subsidiaries | 7 | 97 | 0 |
| Loss on sale of investments in associates | 0 | (64) | (6) |
| **Total** | 7 | 33 | (6) |

The net gain on sale of subsidiaries and investments in 2009 comprised primarily a gain of U.S.$97 million relating to the disposal of East Tennessee Zinc Company LLC in December 2009 (see Note 21) and a gain on the disposal of Refineria de Cartagena S.A. (see Note 7), offset by a dilution loss following Xstrata's

capital raising in March 2009, which resulted in Glencore's effective ownership reducing from 35.2 per cent. to 34.9 per cent.

## 4 Other (Expense)/Income—Net

| | Notes | 2008 | 2009 | 2010 |
|---|---|---|---|---|
| | | *(U.S.$ million)* | | |
| Changes in mark to market valuation—net[1] | | (137) | 222 | (178) |
| Impairment[2] | | (2,763) | 0 | (336) |
| Prodeco transaction and related expenses[3] | 13 | 0 | (303) | (225) |
| Changes in mark to market valuation of forward contracts[4] | | 0 | 0 | (790) |
| Gain on settlement of restructured Russneft loans | 8 | 0 | 0 | 382 |
| Impairment reversal[5] | | 0 | 0 | 674 |
| Revaluation of previously held interest in newly acquired businesses | 21 | 0 | 161 | 462 |
| Impairment on Katanga related goodwill | 21 | 0 | (161) | 0 |
| Foreign exchange gain/(loss) | | (80) | 26 | 31 |
| Other | | 20 | 90 | (28) |
| **Total** | | (2,960) | 35 | (8) |

In addition to foreign exchange gains/(losses) and mark to market movements on investments held for trading, other (expense)/income—net includes significant items of income and expense which due to their non-operational nature or expected infrequency of the events giving rise to them are reported separately from operating segment results. Other (expense)/income—net includes, but is not limited to, impairment charges/reversals, gains/losses on restructured loans, revaluation of previously held interests in business combinations and restructuring and closure costs.

Notes:

(1) Changes in mark to market valuation—net primarily relates to movements on interests in other investments classified as held for trading and carried at fair value, with Glencore's stake in Volcan Compania Minera S.A.A. accounting for the majority of the movement in 2010 and 2009.

(2) In 2010, an impairment was recognised following the Russneft debt amendment and restatement (see Note 8). In 2008, the rapid and severe impacts arising from the global financial crisis in the latter part of that year, resulting in a substantial fall in commodity prices, increased uncertainty in the credit markets and an increase in political risk, led to the deferral of a number of expansion projects, cutbacks in production output and mine closures, leading to impairments to the carrying value of property, plant and equipment (U.S.$97 million), investments in Associates (U.S.$1,883 million), other investments (U.S.$500 million), non-current loans (U.S.$217 million) and other current assets (U.S.$66 million). The recoverable amounts were determined on the basis of the assets' fair value less cost to sell, determined using discounted cash flow techniques which incorporated discount rates commensurate with the nature of the underlying forecast cash flows ranging from 6.4 per cent. to 12.5 per cent.

(3) In March 2009, Xstrata acquired Glencore's Colombian Coal Group ("Prodeco") for U.S.$2 billion and concurrently granted Glencore an option to repurchase Prodeco within 12 months for U.S.$2.25 billion plus profits accrued during the option period and the net balance of any cash invested. Given the fixed price repurchase option, the conditions for derecognition/disposal of Prodeco were not met under IFRS and, as a consequence, Prodeco's operations remained in the consolidated financial statements, while the "proceeds" were deferred and recognised as a liability. In March 2010, the option was exercised (see Note 13). Following the exercise of the option, in addition to the option repurchase expenses (including the option premium and profit entitlement) incurred during the year, U.S.$115 million of additional depreciation expense was recognised to reflect the depreciation that would have been charged if the related assets had not previously been classified as held for sale.

(4) Changes in mark to market valuation of forward contracts represents movements in the fair value of certain fixed price forward coal sales contracts relating to Prodeco's future production, into which it plans to physically deliver. Following the legal reacquisition of Prodeco in March 2010, from an accounting perspective, these forward sales contracts could not technically be classified as "own use" or as cashflow hedges, which would have deferred the income statement effect until performance of the underlying future sale transactions. As at year end, approximately 19.3 million tonnes of such coal had been sold forward at a fixed price in respect of quarterly periods to the end of 2013.

(5) During the regular assessment of whether there is an indication of an asset impairment or whether a previously recorded impairment may no longer be required, an upward revision of long-term base metals and coal price assumptions resulted in an impairment reversal of U.S.$674 million against Glencore's interest in Xstrata. The recoverable amount of Glencore's share of the underlying net assets have been determined on the basis of its fair value less costs to sell using discounted cash flow techniques.

## 5 Income Taxes

**Income taxes consist of the following:**

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| Current income tax expense | (314) | (259) | (292) |
| Deferred income tax credit | 46 | 21 | 58 |
| **Total** | (268) | (238) | (234) |

The effective Group tax rate is different from the statutory Swiss income tax rate applicable to the Company for the following reasons:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| **Income before income taxes and attribution** | 1,336 | 1,967 | 4,340 |
| Less: share of income from Associates | (1,067) | (82) | (1,829) |
| Parent company's and subsidiaries' income before income tax and attribution | 269 | 1,885 | 2,511 |
| Income tax expense calculated at the Swiss income tax rate | (43) | (297) | (401) |
| Effect of different tax rates of subsidiaries operating in other jurisdictions | (160) | (19) | (78) |
| Tax-exempt income, net of non-deductible expenses and other permanent differences | 26 | 56 | 254 |
| Effect of use of tax losses and other deferred tax assets, not previously recognised[1] | (26) | 15 | 135 |
| Effect of change in tax rate on temporary differences | (23) | 0 | (145) |
| Other | (42) | 7 | 1 |
| **Income tax expense** | (268) | (238) | (234) |

Note:

(1) Following the regular assessment and review of business plans related to Katanga Mining Limited, it was determined that a substantial portion of the previously unrecognised tax losses could be recognised.

Deferred taxes as at 31 December 2008, 31 December 2009 and 31 December 2010 are attributable to the items detailed in the table below:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| **Deferred tax assets**[1] | | | |
| Tax losses carried forward | 25 | 29 | 274 |
| Mark to market valuations | 64 | 59 | 95 |
| **Total** | 89 | 88 | 369 |
| **Deferred tax liabilities**[1] | | | |
| Depreciation and amortisation | (167) | (257) | (926) |
| Mark to market valuations | (417) | (328) | (320) |
| Other | (46) | (41) | (62) |
| **Total** | (630) | (626) | (1,308) |
| **Deferred tax—net** | (541) | (538) | (939) |
| **Reconciliation of deferred tax—net** | | | |
| **Opening balance** | (573) | (541) | (538) |
| Recognised in income for the year | 46 | 21 | 58 |
| Recognised in other comprehensive income/(loss) | 1 | (7) | 2 |
| Acquisitions | (15) | (11) | (461) |
| **Closing balance** | (541) | (538) | (939) |

Note:

(1) Asset and liability positions in the same category reflect the impact of tax assets and liabilities arising in local tax jurisdictions that cannot be offset against tax assets and liabilities arising in other tax jurisdictions.

Deferred tax assets are recognised for tax losses carried forward only to the extent that realisation of the related tax benefit is probable. As at 31 December 2010, U.S.$562 million (2009: U.S.$312 million; 2008: U.S.$208 million) of deferred tax assets related to available loss carry forwards have been brought to account, of which U.S.$274 million (2009: U.S.$29 million; 2008: U.S.$25 million) are disclosed as deferred tax assets with the remaining balance being offset against deferred tax liabilities arising in the same respective entity. For the following gross tax losses carried forward, no deferred tax assets have been recognised in the consolidated Historical Financial Information and will expire as follows:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| 1 year | 70 | 85 | 75 |
| 2 years | 21 | 48 | 56 |
| 3 years | 72 | 8 | 38 |
| Thereafter | 222 | 904 | 394 |
| **Total** | 385 | 1,045 | 563 |

As at 31 December 2010, unremitted earnings of U.S.$12,255 million (2009: U.S.$10,263 million; 2008: U.S.$9,329 million) have been retained by subsidiaries and associates for reinvestment. No provision is made for income taxes that would be payable upon the distribution of such earnings. If earnings were remitted, an immaterial tax charge would result based on the tax statutes currently in effect.

## 6 Property, Plant and Equipment

| | Land and buildings | Plant and equipment | Mineral and petroleum rights | Deferred mining costs | Total |
|---|---|---|---|---|---|
| | | | *(U.S.$ million)* | | |
| **Gross carrying amount:** | | | | | |
| **1 January 2008** | 725 | 5,136 | 1,030 | 256 | 7,147 |
| Business combination | 29 | 65 | (36) | 0 | 58 |
| Additions | 51 | 1,624 | 132 | 68 | 1,875 |
| Disposals | (13) | (69) | (4) | (5) | (91) |
| Other movements | 254 | (238) | (47) | 0 | (31) |
| **31 December 2008** | 1,046 | 6,518 | 1,075 | 319 | 8,958 |
| **Accumulated depreciation and impairment:** | | | | | |
| **1 January 2008** | 135 | 1,064 | 205 | 1 | 1,405 |
| Depreciation | 42 | 433 | 86 | 14 | 575 |
| Impairment | 6 | 50 | 39 | 2 | 97 |
| Disposals | (3) | (32) | 0 | 0 | (35) |
| Other movements | (1) | 65 | (5) | (2) | 57 |
| **31 December 2008** | 179 | 1,580 | 325 | 15 | 2,099 |
| **Net book value 31 December 2008** | 867 | 4,938 | 750 | 304 | 6,859 |

Plant and equipment includes expenditure for construction in progress of U.S.$1,381 million and a net book value of U.S.$80 million of obligations recognised under finance lease agreements. Mineral and petroleum rights include expenditures for exploration and evaluation of U.S.$118 million. Depreciation

expenses included in cost of goods sold are U.S.$562 million and in selling and administrative expenses U.S.$13 million.

| | Notes | Land and buildings | Plant and equipment | Mineral and petroleum rights | Deferred mining costs | Total |
|---|---|---|---|---|---|---|
| | | | | *(U.S.$ million)* | | |
| **Gross carrying amount:** | | | | | | |

| **Net book value 31 December 2010** | | 1,042 | 6,631 | 3,936 | 479 | 12,088 |

Plant and equipment includes expenditure for construction in progress of U.S.$1,343 million and a net book value of U.S.$64 million of obligations recognised under finance lease agreements. Mineral and petroleum rights include expenditures for exploration and evaluation of U.S.$379 million. Depreciation expenses included in cost of goods sold are U.S.$893 million, in selling and administrative expenses U.S.$18 million and in other income/(expense)—net, Prodeco transaction related expenses U.S.$115 million.

## 7 Investments in Associates and Other Investments

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| Listed Associates | 11,345 | 13,267 | 15,511 |
| Non-listed Associates | 1,876 | 1,614 | 1,255 |
| **Investments in Associates** | 13,221 | 14,881 | 16,766 |
| Other investments | 2,808 | 3,202 | 2,438 |
| **Total** | 16,029 | 18,083 | 19,204 |

A list of the principal operating, finance and industrial subsidiaries and Associates and other investments is included in Note 28. As at 31 December 2010, the fair value of listed Associates using price published quotations was U.S.$24,511 million (2009: U.S.$19,090 million; 2008: U.S.$3,454 million).

### Listed Associates

In March 2009, Glencore participated in Xstrata's rights issue for U.S.$2,023 million.

In June 2009, following the conversion of a Katanga Mining Limited ("Katanga") convertible loan, Glencore acquired a controlling interest and its initial equity interest was therefore included and considered as part of the cost of acquisition (see Note 21).

### Non-listed Associates

In May 2009, Glencore disposed of its 51 per cent. interest in Refineria de Cartagena for cash proceeds of U.S.$549 million (see Note 3).

### Other investments

Other investments primarily include a 8.8 per cent. interest in United Company Rusal Plc ("UCR") (U.S.$2,048 million; 2009: U.S.$2,003 million; 2008: U.S.$2,003 million) which, following its listing on the Hong Kong Stock Exchange in January 2010, is carried at fair value with associated movements recognised within a related equity reserve (see Note 14). As at 31 December 2010, U.S.$113 million (2009 and 2008: U.S.$ nil million) of Glencore's investment in UCR was pledged as a guarantee against certain borrowings of UCR.

Summarised financial information in respect of Glencore's Associates, reflecting 100 per cent. of the underlying Associate's relevant figures, are set out below. Glencore's share of the joint venture's capital commitments for which the joint venture already has contractually committed financing in place, amounts to U.S.$831 million (2009: U.S.$346 million; 2008: U.S.$319 million).

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| Total assets | 59,731 | 66,522 | 77,247 |
| Total liabilities | 32,965 | 30,136 | 32,506 |
| Revenue | 33,787 | 25,337 | 48,116 |
| Net profit | 3,125 | 826 | 4,941 |

## 8 Advances and Loans

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| Loans to Parents | 64 | 66 | 72 |
| Loans to Associates | 378 | 832 | 426 |
| Other non-current receivables and loans | 1,384 | 1,637 | 3,332 |
| **Total** | 1,826 | 2,535 | 3,830 |

Loans to Parents (see Note 14) and Associates bear interest at applicable floating market rates plus a premium.

Other non-current receivables and loans comprise the following:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| **Counterparty** | | | |
| OAO Russneft | | | |
| Interest-bearing loan at 9 per cent. per annum (see note below) | 1,033 | 1,033 | 2,082 |
| Atlas Petroleum International Limited ("Atlas") | | | |
| Interest-bearing loans at LIBOR plus 3 per cent.[1] | 210 | 270 | 477 |
| PT Bakrie & Brothers Tbk | | | |
| Interest-bearing secured loans at LIBOR plus 9 per cent.[2] | 0 | 0 | 200 |
| Secured marketing related financing arrangements[3] | 0 | 148 | 330 |
| Other | 141 | 186 | 243 |
| **Total** | 1,384 | 1,637 | 3,332 |

Notes:

(1) Primarily relates to carried interest loans associated with the development of the Aseng oil project in Equatorial Guinea, where Atlas is one of the equity partners. The operator of the field and project is Noble Energy, based in Houston. The Aseng project is expected to commence oil production in the first quarter of 2012, with loans subsequently repaid from oil proceeds.

(2) The principal under this loan is payable in five equal semi-annual instalments from June 2012 to June 2014. The loan is secured by 968,442,000 shares (equivalent to 4.66 per cent.) in PT Bumi Resources Tbk., which as at 31 December 2010 were valued at U.S.$323 million.

(3) Various marketing-related financing facilities, generally secured against certain assets and/or payable from the future sale of production of the counterpart. The weighted average interest rate of the loans is 10 per cent. and on average are to be repaid over a three-year period.

**Russneft loans**

In December 2010, OAO Russneft ("Russneft") completed a significant debt amendment and restatement with its major lender, whereby Glencore's previously existing facilities, including some amounts which had been advanced for conversion into Russneft equity, were consolidated into a single facility. The consolidated facility, with a principal amount of U.S.$2,080 million, bears interest at 9 per cent. per annum, with 3 per cent. paid quarterly and the remaining 6 per cent. payable along with the principal. Repayment is expected in monthly instalments over a three-year period commencing in the fourth quarter of 2017, but in any event, not before repayment of the debt owing to the other major lender. The facility is secured by various pledges of shares of members of the Russneft group.

Glencore has accounted for this amendment and restatement as a substantial modification, which resulted in derecognition of all amounts carried under the existing facilities, including principal, accrued interest and equity conversion advances and recognition, at fair value, of the consolidated facility. The transaction resulted in a gain (after taking into account the carrying value of the principal, net of allowance for doubtful accounts, and accrued interest (U.S.$1,413 million) and equity conversion advances (U.S.$285 million)) of U.S.$382 million.

The loan amendment also constituted a loss event with respect to Glencore's equity holdings in certain Russneft subsidiaries due to the increased leverage, amended repayment profile and the enhancement of prioritised security of the consolidated loans and, as a consequence, an impairment charge of U.S.$336 million was recognised against other investments.

## 9 Inventories

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| Production inventories | 1,511 | 1,894 | 2,805 |
| Marketing inventories | 6,294 | 13,179 | 14,588 |
| **Total** | 7,805 | 15,073 | 17,393 |

Production inventories consist of materials, spare parts, work in process and finished goods held by the production entities, whereas marketing inventories are commodities held by the marketing entities. Marketing inventories include readily marketable inventories of U.S.$14,331 million (2009: U.S.$12,945;

2008: U.S.$5,877 million). Readily marketable inventories are inventories that Glencore considers to be readily convertible into cash due to their very liquid nature, widely available markets and the fact that the price risk is covered either by a physical sale transaction or hedge transaction on a commodity exchange or with a highly rated counterparty.

Glencore has a number of dedicated financing facilities, which finance a portion of its marketing inventories. In each case, the inventory has not been derecognised as the Group retains the principal risks and rewards of ownership. The proceeds received are recognised as either current borrowings, commodities sold with agreements to repurchase or trade advances from buyers, depending upon their funding nature. As at 31 December 2010, the total amount of inventory securitised under such facilities was U.S.$2,426 million (2009: U.S.$3,192 million; 2008: U.S.$659 million). The proceeds received recognised as current borrowings were U.S.$1,338 million (2009: U.S.$1,663 million; 2008: U.S.$369 million), as commodities sold with agreements to repurchase, U.S.$484 million (2009: U.S.$477 million; 2008: U.S.$ nil million) and as trade advances from buyers, U.S.$67 million (2009: U.S.$419 million; 2008: U.S.$261 million).

## 10 Accounts Receivable

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| Trade receivables[1] | 9,617 | 9,156 | 12,663 |
| Trade advances and deposits[1] | 2,526 | 4,415 | 4,297 |
| Associated companies[1] | 487 | 315 | 494 |
| Other receivables | 1,326 | 1,303 | 1,540 |
| **Total** | 13,956 | 15,189 | 18,994 |

Note:

(1) Collectively referred to as receivables.

The average credit period on sales of goods is 28 days (2009: 33 days; 2008: 26 days).

As at 31 December 2010, 5 per cent. of receivables were between 1 and 60 days overdue, and 2 per cent. were greater than 60 days overdue (2009: 6 per cent. were between 1 and 60 days overdue and 2 per cent. were greater than 60 days overdue; 2008: 9 per cent. were between 1 and 60 days overdue and 2 per cent. were greater than 60 days overdue). Such receivables, although contractually past their due dates, are not considered impaired as there has not been a significant change in credit quality of the relevant counterparty, and the amounts are still considered recoverable, taking into account customary payment patterns and, in many cases, offsetting accounts payable balances. Receivables are net of allowances for doubtful accounts of U.S.$155 million (2009: U.S.$302 million; 2008: U.S.$312 million), which take into consideration the diverse geographic and industrial composition of the accounts receivable portfolio. The decrease in allowance for doubtful accounts over 2010 is primarily attributable to the Russneft loan amendment and restatement described in Note 8.

Glencore has a number of dedicated financing facilities, which finance a portion of its receivables. In each case, the receivables have not been derecognised, as the Group retains the principal risks and rewards of ownership. The proceeds received are recognised as current borrowings (see Note 15). As at 31 December 2010, the total amount of trade receivables securitised was U.S.$2,349 million (2009: U.S.$1,590 million; 2008: U.S.$1,822 million) and proceeds received and classified as current borrowings amounted to U.S.$1,950 million (2009: U.S.$1,300 million; 2008: U.S.$1,600 million).

## 11 Other Financial Assets

| | Notes | 2008 | 2009 | 2010 |
|---|---|---|---|---|
| | | *(U.S.$ million)* | | |
| **Commodity-related contracts** | 23 | | | |
| Futures | | 8,537 | 2,785 | 1,796 |
| Options | | 300 | 409 | 149 |
| Swaps | | 875 | 587 | 645 |
| Physical forwards | | 3,874 | 2,049 | 3,118 |
| **Financial contracts** | 23 | | | |
| Cross currency swaps | | 95 | 246 | 149 |
| Foreign currency and interest rate contracts | | 81 | 49 | 125 |
| **Total** | | 13,762 | 6,125 | 5,982 |

## 12 Cash and Cash Equivalents

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| Banks and cash on hand | 776 | 738 | 1,090 |
| Deposits and treasury bills | 50 | 122 | 373 |
| **Total** | 826 | 860 | 1,463 |

U.S.$23 million (2009: U.S.$10 million; 2008: U.S.$83 million) was restricted.

## 13 Assets and Liabilities held for Sale

Following Glencore's acquisition in September 2010 of the Pacorini metals warehousing division ("Pacorini"), Glencore commenced a review of the strategic alternatives to strengthen Glencore's participation in the metals warehousing business, which is expected to result in a merger involving the acquired business and a third party. As a result, the corresponding assets (U.S.$161 million non-current and U.S.$119 million current) and liabilities (U.S.$1 million non-current and U.S.$44 million current) at 31 December 2010 were classified as held for sale.

Following the exercise of the call option to repurchase Prodeco from Xstrata in March 2010 and the subsequent decision not to partially or fully dispose of it, following a review of divestment options, the net assets previously classified as held for sale in 2009 were reclassified to the respective line items in the statement of financial position at depreciated cost. As a result of this change in accounting classification, a one time depreciation charge of U.S.$115 million was recognised within the total costs associated with the Prodeco option exercise (see Note 4), to reflect the additional depreciation that would have been charged if the related assets had not previously been classified as held for sale.

The major classes of assets and liabilities of Prodeco were as follows as at 31 December 2009:

| | 2009 |
|---|---|
| | *(U.S.$ million)* |
| Property, plant and equipment | 1,096 |
| Investments in associates | 37 |
| Long term advances and loans | 18 |
| Deferred tax assets | 2 |
| Inventories | 138 |
| Accounts receivable | 55 |
| Cash and cash equivalents | 3 |
| **Assets held for sale** | 1,349 |
| Non-current provisions | 29 |
| Current borrowings | 3 |
| Accounts payable | 203 |
| Income tax payable | 1 |
| **Liabilities held for sale** | 236 |

## 14 Share Capital and Reserves

The share capital of the Company consists of 150,000 registered shares with a nominal value of CHF 500 each, a restriction on transferability and carry the right to a preferred dividend at the Company's discretion of up to a maximum of 10 per cent. of nominal value per annum. Glencore Holding AG and Glencore L.T.E. AG (together the "Parents"), both wholly owned by the management and employees of Glencore, own 85 per cent. and 15 per cent., respectively, of the Company.

The Company is authorised by its articles of incorporation to issue to employees of Glencore, non-voting profit participation certificates ("PPC") with no nominal value, enabling the employees to participate in four profit sharing arrangements. The profit sharing arrangements entitle the participating employees to a portion of Glencore shareholders' funds accumulated during the period that such employees hold the PPCs. The PPCs attribute Glencore's net income pro rata based on the 150,000 (2009 and 2008: 150,000) shares issued. The amounts attributed out of net income for the year to profit participation shareholders are presented within Invested Capital, comprising equity share capital, reserves, accumulated amounts attributed to profit participation shareholders and non-controlling interests. All amounts attributed to profit participation shareholders are to convert to ordinary shares in the new parent company on the Global Offer.

On cessation of employment, the accumulated amounts attributed to an ordinary profit participation shareholder are reclassified into non-current borrowings as "Ordinary Profit Participation Certificates" and paid in instalments over a period of five years with interest accruing at six month U.S.$ LIBOR, with the portion falling due within 12 months included in current borrowings.

Earnings Per Share information is not presented on the grounds that the historical number of ordinary shares will have no relevance on completion of the Global Offer, the conversion of amounts attributable to profit participation shareholders to ordinary shares of the new parent company and the issuance of new share capital raised.

| **Total current borrowings** | | 5,245 | 7,186 | 11,881 |

Notes:

(1) Includes U.S.$63 million (2009: U.S.$65 million; 2008: U.S.$69 million) of obligations under financial leases of which U.S.$4 million (2009: U.S.$6 million; 2008: U.S.$7 million) was current as at the year end.

(2) Comprises various uncommitted bilateral bank credit facilities and other financings.

### 144A Notes

U.S.$950 million 6 per cent. coupon Notes due 2014. The Notes are recognised at amortised cost at an effective interest rate of 6.15 per cent. per annum.

### Xstrata secured bank loans

Comprising two facilities with a total amount of U.S.$2,800 million, with U.S.$2,300 million outstanding as at 31 December 2010 and 31 December 2009. Both facilities mature in September 2011. The facilities have been accounted for as secured bank loans which bear interest at a rate of U.S.$ LIBOR plus a margin. As at 31 December 2010, U.S.$4,199 million (2009: U.S.$4,188 million; 2008: U.S.$2,739 million) of the carrying value of Glencore's investment in Xstrata was pledged as security.

### Convertible bonds

In December 2009, the Group issued U.S.$2,000 million 5 per cent. coupon convertible bonds due December 2014. The bonds are convertible at the option of investors into a certain percentage of Glencore's equity upon a qualifying IPO or upon other pre-determined qualifying events. The bonds contain several embedded derivatives which IFRS requires be accounted for separately, the most significant of these being that if the bonds have not been converted and no qualifying event occurs, they will be redeemed at maturity at 108.1 per cent. of their nominal amount. In addition, if a qualifying IPO or other pre-determined qualifying events have not occurred prior to December 2012, bondholders may, subject to Glencore having achieved a "pre-exceptional" net income of U.S.$3.5 billion in the preceding

12 months or in the event that Glencore is acquired for cash consideration, put the bonds back to Glencore at an amount which achieves a cumulative annualised return of 20 per cent. Payment in this regard could occur from mid-2013 at the earliest.

The bonds consist of a liability component and an equity component. The fair values of the liability component (U.S.$1,923 million) and the equity component (U.S.$77 million) were determined, using the residual method, at issuance of the bonds. The liability component is measured at amortised cost at an effective interest rate of 5.90 per cent. per annum. At issuance and each subsequent period end, the embedded derivatives were concluded to have a fair value of U.S.$ nil due to the probability weighting attributed to the related conditions. Over the first half of 2010, U.S.$300 million of additional Convertible bonds, convertible into 0.84 per cent. of Glencore's equity were issued under the same terms and conditions as those issued in December 2009, with the equity component equalling U.S.$12 million and the liability component equalling U.S.$288 million. In relation to the potential conversion, the terms of the bonds enable a conversion into 6.25 per cent. of Glencore's equity as at 31 December 2010.

**Euro, Sterling and Swiss Franc bonds**

The Group has issued bonds denominated in Euro, Sterling and Swiss Franc where, upon issuance, the principal amounts and the future interest payments were swapped into their U.S. dollar equivalent. The details of amounts issued and outstanding are as follows:

| | Maturity | Initial U.S.$ equivalent | U.S.$ fixed interest rate in % | 2008 | 2009 | 2010 |
|---|---|---|---|---|---|---|
| | | | | *(U.S.$ million)* | | |
| Euro 600 million 5.375 per cent. coupon bonds | September 2011 | 739 | 5.78 | 834 | 817 | 765 |
| Euro 850 million 5.250 per cent. coupon bonds | October 2013 | 1,078 | 6.60 | 1,171 | 1,154 | 1,080 |
| Euro 750 million 7.125 per cent. coupon bonds | April 2015 | 1,200 | 6.86 | 1,031 | 1,030 | 968 |
| Euro 1,250 million 5.250 per cent. coupon bonds | March 2017 | 1,708 | 6.07 | 0 | 0 | 1,677 |
| **Total** | | 4,725 | | 3,036 | 3,001 | 4,490 |
| GBP 650 million 6.50 per cent. coupon bonds | February 2019 | 1,266 | 6.58 | 920 | 1,013 | 999 |
| CHF 600 million 3.625 per cent. coupon bonds | April 2016 | 593 | 4.87 | 0 | 0 | 639 |
| | | 6,584 | | 3,956 | 4,014 | 6,128 |

**Perpetual notes**

U.S.$700 million 8 per cent. notes, callable after February 2011 at par. In December 2010, Glencore announced its intention to call U.S.$300 million of the outstanding notes. This partial redemption was subsequently completed on 6 February 2011. In October 2010, Glencore issued U.S.$350 million 7.5 per cent. notes, callable after October 2015 at par.

**Ordinary profit participation certificates**

Profit participation certificates ("PPC") bear interest at six month U.S.$ LIBOR and in the event of certain triggering events (see Note 14), all PPC would be subordinated to unsecured lenders.

**Committed revolving credit facilities**

In May 2010, Glencore replaced the previous 364 day U.S.$815 million revolving credit facility with a new 364-day U.S.$1,375 million facility with a one-year term out option at Glencore's discretion as well as a 364-day U.S.$515 million Asian focused tranche. In addition, Glencore replaced the U.S.$8,180 million medium-term revolving credit facility with a new three-year revolving credit facility of U.S.$8,370 million and cancelled the U.S.$6,650 million forward start facility concluded in 2009. Up to U.S.$1,000 million of the medium-term tranche may be used as liquidity back up for Glencore's corporate U.S. commercial paper programme.

**Committed secured inventory/receivables facility**

In November 2010, the Company and Glencore AG entered into a 364-day committed U.S.$1.7 billion secured inventory and receivables borrowing base facility. Under the programme, Glencore has the option to pledge up to U.S.$750 million of eligible base metals inventory or up to U.S.$1.7 billion of eligible receivables. Funds drawn under the facility bear interest at U.S.$ LIBOR plus a margin.

**Committed secured receivables facilities**

In April 2010, Glencore entered into a six-month U.S.$550 million committed secured receivables financing programme, which was extended for a further year and increased to U.S.$700 million in December 2010. Funds drawn under the facility bear interest at U.S.$ LIBOR plus a margin.

**U.S. commercial paper**

Glencore has in place a stand-alone U.S. commercial paper programme for U.S.$1,000 million rated A3 and P2, respectively, by Standard & Poor's and Moody's rating agencies. The notes issued under this programme carry interest at floating market rates and mature not more than 270 days from the date of issue.

## 16 Deferred Income

During 2006, Glencore entered into an agreement to deliver a fixed quantity of silver concentrate, a by-product from its mining operations, for a period of 15 years at a fixed price for which Glencore received an upfront payment of U.S.$285 million. The outstanding balance represents the remaining non-current portion of the upfront payment. The upfront payment is released to revenue at a rate consistent with the implied forward price curve at the time of the transaction and the actual quantities delivered.

## 17 Provisions

| | Post retirement benefits[1] | Employee entitlement[2] | Rehabilitation costs[3] | Exchange feature[4] | Other[5] | Total |
|---|---|---|---|---|---|---|

| **31 December 2010** | 60 | 98 | 379 | 0 | 182 | 719 |

Notes:

(1) See Note 18.

(2) The employee entitlement provision represents the value of state-governed employee entitlements due to employees upon their termination of employment.

(3) Rehabilitation provision represents the accrued cost required to provide adequate restoration and rehabilitation upon the completion of extraction activities. These amounts will be settled when rehabilitation is undertaken, generally at the end of a project's life, which ranges from 2 to 50 years. The Group makes contributions to rehabilitation trusts to meet some of the costs of rehabilitation liabilities in South Africa.

(4) In 2008, Glencore repurchased and cancelled all the remaining Exchangeable bonds it had previously issued and simultaneously settled the embedded derivative (exchange feature) contained therein.

(5) Other includes primarily provisions in respect of mine concession obligations of U.S.$54 million (2009: U.S.$56 million; 2008: U.S.$nil million) and construction-related contractual provisions of U.S.$29 million (2009: U.S.$45 million; 2008: U.S.$nil million).

## 18 Personnel Costs and Retirement Benefits

Total personnel costs, which includes salaries, wages, social security and other personnel costs and excludes attribution to profit participation shareholders, incurred for the year ended 31 December 2010 were U.S.$1,677 million (2009: U.S.$1,281 million; 2008: U.S.$1,363 million). Personnel costs related to consolidated industrial subsidiaries of U.S.$885 million (2009: U.S.$672 million; 2008: U.S.$791 million) are included in cost of goods sold. Other personnel costs are included in selling and administrative expenses.

The Company and certain subsidiaries sponsor various pension schemes in accordance with local regulations and practices. Eligibility for participation in the various plans is either based on completion of a specified period of continuous service, or date of hire. The plans provide for certain employee and employer contributions, ranging from 5 per cent. to 16 per cent. of annual salaries, depending on the employee's years of service. Among these schemes are defined contribution plans as well as defined benefit plans. The main locations with defined benefit plans are Switzerland, the UK and the U.S.

### Defined contribution plans

Glencore's contributions under these plans amounted to U.S.$11 million in 2010 and to U.S.$6 million in 2009 and 2008.

### Defined benefit plans

The total present value of the Group's defined benefit obligation amounted to U.S.$422 million at 31 December 2010 (2009: U.S.$363 million; 2008: U.S.$324 million) compared to the total fair value of plan assets of U.S.$267 million (2009: U.S.$232 million; 2008: U.S.$190 million). Further details of the Group's defined benefit plans are not disclosed on the basis that they are not material to the Group's financial position.

## 19 Accounts Payable

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| Trade payables | 7,445 | 8,162 | 12,450 |
| Trade advances from buyers[1] | 2,118 | 946 | 634 |
| Associated companies | 1,074 | 1,371 | 1,788 |
| Other payables and accrued liabilities | 977 | 1,003 | 1,273 |
| **Total** | 11,614 | 11,482 | 16,145 |

Note:

(1) See Note 9.

## 20 Other Financial Liabilities

| | Notes | 2008 | 2009 | 2010 |
|---|---|---|---|---|
| | | *(U.S.$ million)* | | |
| **Commodity-related contracts** | 23 | | | |
| Futures | | 8,409 | 5,747 | 4,142 |

| **Total** | | 13,591 | 8,643 | 8,066 |

## 21 Acquisition and Disposal of Subsidiaries

### 2008 Acquisitions

During 2008, Glencore completed a few smaller acquisitions which have been accounted for as business combinations. The acquisitions are not individually significant to the Historical Financial Information and are therefore presented in aggregate. The fair value of the assets acquired and liabilities assumed at the date of acquisition were:

| | 2008 |
|---|---|
| | *(U.S.$ million)* |
| Property, plant and equipment | 58 |
| Inventories | 49 |
| Accounts receivable | 77 |
| Cash and cash equivalents | 11 |
| Non-controlling interest | 114 |
| Deferred tax liabilities | (15) |
| Accounts payable | (156) |
| **Total fair value of net assets acquired** | 138 |
| Less: amounts previously recognised through investments and loans | 28 |
| Less: cash and cash equivalents acquired | 11 |
| **Net cash used in acquisition of subsidiaries** | 99 |

For the period post-acquisition, these operations contributed net income of a loss of U.S.$10 million to Glencore.

**2009 Acquisitions**

During 2009, the net cash used in the acquisition of subsidiaries related mainly to Katanga Mining Limited ("Katanga"). The fair value of the assets acquired and liabilities assumed at the date of acquisition were:

| | 2009 |
|---|---|
| | *(U.S.$ million)* |
| Property, plant and equipment | 856 |
| Goodwill | 161 |
| Inventories | 83 |
| Accounts receivable | 61 |
| Cash and cash equivalents | 242 |
| Non-controlling interest | (240) |
| Non-current borrowings | (102) |
| Provisions and other non-current borrowings | (52) |
| Deferred tax liability | (11) |
| Accounts payable | (192) |
| **Total fair value of net assets acquired** | 806 |
| Less: amounts previously recognised through investments and loans | 537 |
| Less: cash and cash equivalents acquired | 242 |
| **Net cash used in acquisition of subsidiaries** | 27 |

In January 2009, Glencore participated in a Katanga convertible loan issue via a combination of existing and new loans which, when converted on 2 June 2009, resulted in Glencore holding a 68 per cent. interest in Katanga. Shortly thereafter, Glencore acquired an additional 1.2 per cent. interest, bringing its ownership to 69.2 per cent. The acquisition has been accounted for as a business combination with the non-controlling interest being measured at fair value using discounted cash flow techniques. The total cash consideration of the acquisition, including the amounts paid prior to 2009, was U.S.$619 million. However, under IFRS, the consideration, for acquisition purposes, is deemed to be fair value of the previously held equity interests and the convertible loan determined by reference to the quoted share price on the date of acquisition. In this regard, Glencore realised a net, non-cash gain of U.S.$161 million comprising a gain on conversion of the convertible loan, offset by a loss on its original 8.5 per cent. interest in Katanga. The total consideration measured under IFRS 3 was therefore U.S.$780 million and a goodwill impairment of U.S.$161 million was recognised forthright, based on a detailed fair value assessment of the acquired assets and liabilities, using discounted cash flow techniques with a discount rate of 12 per cent.

**2010 Acquisitions**

During 2010, Glencore acquired controlling interests in various businesses, the most significant being Vasilkovskoje Gold, Chemoil Energy Limited ("Chemoil") and Pacorini. The net cash used in the

acquisition of subsidiaries and the fair value of the assets acquired and liabilities assumed at the date of acquisition are detailed below:

| | Vasilkovskoje | Chemoil | Pacorini[1] | Other[2] | Total |
|---|---|---|---|---|---|
| | | | *(U.S.$ million)* | | |
| Property, plant and equipment | 2,855 | 519 | 0 | 280 | 3,654 |
| Investments in Associates | 0 | 69 | 0 | 0 | 69 |
| Inventories | 44 | 317 | 0 | 93 | 454 |
| Accounts receivable | 103 | 703 | 0 | 76 | 882 |
| Cash and cash equivalents | 13 | 108 | 0 | 11 | 132 |
| Assets held for sale | 0 | 0 | 277 | 0 | 277 |
| Non-controlling interest | (947) | (230) | 0 | (55) | (1,232) |
| Non-current liabilities/borrowings | (14) | (166) | 0 | (61) | (241) |
| Deferred tax liabilities | (365) | (96) | 0 | 0 | (461) |
| Accounts payable | (81) | (493) | 0 | (212) | (786) |
| Current borrowings | 0 | (494) | 0 | (10) | (504) |
| Liabilities held for sale | 0 | (0) | (68) | 0 | (68) |
| **Total fair value of net assets acquired** | 1,608 | 237 | 209 | 122 | 2,176 |
| Less: amounts previously recognised through investments and loans | 1,403 | 0 | 0 | 17 | 1,420 |
| Less: cash and cash equivalents acquired | 13 | 108 | 0 | 11 | 132 |
| **Net cash used in acquisition of subsidiaries** | 192 | 129 | 209 | 94 | 624 |

Notes:

(1) Acquisition accounting determined on a provisional basis.

(2) Includes the acquisition of a 76 per cent. interest in Rio Vermelho, a 60 per cent. interest in Biopetrol Industries AG and a 100 per cent. interest in Minera Altos de Punitaqui.

**Vasilkovskoje**

In February 2010, Kazzinc purchased the remaining 60 per cent. of Vasilkovskoje Gold, a gold development company, that it did not previously own for U.S.$1,140 million to enhance its existing gold production base. The acquisition was funded through the payment of U.S.$204 million and the issuance of new Kazzinc shares, which resulted in Glencore's ultimate ownership in Kazzinc being diluted from 69 per cent. to 50.7 per cent. (without a loss of control). The dilution resulted in a loss of U.S.$99 million which has been recognised in reserves (see Note 14). Prior to acquisition, Kazzinc owned a 40 per cent. interest in Vasilkovskoje Gold which, at the date of acquisition, was revalued to its fair value of U.S.$760 million and as a result, a net gain of U.S.$462 million was recognised in other income (see Note 4). The acquisition has been accounted for as a business combination with the non-controlling interest being measured at its percentage of net assets acquired determined by using discounted cash flow techniques with a discount rate of 8.5 per cent.

For the period post-acquisition, Vasilkovskoje Gold contributed revenue of U.S.$130 million and a loss before attribution of U.S.$15 million. If the acquisition had taken place effective 1 January 2010, the operation would have contributed revenue of U.S.$131 million and a loss before attribution of U.S.$22 million.

**Chemoil**

In April 2010, Glencore completed the acquisition of a 51.5 per cent. stake in Chemoil, a Singapore-listed fuel oil storage and supply company, for U.S.$237 million cash consideration. The acquisition has been accounted for as a business combination with the non-controlling interest being measured at its percentage of net assets acquired.

For the period post-acquisition, Chemoil contributed revenue of U.S.$6,089 million and income before attribution of U.S.$4 million. If the acquisition had taken place effective 1 January 2010, the operation would have contributed revenue of U.S.$7,175 million and a loss before attribution of U.S.$3 million.

**Pacorini**

In September 2010, Glencore acquired the metals warehousing division of Italy's Pacorini Group ("Pacorini") for U.S.$209 million in cash. As contemplated at the time of the acquisition, Glencore commenced a review of the strategic alternatives to strengthen Glencore's participation in the metals warehousing business, which is expected to result in a merger involving the acquired business and a third party. As a result, the assets and liabilities have been classified as held for sale (see Note 13).

For the period post-acquisition, Pacorini contributed revenue of U.S.$64 million and income before attribution of U.S.$5 million. If the acquisition had taken place effective 1 January 2010, the operation would have contributed revenue of U.S.$220 million and an income before attribution of U.S.$31 million.

**Disposals**

In 2008, there were no material disposals of subsidiaries.

In 2009, Glencore disposed of its interests in the East Tennessee Zinc Company LLC operations.

| | 2009 |
|---|---|
| | *(U.S.$ million)* |
| Property, plant and equipment | 72 |
| Inventories | 12 |
| Accounts receivable | 52 |
| Cash and cash equivalents | 6 |
| Accounts payable | (119) |
| **Total net assets disposed** | 23 |
| Net gain on disposal | 97 |
| **Net cash proceeds** | 120 |

In 2010, there were no material disposals of subsidiaries.

## 22 Financial and Capital Risk Management

Components of Glencore's business could be impacted by various external factors, such as a major global economic downturn, which could result in significantly lower commodity prices and demand, political events, unfavourable actions by governments, natural catastrophes, operational disruptions or financial risks such as market risk (including commodity price risk, interest rate risk and currency risk), credit risk (including performance risk) and liquidity risk. It is Glencore's policy and practice to identify and, where appropriate and practical, actively manage such risks to support its objectives in managing its capital and future financial security and flexibility.

Glencore's objectives in managing its capital base (see table below) include preserving its overall financial health and strength for the benefit of all stakeholders and safeguarding its ability to continue as a going concern, while generating sustainable long-term profitability.

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| Invested capital | 16,311 | 17,944 | 22,507 |
| Less: non-controlling interests | 906 | 1,258 | 2,894 |
| **Shareholders' funds** | 15,405 | 16,686 | 19,613 |

Glencore believes that effective, proactive and transparent risk management supports its objective of protecting its current and future financial security, and is of primary importance to its success. An important component of this process is Glencore's employee ownership structure, which aligns the interests of shareholders and management, and fosters a culture of excellence, teamwork and accountability. As management has significant amounts of capital invested in Glencore, with overall compensation skewed in favour of longer term incentives, it is strongly motivated to take a long-term view of overall business performance and to protect Glencore's capital base. Glencore believes that its consistent profitability, the long-term tenure of its management and its prudent risk management policies can in part be attributed to its employee ownership structure. Furthermore, Glencore operates a number

of centralised financial, operational, compliance and legal risk management functions in order to monitor, manage and mitigate overall risk exposure, within approved guidelines.

Glencore's overall risk management programme focuses on the unpredictability of financial markets and seeks to protect its financial security and flexibility by using derivative financial instruments, where possible, to substantially hedge these financial risks. Glencore's finance and risk professionals, working in co-ordination with the commodity departments, monitor, manage and report regularly to management on the financial risks and exposures facing the Group.

Certain borrowing arrangements require compliance with specific financial covenants related to working capital, minimum current ratio and a maximum non-current debt to tangible net worth ratio. During the period, the Company has complied with these requirements.

**Commodity price risk**

Glencore is exposed to price movements for the inventory it holds and the products it produces which are not held to meet priced forward contract obligations and forward priced purchase or sale contracts which are not hedged. Glencore manages a significant portion of this exposure through futures and options transactions on worldwide commodity exchanges or in OTC markets, to the extent available. Commodity price risk management activities are considered an integral part of Glencore's physical commodity marketing activities and the related assets and liabilities are included in other financial assets from and other financial liabilities to derivative counterparties, including clearing brokers and exchanges.

Glencore has entered into futures transactions to hedge the price risk of specific future operating expenditures. These transactions were identified as cash flow hedges. The fair value of these derivatives is as follows:

| | Notional amounts | | Recognised fair values | | |
|---|---|---|---|---|---|
| | Buy | Sell | Assets | Liabilities | Maturity |
| | | | *(U.S.$ million)* | | |
| Commodity futures—2008 | 0 | 391 | 0 | 75 | 2010 |
| Commodity futures—2009 | 0 | 195 | 0 | 41 | 2011 |
| Commodity futures—2010 | 0 | 187 | 0 | 75 | 2012 |

**Value at risk**

One of the tools used by Glencore to monitor and limit its primary market risk exposure, namely commodity price risk related to its physical marketing activities, is the use of a value at risk ("VaR") computation. VaR is a risk measurement technique, which estimates the potential loss that could occur on risk positions as a result of movements in risk factors over a specified time horizon, given a specific level of confidence. The VaR methodology is a statistically defined, probability based approach that takes into account market volatilities, as well as risk diversification by recognising offsetting positions and correlations between commodities and markets. In this way, risks can be measured consistently across all markets and commodities and risk measures can be aggregated to derive a single risk value. Glencore has set a consolidated VaR limit (one day 95 per cent.) of U.S.$100 million representing less than 1 per cent. of Glencore shareholders' funds.

Glencore uses a VaR approach based on Monte Carlo simulations and is either a one-day or one-week time horizon computed at a 95 per cent. confidence level with a weighted data history.

Daily position sheets are distributed and monitored, and weekly Monte Carlo simulations are applied to the various business groups' net marketing positions to determine potential future exposures. As at 31 December 2010, Glencore's 95 per cent., one-day market risk VaR was U.S.$58 million (2009: U.S.$28 million; 2008: U.S.$53 million). Average market risk VaR (one-day 95 per cent.) during 2010 was U.S.$43 million compared to U.S.$27 million during 2009 and to U.S.$50 million in 2008.

VaR does not purport to represent actual gains or losses in fair value on earnings to be incurred by Glencore, nor does Glencore claim that these VaR results are indicative of future market movements or representative of any actual impact on its future results. VaR should always be viewed in the context of its limitations; notably, the use of historical data as a proxy for estimating future events, market illiquidity risks and tail risks. Glencore recognises these limitations, and thus complements and continuously refines its VaR analysis by analysing forward-looking stress scenarios and back-testing calculated VaR against

actual movements arising in the next business week. During 2009 and 2008, certain commodities that Glencore markets and accounts for at fair value were not included in the VaR calculation as well established and liquid price points were not available. These positions are nonetheless reported on the daily position sheets and assuming the net year end positions had been outstanding for the whole year, and market prices were 5 per cent. higher/lower and all other variables held constant, Glencore's income and shareholders' funds for the year ended 31 December 2009, would have decreased/increased by U.S.$30 million (2008: decrease/increase by U.S.$14 million). During 2010, all key commodities which Glencore markets have been included in the VaR analysis.

**Net present value at risk**

Glencore's future cash flows related to its forecast energy, minerals and agricultural production activities are also exposed to commodity price movements. Glencore manages this exposure through a combination of portfolio diversification, occasional shorter term hedging via futures and options transactions, insurance products and continuous internal monitoring, reporting and quantification of the underlying operations' estimated valuations.

**Interest rate risk**

Glencore is exposed to various risks associated with the effects of fluctuations in the prevailing levels of market interest rates on its assets and liabilities and cash flows. Matching of assets and liabilities is utilised as the dominant method to hedge interest rate risks. Floating-rate debt which is predominantly used to fund fast turning working capital (interest is internally charged on the funding of this working capital) is primarily based on U.S.$ LIBOR plus an appropriate premium. Accordingly, prevailing market interest rates are continuously factored into transactional pricing and terms.

Assuming the amount of floating-rate liabilities at the reporting period end were outstanding for the whole year, interest rates were 50 basis points higher/lower and all other variables held constant, Glencore's income and shareholders' funds for the year ended 31 December 2010 would decrease/increase by U.S.$91 million (2009: decrease/increase by U.S.$71 million; 2008: decrease/increase by U.S.$64 million).

**Currency risk**

The U.S. dollar is the predominant functional currency of the Group. Currency risk is the risk of loss from movements in exchange rates related to transactions and balances in currencies other than the U.S. dollar. Such transactions include operating expenditure, capital expenditure and, to a lesser extent, purchases and sales in currencies other than the functional currency. Purchases or sales of commodities concluded in currencies other than the functional currency, apart from certain limited domestic sales at industrial operations which act as a hedge against local operating costs, are promptly hedged through forward exchange contracts. Consequently, foreign exchange movements against the U.S. dollar on recognised transactions would have a negligible financial impact. Glencore enters into currency hedging transactions with leading financial institutions.

Glencore's debt related payments (both principal and interest) are denominated in or swapped using hedging instruments into U.S. dollars. Glencore's operating expenses, being a small portion of its revenue base, are incurred in a mix of currencies of which the U.S. dollar, Swiss Franc, Pound Sterling, Australian Dollar and Euro are the predominant currencies.

Glencore has issued Euro-, Swiss Franc- and Sterling-denominated bonds (see Note 15). Cross currency swaps were concluded to hedge the currency risk on the principal and related interest payments of these bonds. These contracts were designated as cash flow hedges of the foreign currency risks associated with the bonds. The fair value of these derivatives is as follows:

| | Notional amounts | | Recognised fair values | | Average maturity[1] |
|---|---|---|---|---|---|
| | Buy | Sell | Assets | Liabilities | |
| | | | *(U.S.$ million)* | | |
| Cross currency swap agreements—2008 | 0 | 4,283 | 0 | 384 | 2015 |
| Cross currency swap agreements—2009 | 0 | 4,283 | 0 | 48 | 2015 |
| Cross currency swap agreements—2010 | 0 | 6,584 | 0 | 185 | 2015 |

Note:

(1) Refer to Note 15 for details.

**Credit risk**

Credit risk arises from the possibility that counterparties may not be able to settle obligations due to Glencore within their agreed payment terms. Financial assets which potentially expose Glencore to credit risk consist principally of cash and cash equivalents, marketable securities, receivables and advances, derivative instruments and non-current advances and loans. Glencore's credit management process includes the assessment, monitoring and reporting of counterparty exposure on a regular basis. Glencore's cash equivalents are placed overnight with a diverse group of highly credit rated financial institutions. Credit risk with respect to receivables and advances is mitigated by the large number of customers comprising Glencore's customer base, their diversity across various industries and geographical areas, as well as Glencore's policy to mitigate these risks through letters of credit, netting, collateral and insurance arrangements, where appropriate. Additionally, it is Glencore's policy that transactions and activities in trade-related financial instruments be concluded under master netting agreements or long-form confirmations to enable offsetting of balances due to/from a common counterparty in the event of default by the counterparty.

Glencore actively and continuously monitors the credit quality of its counterparties through internal reviews and a credit scoring process, which includes, where available, public credit ratings. Balances with counterparties not having a public investment grade or equivalent internal rating are typically enhanced to investment grade through the extensive use of credit enhancement products, such as letters of credit or insurance products. Glencore has a diverse customer base, with no customer representing more than 3.4 per cent. (2009: 2.3 per cent.; 2008: 2.8 per cent.) of its trade receivables or accounting for more than 3 per cent. of its revenues over the year ended 2010 (2.8 per cent. in 2009 and 2008).

The maximum exposure to credit risk, without considering netting agreements or without taking account of any collateral held or other credit enhancements, is equal to the carrying amount of Glencore's financial assets plus guarantees to third parties and Associates (see Note 25).

**Performance risk**

Performance risk arises from the possibility that counterparties may not be willing or able to meet their future contractual physical sale or purchase obligations to/from Glencore. Glencore undertakes the assessment, monitoring and reporting of performance risk within its overall credit management process. Glencore's market breadth, diversified customer base as well as the standard pricing mechanism in the majority of Glencore's commodity portfolio which does not fix prices beyond three months, with the main exception being coal where longer-term fixed price contracts are common, ensure that performance risk is adequately mitigated. The commodity industry is continuing a trend towards shorter fixed price contract periods, in part to mitigate against such potential performance risk, but also due to the development of more transparent and liquid spot markets, e.g. coal and iron ore and associated derivative products and indexes.

**Liquidity risk**

Liquidity risk is the risk that Glencore is unable to meet its payment obligations when due, or that it is unable, on an ongoing basis, to borrow funds in the market on an unsecured or secured basis at an acceptable price to fund actual or proposed commitments. Prudent liquidity risk management implies maintaining sufficient cash and cash equivalents through the availability of adequate committed funding facilities. Glencore has set itself an internal minimum liquidity target to maintain at all times, available committed undrawn credit facilities of U.S.$3 billion. Glencore's credit profile, diversified funding sources and committed credit facilities, ensure that sufficient liquid funds are maintained to meet its liquidity requirements. As part of its liquidity management, Glencore closely monitors and plans for its future capital expenditure and proposed investments, as well as credit facility refinancing/extension requirements, well ahead of time.

Glencore's financial forecasts and projections, taking into account reasonably possible changes in performance, indicate it is appropriate to adopt the going concern basis in preparing these financial statements.

As at 31 December 2010, Glencore had available committed undrawn credit facilities, cash and marketable securities amounting to U.S.$4,220 million (2009: U.S.$3,826 million; 2008: U.S.$5,255 million).

The maturity profile of Glencore's financial liabilities, excluding amounts attributed to profit participation shareholders, based on the contractual terms is as follows:

| | 2008 | | | | | |
|---|---|---|---|---|---|---|
| | After 5 years | Due 3–5 years | Due 2–3 years | Due 1–2 years | Due 0–1 years | Total |
| | | | *(U.S.$ million)* | | | |
| Borrowings[1] | 3,684 | 1,505 | 7,048 | 834 | 5,245 | 18,316 |
| Expected future interest payments | 882 | 623 | 516 | 527 | 527 | 3,075 |
| Accounts payable | 0 | 0 | 0 | 0 | 11,614 | 11,614 |
| Other financial liabilities | 0 | 0 | 2,119 | 3,139 | 8,333 | 13,591 |
| **Total** | 4,566 | 2,128 | 9,683 | 4,500 | 25,719 | 46,596 |
| Current assets | | | | | 36,508 | 36,508 |

| | 2009 | | | | | |
|---|---|---|---|---|---|---|
| | After 5 years | Due 3–5 years | Due 2–3 years | Due 1–2 years | Due 0–1 years | Total |
| | | | *(U.S.$ million)* | | | |
| Borrowings[1] | 2,943 | 4,344 | 5,507 | 3,950 | 6,845 | 23,589 |

| Current assets | | | | | 44,296 | 44,296 |

Note:

(1) 2008: U.S.$ nil million; 2009: U.S.$341 million; 2010: U.S.$ nil million of reported short-term debt is drawn under a three-year committed facility.

## 23 Financial Instruments

### Fair value of financial instruments

The following table presents the carrying values and fair values of Glencore's financial instruments. Fair value is the amount at which a financial instrument could be exchanged in an arm's length transaction between informed and willing parties, other than in a forced or liquidated sale. Where available, market values have been used to determine fair values. When market values are not available, fair values have been calculated by discounting expected cash flows at prevailing interest and exchange rates. The estimated fair values have been determined using market information and appropriate valuation

methodologies, but are not necessarily indicative of the amounts that Glencore could realise in the normal course of business.

| | 2008 | | | | |
|---|---|---|---|---|---|
| | Carrying value[1] | Available for sale | FVtPL[2] | Total | Fair value |

Notes:

(1) Carrying value comprises investments, loans, accounts receivable, accounts payable and other liabilities measured at amortised cost.

(2) FVtPL—Fair value through profit and loss—held for trading.

(3) Other investments contain U.S.$2,438 million in Level 1. As at 31 December 2009, U.S.$2,624 million of other investments were considered Level 3 valuations, which during 2010 U.S.$2,003 million were reclassified to Level 1 following UCR's listing on the Hong Kong Stock Exchange in January 2010 (see Note 7) and as a result of the Russneft debt amendment and restatement (see Note 8), U.S.$285 million of equity conversion advances were reclassified from other investments to non-current advances (a Level 2 fair value measurement) and the balance of the Russneft investment and the opening Level 3 valuation amount (U.S.$336 million) was impaired.

The following tables show the fair values of the derivative financial instruments including trade financial and physical forward purchase and sale commitments by type of contract as at 31 December 2008, 2009 and 2010. Fair values are primarily determined using quoted market prices or standard pricing models using observable market inputs where available and are presented to reflect the expected gross future cash in/outflows. Glencore classifies the fair values of its financial instruments into a three-level hierarchy based on the degree of the source and observability of the inputs that are used to derive the fair value of the financial asset or liability as follows:

Level 1: unadjusted quoted inputs in active markets for identical assets or liabilities; or

Level 2: inputs other than quoted inputs included in Level 1 that are directly or indirectly observable in the market; or

Level 3: unobservable market inputs or observable but cannot be market corroborated, requiring Glencore to make market-based assumptions.

Level 1 classifications primarily include futures with a tenor of less than one year and options that are exchange traded. Level 2 classifications primarily include futures with a tenor greater than one year, OTC options, swaps and physical forward transactions which derive their fair value primarily from exchange quotes and readily observable broker quotes. Level 3 classifications primarily include physical forward transactions which derive their fair value predominately from models that use broker quotes and applicable market-based estimates surrounding location, quality and credit differentials. In circumstances where Glencore cannot verify fair value with observable market inputs (Level 3 fair values), it is possible that a different valuation model could produce a materially different estimate of fair value.

It is Glencore's policy that transactions and activities in trade-related financial instruments be concluded under master netting agreements or long-form confirmations to enable balances due to/from a common counterparty to be offset in the event of default by the counterparty.

## 24 Future Commitments

Capital expenditure for the acquisition of property, plant and equipment is generally funded through the cash flow generated by the respective industrial entities. As at 31 December 2010, U.S.$787 million (2009: U.S.$815 million; 2008: U.S.$967 million), 100 per cent. of which relates to expenditure to be incurred over the next year (2009: 63 per cent.; 2008: 42 per cent.), was contractually committed for the acquisition of property, plant and equipment.

Certain of Glencore's exploration tenements and licences require it to spend a minimum amount per year on development activities, a significant portion of which would have been incurred in the ordinary course of operations. As at 31 December 2010, U.S.$404 million (2009: U.S.$284 million; 2008: U.S.$262 million) of such development expenditures are to be incurred, of which 36 per cent. are for commitments to be settled over the next year.

Glencore procures seagoing vessel/chartering services to meet its overall marketing objectives and commitments. At year end, Glencore has committed to future hire costs to meet future physical delivery and sale obligations and expectations of U.S.$2,608 million (2009: U.S.$2,185 million; 2008: U.S.$2,880 million) of which U.S.$325 million (2009: U.S.$272 million; 2008: U.S.$nil million) are with associated companies. 50 per cent. of these charters are for services to be received over the next two years.

As part of Glencore's ordinary sourcing and procurement of physical commodities and other ordinary marketing obligations, the selling party may request that a financial institution act as either (a) the paying party upon the delivery of product and qualifying documents through the issuance of a letter of credit or (b) the guarantor by way of issuing a bank guarantee accepting responsibility for Glencore's contractual obligations. As at 31 December 2010, U.S.$8,956 million (2009: U.S.$7,178 million; 2008: U.S.$5,450 million) of such commitments have been issued on behalf of Glencore, which will generally be settled with the payment for such commodity.

Glencore has entered into various operating leases mainly as lessee for office and warehouse/storage facilities. Rental expenses for these leases totalled, respectively, U.S.$62 million, U.S.$53 million and U.S.$66 million for the years ended 31 December 2008, 2009 and 2010. Future net minimum lease payments under non-cancellable operating leases are as follows:

| | 2008 | 2009 | 2010 |
|---|---|---|---|
| | *(U.S.$ million)* | | |
| Within one year | 15 | 26 | 97 |
| Between two and five years | 47 | 51 | 225 |
| After five years | 110 | 93 | 151 |
| **Total** | 172 | 170 | 473 |

**Future development and related commitments**

Prodeco currently exports the majority of its coal through Puerto Zuñiga which operates under a private concession awarded by the Colombian government. The concession expired in March 2009; however, the Colombian government has continued to grant Prodeco the right to use the port under annual lease agreements. To comply with new government regulations on loading methods, which became effective from July 2010 and to alleviate itself from the uncertainty of the annual concession renewal process associated with Puerto Zuñiga, Prodeco has initiated the construction of a new, wholly owned, port facility (Puerto Nuevo) which is estimated to cost U.S.$520 million and be commissioned during the first half of 2013. If the concession does not continue to be extended, Prodeco's export capability would be curtailed, which could significantly impact operations until Puerto Nuevo is operational. As at 31 December 2010, U.S.$55 million of the estimated initial investment has been incurred.

In August 2010, Glencore acquired an ultimate 37.5 per cent. interest in the Kansuki concession ("Kansuki"), a 180 square kilometre copper and cobalt pre-development project which borders Glencore's partly-owned Mutanda concession in the DRC. In exchange, Glencore has (a) an obligation to finance the first U.S.$400 million of development related expenditures, if any, as and when such expenditure gets incurred, (b) the right to operate the operations and (c), a life of mine off-take agreement for all copper and cobalt produced by Kansuki. In addition, one of the partners in Kansuki has the right to sell an additional 18.75 per cent. ultimate interest to Glencore at the then calculated equity value of the operation, at the earlier of the date the operation produces a minimum annual 70,000 metric tonnes of copper and August 2013. Kansuki is currently completing its initial feasibility study for submission by June 2011. As at 31 December 2010, U.S.$11 million of development expenditure had been incurred.

In November 2010, Glencore and Blackthorn Resources Limited completed a joint venture agreement to develop the Perkoa Zinc Project ("Perkoa") located in Burkina Faso, West Africa. Under the terms of the agreement, Glencore will obtain a 50.1 per cent. effective ownership in Perkoa in exchange for (a) an obligation to finance the first U.S.$80 million of development related expenditures, if any, as and when such expenditure gets incurred, (b) the right to operate the operations and (c) a life of mine off-take agreement for all zinc produced by Perkoa. As at 31 December, 2010, U.S.$ nil million of development expenditure had been incurred.

## 25 Contingent Liabilities

The amount of corporate guarantees in favour of associated and third parties as at 31 December 2010, was U.S.$69 million (2009: U.S.$73 million and 2008: U.S.$66 million). Also see Note 7.

### Litigation

Certain legal actions, other claims and unresolved disputes are pending against Glencore. Whilst Glencore cannot predict the results of any litigation, it believes that it has meritorious defenses against those actions or claims. Glencore believes the likelihood of any liability arising from these claims to be remote and that the liability, if any, resulting from any litigation will not have a material adverse effect on its consolidated income, financial position or cash flows.

### Environmental contingencies

Glencore's operations, predominantly those arising from the ownership in industrial investments, are subject to various environmental laws and regulations. Glencore is in material compliance with those laws and regulations. Glencore accrues for environmental contingencies when such contingencies are probable and reasonably estimable. Such accruals are adjusted as new information develops or circumstances change. Recoveries of environmental remediation costs from insurance companies and other parties are recorded as assets when the recoveries are virtually certain. At this time, Glencore is unaware of any material environmental incidents at its locations.

### Bolivian constitution

In 2009, the Government of Bolivia enacted a new constitution. One of the principles of the constitution requires mining entities to form joint ventures with the government. Glencore, through its subsidiary Sinchi Wayra, has, in good faith, entered into negotiations with the Bolivian government regarding this requirement. Whilst progress has been made, the final outcome and the timing thereof cannot be determined at this stage.

## 26 Related Party Transactions

In the normal course of business, Glencore enters into various arm's length transactions with related parties (primarily Xstrata), including fixed price commitments to sell and to purchase commodities, forward sale and purchase contracts, agency agreements and management service agreements. Outstanding balances at period end are unsecured and settlement occurs in cash (see Notes 8, 10, 13 and 19). There have been no guarantees provided or received for any related party receivables or payables.

Related party transactions, unless discussed elsewhere in the notes to the Historical Financial Information, are summarised below. The principal related parties are included in Notes 14 and 28. All transactions between Glencore and its subsidiaries are eliminated on consolidation along with any unrealised profits and losses between its subsidiaries and Associates.

| 2008 | Associated companies | Parent companies | Total |
|---|---|---|---|
| | | *(U.S.$ million)* | |
| Sales | 786 | 0 | 786 |

| Agency expense | (5) | 0 | (5) |

**Remuneration of key management personnel**

The remuneration of directors and other members of key management personnel recognised in the statement of income, including salaries and other current employee benefits amounted to U.S.$146 million (2009: U.S.$148 million; 2008: U.S.$149 million) and amounts attributable to profit participation amounts are U.S.$938 million (2009: U.S.$291 million; 2008: U.S.$242 million). As at 31 December 2010, included in the amounts attributable to profit participation shareholders are U.S.$6,130 million (2009: U.S.$5,192 million; 2008: U.S.$4,901 million).

## 27 Subsequent Events

Subsequent to year end, the following significant events occurred:

In January, Glencore issued CHF 225 million (U.S.$235 million) 3.625 per cent. interest-bearing bonds due April 2016, increasing the size of this CHF bond series to CHF 825 million. The proceeds from this bond issue (plus U.S.$65 million in cash on hand) were used to redeem U.S.$300 million of the U.S.$700 million 8 per cent. perpetual notes.

In February 2011, Glencore concluded a new one year committed U.S.$600 million European oil receivables borrowing base facility.

In April 2011, Glencore agreed with Verny to acquire additional stakes in Kazzinc. These purchases will increase its ownership from 50.7 per cent. to 93.0 per cent. for a total transaction consideration of $3.2 billion. Subject to the satisfaction of certain conditions (including Glencore completing the International Offer and obtaining applicable regulatory approvals), the consideration will be settled through the issuance of U.S.$1 billion of Ordinary Shares at the Offer Price and U.S.$2.2 billion in cash (to be paid in tranches between October and December 2011). The acquisition, if completed, will be accounted for under IAS 27 *Consolidated and Separate Financial Statements* as an equity transaction (a transaction with owners in their capacity as owners) and on the date of completion will result in a net decrease in total equity on Glencore's consolidated statement of financial position of U.S.$2.2 billion equating to the cash component of the consideration. There will be no change to the underlying assets and liabilities of Kazzinc in Glencore's consolidated statement of financial position. Following the date of closing an additional 42.3 per cent. of Kazzinc's income thereafter will be attributable to equity holders of Glencore with the remaining 7 per cent. being attributed to the non controlling interests in Kazzinc.

On 3 May 2011, Glencore replaced the previous 364 day U.S.$1,375 million and the U.S.$515 million Asian focused tranche revolving credit facilities with two new 364 day revolving credit facilities for U.S.$2,925 million and U.S.$610 million, both with a one year extension option at the borrower's discretion. In addition, Glencore extended the final maturity of U.S.$8,340 million of the U.S.$8,370 million medium term revolver for a further year to May 2014. In aggregate, the three tranches represent an increase in committed available liquidity of U.S.$1,645 million.

4 May 2011

Dear Sirs

**Glencore International plc (the "Company")**

We report on the pro forma financial information (the "Pro forma financial information") in respect of Glencore International AG (the "Operating Company") and its subsidiaries (together with the Operating Company, the "Operating Group") set out in Section VII: "Unaudited Pro-Forma Financial Information" of the prospectus dated 4 May 2011 of Glencore International plc (the "Company") prepared in connection with the Company's admission to listing on the premium segment of the Official List of the Financial Services Authority and admission to trading on the London Stock Exchange of the ordinary shares of the Company (the "UK Listing") (the "UK Prospectus") and having regard to the waivers granted by the Stock Exchange of Hong Kong Limited ("HKSE") in connection with the secondary listing of the ordinary shares of the Company on the Main Board of the HKSE (the "HK Listing") (the "HK Prospectus"), (the UK Prospectus and HK Prospectus together being the "Investment Circular") which has been prepared on the basis described in notes 1 to 5, for illustrative purposes only, to provide

information about how the transaction might have affected the financial information presented on the basis of the accounting policies to be adopted by the Company in preparing the financial statements for the period ended 31 December 2011. It is intended that the Company will acquire the entire issued share capital of the Operating Company prior to the implementation of the UK Listing. The Pro Forma Financial Information is therefore based on the consolidated audited historical financial information of the Operating Group at 31 December 2010 contained in Section VI: "Historical Financial Information" of the Investment Circular. No adjustments have been made to reflect the results or any other activity of the Operating Group since 31 December 2010. This report is required by Annex I item 20.2 of Commission Regulation (EC) No 809/2004 (the "Prospectus Directive Regulation"), and is given for the purpose of complying with that requirement and for no other purpose.

**Responsibilities**

It is the responsibility of the directors of the Company (the "Directors") to prepare the pro forma financial information in accordance with Annex I item 20.2 and Annex II items 1 to 6 of the Prospectus Directive Regulation.

It is our responsibility to form an opinion, in accordance with Annex I item 20.2 of the Prospectus Directive Regulation, as to the proper compilation of the pro forma financial information and to report that opinion to you in accordance with Annex II item 7 of the Prospectus Directive Regulation.

Save for any responsibility arising under Prospectus Rule 5.5.3R (2)(f), Chapter 4 of the HKSE Rules Governing the Listing of Securities on the Stock Exchange of Hong Kong Limited (the "HK Listing Rules") and the Companies Ordinance (Cap. 32) of the Laws of Hong Kong (the "Companies Ordinance"), except where waivers have been granted by the HKSE to any person as and to the extent there provided, to the fullest extent permitted by law we do not assume any responsibility and will not accept any liability to any other person for any loss suffered by any such other person as a result of, arising out of, or in accordance with this report or our statement, required by and given solely for the purposes of complying with Annex I item 23.1 of the Prospectus Directive Regulation, and consenting to its inclusion in the Prospectus.

Our responsibilities in relation to the UK Prospectus relate only to the UK Listing and our responsibilities in relation to the Hong Kong Prospectus relate only to the Hong Kong Listing.

In providing this opinion we are not updating or refreshing any reports or opinions previously made by us on any financial information used in the compilation of the pro forma financial information, nor do we accept responsibility for such reports or opinions beyond that owed to those to whom those reports or opinions were addressed by us at the dates of their issue.

**Basis of Opinion**

We conducted our work in accordance with the Standards for Investment Reporting issued by the Auditing Practices Board in the United Kingdom. The work that we performed for the purpose of making this report, which involved no independent examination of any of the underlying financial information, consisted primarily of comparing the unadjusted financial information with the source documents, considering the evidence supporting the adjustments and discussing the pro forma financial information with the Directors.

We planned and performed our work so as to obtain the information and explanations we considered necessary in order to provide us with reasonable assurance that the pro forma financial information has been properly compiled on the basis stated and that such basis is consistent with the accounting policies of the Company.

Our work has not been carried out in accordance with auditing or other standards and practices generally accepted in jurisdictions outside the United Kingdom, including the United States of America, and accordingly should not be relied upon as if it had been carried out in accordance with those standards or practices.

**Opinion**

In our opinion:

(a) the pro forma financial information has been properly compiled on the basis stated; and

(b) such basis is consistent with the accounting policies of the Company.

**Declaration**

For the purposes of Prospectus Rule 5.5.3R(2)(f), we are responsible for this report as part of the UK Prospectus and declare that we have taken all reasonable care to ensure that the information contained in this report is, to the best of our knowledge, in accordance with the facts and contains no omission likely to affect its import. This declaration is included in the UK Prospectus in compliance with Annex I item 1.2 of the Prospectus Directive Regulation.

Yours faithfully

## SUB-SECTION B: UNAUDITED PRO FORMA NET ASSETS STATEMENT

The unaudited pro forma statement of net assets has been prepared to illustrate the effect of the Global Offer on the net assets of the Company as if the Global Offer had taken place on 31 December 2010. The unaudited pro forma statement of net assets has been prepared for illustrative purposes only and, because of its nature, addresses a hypothetical situation and therefore does not reflect the Glencore Group's actual financial position or results.

The unaudited pro forma statement of net assets is based on the consolidated audited historical balance sheet of the Glencore Group at 31 December 2010 contained in Section VI: "Historical Financial Information" of the Prospectus and has been prepared in a manner consistent with the accounting policies adopted by the Company in preparing such information. The unaudited pro forma statement of net assets is complied on the basis set out in the notes below and in accordance with the requirements of item 20.2 of Annex I and items 1 to 6 of Annex II to the Prospectus Rules. No adjustment has been made to reflect the results or any other activity of the Glencore Group since 31 December 2010.

Notes:

(1) Glencore International plc was incorporated on 14 March 2011 and will be the new holding company for the Glencore Group at UK Admission. Since incorporation, it has not traded, has not entered into any transactions and has no material equity or reserves. No financial information for Glencore International plc has been audited.

(2) The consolidated net assets of Glencore International AG as at 31 December 2010 have been extracted without material adjustment from the audited historical financial information of the Glencore Group, as set out in Section VI: "Historical Financial Information".

(3) The estimated net proceeds of the Global Offer are calculated based on an assumed Offer Price of U.S.$8.83 (being the U.S.$ equivalent of the mid-point of the Offer Price Range), after deduction of underwriting fees and other related costs and expenses, and takes no account of any Ordinary Shares which may be issued upon exercise of the Over-Allotment Option, as follows:

| | |
|---|---|
| Gross proceeds from the Global Offer | U.S.$7,891 million |
| Costs and expenses (including taxes) of the Global Offer | U.S.$435 million |
| Net proceeds from the Global Offer | U.S.$7,456 million |

(4) Prior to the Restructuring, Glencore International was entitled to Swiss tax deductions in respect of the profit participating certificates held by employees. As a result of the Restructuring, employees will cease to hold the profit participating certificates. The Restructuring will crystallise Swiss tax deductions of U.S.$4,785 million and will result in a deferred tax asset in Glencore International with a value of U.S.$444 million (net of other tax adjustments).

(5) The consideration for the Kazzinc Tranche 1 Acquisition and the Kazzinc Tranche 2 Acquisition (respectively U.S$1.0 billion of Ordinary Shares at the Offer Price and US$2.2 billion of cash) have not been included in the pro forma statement of net assets as they are subject to certain conditions including receipt of applicable regulatory approvals. The acquisition, if completed, will result in a net decrease in net assets of U.S.$2.2 billion equating to the cash component of the consideration. There would be no impact on pro forma net assets arising from the consideration to be satisfied by the issuance of the U.S.$1 billion of Ordinary Shares at the Offer Price.

(6) Save for the adjustment for the net proceeds of the Global Offer and for the deferred tax assets arising from the Restructiring as described in Notes 3 and 4 above respectively, no adjustment has been made to reflect the trading results or any other transaction of the Glencore Group since 31 December 2010.

## 1 Structure of the Global Offer

This Prospectus is published in connection with the Global Offer. Citi and Morgan Stanley are the Joint Sponsors in relation to UK Admission. Citigroup Global Markets U.K. Equity Limited, Morgan Stanley and Credit Suisse are the Joint Global Co-ordinators of the Global Offer. BNP Paribas, Citigroup Global Markets U.K. Equity Limited, Credit Suisse, Merrill Lynch and MSSL have been appointed as Joint Bookrunners in relation to the International Offer. Citi Asia and Morgan Stanley Asia are the Joint Sponsors in relation to HK Admission. BNP Paribas, Citi Asia, Credit Suisse Asia, Merrill Lynch Asia and Morgan Stanley Asia are the HK Joint Bookrunners of the Hong Kong Offer. The Global Offer comprises:

(a) the International Offer: the making available of up to 1,218,750,000 Ordinary Shares (subject to adjustment as described below and assuming that the Over-Allotment Option is not exercised), being the International Offer Shares, to qualified investors in certain Member States, including to institutional investors in the United Kingdom and Hong Kong and to certain other institutional investors outside the U.S. in reliance on Rule 144A or another exemption from, or transaction not subject to, the registration requirements of the Securities Act; and

(b) the Hong Kong Offer: the making available of 31,250,000 Ordinary Shares (subject to adjustment as described below), being the Hong Kong Offer Shares, to the public and professional investors in Hong Kong.

Based on the assumptions referred to below, the Offer Shares which are the subject of the Global Offer are expected to comprise:

- an issue by the Company of 893,292,886 new Ordinary Shares, representing 12.9 per cent. of the expected issued Ordinary Share capital of the Company immediately following Admission, based on an Offer Price at the mid-point of the Offer Price Range and assuming the Over-Allotment Option is not exercised and no Kazzinc Consideration Shares have been issued; and
- the sale by the Selling Shareholder of 238,782,586 existing Ordinary Shares (such Ordinary Shares to be sold in the International Offer only, representing 3.5 per cent. of the expected issued Ordinary Share capital of the Company immediately following Admission, based on an Offer Price at the mid-point of the Offer Price Range and assuming the Over-Allotment Option is not exercised and no Kazzinc Consideration Shares have been issued.

Pursuant to the Global Offer, the Company intends to raise net proceeds of approximately U.S.$7,456 million, net of underwriting commissions, other estimated fees and expenses and Swiss federal issuance stamp tax payable in connection with Restructuring and the Global Offer, by the issue of 893,292,886 new Ordinary Shares (assuming that the Offer Price is at the mid-point of the Offer Price Range and the Over-Allotment Option is not exercised).

Prior to UK Admission, the Sale Shares will be sold to the Selling Shareholder in order to facilitate the sale of the Sale Shares in the Global Offer. The net proceeds of sale of the Sale Shares in the Global Offer will be received by the Selling Shareholder and paid to Existing Shareholders to enable those Existing Shareholders to meet their tax liabilities and to repay a small tranche of outstanding loans extended by companies within the Glencore Group.

In certain jurisdictions, the Group has a primary obligation to settle tax liabilities on behalf of Existing Shareholders in connection with the Global Offer. The Company will recover amounts paid or to be paid by companies within the Glencore Group under these obligations, as well as amounts owed to companies within the Glencore Group under the small tranche of loans as referred to above, from the proceeds of sale of the Sale Shares.

An aggregate amount of approximately U.S.$2,072 million, net of underwriting commissions, will be raised in the Global Offer by the sale of the Sale Shares by the Selling Shareholder in the International Offer (assuming that the Offer Price is at the mid-point of the Offer Price Range). Save as set out above, the Company will not receive any portion of net proceeds from the sale of the Sale Shares by the Selling Shareholder.

The Selling Shareholder has been incorporated for the purpose of aggregating the Sale Shares and selling them in the International Offer. The Selling Shareholder is expected to have fulfilled its

obligations in respect of the Sale Shares and their sale in the International Offer at or immediately after UK Admission.

The Global Offer will be fully underwritten by the Underwriters in accordance with the terms of the Underwriting Agreement, including the satisfaction of the conditions set out therein (including UK Admission becoming effective by no later than 8.00 a.m. on 24 May 2011 or such later time and/or date as the Company and the Joint Global Co-ordinators may agree, the Restructuring having been completed in accordance with all material terms, and the Company, the Selling Shareholder and the Underwriters agreeing to enter into a Pricing Agreement) and in accordance with their respective commitments as set out in the Underwriting Agreement. The International Managers may arrange sub-underwriting for some, all or none of the Offer Shares. See paragraph 4 of this Section VIII below.

Certain restrictions that apply to the distribution of this Prospectus and the Ordinary Shares being issued and sold under the Global Offer in jurisdictions outside the United Kingdom are described in paragraph 12 of this Section VIII below.

The terms of the Global Offer are subject to change, and any terms to be varied shall be agreed between the Company (through its Board), the Selling Shareholder and the Joint Global Co-ordinators (on behalf of the Banks).

In particular, in the event that the Company, the Selling Shareholder and the Joint Global Co-ordinators (on behalf of the Banks) decide following the date of this Prospectus not to proceed with the Hong Kong Offer, the parties reserve the right to proceed with the International Offer only and the Hong Kong Offer Shares may be made available in the International Offer on the basis of the information contained in this Prospectus as described below.

The Company, in consultation with the Joint Global Co-ordinators, reserves the right at any stage from the date of this Prospectus up until mid-day (Hong Kong time) on the business day before the publication of the Hong Kong Prospectus, not to proceed with HK Admission and/or the Hong Kong Offer. Should the Company decide not to proceed with HK Admission and/or the Hong Kong Offer, no supplemental prospectus will be issued by the Company and the Global Offer will proceed on the basis of the International Offer and UK Admission only. In addition, the Company and the Joint Global Co-ordinators will consider the ability to upsize the International Offer with some or all of the Ordinary Shares which the Company was reserving for the Hong Kong Offer. If applicable, the Company will communicate this proposed upsizing of the International Offer to each applicant who has applied for Ordinary Shares in the International Offer. Such applicants will be able to apply for such additional Ordinary Shares up until the Price Determination Date. The Company would then announce the final size of the International Offer in the Pricing Statement which is expected to be published on or around 19 May 2011.

In this situation, all references in this document to HK Admission, the Hong Kong Offer and/or Hong Kong Offer Shares, Hong Kong Offer Price and HK Sponsors (and the times and dates relating thereto) should be disregarded.

1.1 **The International Offer**

1.1.1 **Allocation**

The Underwriters will solicit from prospective investors indications of interest in acquiring Ordinary Shares under the International Offer. Prospective investors will be required to specify the number of International Offer Shares which they would be prepared to acquire either at specified prices or at the Offer Price (as finally determined). Subject to the Joint Global Co-ordinators and the Company determining allocations, there is no minimum or maximum number of International Offer Shares which can be applied for. The Company and the Joint Global Co-ordinators shall together discuss and agree the final book of demand for, and allocations of, the International Offer Shares.

1.1.2 **Reallocation of Offer Shares between the International Offer and the Hong Kong Offer**

The total number of International Offer Shares to be made available pursuant to the International Offer may change as a result of the clawback arrangement and/or any reallocation of unsubscribed Hong Kong Offer Shares as described in paragraph 1.2.2 below. As set out in paragraph 1.2.2 below, the Company has received approval from the

HKSE for a claw back mechanism for the Hong Kong Offer that limits the number of Ordinary Shares that can be allocated to investors in the Hong Kong Offer to 10 per cent. of the maximum number of Ordinary Shares to be issued and sold in the Global Offer.

1.2 **The Hong Kong Offer**

The Hong Kong Offer forms part of the Global Offer, and comprises an aggregate of 31,250,000 Hong Kong Offer Shares (subject to adjustment as described below) being made available to the public and professional investors in Hong Kong at the Hong Kong Offer Price, representing approximately 2.5 per cent. of the maximum number of Offer Shares initially available under the Global Offer (assuming the Over-Allotment Option is not exercised). Subject to the reallocation of Offer Shares between the International Offer and the Hong Kong Offer as described below, the Hong Kong Offer Shares are expected to represent (i) approximately 0.45 per cent. of the Company's enlarged issued share capital immediately after completion of the Global Offer, without taking into account the exercise of the Over-Allotment Option, or (ii) if the Over-Allotment Option is exercised in full, approximately 0.45 per cent. of the enlarged issued share capital immediately after the completion of the Global Offer and the exercise of the Over-Allotment Option, in each case based on an Offer Price at the mid-point of the Offer Price Range.

The Hong Kong Offer is open to members of the public in Hong Kong and professional investors. Professional investors generally include brokers, dealers, companies (including fund managers), whose ordinary business involves dealing in shares and other securities, and corporate entities that regularly invest in shares and other securities.

1.2.1 **Allocation**

Allocation of Hong Kong Offer Shares to investors under the Hong Kong Offer will be based solely on the level of valid applications received under the Hong Kong Offer.

The basis of allocation may vary, depending on the number of Hong Kong Offer Shares validly applied for by applicants. Such allocation could, where appropriate, consist of balloting, which could mean that some applicants may receive a higher allocation than others who have applied for the same number of Hong Kong Offer Shares, and those applicants who are not successful in the ballot may not receive any Hong Kong Offer Shares.

1.2.2 **Reallocation of Offer Shares between the Hong Kong Offer and the International Offer**

The allocation of the Hong Kong Offer Shares between the Hong Kong Offer and the International Offer is subject to adjustment under the Hong Kong Listing Rules. The Company has applied for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the clawback requirements set out in paragraph 4.2 of Practice Note 18 to the Hong Kong Listing Rules on the following basis. If the number of Offer Shares validly applied for under the Hong Kong Offer represents (i) 15 times or more but less than 50 times, (ii) 50 times or more but less than 100 times, and (iii) 100 times or more of the number of Offer Shares initially available under the Hong Kong Offer, then Offer Shares will be reallocated to the Hong Kong Offer from the International Offer. As a result of such reallocation, the total number of Offer Shares available under the Hong Kong Offer will be increased to 46,875,000 Offer Shares (in the case of (i)), 62,500,000 Offer Shares (in the case of (ii)) and 125,000,000 Offer Shares (in the case of (iii)), representing approximately 3.75 per cent., 5 per cent. and 10 per cent. of the maximum number of Offer Shares initially available under the Global Offer assuming the Over-Allotment Option is not exercised). In addition to the foregoing, the Joint Global Co-ordinators and the Company may together discuss and agree that International Offer Shares be reallocated to the Hong Kong Offer to satisfy valid applications thereunder.

In addition, if the Hong Kong Offer is not fully subscribed for, the Joint Global Co-ordinators and the Company may together discuss and agree that the unsubscribed Hong Kong Offer Shares be reallocated to the International Offer, in such proportions as they deem appropriate.

As mentioned above, should the Company decide not to proceed with HK Admission and/or the Hong Kong Offer it may, in consultation with the Joint Global Co-ordinators,

upsize the International Offer with some or all of the Ordinary Shares which it is reserving for the Hong Kong Offer.

In this situation, all references in this document to HK Admission, the Hong Kong Offer and/or Hong Kong Offer Shares, Hong Kong Offer Price and HK Sponsors (and the times and dates relating thereto) should be disregarded and the Hong Kong Offer Shares will be made available in the International Offer on the basis of the information contained in this Prospectus.

**2 Stabilisation and over-allotment**

In connection with the Global Offer, MSSL, as Stabilising Manager, or any of its affiliates, delegates or agents, may (but will be under no obligation to), to the extent permitted by applicable law, over-allot Ordinary Shares or effect other stabilisation transactions with a view to supporting the market price of the Ordinary Shares at a higher level than that which might otherwise prevail in the open market. The Stabilising Manager is not required to enter into such transactions and such stabilisation transactions may be effected on any securities market, over-the-counter market, stock exchange or otherwise and may be undertaken at any time during the period commencing on the date of the commencement of conditional dealings in the Ordinary Shares on the London Stock Exchange and ending no later than 30 calendar days thereafter (or in respect of any stabilisation action undertaken in Hong Kong, ending at such time in accordance with applicable laws and regulatory requirements). However, there will be no obligation on the Stabilising Manager or any of its affiliates, delegates or agents to effect such transactions and there is no assurance that such transactions will be undertaken. Such stabilisation, if commenced, may be discontinued at any time without prior notice. In no event will measures be taken to stabilise the market price of the Ordinary Shares above the Offer Price. The details of any intended stabilisation to be undertaken in Hong Kong and how it will be regulated under the Securities and Futures Ordinance (Cap. 571 of the Laws of Hong Kong) will be contained in a prospectus expected to be published in relation to the Hong Kong Offer. Except as required by law or regulation, neither the Stabilising Manager nor any of its affiliates, delegates or agents intends to disclose the extent of any over-allotments made and/or stabilisation transactions conducted in relation to the Global Offer.

In connection with the Global Offer, the Stabilising Manager may, for stabilisation purposes, over-allot the Ordinary Shares up to a maximum of ten per cent. of the Offer Shares at the Offer Price. For the purposes of allowing the Stabilising Manager to cover short positions resulting from any such over-allotments and/or from sales of Ordinary Shares effected by it during the stabilising period, the Company has granted to it the Over-Allotment Option. Any Over-Allotment Shares made available pursuant to the Over-Allotment Option will rank *pari passu* in all respects with the Ordinary Shares, including for all dividends, and other distributions declared, made or paid on the Ordinary Shares will be subscribed for on the same terms and conditions as the Ordinary Shares being issued or sold in the Global Offer and will form a single class for all purposes with the other Ordinary Shares.

**3 Pricing**

Pricing for the Offer Shares will be fixed on the Price Determination Date, which is expected to be on or around 18 May 2011 by agreement between the Joint Global Co-ordinators (on behalf of the Underwriters) and the Company, and the number of Offer Shares to be allocated under the International Offer and the Hong Kong Offer will be determined shortly thereafter at the discretion of the Joint Global Co-ordinators, following consultation with the Company. A Pricing Statement, which will contain the Offer Price, is expected to be published by the Company on or around 19 May 2011.

It is currently expected that the Offer Price will be within the Offer Price Range, but this range is indicative only and the Offer Price may be set within, above or below it. A number of factors will be considered in deciding the Offer Price including the level and the nature of the demand for Ordinary Shares and the objective of encouraging the development of an orderly and liquid after-market in the Ordinary Shares. The Offer Price will be established at a level determined in accordance with these arrangements, taking into account indications of interest received (whether before or after the times and/or dates stated) from persons (including market-makers and fund managers) connected with the Banks. If the Offer Price Range changes prior to the announcement of the final Offer Price, the

revised Offer Price Range will be announced and advertised as soon as possible and the Company will publish a supplementary prospectus and each applicant may exercise their withdrawal rights as set out in "Withdrawal Rights" below.

The Company will determine the aggregate number of Offer Shares, the number of New Offer Shares and the number of Sale Shares in light of the determination of the Offer Price on the Price Determination Date. In the Global Offer, the Company and the Selling Shareholder together intend to raise aggregate gross proceeds equivalent to approximately U.S.$10 billion at exchange rates prevailing at the Price Determination Date. The number of Sale Shares will be determined by the Company and the Selling Shareholder by reference to the Offer Price, exchange rates prevailing at the Price Determination Date, and the aggregate amount of the expected tax liabilities and loan repayments of Existing Shareholders. The number of New Offer Shares will be determined so as to provide the balance of the intended aggregate gross proceeds of the Global Offer. The Company and the Selling Shareholder also reserve the right to increase or decrease the intended aggregate gross proceeds amount, subject to no more than 1,250,000,000 Ordinary Shares being issued and/or sold in the Global Offer. The aggregate number of Offer Shares, the number of Sale Shares and the number of New Offer Shares will each be set out in the Pricing Statement.

**4 Underwriting Agreement**

On 4 May 2011, the Company, Glencore International, the Directors, the Selling Shareholder and the Banks entered into an underwriting agreement (the "Underwriting Agreement") relating to the Global Offer. Pursuant to the Underwriting Agreement, subject to, inter alia, execution of the Pricing Agreement by 18 May 2011 (or such later time and date as the Company, the Selling Shareholder and the Joint Global Co-ordinators (on behalf of the Banks) may agree being no later than 15 July 2011) and UK Admission becoming effective no later than 8.00 a.m. on 24 May 2011 (or such later time and date as the Company, the Selling Shareholder and the Joint Global Co-ordinators (on behalf of the Banks) may agree being no later than 31 July 2011) and the satisfaction of certain other conditions, including completion of the Restructuring in all material respects:

4.1 the International Managers have severally agreed to procure subscribers or purchasers for, failing which to subscribe or purchase the International Offer Shares from the Company and the Selling Shareholder at the Offer Price and in such proportions set out in the Underwriting Agreement; and

4.2 the HK Managers have severally agreed to procure subscribers, failing which to subscribe themselves, for all of the Hong Kong Offer Shares at the Offer Price and in such proportions as set out in the Underwriting Agreement;

The Underwriting Agreement also provides for the following (in each case, together with any applicable VAT thereon) to be payable by: (i) the Company to the Underwriters, comprising a commission, in aggregate, of 1.75 per cent. of an amount equal to the product of the Offer Price and the aggregate number of New Offer Shares issued pursuant to the Global Offer and any Over-Allotment Shares issued and delivered following exercise of the Over-Allotment Option; and (ii) the Selling Shareholder to the Underwriters, comprising a commission, in aggregate, of 1.75 per cent. of an amount equal to the product of the Offer Price and the aggregate number of Sale Shares sold pursuant to the International Offer. The Company may also in its absolute discretion pay to the Underwriters (in such proportions as the Company may, in its sole discretion, direct) a further commission of up to U.S.$82.5 million. Any commissions received by the Underwriters may be retained, and any Ordinary Shares acquired by any Underwriter may be retained or dealt in by it, for its own benefit. In addition to these commissions, the Company has agreed to pay, or cause to be paid (together with, in each case, any related VAT) (whether or not the Banks' obligations under the Underwriting Agreement become unconditional or are terminated) certain reasonably incurred costs, charges, fees and expenses in connection with or incidental to the Global Offer, Admission and arrangements contemplated by the Underwriting Agreement including certain taxes payable by the Company pursuant to the Underwriting Agreement.

UK Admission is expected to take place and unconditional dealing in the Ordinary Shares are expected to commence on the London Stock Exchange at 8.00 a.m. on 24 May 2011. HK Admission is expected to become effective and unconditional dealings in the Ordinary Shares are expected to commence on the Main Board of the Hong Kong Stock Exchange at 9.00 a.m. on 25 May 2011. Due

to the time difference between Hong Kong and the UK, it is not possible for HK Admission and UK Admission to occur simultaneously.

However, so as to ensure equality between subscribers and purchasers in the International Offer and the Hong Kong Offer, the Banks will have no termination rights in respect of the Underwriting Agreement in the period between UK Admission and HK Admission.

The Hong Kong Managers have also agreed, on behalf of the Company, to arrange for payment of the brokerage, the SFC transaction levy and the Hong Kong Stock Exchange trading fee payable in respect of the Hong Kong Offer, such amounts to be paid out of the application monies received in respect of the Hong Kong Offer to the relevant payees by a nominee on behalf of all successful applicants under the Hong Kong Offer.

Further details of the terms of the Underwriting Agreement are set out in paragraph 16 of Section X: "Additional Information".

## 5 Dealings and Admission

Application has been made to the FSA for the Ordinary Shares to be admitted to the premium listing segment of the Official List and to the London Stock Exchange and for such Ordinary Shares to be admitted to trading on the London Stock Exchange's main market for listed securities. Application has been made to the Listing Committee of the Hong Kong Stock Exchange for listing of, and permission to deal in, all of the Ordinary Shares on the Main Board of the Hong Kong Stock Exchange.

**Prior to UK Admission, it is expected that dealings in the Ordinary Shares will commence on a conditional basis on the London Stock Exchange at 8.00 a.m. on 19 May 2011. All dealings between the commencement of conditional dealings and the commencement of unconditional dealings will be on a "when issued" basis and at the risk of the parties concerned. If the Global Offer does not become unconditional, these dealings will be of no effect.**

When admitted to trading on the London Stock Exchange, the Ordinary Shares will be registered with ISIN number JE00B4T3BW64 and SEDOL number B4T3BW6. The Ordinary Shares will be traded on the Hong Kong Stock Exchange in board lots of 100 Ordinary Shares each and with the stock code of 00805.

UK Admission is expected to take place and unconditional dealings in the Ordinary Shares are expected to commence on the London Stock Exchange at 8.00 a.m. on 24 May 2011. HK Admission is expected to become effective and unconditional dealings in the Ordinary Shares are expected to commence on the Main Board of the Hong Kong Stock Exchange at 9.00 a.m. on 25 May 2011.

It is expected that Ordinary Shares allocated to investors in the Global Offer will be delivered in certificated or uncertificated form and, for those delivered in uncertificated form, settlement will take place through CREST or CCASS on Admission. All Ordinary Shares issued or sold pursuant to the Global Offer will be issued or sold payable in full at the Offer Price. It is intended that, if applicable, definitive share certificates in respect of the International Offer will be distributed in the week commencing 6 June 2011 (or as soon thereafter as is practicable) and share certificates in respect of the Hong Kong Offer will be despatched on 24 May 2011. No temporary documents of title will be issued.

The International Offer Shares to be made available pursuant to the International Offer will, following UK Admission, rank *pari passu* in all respects with the other Ordinary Shares and will carry the right to receive all dividends and other distributions declared, made or paid on or in respect of the Ordinary Shares after UK Admission. The International Offer Shares will, immediately following UK Admission, be freely transferable under the Articles.

The Hong Kong Offer Shares to be made available pursuant to the Hong Kong Offer will, following HK Admission, rank *pari passu* in all respects with the other Ordinary Shares and will carry the right to receive all dividends and other distributions declared, made or paid on or in respect of the Ordinary Shares after HK Admission. The Hong Kong Offer Shares will, immediately following HK Admission, be freely transferable under the Articles.

Immediately following Admission, it is expected that a minimum of 25 per cent. of the Company's issued Ordinary Share capital will be held in public hands (within the meaning of paragraph 6.1.19R of the Listing Rules).

## 6 CREST and CCASS

CREST is a paperless settlement system in the UK enabling securities to be evidenced otherwise than by a certificate and to be transferred otherwise than by a written instrument. The Ordinary Shares are in registered form. With effect from UK Admission, the Articles will permit the holding of Ordinary Shares under the CREST system. The Company has applied for the Ordinary Shares to be admitted to CREST with effect from UK Admission. Accordingly, settlement of transactions in the Ordinary Shares following UK Admission may take place within the CREST system, if any Shareholder so wishes.

CREST is a voluntary system and holders of Ordinary Shares who wish to receive and retain share certificates will be able to do so. An investor applying for Ordinary Shares in the Global Offer may, however, elect to receive Ordinary Shares in uncertificated form if that investor is a system-member (as defined in the Uncertificated Securities Regulations) in relation to CREST.

CCASS is a securities settlement system in Hong Kong where securities are issued in paper form and deposited with a central depository which is electronically linked with a settlement system. Subject to the granting of the listing of, and permission to deal in, the Ordinary Shares on the Hong Kong Stock Exchange and compliance with the stock admission requirements of HKSCC, the Ordinary Shares will be accepted as eligible securities by HKSCC for deposit, clearance and settlement in CCASS with effect from the date of commencement of dealings in the Ordinary Shares on the Hong Kong Stock Exchange or on any other date HKSCC chooses.

Settlement of transactions between participants of the Hong Kong Stock Exchange is required to take place in CCASS on the second business day after any trading day. All activities under CCASS are subject to the General Rules of CCASS and CCASS Operational Procedures in effect from time to time. Investors should seek the advice of their stockbroker or other professional adviser for details of the settlement arrangements as such arrangements may affect their rights and interests. All necessary arrangements have been made enabling the Ordinary Shares to be admitted into CCASS.

## 7 Transfer of shares between principal share register and branch share register in Hong Kong

Any shareholder whose Ordinary Shares are registered on the principal register may at any time obtain a removal request form from the principal share register for a transfer of Ordinary Shares to the branch share register in Hong Kong. A removal request form when completed should be returned together with the corresponding share certificates and administration fee to the principal registrar, who will arrange for the transfer of such Ordinary Shares to the branch share register in Hong Kong provided that the shareholder concerned provides a registered address in Hong Kong.

Similarly, any shareholder whose Ordinary Shares are registered on the branch share register in Hong Kong can at any time obtain a removal request form from the Hong Kong share registrar for a transfer of Ordinary Shares to the principal share register. On the return of such form, duly completed, together with the corresponding share certificates and administration fee to the Hong Kong share registrar it will arrange for the transfer of such Ordinary Shares to the principal share register.

## 8 Lock-up arrangements

The Company has entered into a lock-up arrangement in favour of the Joint Global Co-ordinators for a period of six months from the date of UK Admission. In addition, each Existing Shareholder has entered into a lock-up arrangement in favour of the Joint Global Co-ordinators and the Company for various periods from the date of Admission. These lock-up arrangements apply in the case of the Executive Directors until five years after Admission (with a staggered release after the first year of that period) and in the case of the other Existing Shareholders for a period of time of between one year and four years from Admission (with a staggered release after the first year of that period, if applicable). Furthermore, each Cornerstone Investor has entered into a lock-up arrangement in favour of the Joint Global Co-ordinators and the Company for a period of six months from the date of UK Admission. The lock-up arrangements are subject to certain exceptions.

Further details of the terms of these arrangements are set out in paragraph 17 of Section X: "Additional Information".

## 9 Withdrawal rights

In the event that the Company is required to publish any supplementary prospectus, applicants who have applied for Ordinary Shares in the International Offer shall have at least two clear business days following the publication of the relevant supplementary prospectus within which to withdraw their offer to subscribe for Ordinary Shares in the International Offer in its entirety. The right to withdraw an application to subscribe for Ordinary Shares in the International Offer in these circumstances will be available to all investors in the International Offer. If the application is not withdrawn within the stipulated period, any offer to apply for Ordinary Shares in the International Offer will remain valid and binding.

Investors wishing to exercise statutory withdrawal rights after the publication of any supplementary prospectus must do so by lodging a written notice of withdrawal by hand (during normal business hours only) at Computershare Investor Services (Jersey) Limited, Queensway House, Hilgrove Street, St. Helier, Jersey JE1 1ES, or by facsimile (during normal business hours only) on +44(0)870 873 5851 so as to be received no later than two business days after the date on which the supplementary prospectus is published. Notice of withdrawal given by any other means or which is deposited with or received by the Company after expiry of such period will not constitute a valid withdrawal.

## 10 Cornerstone investors

On 4 May 2011, in connection with the International Offer, the Company entered into subscription agreements with certain Cornerstone investors (including, in the case of the cornerstone investors that are private banks, the ultimate beneficial owners of the International Offer Shares subscribed for under the relevant Cornerstone Investment Agreements) (the "Cornerstone Investors") who have agreed to subscribe for International Offer Shares at the Offer Price (the "Cornerstone Investment Agreements"). The terms of the arrangements between each of the Cornerstone Investors and the Company are summarised in paragraph 10.2 below.

Certain of the Banks have made, or may enter into, arrangements with one or more Cornerstone Investors and certain other investors to provide financing in connection with the subscription by such investors for the International Offer Shares as described above.

Based on an Offer Price at the mid-point of the Offer Price Range, the total number of International Offer Shares subscribed for by the Cornerstone Investors would be approximately 350,943,389 International Offer Shares, which represent approximately (i) 31.9 per cent. of the International Offer Shares, and (ii) 5.1 per cent. of the Ordinary Shares in issue following the Global Offer, in each case, assuming that the Over-Allotment Option is not exercised and that the Kazzinc Consideration Shares are not issued.

The International Offer Shares to be subscribed for by the Cornerstone Investors pursuant to the Cornerstone Investment Agreements will rank *pari passu* in all respects with the other Ordinary Shares, and the International Offer Shares to be subscribed for by the Cornerstone Investors will be held in public hands (within the meaning of paragraph 6.1.19R of the Listing Rules).

The Cornerstone Investors are independent third parties and none of them is an existing shareholder or a connected person of the Company (as defined in the Hong Kong Listing Rules), save to the extent that any such Cornerstone Investors hold Convertible Bonds. The International Offer Shares to be acquired by the Cornerstone Investors will not be affected by any reallocation of the Offer Shares between the International Offer and the Hong Kong Offer or by any exercise of the Over Allotment Option.

### 10.1 Cornerstone Investors

A brief description of each of the Cornerstone Investors is as follows. The information set out below in respect of each of the Cornerstone Investors has been provided by each relevant Cornerstone Investor.

***Aabar***

Aabar Investments PJS ("Aabar") is an investment company headquartered in Abu Dhabi, United Arab Emirates with investments around the world. It invests in various sectors, including financial services, automotive, real estate, energy, manufacturing and technology and aerospace, with many of its investments being made by way of international partnerships and alliances. Its largest stakeholder is the International Petroleum Investment Company, which is wholly owned by the Government of the Emirate of Abu Dhabi.

Aabar has agreed to acquire, directly or indirectly, such number of Offer Shares which may be acquired with the sterling equivalent of U.S.$850 million at the Offer Price. Following UK Admission, such Offer Shares will be held, directly or indirectly, by Aabar on the Company's principal share register. Although no formal arrangements have been entered into between Glencore and Aabar, the two organisations intend to explore areas of co-operation between themselves in the future.

***BlackRock***

BlackRock Advisors (UK) Limited and BlackRock Investment Management (UK) Limited are companies incorporated in England (the "BlackRock Entities"). The BlackRock Entities are indirect wholly owned subsidiaries of BlackRock, Inc ("BlackRock"), which is a Delaware corporation listed on the New York Stock Exchange (NYSE:BLK). BlackRock is one of the world's preeminent asset management firms and a provider of global investment management, risk management and advisory services to institutional, intermediary and individual investors around the world.

The BlackRock Entities have agreed to acquire such number of Offer Shares which may be acquired with the sterling equivalent of U.S.$360 million[(1)] at the Offer Price. Following UK Admission, such Offer Shares will be held by the BlackRock Entities on the Company's principal share register.

***Brookside Capital***

Brookside Capital Trading Fund, L.P. (the "Brookside Fund") is a limited partnership formed under the laws of Delaware, United States of America, which, as of 31 March 2011, had approximately U.S.$11 billion in assets. The investment advisor to the Brookside Fund is Brookside Capital, LLC ("Brookside Capital"), the public equity affiliate of Bain Capital, LLC. Brookside Capital's investment process involves in-depth strategic and financial analysis, with an emphasis on the analysis of industry dynamics, competitive position and management capability and identification of operational improvements to determine the "intrinsic value" of potential investments.

The Brookside Fund has agreed to acquire such number of Offer Shares which may be acquired with the sterling equivalent of U.S.$225 million at the Offer Price. Following UK Admission, such Offer Shares will be held by the Brookside Fund on the Company's principal share register.

***Credit Suisse AG***

Credit Suisse AG is domiciled in Switzerland and is a wholly owned subsidiary of Credit Suisse Group AG which is listed on the SIX Swiss Exchange (ISIN: CH0012138530). Credit Suisse AG's business consists of the three divisions Private Banking, Investment Banking and Asset Management. Credit Suisse AG's Private Banking division offers comprehensive advice and a broad range of wealth management solutions, which are tailored to the needs of high-net-worth and ultra-high-net-worth individuals worldwide. In Switzerland, it supplies banking products and services to individual clients, including affluent, high-net-worth and ultra-high-net-worth clients, and corporates and institutions.

(1) BlackRock Advisors (UK) Limited has agreed to acquire such number of Offer Shares which may be acquired with £95 million, which has been converted into U.S.$158 million based on the pounds sterling/U.S.$ exchange rate of £1.00 = U.S.$1.667 quoted by Bloomberg on 29 April 2011.

Credit Suisse AG has agreed to acquire, as agent, and on behalf of eight underlying clients, such number of Offer Shares which may be acquired with the pounds sterling equivalent of U.S.$175 million at the Offer Price. No single underlying client of Credit Suisse AG has agreed to subscribe for more than U.S.$60 million. All the subscription monies are provided by the underlying clients of Credit Suisse AG. The underlying clients are neither directors, nor hold or control more than 10 per cent. of the issued share capital, of Credit Suisse AG or any of it associates. Following UK Admission, such Offer Shares will be held by the underlying clients on the Company's principal share register.

***Eton Park***

Eton Park Master Fund, Ltd. and EP Cayman, Ltd. are exempted companies incorporated in the Cayman Islands (the "Eton Park Funds"). The investment manager of the Eton Park Funds is Eton Park Capital Management, L.P. ("Eton Park"). Eton Park is a global, multi-disciplinary investment management firm with offices in New York, London and Hong Kong. As at 31 March 2011, Eton Park had in excess of U.S.$14 billion of assets under management.

The Eton Park Funds have agreed to acquire such number of Offer Shares which may be acquired with the sterling equivalent of U.S.$200 million at the Offer Price. Following UK Admission, such Offer Shares will be held by or on behalf of the Eton Park Funds on the Company's principal share register.

***Fidelity***

FIL Investment Services (UK) Limited, FIL Investments International and FIL Pensions Management (the "Fidelity Entities") are all ultimately owned and controlled by Fidelity. Fidelity is one of the UK's largest investment fund managers with over 660,000 customers in the UK. Fidelity looks after assets worth U.S.$255.5 billion (as at 31 March 2011).

The Fidelity Entities have agreed to acquire such number of Offer Shares which may be acquired with the sterling equivalent of U.S.$215 million at the Offer Price. Following UK Admission, such Offer Shares will be held by the Fidelity Entities on the Company's principal share register.

***GIC***

The Government of Singapore Investment Corporation Pte Ltd ("GIC") is a global investment management company established in 1981 to manage Singapore's foreign reserves. GIC invests internationally in equities, fixed income, foreign exchange, commodities, money markets, alternative investments, real estate and private equity. With its current portfolio size of more than U.S.$100 billion, GIC is amongst the world's largest fund management companies.

GIC has agreed to acquire such number of Offer Shares which may be acquired with the sterling equivalent of U.S.$400 million at the Offer Price. Following UK Admission, such Offer Shares will be held by GIC on the Company's principal share register.

***Och-Ziff***

Certain affiliated investment funds of Och-Ziff Capital Management Group (the "Och-Ziff Funds") have agreed to acquire such number of Offer Shares which may be acquired with the sterling equivalent of U.S.$175 million at the Offer Price. Following UK Admission, such Offer Shares will be held by the Och-Ziff Funds on the Company's principal share register.

***Pictet***

Founded in 1805 in Geneva, Pictet & Cie ("Pictet") is today among Switzerland's largest private banks, and one of the leading independent asset management specialists in Europe, with CHF 372 billion in assets under management and custody as at 31 December 2010. Pictet is a partnership, owned and managed by eight general partners with unlimited liability for the bank's commitments. Specialising in asset and wealth management Pictet also offers, as stand-alone products, global custody and fund administration.

Pictet has agreed to acquire, as agent, and on behalf of 50 underlying clients, such number of Offer Shares which may be acquired with the pounds sterling equivalent of U.S.$100 million at the Offer Price. No single underlying client of Pictet has agreed to subscribe for more than U.S.$25 million. All the subscription monies are provided by the underlying clients of Pictet. The underlying clients are neither directors, nor hold or control more than 10 per cent. of the partnership, of Pictet or any of it associates. Following UK Admission, such Offer Shares will be held by the underlying clients on the Company's principal share register.

***UBS AG***

UBS AG is a bank incorporated and domiciled in Switzerland and is listed on the SIX Swiss Exchange and the New York Stock Exchange (Valor symbol: UBSN; ISIN: CH0024899483). It operates under the Swiss Code of Obligations and Swiss Federal Banking Law as an Aktiengesellschaft, a corporation that has issued shares of common stock. UBS AG has its two headquarters in Zurich and Basel, Switzerland. Its scope of operations extends to all types of banking, financial, advisory, trading and service activities in Switzerland and abroad.

UBS AG has agreed to acquire, as agent, and on behalf of four underlying clients, such number of Offer Shares which may be acquired with the pounds sterling equivalent of U.S.$100 million at the Offer Price. No single underlying client of UBS AG has agreed to subscribe for more than U.S.$25 million. All the subscription monies are provided by the underlying clients of UBS AG. The underlying clients are neither directors, nor hold or control more than 10 per cent. of the issued share capital, of UBS AG or any of it associates. Following UK Admission, such Offer Shares will be held by the underlying clients on the Company's principal share register.

***York Capital***

York Capital Management was founded in 1991 and has offices located in New York, London and Hong Kong. York Capital Management manages over U.S.$16 billion dollars worth of assets on behalf of institutions, endowments, foundations, fund of funds, wealthy individuals and their families. York Capital Management's investment strategy is to provide consistent, superior risk-adjusted investment returns relatively independent of the overall market, and it pursues this strategy through a combination of focused research, investment selection, and disciplined risk management.

Investment funds and accounts managed by York Capital Management Global Advisors, LLC (the "York Capital Funds"), have agreed to acquire such number of Offer Shares which may be acquired with the sterling equivalent of U.S.$200 million at the Offer Price. Following UK Admission, such Offer Shares will be held by the York Capital Funds on the Company's principal share register.

***Zijin***

Zijin Mining Group Co. Ltd ("Zijin") is registered in China, with its head office in Shanghang County, Fujian province. Zijin's gold production is ranked No. 1 in China and it also mines other metals including copper, lead, zinc, tungsten, tin, silver and iron. Zijin's offshore operations are still at an early stage but it has a strong potential for growth in the years to come. Zijin is dual listed on the Hong Kong Stock Exchange and the Shanghai Stock Exchange, with a market capitalisation of over U.S.$17 billion.

Zijin has agreed to acquire such number of Offer Shares which may be acquired with the sterling equivalent of U.S.$100 million at the Offer Price. Following UK Admission, such Offer Shares will be held by Zijin on the Company's principal share register.

10.2 **Cornerstone Investment Agreements**

The subscription obligation of each Cornerstone Investor is conditional upon, amongst others, the Underwriting Agreement being entered into and having become unconditional in respect of the International Offer by no later than UK Admission (or such later time and date as the Company and Joint Global Co-ordinators may agree and notify to the Cornerstone Investor, being no later than 31 July 2011) and not having been terminated on or prior to UK Admission and the Offer Price being within the Offer Price Range.

Each of the Cornerstone Investors has agreed that (subject to certain customary exceptions more particularly described in paragraph 17.7 of Section X: "Additional Information"), without the prior written consent of the Company and the Joint Global Co-ordinators (which are parties to the Cornerstone Investment Agreements), it will not, at any time during the period ending six months following UK Admission, directly or indirectly, dispose of any Offer Shares subscribed for by it pursuant to the Cornerstone Investment Agreement to which it is party.

Please refer to Section X: "Additional Information" for further information on the Cornerstone Investment Agreements.

**11 Impact of the convertible bond**

Following Admission, Convertible Bond investors will be eligible to convert their bonds into Ordinary Shares which will in total represent 5.5 per cent. of the total issued share capital of the Company following Admission and following conversion (assuming the Offer Price is set at the mid-point of the Offer Price Range, the Over-Allotment Option was not exercised and no Kazzinc Consideration Shares have been issued).

Please refer to Section X: "Additional Information" for further information on the Convertible Bonds.

**12 Selling and transfer restrictions**

The distribution of this Prospectus and the offer of Ordinary Shares in certain jurisdictions may be restricted by law and persons into whose possession this Prospectus comes should therefore inform themselves about and observe any such restrictions, including those in the paragraphs that follow. Any failure to comply with these restrictions may constitute a violation of the securities laws of any such jurisdiction.

No action has been taken or will be taken in any jurisdiction that would permit a public offering or sale of the Ordinary Shares, or possession or distribution of this Prospectus (or any other offering or publicity material relating to Ordinary Shares other than a separate prospectus to be issued by the Company in Hong Kong in connection with the Hong Kong Offer) in any country or jurisdiction where action for that purpose is required or doing so may be restricted by law.

None of the Ordinary Shares may be offered for subscription, sale or purchase or be delivered, and this Prospectus and any other offering material in relation to the Ordinary Shares may not be circulated, in any jurisdiction where to do so would breach any securities laws or regulations of any such jurisdiction or give rise to an obligation to obtain any consent, approval or permission or to make any application, filing or registration.

Persons into whose possession this Prospectus comes should inform themselves about and observe any restrictions on the distribution of this Prospectus and any offering of the Ordinary Shares. Any failure to comply with these restrictions may constitute a violation of the securities laws of any such jurisdiction. This Prospectus does not constitute an offer to subscribe for or purchase any of the Ordinary Shares to any person in any jurisdiction to whom it is unlawful to make such offer of solicitation in such jurisdiction.

No Ordinary Shares have been marketed to, nor are available for purchase in whole or in part by, the public in the United Kingdom or elsewhere in conjunction with the Global Offer. This Prospectus does not constitute a public offer or the solicitation of a public offer in the United Kingdom to subscribe for or buy any securities in the Company or any other entity.

12.1 **Offering restrictions relating to the U.S. and U.S. Persons**

As described more fully below, there are certain selling and transfer restrictions regarding the Ordinary Shares with respect to U.S. shareholders.

These restrictions include, among others, (i) prohibitions on participation in the Global Offer by persons in circumstances which might cause the Company to be required to be registered as an investment company under the Investment Company Act, and (ii) restrictions on the ownership and transfer of Ordinary Shares by such persons following the Global Offer.

The Ordinary Shares have not been and will not be registered under the Securities Act or the securities laws of any state of the U.S. and, therefore, the Ordinary Shares may not be directly

or indirectly offered for subscription or purchase, sold, delivered or transferred to (or for the account or benefit of) any U.S. Person, or in or into the U.S. except pursuant to an applicable exemption from, or in a transaction not subject to, the registration requirements of the Securities Act and in compliance with any applicable securities laws of any state or other jurisdiction of the U.S. There will be no public offer of the Ordinary Shares in the U.S.

The Underwriters may arrange for the offer of Ordinary Shares only (a) outside the U.S., other than to U.S. Persons or persons acquiring for the account or benefit of a U.S. Person, in accordance with Rule 903 of Regulation S and (b) within the U.S. by U.S. broker-dealer affiliates of a Joint Global Coordinator to, or for the account or benefit of, U.S. Persons reasonably believed to be both QIBs, in reliance on the exemption from registration provided by Rule 144A under the Securities Act, and QPs. Any U.S. Person subscribing for or purchasing Ordinary Shares will be required to execute the U.S. Purchaser's Letter described below.

*Restrictions on offering under the Securities Act and the Investment Company Act*

Each subscriber and purchaser that is within the U.S. or that is a U.S. Person (or is subscribing or purchasing for the account or benefit of a U.S. Person) is notified that the offer and sale of Ordinary Shares to it is being made in reliance upon an exemption from the registration requirements of the Securities Act, and that the Company will not be registered under the Investment Company Act. Each subscriber and purchaser that is within the U.S., or that is a U.S. Person (or is subscribing or purchasing for the account or benefit of a U.S. Person), must be both a QIB and a QP.

In addition, each subscriber and purchaser that is located within the U.S. or that is a U.S. Person (or is subscribing or purchasing for the account or benefit of a U.S. Person), prior to any such transaction, will be required to execute a U.S. Purchaser's Letter in the form set out in Section XI: "U.S. Purchaser's Letter", and deliver the letter to the Underwriters and the Company. The U.S. Purchaser's Letter will require each such subscriber and purchaser to represent and agree that, amongst other things, (i) it is both a QIB and a QP and (ii) it will only offer, sell, transfer, assign, pledge or otherwise dispose of the Ordinary Shares in an offshore transaction complying with the provisions of Regulation S (including, for the avoidance of doubt, a *bona fide* sale on the London Stock Exchange's main market for listed securities and on the Main Board of the Hong Kong Stock Exchange) to a person not known to be a U.S. Person (by pre-arrangement or otherwise), and in compliance with applicable securities laws, provided that the transferor has executed an Offshore Transaction Letter in the form of Annex I to Section XI: "U.S. Purchaser's Letter" and promptly sends it to the Company. The transferor will notify any subsequent transferee or executing broker, as applicable, of the restrictions that are applicable to the Ordinary Shares being sold. The U.S. Purchaser's Letter and the Offshore Transaction Letter contain additional written representations, agreements and acknowledgements relating to the transfer restrictions applicable to the Ordinary Shares.

The Company has not been and does not intend to become registered as an investment company under the Investment Company Act and related rules. The Company and its agents may require any U.S. Person or any person within the U.S. that was required to be a QP but was not a QP at the time it acquired the Ordinary Shares or a beneficial interest therein to transfer its Ordinary Shares or such beneficial interest immediately to a non-U.S. Person in an offshore transaction pursuant to Regulation S under the Securities Act.

If any subscriber or purchaser of Ordinary Shares that was required to execute a U.S. Purchaser's Letter in connection with the acquisition of such Ordinary Shares receives them in certificated form, the certificate for the Ordinary Shares will bear an appropriate legend reflecting the transfer restrictions described in the U.S. Purchaser's Letter.

*Restrictions on offering in reliance on Regulation S*

Each purchaser to whom the Ordinary Shares are distributed, offered or sold outside the U.S. (other than U.S. Persons) will be deemed by its subscription for, or purchase of, the Ordinary Shares, to have represented and agreed as follows:

(a) it is not a U.S. Person and is not acquiring the Ordinary Shares for the account or benefit of a U.S. Person;

(b) it is acquiring the Ordinary Shares in an offshore transaction meeting the requirements of Regulation S;

(c) it is aware that the Ordinary Shares have not been and will not be registered under the Securities Act and may not be offered or sold in the U.S. or to, or for the account or benefit of, U.S. Persons, absent registration or an exemption from registration under the Securities Act;

(d) it is aware that the Company has not registered under the Investment Company Act and that the Company has put in place restrictions for transactions not involving any public offering in the U.S., and to ensure that the Company is not and will not be required to register under the Investment Company Act;

(e) if in the future it decides to offer, sell, transfer, assign or otherwise dispose of the Ordinary Shares, it will do so only in compliance with an exemption from the registration requirements of the Securities Act and under circumstances which will not require the Company to register under the Investment Company Act;

(f) it has carefully read and understands this Prospectus, and has not, directly or indirectly, distributed, forwarded, transferred or otherwise transmitted this Prospectus or any other presentation or offering materials concerning the Ordinary Shares to any persons within the U.S. or to any U.S. Persons, nor will it do any of the foregoing; and

(g) the Company, the Underwriters and their respective directors, officers, agents, employees, advisers and others will rely upon the truth and accuracy of the foregoing representations and agreements. If any of the representations or agreements made by it are no longer accurate or have not been complied with, it will immediately notify the Company, the Underwriters, and if it is acquiring any Ordinary Shares as a fiduciary or agent for one or more accounts, it has sole investment discretion with respect to each such account and it has full power to make such foregoing representations and agreements on behalf of each such account.

*Restrictions on U.S. Persons*

Each U.S. Person will be deemed to have represented and agreed for the benefit of the Company and its advisers that:

(a) it is a QIB and a QP;

(b) if it purchases Ordinary Shares, (i) it will be a QIB and a QP at the time of such purchase and subscription or it will be acting for the account or benefit of a QIB and a QP; and (ii) such Ordinary Shares will be offered, resold, transferred, assigned, pledged or otherwise disposed of by it in a transaction (a "disposal") executed solely in, on or through the facilities of the London Stock Exchange, the Hong Kong Stock Exchange or otherwise in an offshore transaction complying with the provisions of Regulation S, and neither it nor any person acting on its behalf will pre-arrange such disposal with a buyer in the U.S. or known to be a U.S. Person; and

(c) if it elects to subscribe for Ordinary Shares, such subscription will only be valid if it follows the procedures described in paragraph 12 of this Section VIII and such subscription is accompanied by an executed U.S. Purchaser's Letter attached in Section XI: "U.S. Purchaser's Letter".

12.2 **European Economic Area**

In relation to each Member State of the European Economic Area which has implemented the Prospectus Directive (each, a "Relevant Member State"), with effect from and including the date on which the Prospectus Directive is implemented in that Relevant Member State (the "Relevant Implementation Date") no offer of the Ordinary Shares which are the subject of the offering contemplated by the Prospectus to the public in that Relevant Member State has been or will be made other than the offers contemplated in the Prospectus in the United Kingdom from the time the Prospectus has been approved by the competent authority in the United Kingdom and published and notified to the relevant competent authority in accordance with the Prospectus Directive as implemented in the United Kingdom until UK Admission, and

provided that the Company has consented in writing to use of the Prospectus for any such offers, except that with effect from and including the Relevant Implementation Date, an offer of such Ordinary Shares may be made to the public in that Relevant Member State:

- *Qualified investors:* to any legal entity which is a qualified investor as defined in the Prospectus Directive;
- *Fewer than 100 offerees:* to fewer than 100 or, if the Relevant Member State has implemented the relevant provision of the 2010 PD Amending Directive, 150, natural or legal persons (other than qualified investors as defined in the Prospectus Directive), as permitted under the Prospectus Directive, subject to obtaining the prior consent of the relevant Underwriters nominated by the Company for any such offer; or
- *No publication of a prospectus:* in any other circumstances falling within Article 3(2) of the Prospectus Directive,

provided that no such offer of Ordinary Shares shall require the Company or any of the Underwriters to publish a prospectus pursuant to Article 3 of the Prospectus Directive or supplement a prospectus pursuant to Article 16 of the Prospectus Directive.

For the purposes of this selling restriction, the expression an "offer of Ordinary Shares to the public" in relation to any Ordinary Shares in any Relevant Member State means the communication in any form and by any means of sufficient information on the terms of the offer and the Ordinary Shares to be offered so as to enable an investor to decide to purchase or subscribe the Ordinary Shares, as the same may be varied in that Relevant Member State by any measure implementing the Prospectus Directive in that Relevant Member State and the expression "Prospectus Directive" means Directive 2003/71/EC (and amendments thereto, including the 2010 PD Amending Directive, to the extent implemented in the Relevant Member State), and includes any relevant implementing measure in the Relevant Member State and the expression "2010 PD Amending Directive" means Directive 2010/73/EU.

12.3 **Japan**

The Ordinary Shares offered hereby have not been and will not be registered under the Financial Instruments and Exchange Act of Japan. Accordingly, no Ordinary Shares will be offered or sold, directly or indirectly, in Japan or to, or for the benefit of, any resident of Japan (which term as used herein means any person resident in Japan, including any corporation or other entity organised under the laws of Japan) or to others for re-offering or resale, directly or indirectly, in Japan or to, or for the benefit of, any resident of Japan, except pursuant to an exception from the registration requirements of, and otherwise in compliance with, the Financial Instruments and Exchange Law and other relevant laws and regulations of Japan.

12.4 **Australia**

This Prospectus has not been and will not be lodged with the Australian Securities and Investments Commission or the Australian Stock Exchange and is not a disclosure document for the purposes of Australian law. This Prospectus (whether in preliminary or definitive form) may not be issued or distributed in Australia and no offer or invitation may be made in relation to the issue, sale or purchase of any Ordinary Shares in Australia (including an offer or invitation received by a person in Australia) and no shares may be sold in Australia, unless the offer or invitation may be made to investors without a disclosure document under Part 6D 2 of the Corporations Act 2001 (the "Corporations Act").

Any person to whom Ordinary Shares are issued or sold pursuant to this Prospectus must not, within 12 months after the issue, offer (or transfer, assign or otherwise alienate) those Ordinary Shares to persons in Australia except in circumstances where disclosure is not required under the Corporations Act.

This Prospectus is not, and under no circumstances is to be construed as, an advertisement or a public offering of the Ordinary Shares in Australia.

This Prospectus has not been prepared for an Australian audience. Australian investors should therefore note that this Prospectus:

- may contain references to dollar amounts which are not Australian dollars;

- may contain financial information which is not prepared in accordance with Australian law or practices;
- may not address risks associated with investment in foreign currency denominated investments; and
- does not address Australian tax issues.

12.5 **United Arab Emirates**

This Prospectus is strictly private and confidential and is being distributed to a limited number of investors and must not be provided to any person other than the original recipient, and may not be reproduced or used for any other purpose.

By receiving this Prospectus, the person or entity to whom it has been issued understands, acknowledges and agrees that this Prospectus has not been approved by or filed with the UAE Central Bank, the Emirates Securities or Commodities Authority ("ESCA") or any other authorities in the UAE, nor has the placement agent, if any, received authorisation or licensing from the UAE Central Bank, ESCA or any other authorities in the UAE to market or sell securities or other investments within the UAE. No marketing of any financial products or services has been or will be made from within the UAE other than in compliance with the laws of the UAE and no subscription to any securities or other investments may or will be consummated within the UAE. It should not be assumed that the placement agent, if any, is a licensed broker, dealer or investment adviser under the laws applicable in the UAE, or that it advises individuals resident in the UAE as to the appropriateness of investing in or purchasing or selling securities or other financial products. The Ordinary Shares may not be offered or sold directly or indirectly to the public in the UAE. This does not constitute a public offer of securities in the UAE in accordance with the Commercial Companies Law, Federal Law No. 8 of 1984 (as amended) or otherwise.

12.6 **Dubai International Financial Centre**

This Prospectus relates to an Exempt Offer in accordance with the Offered Securities Rules of the Dubai Financial Services Authority (the "DFSA"). This Prospectus is intended for distribution only to persons of a type specified in those rules. It must not be delivered to, or relied on by, any other person.

The DFSA has no responsibility for reviewing or verifying any documents in connection with Exempt Offers. The DFSA has not approved the Ordinary Shares or the Prospectus nor taken steps to verify the information set out in the Prospectus, and has no responsibility for it.

The Ordinary Shares and interests therein to which this Prospectus relates may be illiquid and/or subject to restrictions on their resale. Prospective purchasers of the Ordinary Shares and interests therein should conduct their own due diligence on the Ordinary Shares. If you do not understand the contents of this Prospectus you should consult an authorised financial adviser.

In relation to its use in the DIFC, this Prospectus is strictly private and confidential and is being distributed to a limited number of investors and must not be provided to any person other than the original recipient, and may not be reproduced or used for any other purpose. The interests in the Ordinary Shares may not be offered or sold directly or indirectly to the public in the DIFC.

12.7 **South Africa**

This Prospectus will not be registered as a prospectus in terms of the Companies Act 1973 in South Africa and as such, any offer of Ordinary Shares in South Africa may only be made if it shall not be capable of being construed as an offer to the public as envisaged by section 144 of such Act. Furthermore, any offer or sale of the Ordinary Shares shall be subject to compliance with South African exchange control regulations.

12.8 **Hong Kong**

(a) No International Offer Shares have been offered or sold or will be offered or sold in Hong Kong, by means of any document, other than (a) to "professional investors" as defined in the Securities and Futures Ordinance (Chapter 571 of the Laws of Hong Kong) and any rules made under that Ordinance; or (b) in other circumstances which do not

result in the document being a "prospectus" as defined in the Companies Ordinance of Hong Kong or which do not constitute an offer to the public within the meaning of that Ordinance; and

(b) No advertisement, invitation or document relating to the International Offer Shares has been issued or has been in the possession of any person for the purposes of issue, nor will any such advertisement, invitation or document be issued or be in the possession of any person for the purpose of issue, whether in Hong Kong or elsewhere, which is directed at, or the contents of which are likely to be accessed or read by, the public of Hong Kong (except if permitted to do so under the securities laws of Hong Kong) other than with respect to International Offer Shares which are or are intended to be disposed of only to persons outside Hong Kong or only to "professional investors" as defined in the Securities and Futures Ordinance (Chapter 571 of the Laws of Hong Kong) and any rules made under that Ordinance.

12.9 **Brazil**

The offering of the Ordinary Shares has not been, and will not be, submitted to, or registered with, the Brazilian Securities Commission (*Comissão de Valores Mobiliários*). Accordingly, the Ordinary Shares may not be offered or sold in Brazil in circumstances that constitute a public offering or distribution according to Brazilian laws and regulations. Documents relating to the offering of the Ordinary Shares, including this Prospectus, may not be supplied or made generally available to the public in Brazil or be used in connection with an offer for subscription or sale to the public in Brazil.

Therefore, no Ordinary Shares have been offered or sold or will be offered or sold in Brazil, except in circumstances which do not constitute a public offering, placement, distribution or negotiation of securities in the Brazilian capital markets regulated by Brazilian legislation.

Persons wishing to offer or acquire the Ordinary Shares within Brazil should consult with their own counsel as to the applicability of registration requirements or any exemption therefrom.

12.10 **Canada**

The Ordinary Shares will not be qualified for sale under the securities laws of any province or territory of Canada. The Offer Shares may not be offered or sold, directly or indirectly, in any province or territory of Canada or to or for the benefit of any resident of any province or territory of Canada, except pursuant to an exemption from the requirement to file a prospectus in the province or territory of Canada in which the offer or sale is made and only by a dealer duly registered under applicable laws in circumstances where an exemption from applicable registered dealer registration requirements is not available.

The Ordinary Shares will not be offered, sold or distributed directly or indirectly, in Canada or to or for the benefit of any resident of Canada, other than in compliance with applicable securities laws. Neither this Prospectus, nor any other offering material in connection with the offer of the Offer Shares under the Global Offering, will be distributed or delivered in Canada other than in compliance with applicable securities laws.

12.11 **India**

This Prospectus has not and will not be registered as a "prospectus" under the Indian Companies Act, 1956 with the Registrar of Companies (the "RoC"), nor has the Prospectus nor any amendment or supplement thereto been reviewed, approved, or recommended by the RoC or the Securities and Exchange Board of India or any other Indian regulatory authority. This Prospectus may not be distributed directly or indirectly in India or to residents of India and any Ordinary Shares may not be offered, sold, transferred or delivered directly or indirectly in India to, or for the account or benefit of, any resident of India, except as permitted by applicable Indian laws and regulations, under which an offer to eligible Indian residents is strictly on a private and confidential basis and is limited to select institutional investors (who are eligible to apply for such offering) and is not an offer to the public. This Prospectus is not a prospectus or an advertisement under applicable Indian laws and should not be circulated to any other person other than to whom the offer is made.

12.12 **Indonesia**

The Ordinary Shares will not be registered as public offering in Indonesia, and therefore the Ordinary Shares will not be offered to more than 100 parties or sold to more than 50 parties in Indonesia or to Indonesian nationals, corporations or to Indonesian citizens, wherever they are domiciled or to Indonesian residents. Neither this Prospectus nor any other offering materials relating to the Ordinary Shares have been distributed, or will be distributed, in Indonesia or to Indonesian nationals, corporations or residents in a manner which constitutes a public offering of the Ordinary Shares under the laws or regulations of the Republic of Indonesia.

12.13 **Kingdom of Saudi Arabia**

This Prospectus may not be distributed in the Kingdom of Saudi Arabia (the "Kingdom"), except to such persons as are permitted under the Offers of Securities Regulations issued by the Capital Market Authority of the Kingdom (the "Capital Market Authority").

The Capital Market Authority does not make any representations as to the accuracy or completeness of this Prospectus and expressly disclaims any liability whatsoever for any loss arising from, or incurred in reliance upon, any part of this Prospectus. Prospective purchasers of the Ordinary Shares offered hereby should conduct their own due diligence on the accuracy of the information relating to the Ordinary Shares. If a prospective purchaser does not understand the contents of this Prospectus, he or she should consult an authorised financial adviser.

12.14 **Kuwait**

By receiving this Prospectus, the person or entity to whom it has been issued understands, acknowledges and agrees that this Prospectus has not been approved by the Kuwait Central Bank, the Kuwait Ministry of Commerce and Industry or any other authority in Kuwait, nor have any authorisations or licences been granted by the Kuwait Central Bank, the Kuwait Ministry of Commerce and Industry or any other authority in Kuwait to market or sell the Ordinary Shares within Kuwait.

No marketing of any financial products or services has been or will be made from within Kuwait and no subscription to any securities, financial products or financial services may or will be consummated within Kuwait. The managers for Kuwait do not advise parties in Kuwait as to the appropriateness of investing in, purchasing or selling the Ordinary Shares or other financial products. Nothing contained in this Prospectus is intended to constitute investment, legal, tax, accounting or other professional advice. This Prospectus is for information only and nothing in this Prospectus is intended to endorse or recommend a particular course of action. Any person considering acquiring the Ordinary Shares should consult with an appropriate professional for specific advice rendered on the basis of their respective situation.

12.15 **Malaysia**

No offering for subscription or purchase and no invitation to subscribe for or purchase the Ordinary Shares may be made in Malaysia. This Prospectus or any document or other materials in connection therewith may not be distributed in Malaysia directly or indirectly for the purpose of any offering for subscription or purchase, invitation to subscribe for or purchase or for the sale of, the Ordinary Shares in Malaysia other than to persons falling within one of the categories specified under Schedule 6 or Section 229(1)(b) or Schedule 7 or Section 230(1)(b) of the Capital Markets and Services Act 2007 of Malaysia.

If you are a purchaser of Ordinary Shares, then you represent and warrant that you are a person falling within one of the categories of persons specified under Schedule 6 or Section 229(1)(b); or Schedule 7 (or Section 230(1)(b)) of the Capital Markets and Services Act 2007 of Malaysia, subject to any law, order, regulation or official directive of the Securities Commission of Malaysia, Bursa Malaysia Securities Berhad and/or any other regulatory authority from time to time.

12.16 **People's Republic of China**

This Prospectus and the information contained herein may not be circulated or distributed in the People's Republic of China (for such purposes, not including the Hong Kong and Macau Special Administrative Regions or Taiwan) and the Ordinary Shares are not being offered or sold and may not be offered or sold, directly or indirectly, to any resident of the People's

Republic of China, or offered or sold to any person for re-offering or resale, directly or indirectly, to any resident of the People's Republic of China, except pursuant to applicable laws and regulations of the People's Republic of China. PRC investors are responsible for obtaining all relevant government regulatory approvals/licences (if any) by themselves, including, but not limited to, any which may be required from the State Administration of Foreign Exchange and other competent regulatory authorities and complying with all relevant PRC regulations (if applicable), including, but not limited to, any relevant foreign exchange regulations and/or overseas investment regulations.

12.17 **Singapore**

This Prospectus has not been registered as a prospectus with the Monetary Authority of Singapore under the Securities and Futures Act, Cap. 289 of Singapore (the "SFA") and, accordingly, the Ordinary Shares may not be offered or sold, nor may the Ordinary Shares be the subject of an invitation for subscription or purchase, nor may this Prospectus or any other document or material in connection with the offer or sale, or invitation for subscription or purchase of the Ordinary Shares be circulated or distributed, whether directly or indirectly, to any person in Singapore other than (i) to an institutional investor (as defined in Section 4A of the SFA) pursuant to Section 274 of the SFA, (ii) to a relevant person (as defined in Section 275(2) of the SFA) pursuant to Section 275(1) of the SFA, or any person pursuant to an offer referred to in Section 275(1A) of the SFA, and in accordance with the conditions specified in Section 275 of the SFA or (iii) otherwise pursuant to, and in accordance with the conditions of, any other applicable provision of the SFA.

Where the Ordinary Shares are acquired by persons who are relevant persons specified in Section 276 of the SFA, namely:

(a) a corporation (which is not an accredited investor (as defined in Section 4A of the SFA)) the sole business of which is to hold investments and the entire share capital of which is owned by one or more individuals, each of whom is an accredited investor; or

(b) a trust (where the trustee is not an accredited investor) whose sole purpose is to hold investments and each beneficiary of the trust is an individual who is an accredited investor,

the shares, debentures and units of shares and debentures of that corporation or the beneficiaries' rights and interest (howsoever described) in that trust shall not be transferred within six months of that corporation or that trust acquiring the Ordinary Shares pursuant to an offer made under Section 275 of the SFA except:

(i) to an institutional investor (under Section 274 of the SFA) or to a relevant person as defined in Section 275(2) of the SFA, or any person pursuant to an offer that is made on terms that such shares, debentures and units of shares and debentures of that corporation or such rights or interest in that trust are acquired at a consideration of not less than 200,000 Singapore dollars (or its equivalent in a foreign currency) for each transaction, whether such amount is to be paid for in cash or by exchange of securities or other assets and further for corporations, in accordance with the conditions specified in Section 275(1A) of the SFA;

(ii) where no consideration is or will be given for the transfer;

(iii) where the transfer is by operation of law; or

(iv) as specified in Section 276(7) of the SFA.

12.18 **State of Israel**

No offer, placing, sale or transfer of the Ordinary Shares shall take place in Israel if such offer, placement, sale or transfer would constitute a public offering within the meaning of the Israeli Securities Law—1968 (the "Securities Law"). Any such offer, placement, sale or transfer shall be conducted only in a manner that would not require the publication of a prospectus or similar document in Israel. Such offer, placement, sale or transfer may be made in accordance with Section 15A(a)(1) or Section 15A(b) of the Securities Law, including to an investor of the type that is included in the list of investors set forth in the First Addendum to the Securities Law, with respect to Section 15a(b)(1) of the Law.

12.19 **State of Qatar**

The Ordinary Shares have not been offered, sold or delivered, and will not be offered, sold or delivered, at any time, directly or indirectly, in the State of Qatar in a manner that would constitute a public offering and only in circumstances that are (i) in compliance with all applicable laws and regulations of the State of Qatar and (ii) through persons or corporate entities authorised and licensed to provide investment advice and/or engage in brokerage activity and/or trade in respect of foreign securities in the State of Qatar. This Prospectus has not been reviewed or registered with or approved by the Qatari government authorities, the Qatari Financial Markets Authority or any other relevant State of Qatar regulatory body, whether under law no. 25 (2002) concerning investment funds, Central Bank Resolution no. 15 (1997), as amended, or any associated regulations. Therefore, this Prospectus is strictly private and confidential, and is being issued to a limited number of sophisticated investors, and may not be reproduced or used for any other purpose, nor provided to any person other than the recipient thereof. No general offering of the Ordinary Shares has been or will be made in the State of Qatar and the Ordinary Shares may only be offered, distributed or sold in the State of Qatar to a limited number of investors.

12.20 **Sultanate of Oman**

The information contained in this Prospectus neither constitutes a public offer of securities in the Sultanate of Oman as contemplated by the Commercial Companies Law of Oman (Royal Decree 4/74) or the Capital Market Law of Oman (Royal Decree 80/98), nor does it constitute an offer to sell, or the solicitation of any offer to buy Non-Omani securities in the Sultanate of Oman as contemplated by Article 139 of the Executive Regulations of the Capital Market Law (issued by Decision No. 1/2009). Additionally, this Prospectus is not intended to lead to the conclusion of a contract of any nature whatsoever within the territory of the Sultanate of Oman.

The recipient of this Prospectus represents that he/she is a sophisticated investor (as described in Article 139 of the Executive Regulations of the Capital Market Law) and has such experience in business and financial matters that he/she is capable of evaluating the merits and risks of an investment in securities. The investor acknowledges that he/she is aware that an investment in securities is speculative and involves a high degree of risk, which could include loss of the entire investment.

12.21 **Switzerland**

The Ordinary Shares may not be and will not be publicly offered, sold or advertised, directly or indirectly, in or from Switzerland. Neither this Prospectus nor any other offering or marketing material relating to the Ordinary Shares constitutes a prospectus as such term is understood pursuant to article 652a of the Swiss Federal Code of Obligations or a listing prospectus within the meaning of the listing rules of SIX, and neither this Prospectus nor any other offering or marketing material relating to the Ordinary Shares may be publicly distributed or otherwise made publicly available in Switzerland.

Neither this document nor any other offering or marketing material relating to the offering, the Issuer or the Ordinary Shares have been or will be filed with or approved by any Swiss regulatory authority. In particular, this document will not be filed with, and the Global Offer of Ordinary Shares will not be supervised by, the Swiss Financial Market Supervisory Authority FINMA (FINMA), and the Global Offer has not been and will not be authorized under the Swiss Federal Act on Collective Investment Schemes (“CISA”). The investor protection afforded to acquirers of interests in collective investment schemes under the CISA does not extend to acquirers of Ordinary Shares.

12.22 **Thailand**

The Ordinary Shares have not been offered or sold and will not be offered or sold, to persons in Thailand other than under circumstances which do not constitute an offer for sale of shares to the public for the purposes of the Securities and Exchange Act of 1992 of Thailand or require approval from or filing of a registration statement and draft prospectus with the office of the Securities and Exchange Commission of Thailand.

12.23 **Bahamas**

The Ordinary Shares shall not be offered or sold in the Bahamas except in circumstances that do not constitute an offer to the public. The Ordinary Shares may not be offered or sold or otherwise disposed of in any way to any person(s) deemed "resident" for exchange control purposes by the Central Bank of the Bahamas.

12.24 **Philippines**

The Ordinary Shares being offered or sold through this Prospectus have not been registered with the Philippines Securities and Exchange Commission under the Philippines Securities Regulation Code. Any future offer or sale of the Ordinary Shares is subject to registration requirement under the Philippines Securities Regulation Code unless such offer or sale qualifies as an exempt transaction.

12.25 **Monaco**

The Ordinary Shares may not be offered or sold, directly or indirectly, to the public in Monaco other than by a Monaco bank or a duly authorised Monegasque intermediary. Consequently, this Prospectus may only be communicated to Monaco banks duly licensed by the Autorité de Contrôle Prudentiel and fully licensed Monaco portfolio management companies by virtue of Law n° 1.144 of July 26, 1991 and Law 1.338, of September 7, 2007 duly licensed by the Commission de Contrôle des Activités Financières. Such regulated intermediaries may in turn communicate this Prospectus to potential investors.

## SECTION IX: TAXATION

**The following section is a summary guide only to certain aspects of tax in the UK, Switzerland, Jersey, the U.S. and Hong Kong. This is not a complete analysis of all the potential tax effects of acquiring, holding and disposing of Ordinary Shares, nor will it relate to the specific tax position of all Shareholders in all jurisdictions. This summary does not purport to be a legal opinion. Shareholders are advised to consult their own tax advisers.**

**The description of the taxation consequences is written on the basis that the Company will be solely resident in Switzerland for tax purposes and will therefore be subject to the Swiss tax regime and not (except as noted below) the Jersey tax regime. As a consequence, please refer to the section "Swiss taxation" below for information about withholding tax on dividends and similar cash or in-kind distributions.**

### 1 UK taxation

**The following summary is intended as a general guide only and relates only to certain limited aspects of UK tax consequences of holding and disposing of Ordinary Shares. It is based on current UK tax law and the current practice of HMRC, both of which are subject to change, possibly with retrospective effect. The summary applies only to Shareholders who are resident and, if individuals, ordinarily resident and domiciled in the UK for taxation purposes, who hold their Ordinary Shares as an investment (other than under a personal equity plan or an individual savings account), who are the absolute beneficial owners of their Ordinary Shares, who have not (and are not deemed to have) acquired their Ordinary Shares by virtue of an office or employment (whether current, historic or prospective) and are not officers or employees of any member of the Glencore Group. In addition, these comments may not apply to certain classes of Shareholders such as traders, brokers, dealers, banks, financial institutions, collective investment schemes, insurance companies, investment companies, tax-exempt organisations, persons connected with the Company or the Glencore Group, and persons who hold the Ordinary Shares as part of hedging or conversion transactions.**

**Any person who is in any doubt as to his or her tax position, or who is resident or otherwise subject to taxation in a jurisdiction outside the UK, should consult his or her tax advisers immediately.**

#### 1.1 UK taxation of dividends

Dividends paid on the Ordinary Shares

*Shareholders who are individuals and who own less than a 10 per cent. shareholding in the Company*

A Shareholder who is an individual who is resident in the UK for tax purposes (or who carries on a trade, profession or vocation in the UK through a branch or agency and has used, held or acquired Ordinary Shares for the purposes of such trade, profession or vocation, branch or agency in the UK) will, if he owns less than 10 per cent. of the issued share capital in the Company, be entitled to a tax credit in respect of a dividend paid by the Company which may be set off against the Shareholder's total income tax liability. The tax credit will be equal to 10 per cent. of the aggregate of the dividend and the tax credit (the "gross dividend"), which is also equal to one-ninth of the cash dividend received. Such an individual Shareholder who is liable to income tax at the basic rate will be subject to tax on the dividend at the rate of 10 per cent. of the gross dividend, so that the tax credit will satisfy in full such Shareholder's liability to income tax on the dividend. In the case of such an individual Shareholder who is liable to income tax at the higher rate, the tax credit will be set against but not fully match the Shareholder's tax liability on the gross dividend and such Shareholder will have to account for additional income tax equal to 22.5 per cent. of the gross dividend (which is also equal to 25 per cent. of the cash dividend received) to the extent that the gross dividend when treated as the top slice of the Shareholder's income falls above the threshold for higher rate income tax. In the case of such an individual Shareholder who is subject to income tax at the additional rate, the tax credit will also be set against but not fully match the Shareholder's liability on the gross dividend and such Shareholder will have to account for additional income tax equal to 32.5 per cent. of the gross dividend (which is also equal to approximately 36 per cent. of the cash dividend received) to the extent that the gross dividend when treated as the top slice of the Shareholder's income falls above the threshold for additional rate income tax.

*Shareholders who are individuals who own a 10 per cent. or greater shareholding in the Company*

In certain circumstances, individuals who own a 10 per cent. or greater shareholding in a company do not qualify for the 10 per cent. tax credit. However, as the Company should not be an offshore fund, and is a company resident in a territory with which the UK has a double tax convention which includes a non-discrimination article, any individuals holding a 10 per cent. or greater shareholding in the Company should also qualify for the 10 per cent. dividend tax credit.

*Corporate Shareholders*

Shareholders who are within the charge to corporation tax in respect of Ordinary Shares in the Company will be subject to corporation tax on the gross amount of any dividends paid by the Company, subject to any applicable credit for Swiss Withholding Tax (as defined below), unless (subject to special rules for such Shareholders that are small companies) the dividends fall within an exempt class and certain other conditions are met. It is expected that the dividends paid by the Company would generally be exempt for such Shareholders.

The statements contained under the heading "*Dividends paid on the Ordinary Shares*" in this paragraph 1.1 reflect the Company's understanding of the correct interpretation of current UK tax law. However, there is currently some doubt as to whether HMRC agrees with this interpretation in relation to distributions made out of share premium and, therefore, it is unclear how HMRC would interpret a distribution by the Company out of Qualifying Reserves (as described below), as is intended (see the discussion under "Swiss taxation" below). In such cases, there is a risk that HMRC may seek to argue, in relation to certain classes of Shareholders, that such a distribution should not be treated under the rules for income distributions, but is instead within the charge to tax on chargeable gains. In light of this uncertainty, Shareholders are advised to consult their own professional advisers in relation to the implications of distributions by the Company.

Impact of Swiss Withholding Tax

As described more fully under "Swiss taxation" below, dividends and other distributions paid by the Company out of other reserves than the Qualifying Reserves (as described below) will be subject to Swiss Withholding Tax on the cash amount of the distribution at the then prevailing rate (currently 35 per cent.). A UK resident Shareholder may be able to claim a partial refund of the Swiss Withholding Tax withheld under the UK-Switzerland double tax convention.

A UK resident individual Shareholder will generally be entitled to credit for any Swiss Withholding Tax withheld from a dividend or other distribution paid by the Company and not recoverable from the Swiss tax authorities against income tax payable by such Shareholder in respect of the dividend (having taken into account any benefits available under the UK-Switzerland double tax convention).

Under the dividend exemption rules of Part 9A of the Corporation Tax Act 2009, any Shareholder within the charge to corporation tax should generally not be subject to corporation tax on dividends paid by the Company. Where the dividend exemption applies, no credit for any Swiss Withholding Tax withheld from a dividend paid by the Company will be available to a UK resident corporate Shareholder. However, under the dividend exemption rules, an election can be made for a dividend to not be exempt from corporation tax. If such an election is made, HMRC will generally give credit against UK corporation tax on the dividend for any Swiss Withholding Tax withheld from a dividend paid by the Company and not recoverable from the Swiss tax authorities, applying the appropriate rate of withholding under the UK-Switzerland double tax convention.

If you are in any doubt about your tax position, you should consult your own professional adviser without delay.

1.2 **UK taxation consequences of disposing of Ordinary Shares**

A disposal of Ordinary Shares by a UK tax resident Shareholder may, depending on individual circumstances, give rise to a chargeable gain or allowable loss for UK tax purposes.

A disposal of Ordinary Shares by a Shareholder who is not resident in the UK for tax purposes but who carries on a trade, profession or vocation in the UK through a branch, agency or permanent establishment and has used, held or acquired the Ordinary Shares for the purposes of such trade, profession or vocation or such branch, agency or permanent establishment may, depending on individual circumstances, give rise to a chargeable gain or allowable loss for UK tax purposes.

A Shareholder who is an individual and who is temporarily non-resident in the UK for a period of less than five complete tax years may, under anti-avoidance legislation, still be liable to UK taxation on their return to the UK on a chargeable gain realised on the disposal or part disposal of Ordinary Shares during the period when he is non-resident.

For corporate Shareholders only, indexation allowance on the relevant proportion of the original allowable cost should be taken into account for the purposes of calculating a chargeable gain (but not an allowable loss) arising on a disposal or part disposal of Ordinary Shares.

1.3 **UK stamp duty and SDRT**

No UK stamp duty or SDRT will be payable on the issue of Ordinary Shares.

In practice, UK stamp duty should generally not need to be paid on an instrument transferring Ordinary Shares, provided that such transfer instruments are executed and retained outside of the UK.

No UK SDRT will be payable in respect of any agreement to transfer Ordinary Shares.

The statements in this paragraph 1.3 summarise the current position on stamp duty and SDRT and are intended as a general guide only. They assume that the Ordinary Shares will not be registered in a register kept in the UK by or on behalf of the Company. The Company has confirmed it does not intend to keep such a register in the UK.

1.4 **UK inheritance tax**

On the basis of the assumption contained in paragraph 1.3 above, the Ordinary Shares will be assets situated outside the United Kingdom for the purposes of United Kingdom inheritance tax. A gift of such assets by, or the death of, an individual holder of such assets who is domiciled or is deemed to be domiciled in the United Kingdom may (subject to certain exemptions and reliefs) give rise to a liability to United Kingdom inheritance tax. Generally, United Kingdom inheritance tax is not chargeable on outright gifts to individuals if the transfer is made more than seven complete years prior to the death of the donor. For inheritance tax purposes, a transfer of assets at less than full market value may be treated as a gift and particular rules apply to gifts where the donor reserves or retains some benefit. Since the Ordinary Shares will be assets situated outside the United Kingdom for the purposes of United Kingdom inheritance tax, where a holder is neither domiciled nor deemed domiciled in the United Kingdom (under certain rules relating to long residence or previous domicile), neither a gift of such assets by the holder nor the death of such holder will give rise to a liability to United Kingdom inheritance tax.

1.5 **Close Companies**

Shareholders who are resident or, in the case of individuals, resident or ordinarily resident in the UK, who hold, alone or together with associated persons, an interest of more than 10 per cent. in the Company could, under the provisions of Section 13 of the Taxation of Chargeable Gains Act 1992, in certain circumstances, be subject to United Kingdom tax in respect of a portion of capital gains made by non-UK resident subsidiaries of the Company if the Company itself is considered to be a "close" company for the purposes of these rules. The Company currently considers that it is not a "close" company for these purposes. "Close" company status is a question of fact which turns upon the extent of shareholders' holdings in the Company and the relationships between such shareholders. Accordingly, whether or not the Company is considered to be a "close" company currently or in the future may be determined by factors outside the Company's direct control.

## 2 Swiss taxation

**The following paragraphs discuss Swiss Withholding Tax and the position on Swiss tax for Shareholders who are initial purchasers of Ordinary Shares. This is a general summary of certain tax consequences of the ownership of the Ordinary Shares. These discussions are based, as applicable, on the tax laws, regulations, decrees, rulings, income tax conventions (treaties), administrative practice and judicial decisions of Switzerland as in effect on the date of this Prospectus which are subject to change (or subject to changes in interpretations), possibly with retrospective effect. This is not a complete analysis of the potential tax effects relevant to owning Ordinary Shares, nor does the following summary take into account or discuss the tax laws of any jurisdiction other than Switzerland. It also does not take into account investors' individual circumstances. This summary does not purport to be a legal opinion or to address all tax aspects that may be relevant to a holder of Ordinary Shares. Investors are advised to consult their own tax advisers as to Swiss or other tax consequences of the acquisition, ownership and disposition of the Ordinary Shares. Tax consequences may differ according to the provisions of different double taxation treaties and the investor's particular circumstances. The statements and discussion of Swiss taxes set out below are of a general nature and do not relate to persons in the business of buying and selling shares or other securities.**

Swiss Withholding Tax

Any dividends and similar cash or in-kind distributions of profit and reserves other than Qualifying Reserves made by the Company in respect of the Ordinary Shares, including stock dividends and the distribution of any liquidation proceeds in excess of nominal share capital and Qualifying Reserves, will be subject to Swiss Federal Withholding tax (*Verrechnungssteuer*) ("**Swiss Withholding Tax**") imposed on the gross amount at the then prevailing rate (currently 35 per cent.).

For distributions subject to Swiss Withholding Tax, the Company may only pay out 65 per cent. of the gross amount of any dividend and similar distributions to the holders of Ordinary Shares. A portion equal to 35 per cent. of the gross amount of such dividends and similar distributions must be paid to the Swiss Federal Tax Administration. The redemption of Ordinary Shares by the Company may under certain circumstances (in particular, if the Ordinary Shares are redeemed for subsequent cancellation) be taxed as a partial liquidation for Swiss Withholding Tax purposes, with the effect that Swiss Withholding Tax at the then prevailing rate (currently 35 per cent.) is due on the difference between the redemption price and nominal value plus proportionate Qualifying Reserves of the redeemed Ordinary Shares.

However, dividends and similar distributions out of Qualifying Reserves and repayments of the nominal share capital will not be subject to Swiss Withholding Tax. A ruling from the Swiss Federal Tax Administration signed 7 January 2011 confirmed that Qualifying Reserves of approximately U.S.$8.8 billion will be created on the Restructuring. The Global Offer will create additional Qualifying Reserves equal to the share premium of the Ordinary Shares issued. This ruling is binding on the Swiss Federal Tax Administration, provided that, among other things, full disclosure of the facts and circumstances of the Restructuring have been provided to the Swiss Federal Tax Administration (which the Company believes is the case), the terms of the ruling are complied with and the relevant facts and applicable laws, regulations and administrative practice remain unchanged. It is at the discretion of the Company's shareholders to decide (at a shareholders' meeting) whether to distribute a dividend out of Qualifying Reserves free of Swiss Withholding Tax and/or out of profit/retained earnings/non-qualifying reserves subject to Swiss Withholding Tax. Once cumulative distributions out of Qualifying Reserves exceed the value threshold described above, any distributions paid by the Company will be subject to Swiss Withholding Tax. To the extent that additional shares are issued by the Company in the future, the value of the distributions which can be made free of Swiss Withholding Tax will be increased by an amount corresponding to the total nominal share capital and paid-in capital/share premium of the shares issued.

Swiss resident beneficiaries of taxable dividends and similar distributions in respect of the Ordinary Shares are entitled to full subsequent relief of the Swiss Withholding Tax, either through a tax refund or tax credit against their income tax liability, if they duly report the underlying income in their tax returns or financial statements used for tax purposes, as the case may be, and if there is no tax avoidance. Non-Swiss resident beneficiaries of dividends and similar distributions in respect of Ordinary Shares may be entitled to a partial or full credit of the Swiss Withholding Tax in accordance

with any applicable double taxation convention between Switzerland and the beneficiary's country of tax residence.

Income and profit tax

*Income tax for individuals holding the shares as private assets:* Individuals who are resident in Switzerland for tax purposes and hold Ordinary Shares as part of his or her private assets (*Privatvermögen*) who receive dividends and similar distributions (including stock dividends and liquidation proceeds in excess of nominal share capital and Qualifying Reserves) from the Company must include these distributions in his or her personal tax return and will be subject to federal, cantonal and communal income tax on any net taxable income for the relevant tax period. However, dividends and similar distributions out of Qualifying Reserves and repayments of the nominal share capital will not be subject to federal, cantonal and communal income tax. Stock dividends may be treated differently for cantonal and communal taxes depending on the canton of residency. The Direct Federal Tax on dividends and similar distributions (including stock dividends and liquidation proceeds in excess of nominal share capital and Qualifying Reserves) from the Company is reduced to 60 per cent. of regular taxation (*Teilbesteuerung*) if the investment amounts to at least 10 per cent. of nominal share capital of the Company. Most cantons have already introduced or will introduce a similar partial taxation on a cantonal and communal level.

*Income tax for individuals holding the shares as business assets:* Swiss resident individuals holding Ordinary Shares as business assets, as well as non-Swiss resident individuals holding the shares as part of a permanent establishment or a fixed place of business receiving dividends and similar distributions (including stock dividends and liquidation proceeds in excess of nominal share capital and Qualifying Reserves) from the Company, must include these distributions in his or her income statement and will be subject to federal, cantonal and communal income tax on any net taxable income for the relevant tax period. The Direct Federal Tax on dividends and similar distributions (including stock dividends and liquidation proceeds in excess of nominal share capital and Qualifying Reserves) from the Company is reduced to 50 per cent. of regular taxation (*Teilbesteuerung*), if the investment is held as a business asset in terms of Swiss tax law and amounts to at least 10 per cent. of the nominal share capital of the Company. Most cantons have already introduced or will introduce a similar partial taxation on a cantonal and communal level.

*Profit tax for legal entities:* Legal entities resident in Switzerland or non-Swiss resident entities holding Ordinary Shares as part of a Swiss permanent establishment are required to include all taxable distributions received on the Ordinary Shares in their profit and loss statement relevant for profit tax purposes and will be subject to federal, cantonal and communal corporate profit tax on any net taxable earnings for such period. A Swiss corporation or co-operative, or a non-Swiss corporation or co-operative holding Ordinary Shares as part of a Swiss permanent establishment, may under certain circumstances, benefit from taxation relief with respect to distributions (*Beteiligungsabzug*), provided such Ordinary Shares represent at the time of the distribution at least 10 per cent. of the share capital or 10 per cent. of the profit and reserves, respectively, or a fair market value of at least 1 million Swiss francs.

A holder of Ordinary Shares who is not a resident of Switzerland for tax purposes will not be liable for any Swiss income or profit taxes on dividends and similar distributions with respect to the Ordinary Shares, unless the Ordinary Shares are attributable to a permanent establishment or a fixed place of business maintained in Switzerland by such non-Swiss resident.

Net worth and capital taxes

An individual who is a Swiss resident for tax purposes, or a non-Swiss resident holding Ordinary Shares as part of a permanent establishment or fixed place of business situated in Switzerland, is required to include his or her Ordinary Shares in his or her assets which are subject to cantonal and communal net worth taxes. No net worth tax is levied at the federal level.

Legal entities resident in Switzerland or non-Swiss resident legal entities with a Swiss permanent establishment are subject to cantonal and communal capital tax. The cantonal and communal capital tax is levied on the basis of the taxable equity of the legal entities. Usually, the acquisition of Ordinary Shares should not influence the equity of a legal entity and should therefore have no or only limited influence on its capital tax charge. However, the acquisition of Ordinary Shares may change the basis

for international or inter-cantonal allocation of the taxable equity of the legal entity. No capital tax is levied at the federal level.

Taxes on capital gains upon disposal of Ordinary Shares

*Individuals:* Individuals who are resident in Switzerland for tax purposes and hold Ordinary Shares as part of his or her private assets (*Privatvermögen*) generally are exempt from Swiss federal, cantonal and communal taxes with respect to capital gains realised upon the sale or other disposal of Ordinary Shares, unless such individuals are qualified as professional securities dealers (*Wertschriftenhändler*) for income tax purposes. Under certain circumstances, share sale proceeds of a private individual may be recharacterised into taxable investment income. Upon a repurchase of Ordinary Shares by the Company, the portion of the repurchase price in excess of the nominal amount and Qualifying Reserves may be classified as taxable investment income if the Ordinary Shares repurchased are not sold within a six-year period or if the Ordinary Shares are repurchased for a capital reduction. Capital gains realised by an individual on Ordinary Shares that are held as part of its business assets are subject to income taxation and social security contributions. Capital gains realised by individuals who, for income tax purposes, are classified as professional securities dealers are subject to income taxation and social security contributions. Certain reductions or partial taxation similar to those mentioned above for dividends (*Teilbesteuerung*) may be available for capital gains realised upon the sale of Ordinary Shares if certain conditions are met. The entitlement of shareholders to such reductions must be assessed on an individual basis and shareholders should consult their own legal, financial or tax advisers.

*Legal entities:* Capital gains upon the sale or other disposal of Ordinary Shares realised by legal entities resident in Switzerland for tax purposes or foreign legal entities holding Ordinary Shares as part of a Swiss permanent establishment are generally subject to ordinary profit taxation. A Swiss corporation or co-operative, or non-Swiss corporation or co-operative holding Ordinary Shares as part of a Swiss permanent establishment, may, under certain circumstances, benefit from taxation relief on capital gains realised upon the disposal of Ordinary Shares (*Beteiligungsabzug*), provided such Ordinary Shares were held for at least one year and the shareholder disposes at least 10 per cent. of the share capital or 10 per cent. of the profit and reserves, respectively. Subsequent sales can be less than 10 per cent. of the nominal share capital in order to qualify for the participation relief, provided the fair market value of the Ordinary Shares held as per the previous financial year end prior to this sale amounts to at least 1 million Swiss francs.

*Non-resident individuals and legal entities:* Individuals and legal entities which are not Swiss residents for tax purposes and do not hold Ordinary Shares as part of a Swiss business operation or a Swiss permanent establishment or fixed place of business situated in Switzerland are generally not subject to Swiss income or profit taxes on gains realised upon the disposal of the Ordinary Shares.

Gift and inheritance taxes

The transfer of Ordinary Shares may be subject to cantonal and/or communal gift, estate or inheritance taxes if the donor is, or the deceased was, resident for tax purposes in a canton levying such taxes.

Federal stamp tax upon issuance and transfer of Ordinary Shares

A one time federal insurance stamp tax (*Emissionsabgabe*) will be payable on the issue of new Ordinary Shares at the then prevailing rate (currently one per cent.). This tax will be payable by the Company.

The transfer of any Ordinary Shares may be subject to a federal transfer stamp tax (*Umsatzabgabe*) at a current rate of up to 0.30 per cent. if such transfer occurs through or with a Swiss or Liechtenstein bank or securities dealer as defined in the Swiss Federal Stamp Tax Act.

## 3 Jersey taxation

**The following summary of the anticipated treatment of the Company and holders of Ordinary Shares (other than residents of Jersey) is based on Jersey taxation law and practice as it is understood to apply at the date of this Prospectus. It does not constitute legal or tax advice and does not address all aspects of Jersey tax law and practice. Shareholders should consult their professional advisers on the**

**implications of acquiring, buying, holding, selling or otherwise disposing of Ordinary Shares under the laws of the jurisdictions in which they may be liable to taxation. Shareholders should be aware that tax laws, rules and practice and their interpretation may change.**

Taxation of the Company

Jersey taxation legislation provides that the general basic rate of income tax on the profits of companies regarded as resident in Jersey or having a permanent establishment in Jersey will be zero per cent. and that only a limited number of financial services companies shall be subject to income tax at a rate of ten per cent.

The Comptroller of Taxes has confirmed that the Company shall not be regarded as resident in Jersey so long as it satisfies the conditions set out in Article 123(1)(a) of the Income Tax (Jersey) Law 1961, and therefore the Company will not (except as noted below) be liable to Jersey income tax.

If the Company derives any income from the ownership, disposal or exploitation of land in Jersey, such income will be subject to Jersey income tax at the rate of 20 per cent. It is not expected that the Company will derive any such income.

A 3 per cent. (5 per cent. from 1 June 2011) goods and services tax is generally paid in Jersey on the sale or exchange of goods and services in Jersey. All businesses with a 12-month taxable turnover in excess of £300,000 must, by Jersey law, register for this tax unless they are an international services entity ("ISE"). For so long as the Company is an ISE within the meaning of the Goods and Services (Jersey) Law 2007, having satisfied the requirements of the Goods and Services Tax (International Services Entities) (Jersey) Regulations 2008, as amended, a supply of goods or services made by or to the Company shall not be a taxable supply for the purposes of Jersey law.

Taxation of holders of Ordinary Shares

The Company will be entitled to pay dividends to holders of Ordinary Shares without any withholding or deduction for, or on account of, Jersey tax. The holders of Ordinary Shares (other than residents of Jersey) will not be subject to any tax in Jersey in respect of the holding, sale or other disposition of such Ordinary Shares.

Stamp duty

No stamp duty is payable in Jersey on the issue or *inter vivos* transfer of the Ordinary Shares.

Upon the death of a holder of the Ordinary Shares, a grant of probate or letters of administration will be required to transfer the Ordinary Shares of the deceased person, except that where the deceased person was domiciled outside of Jersey at the time of death, the Company may (at its discretion) dispense with this requirement where the value of the deceased's movable estate in Jersey does not exceed £10,000.

Upon the death of a holder of the Ordinary Shares, Jersey stamp duty will be payable on the registration in Jersey of a grant of probate or letters of administration, which will be required in order to transfer or otherwise deal with:

(a) (where the deceased person was domiciled in Jersey at the time of death) the deceased person's personal estate wherever situated (including any Ordinary Shares) if the net value of such personal estate exceeds £10,000; or

(b) (if the deceased person was domiciled outside of Jersey at the time of death) the deceased person's personal estate situated in Jersey (including any Ordinary Shares) if the net value of such personal estate exceeds £10,000.

The rate of stamp duty payable is:

(i) (where the net value of the deceased person's relevant personal estate does not exceed £100,000) 0.5 per cent. of the net value of the deceased person's relevant personal estate; or

(ii) (where the net value of the deceased person's relevant personal estate exceeds £100,000) £500 for the first £100,000 plus 0.75 per cent. of the net value of the deceased person's relevant personal estate which exceeds £100,000.

In addition, application and other fees may be payable.

Jersey does not otherwise levy taxes upon capital, inheritances, capital gains or gifts, nor are there any other estate duties.

## 4 U.S. taxation

### CERTAIN U.S. FEDERAL INCOME TAX CONSIDERATIONS

TO ENSURE COMPLIANCE WITH TREASURY DEPARTMENT CIRCULAR 230, HOLDERS ARE HEREBY NOTIFIED THAT: (A) ANY DISCUSSION OF FEDERAL TAX ISSUES IN THIS PROSPECTUS IS NOT INTENDED OR WRITTEN TO BE RELIED UPON, AND CANNOT BE RELIED UPON, BY HOLDERS FOR THE PURPOSE OF AVOIDING PENALTIES THAT MAY BE IMPOSED ON HOLDERS UNDER THE INTERNAL REVENUE CODE; (B) SUCH DISCUSSION IS INCLUDED HEREIN BY THE ISSUER IN CONNECTION WITH THE PROMOTION OR MARKETING (WITHIN THE MEANING OF CIRCULAR 230) BY THE ISSUER OF THE TRANSACTIONS OR MATTERS ADDRESSED HEREIN; AND (C) HOLDERS SHOULD SEEK ADVICE BASED ON THEIR PARTICULAR CIRCUMSTANCES FROM AN INDEPENDENT TAX ADVISER.

* * * * *

The following is a summary of certain material U.S. federal income tax consequences of the acquisition, ownership and disposition of Ordinary Shares by a U.S. Holder (as defined below). This summary deals only with initial purchasers of Ordinary Shares that are U.S. Holders that will hold the Ordinary Shares as capital assets. The discussion does not cover all aspects of U.S. federal income taxation that may be relevant to, or the actual tax effect that any of the matters described herein will have on, the acquisition, ownership or disposition of Ordinary Shares by particular investors, and does not address state, local, foreign or other tax laws. This summary also does not address tax considerations applicable to investors that own (directly, indirectly, or constructively) 10 per cent. or more of the voting stock of the Company, nor does this summary discuss all of the tax considerations that may be relevant to certain types of investors subject to special treatment under the U.S. federal income tax laws (such as financial institutions, insurance companies, investors liable for the alternative minimum tax, individual retirement accounts and other tax-deferred accounts, tax-exempt organisations, dealers in securities or currencies, investors that will hold the Ordinary Shares as part of straddles, hedging transactions or conversion transactions for U.S. federal income tax purposes or investors whose functional currency is not the U.S. dollar).

As used herein, the term "U.S. Holder" means a beneficial owner of Ordinary Shares that is, for U.S. federal income tax purposes, (i) an individual citizen or resident of the United States, (ii) a corporation created or organised under the laws of the United States or any State thereof, (iii) an estate the income of which is subject to U.S. federal income tax without regard to its source, or (iv) a trust if a court within the United States is able to exercise primary supervision over the administration of the trust and one or more U.S. persons have the authority to control all substantial decisions of the trust, or the trust has elected to be treated as a domestic trust for U.S. federal income tax purposes.

The U.S. federal income tax treatment of a partner in a partnership that holds Ordinary Shares will depend on the status of the partner and the activities of the partnership. Prospective purchasers that are partnerships should consult their tax advisers concerning the U.S. federal income tax consequences to their partners of the acquisition, ownership and disposition of Ordinary Shares by the partnership.

The summary assumes that the Company is not a passive foreign investment company (a "PFIC") for U.S. federal income tax purposes, which the Company believes to be the case. The Company's possible status as a PFIC must be determined annually and therefore may be subject to change. If the Company were to be a PFIC in any year, materially adverse consequences could result for U.S. Holders.

The summary is based on the tax laws of the United States, including the Internal Revenue Code of 1986, as amended, its legislative history, existing and proposed regulations thereunder, published rulings and court decisions, as well as on the income tax treaty between the U.S. and Switzerland (the "Treaty"), all as of the date hereof and all subject to change at any time, possibly with retroactive effect.

**THE SUMMARY OF U.S. FEDERAL INCOME TAX CONSEQUENCES SET OUT BELOW IS FOR GENERAL INFORMATION ONLY. ALL PROSPECTIVE PURCHASERS SHOULD CONSULT**

**THEIR TAX ADVISERS AS TO THE PARTICULAR TAX CONSEQUENCES TO THEM OF OWNING THE ORDINARY SHARES, INCLUDING THEIR ELIGIBILITY FOR THE BENEFITS OF THE TREATY, THE APPLICABILITY AND EFFECT OF STATE, LOCAL, FOREIGN AND OTHER TAX LAWS AND POSSIBLE CHANGES IN TAX LAW.**

**Ordinary Shares**

***Dividends***

*General*

Distributions paid by the Company out of current or accumulated earnings and profits (as determined for U.S. federal income tax purposes), before reduction for any Swiss Withholding Tax paid by the Company with respect thereto, will generally be taxable to a U.S. Holder as foreign source dividend income, and will not be eligible for the dividends received deduction allowed to corporations. Distributions in excess of current and accumulated earnings and profits will be treated as a non-taxable return of capital to the extent of the U.S. Holder's basis in the Ordinary Shares and thereafter as capital gain. However, the Company does not maintain calculations of its earnings and profits in accordance with U.S. federal income tax accounting principles. U.S. Holders should therefore assume that any distribution by the Company with respect to Ordinary Shares will constitute ordinary dividend income. U.S. Holders should consult their own tax advisers with respect to the appropriate U.S. federal income tax treatment of any distribution received from the Company.

*Foreign Currency Dividends*

Dividends paid in pounds sterling, euros or Swiss Francs will be included in income in a U.S. dollar amount calculated by reference to the exchange rate in effect on the day the dividends are received by the U.S. Holder, regardless of whether the pounds sterling, euros or Swiss Francs are converted into U.S. dollars at that time. If dividends received in pounds sterling, euros, or Swiss Francs are converted into U.S. dollars at the spot rate on the day they are received, the U.S. Holder generally will not be required to recognise foreign currency gain or loss in respect of the dividend income.

*Effect of Swiss Withholding Taxes*

As discussed in "Swiss Taxation—Withholding Tax", under current law payments of dividends by the Company out of reserves other than Qualifying Reserves are subject to Swiss Withholding Tax at the then prevailing rate (currently 35 per cent.). The rate of withholding tax applicable to U.S. Holders that are eligible for benefits under the Treaty is reduced to a maximum of 15 per cent. For U.S. federal income tax purposes, U.S. Holders will be treated as having received the amount of Swiss taxes withheld by the Company, and as then having paid over the withheld taxes to the Swiss taxing authorities. As a result of this rule, the amount of dividend income included in gross income for U.S. federal income tax purposes by a U.S. Holder with respect to a payment of dividends will be greater than the amount of cash actually received (or receivable) by the U.S. Holder from the Company with respect to the payment.

A U.S. Holder will generally be entitled, subject to certain limitations, to a credit against its U.S. federal income tax liability, or a deduction in computing its U.S. federal taxable income, for Swiss income taxes withheld by the Company. U.S. Holders that are eligible for benefits under the Treaty will not be entitled to a foreign tax credit for the amount of any Swiss taxes withheld in excess of the 15 per cent. maximum rate, and with respect to which the holder is entitled to obtain a refund from the Swiss taxing authorities.

For purposes of the foreign tax credit limitation, foreign source income is classified in one of two "baskets", and the credit for foreign taxes on income in any basket is limited to U.S. federal income tax allocable to that income. Dividends paid by the Company generally will constitute foreign source income in the "passive income" basket.

U.S. Holders that are accrual basis taxpayers, and who do not otherwise elect, must translate Swiss taxes into U.S. Dollars at a rate equal to the average exchange rate for the taxable year in which the taxes accrue, while all U.S. Holders must translate taxable dividend income into U.S. Dollars at the spot rate on the date received. This difference in exchange rates may reduce the U.S. dollar value of the credits for Swiss taxes relative to the U.S. Holder's U.S. federal income tax liability attributable to a dividend. However, cash basis and electing accrual basis U.S. Holders may translate Swiss taxes into

U.S. Dollars using the exchange rate in effect on the day the taxes were paid. Any such election by an accrual basis U.S. Holder will apply for the taxable year in which it is made and all subsequent taxable years, unless revoked with the consent of the IRS.

Prospective purchasers should consult their tax advisers concerning the foreign tax credit implications of the payment of Swiss taxes.

***Sale or other Disposition***

Upon a sale or other disposition of Ordinary Shares, a U.S. Holder generally will recognise capital gain or loss for U.S. federal income tax purposes equal to the difference, if any, between the amount realised on the sale or other disposition and the U.S. Holder's adjusted tax basis in the Ordinary Shares. This capital gain or loss will be long-term capital gain or loss if the U.S. Holder's holding period in the Ordinary Shares exceeds one year.

A U.S. Holder's tax basis in an Ordinary Share will generally be its U.S. dollar cost. The U.S. dollar cost of an Ordinary Share purchased with foreign currency will generally be the U.S. dollar value of the purchase price on the date of purchase, or the settlement date for the purchase, in the case of Ordinary Shares traded on an established securities market, within the meaning of the applicable Treasury Regulations, that are purchased by a cash basis U.S. Holder (or an accrual basis U.S. Holder that so elects). Such an election by an accrual basis U.S. Holder must be applied consistently from year to year and cannot be revoked without the consent of the IRS. The amount realised on a sale or other disposition of Ordinary Shares for an amount in foreign currency will be the U.S. dollar value of this amount on the date of sale or disposition. On the settlement date, the U.S. Holder will recognise U.S. source foreign currency gain or loss (taxable as ordinary income or loss) equal to the difference (if any) between the U.S. dollar value of the amount received based on the exchange rates in effect on the date of sale or other disposition and the settlement date. However, in the case of Ordinary Shares traded on an established securities market that are sold by a cash basis U.S. Holder (or an accrual basis U.S. Holder that so elects), the amount realised will be based on the exchange rate in effect on the settlement date for the sale, and no exchange gain or loss will be recognised at that time.

***Disposition of Foreign Currency***

Foreign currency received on the sale or other disposition of an Ordinary Share will have a tax basis equal to its U.S. dollar value on the settlement date. Foreign currency that is purchased will generally have a tax basis equal to the U.S. dollar value of the foreign currency on the date of purchase. Any gain or loss recognised on a sale or other disposition of a foreign currency (including its use to purchase Ordinary Shares or upon exchange for U.S. dollars) will be U.S. source ordinary income or loss.

**Passive Foreign Investment Company Considerations**

A foreign corporation will be a PFIC in any taxable year in which, after taking into account the income and assets of the corporation and certain subsidiaries pursuant to applicable "look-through rules," either (i) at least 75 per cent. of its gross income is "passive income" or (ii) at least 50 per cent. of the average value of its assets is attributable to assets which produce passive income or are held for the production of passive income. The Company does not believe that it was a PFIC for its preceding year and does not expect to be or become a PFIC for U.S. federal income tax purposes. Although income from the sales of commodities is generally passive income, a special rule treats active business gains from the sales of commodities as non-passive income provided certain requirements are met. To the extent the Company derives income from the sale of commodities, the Company believes that it currently meets these requirements. The Company's possible status as a PFIC must be determined annually, however, and may be subject to change if the Company fails to qualify under this special rule for any year in which a U.S. Holder holds Ordinary Shares.

If the Company were to be treated as a PFIC, U.S. Holders of Ordinary Shares would be required (i) to pay a materially greater amount of tax on certain distributions and gains on sale and (ii) to pay tax on any gain from the sale of Ordinary Shares at ordinary income (rather than capital gains) rates in addition to paying a materially greater amount of tax on this gain. Prospective purchasers should consult their tax advisers regarding the potential application of the PFIC regime.

*Backup Withholding and Information Reporting*

Payments of dividends and other proceeds with respect to Ordinary Shares, by a U.S. paying agent or other U.S. intermediary will be reported to the IRS and to the U.S. Holder as may be required under applicable regulations. Backup withholding may apply to these payments if the U.S. Holder fails to provide an accurate taxpayer identification number or certification of exempt status or fails to report all interest and dividends required to be shown on its U.S. federal income tax returns. Certain U.S. Holders are not subject to backup withholding. U.S. Holders should consult their tax advisers as to their qualification for exemption from backup withholding and the procedure for obtaining an exemption.

*Reportable Transactions*

A U.S. taxpayer that participates in a "reportable transaction" will be required to disclose its participation to the IRS. Under the relevant rules, if the Ordinary Shares are denominated in a foreign currency, a U.S. Holder may be required to treat a foreign currency exchange loss from the Ordinary Shares as a reportable transaction if this loss exceeds the relevant threshold in the regulations (U.S.$50,000 in a single taxable year, if the U.S. Holder is an individual or trust, or higher amounts for other non-individual U.S. Holders), and to disclose its investment by filing Form 8886 with the IRS. A penalty in the amount of U.S.$10,000 in the case of a natural person and U.S.$50,000 in all other cases is generally imposed on any taxpayer that fails to timely file an information return with the IRS with respect to a transaction resulting in a loss that is treated as a reportable transaction. Prospective purchasers are urged to consult their tax advisers regarding the application of these rules.

*Foreign Financial Asset Reporting*

Recently enacted legislation imposes new reporting requirements on the holding of certain foreign financial assets, including equity of foreign entities, if the aggregate value of all of these assets exceeds $50,000. The Ordinary Shares are expected to constitute foreign financial assets subject to these requirements unless the Ordinary Shares are held in an account at a domestic financial institution. U.S. Holders should consult their tax advisers regarding the application of this legislation.

## 5 Hong Kong taxation

**The summary in the following paragraphs is intended for general information only and therefore does not constitute, in whole or in part, an expression of an opinion. The summary is based solely upon the information, documents, facts and assumptions which are included or referenced in the following paragraphs. Only the following specific Hong Kong tax issues and tax consequences are discussed and no other taxes of any kind are considered. The summary is based on the relevant laws, regulations, and interpretations of Hong Kong (the "authorities") that are in effect as of the date of this Prospectus. The authorities are subject to change, which may be retroactive in their effect. Any changes or developments that may affect the summary or any matters set forth herein and, in particular, any subsequent event after the date of this Prospectus will not be taken into consideration. In addition, the summary is not binding on the tax authorities or the courts and should not be considered as any representation, warranty, or guarantee that the tax authorities or the courts will concur with the summary. Any person who is in any doubt as to his or her tax position should consult his or her tax advisers immediately.**

Tax on dividends

If the Company is chargeable to Hong Kong profits tax and a dividend is received from the Company, such dividend is specifically exempted from tax in Hong Kong under Hong Kong tax legislation. In other cases, i.e. where the dividend is received from the Company and the Company is not chargeable to Hong Kong profits tax, the current practice of the Hong Kong Inland Revenue Department is that no tax is charged in Hong Kong on such a dividend.

Tax on gains and profits tax

Chargeability to Hong Kong profits tax on gains from the sale of assets depends on the nature and source of the gains. No tax is imposed in respect of gains arising from the sale of capital assets. Trading gains from the sale of assets by persons carrying on a trade, profession or business in Hong Kong where the gains are derived from or arise in Hong Kong will be subject to Hong Kong profits

tax, which is currently imposed at the rate of 16.5 per cent. on corporations and at a maximum rate of 15 per cent. on individuals.

In accordance with the prevailing practice of the Hong Kong Inland Revenue Department, the source of gains from the purchase and sale of listed shares through a stock exchange is ascertained by the location of the stock exchange where the shares in question are traded. In respect of the gains from the sale of Ordinary Shares through the Hong Kong Stock Exchange, the seller will be subject to Hong Kong profits tax if the seller carries on a trade, profession or business in Hong Kong and holds the Ordinary Shares for trading purposes.

Stamp duty

No Hong Kong stamp duty will be payable on the new issue of Ordinary Shares by the Company.

Hong Kong stamp duty will be payable by the purchaser on every purchase and by the seller on every sale of Hong Kong stock. Hong Kong stock is defined as "stock the transfer of which is required to be registered in Hong Kong" and includes Ordinary Shares traded through the Hong Kong Stock Exchange. The duty is charged at the *ad valorem* rate of 0.1 per cent. of the consideration for, or (if greater) the value of, the shares transferred on each of the seller and purchaser. In other words, a total of 0.2 per cent. would currently be payable on a typical sale and purchase transaction with respect to the transfer of the Company's Ordinary Shares through the Hong Kong Stock Exchange. In addition, any instrument of transfer (if required) will be subject to a flat rate of stamp duty of HK$5.00. The agent or, where no agent, the principal effecting the sale or purchase is liable for the payment of the stamp duty.

The purchaser and the seller of Ordinary Shares traded through the Hong Kong Stock Exchange are subject to Hong Kong stamp duty.

## SECTION X: ADDITIONAL INFORMATION

### 1 Responsibility

1.1 The Company and the Directors, whose names and principal functions are set out in Section II: "Directors and Corporate Governance", accept responsibility for the information contained in this Prospectus. To the best of the knowledge of the Company and the Directors (each of whom has taken all reasonable care to ensure that such is the case), the information contained in this Prospectus is in accordance with the facts and does not omit anything likely to affect the import of such information.

1.2 Deloitte LLP accepts responsibility for the purposes of Prospectus Rule 5.5.3R (2)(f) for its reports on the historical financial information and the unaudited pro forma financial information of Glencore set out in Sections VI: "Historical and Financial Information" and VII: "Unaudited Pro Forma Financial Information" of this Prospectus, and has taken all reasonable care to ensure that the information contained in these reports is, to the best of its knowledge, in accordance with the facts and contains no omission likely to affect its import.

1.3 Mr Emerson accepts responsibility for the purposes of Prospectus Rule 5.5.3R (2)(f) for the mineral reserve and resources information in relation to AR Zinc, Los Quenuales and Sinchi Wayra as set out in Section I: "Information on Glencore" and confirms that he has taken all reasonable care to ensure that the relevant information, to the best of his knowledge, is in accordance with the facts and contains no omission likely to affect its import. Mr Emerson has consented to and not withdrawn his consent for inclusion of his name in the Prospectus, in the form and context in which such references appear.

1.4 Mr Simpson and Mr Hosken each accept responsibility for the purposes of Prospectus Rule 5.5.3R (2)(f) for the mineral reserves and resources information in relation to Cobar as set out in Section I: "Information on Glencore" and confirm that they have each taken all reasonable care to ensure that the relevant information, to the best of their knowledge, is in accordance with the facts and contains no omission likely to affect its import. Mr Simpson and Mr Hosken have each consented to and not withdrawn their respective consents for inclusion of their names in the Prospectus, in the form and context in which such references appear.

1.5 Mr Willem Van der Schyff accepts responsibility for the purposes of Prospectus Rule 5.5.3R (2)(f) for the mineral reserves and resources information in relation to Kansuki as set out in Section I: "Information on Glencore" and confirms that he has taken all reasonable care to ensure that the relevant information, to the best of his knowledge, is in accordance with the facts and contains no omission likely to affect its import. Mr Van der Schyff has consented to and not withdrawn his consent for inclusion of his name in the Prospectus, in the form and context in which such references appear.

1.6 Mr Selfe, Mr King, Mr Fowler and Mr O'Callaghan each accept responsibility for the purposes of Prospectus Rule 5.5.3R (2)(f) for the mineral reserves and resources information in relation to Murrin Murrin as set out in Section I: "Information on Glencore" and confirm that they have taken all reasonable care to ensure that the relevant information, to the best of their knowledge, is in accordance with the facts and contains no omission likely to affect its import. Mr Selfe, Mr King, Mr Fowler and Mr O'Callaghan have each consented to and not withdrawn their respective consents for inclusion of their names in the Prospectus, in the form and context in which such references appear.

1.7 Mr Denner and Mr Dippenaar each accept responsibility for the purposes of Prospectus Rule 5.5.3R (2)(f) for the mineral reserves and resources information in relation to Shanduka as set out in Section I: "Information on Glencore" and confirm that they have taken all reasonable care to ensure that the relevant information, to the best of their knowledge, is in accordance with the facts and contains no omission likely to affect its import. Mr Denner and Mr Dippenaar have each consented to and not withdrawn their respective consents for inclusion of their names in the Prospectus, in the form and context in which such references appear.

### 2 Incorporation and registered office

2.1 The Company was incorporated and registered in Jersey on 14 March 2011 as a public company limited by shares under the Jersey Companies Law with the name Glencore International

Limited and with the registered number 107710. The Company changed its name to Glencore International plc on 12 April 2011 pursuant to a special resolution.

2.2 The Company's registered office is at Queensway House, Hilgrove Street, St Helier, Jersey JE1 1ES (telephone number +44 1534 281800) and its principal place of business is Baarermattstrasse 3, PO Box 777, CH-6341 Switzerland.

2.3 The principal legislation under which the Company operates, and under which the Ordinary Shares were created, is the Jersey Companies Law.

2.4 The principal business of the Company will be to act as the ultimate holding company of the Glencore Group.

2.5 The accounting reference date of the Company is 31 December.

## 3 The Restructuring

The Restructuring will be implemented prior to UK Admission and will result in the Company becoming the new ultimate parent company of the Glencore Group, and the direct owner of 100 per cent. of the issued share capital of Glencore International at UK Admission. After the Price Determination Date, profit participation certificates issued by Glencore International (further details which are set out in note 14 to Sub-section B of Section VI: "Historical Financial Information") will be exchanged for new shares in Glencore Holding AG, the current parent company of Glencore International. Glencore Holding AG and Glencore L.T.E. AG (which is the other current shareholder of Glencore International) will then simultaneously merge with Glencore International by way of a statutory merger under Swiss law, with Glencore International as the surviving entity. After completion of this merger and before UK Admission, 100 per cent. of the issued shares in Glencore International will be contributed to the Company in consideration of the issue of new shares by the Company. If the Restructuring is not implemented in all material respects as described, the Global Offer will not proceed and Admission will not occur.

## 4 Subsidiaries

The Company is the ultimate holding company of the Glencore Group. The following table shows details of the Company's significant subsidiaries and undertakings. The issued share capital of each of these companies is fully paid.

| Name of Subsidiary | Country of incorporation | Principal Activities | Percentage held by the Company | Publicly traded (✓/×) |
|---|---|---|---|---|
| Glencore AG | Switzerland | Operating | 100.0 | × |
| —Allied Alumina Inc. (Sherwin Alumina) | U.S. | Alumina production | 100.0 | × |
| —Columbia Falls | U.S. | Aluminium production | 100.0 | × |

| ST Shipping | Singapore | Operating | 100.0 | × |
| Topley | British Virgin Islands | Ship owner | 100.0 | × |
| Volcan | Peru | Zinc production | 5.94 | ✓ |

Notes:

(1) Represents Glencore's economic interest in Century, comprising 39.1 per cent. voting interest and 4.9 per cent. non-voting interest.

(2) Publicly traded on the Toronto Stock Exchange under the symbol POM and on the New York Stock Exchange under symbol PLM.

(3) Publicly traded on the Frankfurt Stock Exchange under symbol A0HNQ5. Glencore owns 46,812,601 shares.

(4) Publicly traded on the Australian Stock Exchange under symbol BTR. Subject to final regulatory approvals, Glencore owns 16,032,700 shares.

(5) Publicly traded on the Singapore Exchange under the symbol CHEL.SI. Glencore owns 66,204,594 shares.

(6) Glencore has agreed to acquire additional stakes in Kazzinc thereby increasing its ownership to 93.0 per cent.

(7) Publicly traded on the Toronto Stock Exchange under the symbol KAT.TO. Glencore owns 1,419,031,161 shares.

(8) The balance of the joint venture is held by Minara, giving Glencore an effective interest of 82.4 per cent. in the joint venture.

(9) Publicly traded on the Australian Stock Exchange under the symbol MOR.AX. Glencore owns 824,829,760 shares.

(10) Although Glencore holds more than 20 per cent. of the voting rights, it has limited key management influence and thus does not exercise significant influence.

## 5 Share capital of the Company

5.1 The Company was incorporated on 14 March 2011 with the name "Glencore International Limited" and a share capital of U.S.$0.02 divided into two Ordinary Shares of U.S.$0.01 each, which were issued on incorporation to each of Computershare Company Secretarial Services (Jersey) Limited and Computershare Nominees (Channel Islands) Limited as nominees for Ivan Glasenberg and Steven Kalmin, respectively. On 20 April 2011, one Subscriber Share was transferred to each of Ivan Glasenberg and Steven Kalmin. The Subscriber Shares will be repurchased by the Company on 23 May 2011 at their nominal value and then cancelled.

5.2 The issued and fully paid share capital of the Company as at 29 April 2011, being the last practicable date prior to publication of this Prospectus, is as follows:

| Class of shares | Number | Amount |
|---|---|---|
| Ordinary Shares | 2 | U.S.$0.02 |

5.3 Pursuant to the Glencore International Purchase Agreement, on the day before the date of UK Admission and in consideration of the transfer of all of the issued share capital of Glencore International to the Company by Revelstoke Limited, the Company will issue 6,000,000,000 Ordinary Shares at the Offer Price, credited as fully paid up, to Revelstoke Limited on behalf of the Existing Shareholders. The Sale Shares will be transferred to the Selling Shareholder

pursuant to the arrangements described in paragraph 1 of Section VIII: "Details of the Global Offer". The proposed issued and fully paid share capital of the Company as it is expected to be immediately following the acquisition by the Company of Glencore International becoming effective is as follows:

| Class of shares | Number | Amount |
|---|---|---|
| Ordinary Shares | 6,000,000,000 | U.S.$60,000,000 |

5.4 On 3 May 2011, the Company passed a special resolution to authorise the purchase of the Subscriber Shares. On 3 May 2011, the Company entered into contracts to repurchase the Subscriber Shares at their nominal value on 23 May 2011.

5.5 By various written resolutions passed on 12 April 2011 and 3 May 2011, it was resolved by the holders of the Subscriber Shares that:

(a) the Company change its name from Glencore International Limited to Glencore International plc;

(b) the Company adopt the Articles, conditional on Admission;

(c) the authorised share capital of the Company be increased from U.S.$100 to U.S.$500,000,000 by the creation of an additional 49,999,990,000 Ordinary Shares;

(d) subject to UK Admission having occurred, authority be conferred on the Company's Directors pursuant to article 10.2(a) of the Articles to allot shares or grant rights to subscribe for or to convert any security into shares up to an aggregate nominal amount equal to the Authorised Allotment Amount (as defined in the Articles) for a period commencing on the date of Admission and ending at the conclusion of the Company's annual general meeting in 2012 or on 30 June 2012 (whichever is the earlier), and for the purposes of this resolution, the Authorised Allotment Amount (as defined in the Articles) shall be an amount equal to one-third of the New Issued Share Capital. For the purposes of this paragraph (d) and paragraphs (e), (f) and (g) below, the "New Issued Share Capital" is the nominal amount of the issued share capital of the Company immediately following UK Admission and as increased by any exercise of the Over-Allotment Option and/or the issue of the Kazzinc Consideration Shares;

(e) subject to UK Admission having occurred, authority be conferred on the Company's Directors pursuant to article 10.2(b) of the Articles to allot shares or grant rights to subscribe for or to convert any security into shares up to a further nominal amount equal to the Rights Issue Allotment Amount only in connection with a rights issue (as defined in the Articles) for a period commencing on the date of Admission and ending at the conclusion of the Company's annual general meeting in 2012 or on 30 June 2012 (whichever is the earlier) and, for the purposes of this resolution, the Rights Issue Allotment Amount (as defined in the Articles) shall be an amount equal to a further one-third of the New Issued Share Capital;

(f) subject to UK Admission having occurred, the Directors be empowered pursuant to article 10.3 of the Articles to allot equity securities (as defined in the Articles) wholly for cash:

(i) pursuant to the authority granted as described in paragraph (d) above in connection with a pre-emptive offer (as defined in the Articles);

(ii) pursuant to the authority granted as described in paragraph (e) above; and

(iii) up to an aggregate nominal amount equal to the Non-Pre-Emptive Amount (as defined in the Articles),

as if article 11 of the Articles (Pre-emption rights) did not apply and for the purposes of this resolution, the Non-Pre-Emptive Amount shall be an amount equal to 5 per cent. of the New Issued Share Capital. This power shall expire at the conclusion of the Company's annual general meeting in 2012 or on 30 June 2012 (whichever is the earlier);

(g) subject to UK Admission having occurred, the Company be generally and unconditionally authorised:

(i) pursuant to Article 57 of the Jersey Companies Law to make market purchases of Ordinary Shares, provided that:

(A) the maximum number of Ordinary Shares authorised to be purchased is the number equal to 10 per cent. of the number of Ordinary Shares comprising the New Issued Share Capital;

(B) the minimum price, exclusive of any expenses, which may be paid for an Ordinary Share is U.S.$0.01;

(C) the maximum price, exclusive of any expenses, which may be paid for an Ordinary Share shall be the higher of:

(I) an amount equal to 5 per cent. above the average of the middle market quotations for Ordinary Shares taken from the London Stock Exchange Daily Official List for the five business days immediately preceding the day on which such shares are contracted to be purchased; and

(II) the higher of the price of the last independent trade and the highest current independent bid on the London Stock Exchange Daily Official List at the time that the purchase is carried out; and

(D) the authority hereby conferred shall expire on the earlier of the conclusion of the Company's annual general meeting in 2012 or on 30 June 2012 (except that the Company may make a contract to purchase Ordinary Shares under this authority before such authority expires, which will or may be executed wholly or partly after the expiry of such authority, and may make purchases of Ordinary Shares in pursuance of any such contract as if such authority had not expired); and

(ii) pursuant to Article 58A of the Jersey Companies Law, to hold, if the Directors so desire, as treasury shares any Ordinary Shares purchased pursuant to the authority conferred by paragraph (i) above;

(h) the Glencore Deferred Bonus Plan, the Glencore Performance Share Plan and the Glencore Employee Share Trust be approved; and

(i) subject to UK Admission having occurred authority be conferred on the Directors to (i) allot (in addition to the authorities set out in paragraphs (d) to (f) above) shares sufficient to satisfy the rights of the investors in the Convertible Bonds to convert their bonds into Ordinary Shares of Glencore; and (ii) take any other action considered necessary or desirable by the Directors or the Company in assuming the obligations of Holdco under the terms and conditions of the Convertible Bonds.

5.6 Save as disclosed in this paragraph 5:

(a) there has been no change in the amount of the issued share or loan capital of the Company within three years of the date of this document; and

(b) no share or loan capital of the Company or any other member of the Glencore Group is under option or is, or will, immediately following UK Admission, be agreed, conditionally or unconditionally, to be put under option.

5.7 Save as disclosed in note 28 of the Historical Financial Information included in Section VI: "Historical Financial Information" of this Prospectus, there has been no change in the amount of the issued share or loan capital of any other member of the Glencore Group (other than intra-group issues by wholly-owned subsidiaries) within three years of the date of this Prospectus which is material in the context of the Glencore Group taken as a whole.

5.8 Save as disclosed in paragraph 18.6 below, the Company has no convertible securities, exchangeable securities or securities with warrants in issue.

## 6 Summary of the memorandum of association of the Company

Under the Jersey Companies Law, the capacity of a Jersey company is not limited by anything contained in its memorandum or Articles. Accordingly, the memorandum of association of a Jersey company does not contain an objects clause. The Company's memorandum of association is available for inspection at the addresses specified in paragraph 28 below.

## 7 Summary of the Articles of the Company

The Articles have been adopted conditional upon Admission and include provisions to the following effect:

### 7.1 Alteration of share capital

Subject to the provisions of the Jersey Companies Law, the Company may by special resolution reduce its share capital, share premium account or capital redemption reserve in any way.

### 7.2 Share rights

(a) Without prejudice to any special rights attached to any existing shares or class of shares, any share in the Company may be issued with such preferred, deferred or other special rights or restrictions as the Company may by special resolution determine.

(b) Subject to the provisions of the Jersey Companies Law, the special rights attached to any class of shares may be varied or abrogated either with the written consent of the holders of not less than three-quarters in nominal value of the issued shares of the class or the sanction of a special resolution passed at a separate meeting of the holders of the shares of the class.

### 7.3 Allotment of securities and pre-emption rights

(a) The Company may from time to time pass an ordinary resolution authorising the Directors of the Company to exercise all the powers of the Company to allot shares or grant rights to subscribe for or to convert any security into shares (i) generally up to the nominal amount specified in the resolution as being the Authorised Allotment Amount; and (ii) in connection with a rights issue only, up to a further nominal amount specified in the resolution as being the Rights Issue Allotment Amount. Any authority shall expire on the day specified in the resolution, not being more than five years after the date on which the resolution is passed.

(b) The Articles include pre-emption provisions requiring that equity securities issued for cash by the Company must first be offered to existing shareholders in proportion to their existing holdings of ordinary shares (excluding treasury shares). Exceptions to this rule include the allotment of:

(i) bonus shares;

(ii) equity securities to be paid up (either wholly or partly) otherwise than in cash; and

(iii) equity securities allotted for cash which are to be held under an employee share scheme.

(c) The Company may from time to time pass a special resolution empowering the Directors of the Company to exercise all the powers of the Company to allot equity securities wholly for cash:

(i) in connection with a rights issue;

(ii) in connection with a pre-emptive offer, up to an aggregate nominal amount specified in the resolution as being the Authorised Allotment Amount; and

(iii) otherwise than in connection with a rights issue or a pre-emptive offer, up to an aggregate nominal amount specified in the resolution as being the Non-Pre-Emptive Amount.

(d) Any authority shall expire on the day specified in the resolution, not being more than five years after the date on which the resolution is passed.

7.4 **Purchase of own shares and treasury shares**

Subject to the Jersey Companies Law and the Listing Rules:

(a) the Company may purchase any of its own shares of any class, including any redeemable shares, provided that any such purchase is first approved by special resolution; and

(b) the Company may hold as treasury shares any shares purchased or redeemed by it.

7.5 **Share certificates and uncertificated shares**

(a) Every holder of shares in certificated form whose name is entered on the Company's register of members is entitled, without payment, to a certificate in respect of such shares. In the case of joint holders, delivery of a certificate to one of the joint holders shall be sufficient delivery to all.

(b) Subject to the Jersey Companies Law and the CREST Regulations, the Directors may permit any class of shares to be held in uncertificated form and to be transferred by means of a relevant system and may revoke any such permission.

7.6 **Register of members**

The register of members of the Company must be kept in Jersey although branch registers may be kept in other territories.

7.7 **Calls on shares**

(a) The Directors may, from time to time, make calls upon the members in respect of any moneys unpaid on their shares, subject to the terms of allotment of such shares. Each member shall (subject to being given at least 14 clear days' notice in writing specifying the time or times and place of payment) pay to the Company the specified amount called on his shares.

(b) Unless the Directors decide otherwise, where a call is not paid on a share before or on the due date for payment, the person from whom it is due (and the Directors may also provide that he shall forfeit any dividends due in respect of the share) and shall not be entitled to vote at any meeting or upon a poll, or to exercise any privilege as a member in respect of the share, until he shall have paid all calls for the time being due and payable on the share held by him.

7.8 **Forfeiture and lien**

(a) If a member fails to pay in full any call or instalment of a call on or before the due date for payment, the Directors may, at any time thereafter, serve a notice in writing on him requiring payment of such unpaid amount together with any interest accrued thereon and any expenses incurred by the Company by reason of such non-payment. The notice shall state that, in the event of non-payment in accordance with the notice, the shares on which the call has been made will be liable to be forfeited. If the requirements of such notice are not met within the timeframe stated in that notice, any share in respect of which the notice was given may be forfeited by resolution of the Directors.

(b) The Company shall have a first and paramount lien on every share (not being a fully paid share) for all moneys (whether presently payable or not) called or payable at a fixed time in respect of such share. The Directors may, at any time, either generally or in any particular case, declare any share to be wholly or partly exempt from these provisions. The Company may sell, in such manner as the Directors think fit, any share on which the Company has a lien if any sum in respect of which the lien exists is presently payable and is not paid within 14 clear days of a notice of intention to sell the share in default of payment shall have been given to the holder of the share.

7.9 **Sale of shares of untraced members**

The Company may sell any share of a member who has not claimed dividends during a period of 12 years and who cannot be traced, as set out in the Articles.

7.10 **Transfer of shares**

(a) Any member may transfer all or any of his certificated shares by an instrument of transfer in writing in any usual or common form or in any other form acceptable to the Directors. An instrument of transfer shall be signed by or on behalf of the transferor and, unless the share is fully paid, by or on behalf of the transferee.

(b) All transfers of shares which are in uncertificated form shall, subject to the CREST Regulations, be effected by means of a computer system (as defined in the CREST Regulations).

(c) The Directors may, in their absolute discretion, refuse to register any transfer of an uncertificated share where permitted by the CREST Regulations.

(d) The Directors may, in certain circumstances, refuse to register the transfer of a certificated share, unless the instrument of transfer is:

(i) in respect of one class of share only;

(ii) in favour of not more than four joint transferees;

(iii) left at the registered office of the Company or such other place, as the Directors may decide, for registration; and

(iv) accompanied by the certificate for the shares to be transferred and such other evidence (if any) as the Directors may reasonably require as proof of title.

(e) If the Directors refuse to register a transfer of a share, they shall send the transferee notice of the refusal giving reasons for the refusal as soon as practicable.

(f) No fee shall be charged for the registration of any instrument of transfer or other document relating to or affecting the title to a share.

7.11 **Disclosure of interests in shares**

(a) The Company may give a disclosure notice to any person whom it knows, or has reasonable cause to believe, is either:

(i) interested in the Company's shares; or

(ii) has been so interested at any time during the three years immediately preceding the date on which the disclosure notice is issued.

(b) The disclosure notice may require the person:

(i) to confirm that fact or (as the case may be) to state whether or not it is the case; and

(ii) if he holds, or has during that time held, any such interest, to give such further information as may be required.

(c) The notice may require the person to whom it is addressed, where either:

(i) his interest is a present interest and another interest in the shares subsists; or

(ii) another interest in the shares subsisted during that three-year period at a time when his interest subsisted,

to give, so far as lies within his knowledge, such particulars with respect to that other interest as may be required by the notice, including the identity of persons interested in the shares in question.

(d) The notice may require the person to whom it is addressed, where his interest is a past interest, to give (so far as lies within his knowledge) particulars of the identity of the person who held that interest immediately upon his ceasing to hold it.

(e) Failure to provide the information within the time specified in the notice means that, if the Directors so determine, the holder of the relevant shares shall not be entitled to attend or vote either personally or by proxy at a shareholders' meeting or to exercise any other right confirmed by membership in relation to shareholder meetings for so long as

the default continues (and, if those shares represent at least 0.25 per cent. of the issued shares of the class, the holder shall not, if the Directors so direct by notice to such holder, be entitled to receive any payment by way of dividend or to transfer any rights in the shares, provided that, in the case of shares in uncertificated form, the Directors may only exercise their discretion not to register a transfer if permitted to do so by the CREST Regulations).

7.12 **Disclosures pursuant to the Disclosure and Transparency Rules**

(a) The provisions of Chapter 5 of the Disclosure and Transparency Rules ("DTR5") are incorporated by reference into the Articles and the Company is be deemed to be an "issuer" (and not, for the avoidance of doubt, a "non-UK issuer"), as such term is defined in paragraph 5.1.1 of DTR5.

(b) If the Directors determine that a holder of shares has not complied with the provisions of DTR5, with respect to some or all of such shares held by that holder, the Directors shall have the right in the circumstances set out in the Articles to suspend the right of such shareholder to attend or vote in person or by proxy at any meeting of the Company, until said shareholder has cured the non-compliance with the provisions of DTR5; and/or

where the default shares represent 0.25 per cent. or more of the issued shares of the class:

(i) withhold any dividend or other amount payable with respect to such shares, such amount to be payable only after the notice of default ceases to have effect with respect to those shares; and/or

(ii) render ineffective any election to receive shares of the Company instead of cash in respect of any dividend or part thereof; and/or

(iii) prohibit the transfer of any shares in the Company held by the defaulting shareholder except in the circumstances set out in the Articles.

(c) The Company shall put in place policies and procedures under which persons discharging managerial responsibilities (as that term is defined in the Disclosure and Transparency Rules) shall be required to comply with Chapter 3 of the Disclosure and Transparency Rules.

7.13 **General meetings**

(a) The Directors shall convene, and the Company shall hold, annual general meetings, in accordance with the Jersey Companies Law. The Company must hold an annual general meeting within six months of the end of each financial year of the Company and not more than 15 months shall lapse between subsequent annual general meetings.

(b) The Directors may call further general meetings whenever they think fit. On the requisition of members pursuant to the provisions of the Jersey Companies Law or the Articles, the Directors shall also promptly convene a general meeting.

(c) An annual general meeting must be called by at least 21 clear days' notice. Any other general meeting must be called by at least 14 days' clear notice. Subject to the provisions of the Articles, the notice must be sent to all the members, to each of the Directors and to the auditors.

(d) Any procedural resolution put to the vote of the meeting shall be decided on a show of hands, unless (before or on the declaration of such a vote) a poll is demanded by:

(i) the chairman of the meeting;

(ii) at least five members present in person or by proxy and entitled to vote on the resolution;

(iii) a member or members present in person or by proxy and representing not less than one-tenth of the total voting rights of all the members having the right to vote on the resolution; or

(iv) a member or members present in person or by proxy and holding shares in the Company conferring a right to vote at the meeting, being shares on which an aggregate sum has been paid up equal to not less than 10 per cent. of the total sum paid up on all the shares conferring that right.

Any other resolution put to the vote of the meeting shall be decided on a poll.

(e) An ordinary resolution shall be passed by a simple majority of votes in favour and a special resolution shall be passed by a three-quarters majority of votes in favour.

(f) A poll at a general meeting shall be taken in such manner as the chairman of the meeting may decide.

(g) A Director and any proxy shall, notwithstanding that he is not a member, be entitled to attend and speak at any general meeting and at any separate meeting of the holders of any class of shares in the capital of the Company.

(h) The shareholders who generally represent at least 5 per cent. of the total voting rights of all members having a right to vote at a general meeting are permitted to requisition a general meeting and the shareholders who generally represent at least 2.5 per cent. of the total voting rights of all members having a right to vote at an annual general meeting are permitted to require the Company to circulate members' resolutions to be moved at the next annual general meeting and require the Company to circulate statements relating to resolutions to be dealt with at a general meeting.

(i) Shareholders generally representing at least 5 per cent. of the total voting rights or not fewer than 100 members having a right to vote on a matter to which a poll relates may require the Board to obtain an independent report on any poll taken, or to be taken, at a general meeting of the Company.

7.14 **Voting rights**

Subject to the Articles and any special rights or restrictions as to voting attached to any shares, on a show of hands every member (or his proxy) present shall have one vote and on a poll every member (or his proxy) present shall have one vote for every share of which he is the holder. A member may appoint more than one proxy to vote on that member's behalf. A member that is a body corporate may appoint a corporate representative to represent it at a general meeting. Jersey law does not expressly permit the appointment of more than one corporate representative by a member in respect of the same shareholding.

7.15 **Directors**

*Appointment of Directors*

(a) Unless otherwise determined by ordinary resolution, the number of Directors shall not be subject to any maximum but shall not be less than two. The Directors may be appointed by ordinary resolution or by the Directors. Subject to the provisions on rotation of Directors, any Director appointed by the Board holds office only until the next following annual general meeting and, if not reappointed at such annual general meeting, shall vacate office at its conclusion.

(b) The Directors may appoint any one or more of their body to be executive Directors and confer on them any powers exercisable by them as the Directors think fit.

*Chairman of the Board*

The Board of the Company may appoint a chairman of the Board.

*Age of Directors*

No age limit shall apply to Directors of the Company.

*Qualification of Directors*

A Director shall not be required to hold any shares in the capital of the Company by way of qualification.

*Retirement of Directors by rotation*

Each Director shall retire at the next annual general meeting if appointed by the Board since the previous annual general meeting. Each Director shall retire at the annual general meeting held in the third calendar year following the annual general meeting at which he was last elected or re-elected. Each such retiring Director of the Company shall be eligible for re-election by shareholders at the annual general meeting at which he has retired unless the Board determines otherwise.

*Removal of Directors*

The Company may, by ordinary resolution, remove any Director before his period of office has expired. A Director may also be removed from office by the service on him of a notice to that effect signed by or on behalf of all the other Directors.

*Remuneration of Directors*

(a) The ordinary remuneration of the Directors who do not hold executive office for their services shall be limited to, in aggregate, £3 million per annum, or such higher amount as may be determined by ordinary resolution.

(b) Any Director who holds any executive office with the Company or any subsidiary undertaking of the Company or who performs any special or extra services for, or at the request of, the Company may be paid such extra remuneration as the Board may determine.

(c) In addition to any remuneration to which the Directors are entitled under the Articles, each Director may be paid all reasonable expenses incurred by him in the discharge of his duties, including his expenses of travelling to and from meetings of the Directors or of any committee of the Directors or general meetings of the Company.

(d) The Board may pay, provide or procure the grant of pensions or other retirement or superannuation benefits and death, disability or other benefits, allowances or gratuities for any past or present Director or the relatives or dependants of any such person. For this purpose, the Board may establish and maintain, participate in or contribute to any non-contributory or contributory pension or superannuation fund, scheme or arrangement and pay any insurance premiums.

*Payment for loss of office*

(a) Except in certain circumstances permitted by the Articles, the Company shall not make a payment for loss of office to a Director of the Company unless the payment has been approved by an ordinary resolution of the Company.

(b) Before such a resolution may be passed, a memorandum setting out particulars of the proposed payment (including its amount) is made available for inspection by shareholders:

  (i) at the registered office of the Company for not less than 15 clear days ending with the date that the proposed resolution is put to the members; and

  (ii) at the meeting at which the proposed resolution is put to the members.

*Permitted interests of Directors*

(a) Subject to compliance with the Articles and Jersey Companies Law, a Director may hold office, be employed by or be interested in any Glencore company or be party to or be interested in any contract, transaction or arrangement with any Glencore company or in which the Company is otherwise interested.

(b) A Director must have certain interests authorised by the other Directors as if the provisions of section 175 of the UK Companies Act 2006 applied to the Company.

(c) A Director may not vote in respect of authorisation of his interest and will not count towards the quorum of the meeting of Directors at which the interest is considered.

*Restrictions on voting*

A Director shall not be entitled to vote on any resolution of the Board concerning a matter in which he or any person connected with him is interested, but this prohibition shall not apply to amongst other things:

(a) any transaction or arrangement in which he or any connected person is interested by virtue of an interest in shares, debentures or other securities of the Company or otherwise in or through the Company;

(b) the giving of a guarantee, security or indemnity in respect of money lent or obligations incurred by him or any other person at the request of, or for the benefit of, the Company or any of its subsidiary undertakings;

(c) the giving of a guarantee, security or indemnity in respect of a debt or obligation of the Company or any of its subsidiary undertakings for which the Director has assumed responsibility (in whole or in part and whether alone or jointly with others) under a guarantee or indemnity or by the giving of security;

(d) any issue of shares, debentures or other securities of the Company or any of its subsidiary undertakings for subscription or purchase, in which offer he is or may be entitled to participate as a holder of securities or in the underwriting or sub-underwriting of which he is to participate;

(e) any transaction or arrangement concerning any other company in which he does not hold voting rights representing 1 per cent. or more of any class of the equity share capital of that company;

(f) the adoption, modification or operation of a pension fund, retirement, death or disability benefits scheme or an employee share scheme under which he may benefit and which does not award him any privilege or benefit not generally awarded to the employees or former employees to whom such arrangement relates; or

(g) the purchase or maintenance of insurance for any Director of the Company against any liability.

*Board meetings*

(a) Directors may convene meetings as they deem fit. The quorum necessary for transactions of the business of a Board meeting is two Directors. The Chairman of the Board meeting has the casting vote.

(b) No fewer than half of the Board meetings in any financial year shall be held in Switzerland.

(c) The Directors may adopt decisions by written resolution and may appoint committees as they deem fit and appropriate.

*Borrowing powers*

The Board may exercise all the powers of the Company to borrow money and to mortgage or charge its undertaking, property and uncalled capital and to issue debentures and other securities. There is no obligation on the Directors to restrict the borrowings of the Company.

7.16 **Nomination rights**

(a) A member who holds shares on behalf of another person may nominate that person to enjoy information rights.

(b) For these purposes, "information rights" means:

(i) the right to receive a copy of all communications that the Company sends to its members generally or to any class of its members that includes the person making the nomination;

(ii) the right to receive one copy of the Company's last annual accounts, the last Directors' remuneration report, the last Directors' report and the auditor's report on those accounts (including the report on the Directors' remuneration report and on the Directors' report);

(iii) the right to receive one copy of the summary financial statements of the Company; and

(iv) the right to receive one copy of any document or information, in hard copy form, which has been provided to the members, by the Company, by means of electronic communication.

(c) If the person to be nominated in accordance with paragraph (a) above wishes to receive hard copy communications, he must, prior to the nomination being made, request the person making the nomination to notify the Company of that fact and provide an address to which such copies may be sent. If, having received such a request, the person making the nomination notifies the Company that the nominated person wishes to receive hard copy communications and provides the Company with that address, the right of the nominated person is to receive hard copy communications accordingly.

(d) If the nominated person does not make such a notification or provide an address to the Company for delivery of the information, he is taken to have agreed that documents or information may be sent or supplied to him by the Company by means of a website. Such agreement may be revoked by the nominated person making the notification or sending details of his address to the Company.

(e) The nomination may be terminated at the request of the member or of the nominated person and will cease to have effect in certain circumstances as set out in the Articles.

(f) These rights are in addition to the rights of the member himself.

(g) Any provision of the Jersey Companies Law and any provision of the Articles having effect in relation to communications with members has a corresponding effect (subject to any necessary adaptations) in relation to communications with the nominated person.

7.17 **Electronic communications**

(a) The Company may send or supply a document or information by way of electronic communication to any shareholder who has agreed (generally or specifically) that notices, documents or information can be sent or supplied to them in that form and has not revoked such agreement. The Company may do so by sending or supplying the document or communication to such address as may from time to time be specified for that purpose by the intended recipient or by making it available on a website and notifying the shareholder that it has been made available. A member shall be deemed to have agreed that the Company may send or supply a document or information by means of a website if the conditions set out in the Articles have been satisfied.

(b) A shareholder whose registered address is not within Jersey, the United Kingdom or Hong Kong shall not be entitled to receive any document from the Company in hard copy form unless he gives to the Company a postal address within Jersey, the United Kingdom or Hong Kong at which notices may be given to him.

(c) Where a document or information is sent or supplied by means of a website, it shall be deemed to have been received:

(i) when the material was first made available on the website; or

(ii) if later, when the recipient received or was deemed to have received notice of the fact that the material was available on the website.

7.18 **Dividends and other distributions**

(a) Subject to the provisions of the Jersey Companies Law, the Company may, by ordinary resolution, declare dividends but no such dividend shall exceed the amount recommended by the Board.

(b) Subject to the provisions of the Jersey Companies Law, the Board may pay fixed and interim dividends if, and insofar as, in the opinion of the Board, the financial position of the Company justifies such payments. If the Board acts in good faith, the Directors shall not incur any liability to the holders of any shares for any loss they may suffer by the lawful payment, on any other class of shares having non-preferred or deferred rights, of any such fixed or interim dividend.

(c) The Company may, upon the recommendation of the Board, by ordinary resolution, direct payment of a dividend in whole or in part *in specie* and the Board shall give effect to such resolution.

(d) No dividend or other moneys payable in respect of a share shall bear interest against the Company.

(e) The Board may retain any dividend or moneys payable in respect of a share on which the Company has a lien.

(f) Any dividend unclaimed after a period of 12 years from the date on which such dividend was declared or became due for payment shall be forfeited and revert to the Company.

(g) The Board may, if authorised by an ordinary resolution of the Company, offer any holder of shares the right to elect to receive shares by way of scrip dividend instead of cash.

7.19 **Summary financial statements**

The Company may send summary financial statements to shareholders instead of copies of its full accounts and reports, in accordance with the Articles.

7.20 **Indemnity and insurance of Directors and officers**

Subject to the provisions of, and to the extent permitted by, the Jersey Companies Law, the Company shall:

(a) indemnify any Director of the Company (or of a subsidiary undertaking) against any liability;

(b) indemnify a director of a company that is a trustee of an occupational pension scheme for employees (or former employees) of the Company (or of any subsidiary of the Company) against liability incurred in connection with that company's activities as trustee of the scheme;

Subject to the provisions of, and to the extent permitted by Jersey Companies Law, the Company may:

(i) purchase and maintain insurance against any liability for any director referred to in paragraphs (a) or (b) above; and

(ii) provide any director referred to in paragraph (a) or (b) above with funds (whether by loan or otherwise) to meet expenditure incurred or to be incurred by him in defending any criminal, regulatory or civil proceedings or in connection with an application for relief (or to enable any such director to avoid incurring such expenditure).

7.21 **Winding-up**

Subject to any particular rights or limitations for the time being attached to any shares, if the Company is wound up, the assets available for distribution among the members shall be distributed to the members *pro rata* to the number of shares held by each member at the time of the commencement of the winding-up. If any share is not fully paid up, that share shall only carry the right to receive a distribution calculated on the basis of the proportion that the amount paid up on that share bears to the issue price of that share.

If the Company is wound up, the Company may, with the sanction of a special resolution of the Company and any other sanction required by the Jersey Companies Law and the liquidator or, where there is no liquidator, the Directors may, for that purpose, value any assets and determine how the division shall be carried out as between the members or different classes of members and vest the whole or any part of the assets in trustees upon such trusts for the benefit of members as the liquidator or the Directors shall think fit. No shareholder shall be compelled to accept any assets in respect of which there is any liability.

**8 Takeover regulation**

The City Code will govern takeover offers for the Company and other matters to which the City Code applies. The Jersey Takeover Law provides a statutory framework for the application of the City Code to takeover offers for Jersey incorporated companies and other matters to which the City Code applies, and appoints the Panel on Takeovers and Mergers (the "Panel") as the body to oversee takeover offers for Jersey incorporated companies.

8.1 **Mandatory bids**

Under the City Code, if an acquisition of Ordinary Shares were to increase the aggregate holding of an acquirer and its concert parties to Ordinary Shares carrying 30 per cent. or more of the voting rights in Glencore, the acquirer and, depending upon the circumstance, its concert parties would be required (except with the consent of the Panel) to make a cash offer for the outstanding Ordinary Shares at a price not less than the highest price paid for the Ordinary Shares by the acquirer or its concert parties during the previous 12 months. A similar obligation to make such a mandatory offer would also arise on the acquisition of Ordinary Shares by a person holding (together with its concert parties) Ordinary Shares carrying between 30 per cent. and 50 per cent. of the voting rights in Glencore, if the effect of such acquisition were to increase that person's percentage of the voting rights.

8.2 **Squeeze-out**

The Jersey Companies Law provides that, where a person (the "Offeror") makes a takeover offer to acquire all of the shares (or all of the shares in any class) in a Jersey company (other than any shares already held by the Offeror at the date of the offer), if the Offeror has, by virtue of acceptance of the offer, acquired or contracted to acquire not less than 90 per cent. in nominal value of the shares (or class of shares) to which the offer relates, the Offeror may (subject to the requirements of the Jersey Companies Law), by notice to the holders of the shares (or class of shares) to which the offer relates which the Offeror has not already acquired or contracted to acquire, compulsorily acquire those shares. A holder of any shares who receives a notice of compulsory acquisition may (within six weeks from the date on which such notice was given) apply to the Jersey court for an order that the Offeror not be entitled and bound to purchase the holder's shares or that the Offeror purchase the holder's shares on terms different to those of the offer.

8.3 **Sell-out**

Where, before the end of the period within which the takeover offer can be accepted, the Offeror has by virtue of acceptance of the offer acquired or contracted to acquire not less than 90 per cent. in nominal value of all of the shares (or all of the shares of a particular class) of the Jersey company, the holder of any shares (or class of shares) to which the offer relates who has not accepted the offer may, by written notice to the Offeror, require the Offeror to acquire the holder's shares. The Offeror shall (subject to the requirements of the Jersey Companies Law) be entitled and bound to acquire the holder's shares on the terms of the offer or on such other terms as may be agreed. Where a holder gives the Offeror a notice of compulsory acquisition, each of the Offeror and the holder of the shares is entitled to apply to the Jersey court for an order that the terms on which the Offeror is entitled and bound to acquire the holder's shares shall be such as the court thinks fit.

## 9 Directors of the Company

9.1 The Directors and their functions within the Company and Glencore and brief biographies are set out in Section II: "Directors and Corporate Governance".

9.2 The companies and partnerships of which the Directors are, or have been, within the past five years, members of the administrative, management or supervisory bodies or partners (excluding the Company and its subsidiaries and also excluding the subsidiaries of the companies listed below) are as follows:

| Name | Current directorships/partnerships | Former directorships/partnerships |

Note:

(1) Steven Kalmin will be standing for election to the Century Aluminum board, at the Century Aluminum 2011 annual general meeting expected to be held in June 2011. Century Aluminum has agreed to publicly support and recommend the election of Mr Kalmin at such annual general meeting.

Save as set out above, none of the Directors or the Company Secretary have any business interests, or perform any activities, outside Glencore which are significant with respect to Glencore.

9.3 There are no family relationships between any Directors.

9.4 As at the date of this Prospectus, none of the Directors has, at any time within the last five years:

(a) had any prior convictions in relation to fraudulent offences;

(b) been declared bankrupt or been the subject of any individual voluntary arrangement;

(c) been associated with any bankruptcies, receiverships or liquidations when acting in the capacity of a member of the administrative, management or supervisory body or of a senior manager;

(d) been subject to any official public incrimination and/or sanction by any statutory or regulatory authority (including designated professional bodies);

(e) been disqualified by a court from acting in the management or conduct of the affairs of any issuer;

(f) been disqualified by a court from acting as a member of the administrative, management or supervisory bodies of any issuer;

(g) been a partner or senior manager in a partnership which, while he was a partner or within 12 months of his ceasing to be a partner, was put into compulsory liquidation or administration or which entered into any partnership voluntary arrangement;

(h) owned any assets which have been subject to a receivership or been a partner in a partnership subject to a receivership where he was a partner at a time or within the 12 months preceding such event; or

(i) been an executive director or senior manager of a company which has been placed in receivership, compulsory liquidation, creditors' voluntary liquidation or administration or which entered into any company voluntary arrangement or any composition or arrangement with its creditors generally or any class of creditors, at any time during which he was an executive director or senior management of that company or within 12 months of his ceasing to be an executive director or senior manager.

9.5 The aggregate remuneration paid (including any contingent or deferred compensation) and benefits in kind granted to the Directors by Glencore and its subsidiaries during the financial year ended 31 December 2010 for services in all capacities was U.S.$471.8 million. This sum includes amounts of remuneration allocated to Directors in respect of their profit participation certificates for the financial year ended 31 December 2010. As described in paragraph 3 of Part X: "Additional Information", following completion of the Restructuring, all profit participation certificates will have been exchanged for Ordinary Shares and will not be allocated amounts in respect of profit for financial years commencing on or after 1 January 2011.

9.6 The total amount set aside or accrued by Glencore or its subsidiaries to provide pension, retirement or similar benefits for the Directors of Glencore for the financial year ended 31 December 2010 was U.S.$91,021.

## 10 Directors' service contracts, terms of appointment and other details

10.1 Each of the Executive Directors has a service contract with Glencore International AG which will be effective from Admission.

10.2 The terms of the Executive Directors' service contracts are summarised below:

| Name | Position | Date of contract | Notice period[1] | Salary (£) |
|---|---|---|---|---|
| **Executive Directors[2][3]** | | | | |
| Ivan Glasenberg . . . . . | Chief Executive Officer | 28 April 2011 | 12 months | 925,000 |
| Steven Kalmin . . . . . | Chief Financial Officer | 28 April 2011 | 12 months | 700,000 |

Notes:

(1) Other than entitlement to notice, a payment in lieu of notice, Executive Directors will not be entitled to compensation on termination of their contract.

(2) The Executive Directors are entitled to participate in any benefit (including pension) arrangements which Glencore has in place from time to time for categories of employees of which they are members.

(3) The Executive Directors are entitled, at the Company's discretion, to participate in the Company's bonus arrangements from time to time. The current maximum annual bonus opportunity for each of them is 200 per cent. of annual salary mentioned above.

10.3 The Non-Executive Directors do not have service contracts although they have letters of appointment reflecting their responsibilities and commitments. Under the Articles, all Directors must retire by rotation and seek re-election by shareholders every three years, however, it is intended that the Directors shall each retire and submit themselves for re-election by shareholders annually.

10.4 The terms of the Non-Executive Directors' appointment letters are summarised below:

| Name | Position | Date of joining the Board | Notice period (months)[1][2] | Total fees[3] (£) |
|---|---|---|---|---|
| **Non-Executive Directors** | | | | |
| Simon Murray . . . . . | Non-Executive Chairman | 28 April 2011 | 3 | 675,000 |
| Peter Coates . . . . . | Non-Executive Director | 14 April 2011 | 3 | 128,800 |
| Leonhard Fischer . . . . | Non-Executive Director | 14 April 2011 | 3 | 128,800 |
| Anthony Hayward . . . . | Non-Executive Director | 14 April 2011 | 3 | 158,800 |
| William Macaulay . . . . | Non-Executive Director | 14 April 2011 | 3 | 126,300 |
| Li Ning . . . . . | Non-Executive Director | 14 April 2011 | 3 | 90,800 |

Notes:

(1) Under the Articles, all Directors must retire by rotation and seek re-election by shareholders every three years, however, it is intended that the Directors shall each retire and submit themselves for re-election by shareholders annually.

(2) Other than the entitlement to notice, Non-Executive Directors will not be entitled to compensation on termination of their appointment.

(3) Total fees vary due to different roles and committees the various Non-Executive Directors sit on.

10.5 During the three financial years ended 31 December 2010, no emolument was paid by Glencore to any of the Directors as an inducement to join or upon joining Glencore or as compensation for loss of office. None of the Directors waived any emoluments during the same period.

## 11 Directors' interests

11.1 The interests in the share capital of the Company of the Directors (all of which, unless otherwise stated, are beneficial or are interests of a person connected with a Director), assuming that the Offer Price is at the mid-point of the Offer Price Range, the Over-Allotment Option is not exercised and that the Kazzinc Consideration Shares have not been issued immediately prior to and following Admission are as follows:

| | Immediately prior to Admission | | Immediately following Admission | |
|---|---|---|---|---|
| Name | No. of Ordinary Shares | Percentage of issued share capital | No. of Ordinary Shares | Percentage of issued share capital |
| **Directors** | | | | |
| Ivan Glasenberg . . . . . | 1,086,881,843 | 18.1 | 1,086,881,843 | 15.8 |
| Steven Kalmin . . . . . | 70,676,710 | 1.2 | 70,676,710 | 1.0 |

11.2 There are no outstanding loans granted by any member of the Glencore Group to any Director, nor has any guarantee been provided by any member of the Glencore Group for their benefit.

11.3 There are:

(a) no potential conflicts of interest between any duties to the Company of the Directors and their private interests and/or other duties; and

(b) no arrangements or understandings with the members, suppliers or others pursuant to which any Director was selected.

11.4 Save as set out in Section VIII: "Details of the Global Offer", there are no restrictions agreed by any Director on the disposal within a certain time of their holdings in the Company's securities.

11.5 No awards have been granted to date to the Directors pursuant to the Glencore employee share plans. See paragraph 14 of this Section X for further details.

## 12 Interests of significant Shareholders

12.1 Other than the interests of the Directors disclosed in paragraph 11 above and other than any interest that may arise under the Underwriting Agreement (assuming that the Offer Price is at the mid-point of the Offer Price Range, the Over-Allotment Option is not exercised and that

the Kazzinc Consideration Shares have not been issued), as far as the Company is aware, the following persons immediately prior to Admission are interested and will following Admission be interested, in three per cent. or more of the Company's issued ordinary share capital:

| | Immediately prior to Admission | | Immediately following Admission | |
|---|---|---|---|---|
| Name | No. of Ordinary Shares | Percentage of issued share capital | No. of Ordinary Shares | Percentage of issued share capital |
| Daniel Francisco Maté Badenes .... | 416,354,564 | 6.9 | 416,354,564 | 6.0 |
| Aristotelis Mistakidis ..... | 411,766,382 | 6.9 | 411,766,382 | 6.0 |
| Tor Peterson[(1)] ..... | 366,255,354 | 6.1 | 366,255,354 | 5.3 |
| Alex Beard ..... | 320,506,122 | 5.3 | 320,506,122 | 4.6 |
| Selling Shareholder ..... | 238,782,586 | 4.0 | nil | nil |

Note:

(1) Within the meaning of Chapter 5 of the UK Disclosure and Transparency Rules, Tor Peterson is an indirect holder of 105,548,031 Ordinary Shares held by Cititrust (Switzerland) Limited pursuant to a fiduciary arrangement established for his benefit prior to the Restructuring. This indirect holding of Ordinary Shares is included in the above table.

12.2 The Company's significant Shareholders do not have and will not have different voting rights attached to the Ordinary Shares they hold to those held by the other Shareholders.

12.3 The Company is not aware of any person who immediately following Admission, directly or indirectly, jointly or severally, will own or could exercise control over the Company.

## 13 Pensions

Glencore and certain subsidiaries sponsor various pension schemes in accordance with local regulations and practices and among these schemes are defined contribution plans as well as defined benefit plans. Eligibility for participation in the various plans is based on either completion of a specified period of continuous service or date of hire. The plans provide for certain employee and employer contributions, ranging from five to 16 per cent. of annual salaries, depending on the employee's years of service. However, the majority of employees do not participate in a pension scheme offered by Glencore. Approximately 3 per cent. of Glencore's employees participate in its defined benefit pensions schemes and these are mainly operated in the U.S., the UK and Switzerland, which account for more than 90 per cent. of Glencore's aggregate pension liabilities.

## 14 Glencore employee share plans

### 14.1 Overview

Glencore believes that its employee ownership structure has been an important element of its successful growth since its inception, with its consistent profitability, the long-term tenure of its management team and prudent risk management policies having been a direct result of this ownership structure. As explained under "Description of ownership structure" in Section II: "Directors and Corporate Governance", to continue this strong culture of employee ownership within Glencore, the Company has adopted the following employee share plans:

(a) the Glencore Performance Share Plan (the "PSP"); and

(b) the Glencore Deferred Bonus Plan (the "DBP").

No awards have been granted under these plans to date. It is not proposed to make any awards in calendar year 2011 other than awards under the PSP to new hires and any top-up awards to existing employees necessary to reflect their level of seniority and/or performance in line with their peers (where such top-up awards, if any, are not expected to be material). These plans are in addition to the annual short-term bonus arrangements in place for the Glencore employees.

The principal features of the PSP and the DBP are summarised below.

Also summarised below are the principal features of certain long-service and phantom equity awards made to employees of the Group. It is not proposed to grant further awards under either of these arrangements.

The Company has also adopted an employee benefit trust which may be used to provide Ordinary Shares to satisfy awards under the PSP and/or the DBP.

14.2 **Glencore Performance Share Plan**

(a) Summary

Under the PSP, a participant is granted a right (a "PSP Award") to receive free Ordinary Shares after a specified period, subject to continued employment, forfeiture for malus events and, for Executive Directors, satisfaction of the agreed performance condition(s).

PSP Awards will be granted to employees who have demonstrated excellent performance over a sustained period. It is proposed that PSP Awards granted to Executive Directors will vest after three years subject to the satisfaction of the agreed performance condition(s), continued employment and forfeiture for malus events. PSP Awards granted to other employees will vest in annual tranches over five years, subject to continued employment and forfeiture for malus events.

(b) Eligibility to participate

Executive Directors and other employees of the Glencore Group will be eligible to participate in the PSP, subject to selection by the remuneration committee (which for the purposes of this paragraph 14 includes, as appropriate, a sub-committee so formed by the remuneration committee or, by delegation, the Chief Executive Officer).

(c) Grant of PSP Awards

(i) Number of Ordinary Shares: The number of Ordinary Shares comprised in a PSP Award will be determined by the remuneration committee. In respect of an Executive Director, the value of Ordinary Shares comprised in a PSP Award(s) granted in any financial year will not exceed 500 per cent. of salary.

(ii) Structure of PSP Awards: PSP Awards will normally be structured as conditional awards of Ordinary Shares but, at the remuneration committee's discretion, may alternatively be structured as options, forfeitable shares or phantom awards.

(iii) Performance condition: PSP Awards granted to Executive Directors will be subject to an objective performance condition(s) in line with the Company's strategy. The performance condition(s) will be determined by the remuneration committee at grant.

(d) Before vesting

(i) Rights: Participants will not be entitled to vote or receive dividends in respect of PSP Awards which are structured as conditional awards, options or phantom awards. However, the remuneration committee may decide to pay participants a dividend equivalent on vesting.

(ii) Leaving employment: If a participant leaves the Glencore Group before vesting, his PSP Award will lapse unless he is a good leaver. A good leaver reason includes disability, ill-health, redundancy, agreed retirement or sale of his employing company/business or any other reason that the remuneration committee may agree. For good leavers, a PSP Award will generally vest on the normal vesting date(s), subject to any agreed performance condition(s) being met and forfeiture for malus events. The number of Ordinary Shares may be time pro-rated at the remuneration committee's discretion.

(iii) Malus events: In the event that a participant behaves in a way which violates the legitimate interests of the Glencore Group (for example, by breaching confidentiality obligations or otherwise acting in a manner which falls outside the normal course of Glencore's business) and such behaviour results in a material loss

or other material detriment to the Glencore Group, the remuneration committee may reduce the PSP Award as it considers appropriate.

(iv) Corporate events before vesting: On a takeover, merger or other corporate reorganisation, participants may be required or permitted to exchange their PSP Awards for equivalent awards over shares in the acquiring company. Alternatively, the remuneration committee may decide that PSP Awards will vest immediately, subject to the satisfaction of any agreed performance condition(s). The number of Ordinary Shares may be time pro-rated at the remuneration committee's discretion.

(v) Rights issues and other variations of share capital: In the event of a rights issue, demerger or other variation in share capital, the number of Ordinary Shares subject to a PSP Award may be adjusted.

(e) Vesting

PSP Awards will vest after the period specified by the remuneration committee. It is currently intended that PSP Awards held by Executive Directors will normally vest on the third anniversary of grant subject to continued employment, satisfaction of any agreed performance condition(s) and forfeiture for malus events. For other participants, it is currently intended that PSP Awards will vest over five years in five equal tranches subject to continued employment and forfeiture for malus events.

14.3 **Glencore Deferred Bonus Plan**

(a) Summary

Under the DBP, all or part of a participant's bonus is deferred as an award of Ordinary Shares (a "Bonus Award") which vests at the end of a specified period subject to continued employment and forfeiture for malus events.

It is intended that the first grant of Bonus Awards under the DBP will be made in 2012 to Executive Directors in respect of bonuses earned in 2011 under Glencore's annual bonus arrangements. These Bonus Awards will vest over three years.

(b) Eligibility to participate

Executive Directors and other employees of the Glencore Group will be eligible to participate in the DBP, subject to selection by the remuneration committee. It is currently intended that Bonus Awards will only be granted to Executive Directors.

(c) Grant of Bonus Awards

(i) Number of Ordinary Shares: The number of Ordinary Shares comprised in a Bonus Award will be determined by reference to the amount of the participant's bonus which is to be deferred and the market value of an Ordinary Share at the time of grant.

(ii) Structure of Bonus Awards: Bonus Awards will normally be structured as conditional awards of Ordinary Shares but, at the remuneration committee's discretion, may alternatively be structured as nil cost options, forfeitable shares or phantom awards.

(d) Before vesting

(i) Rights: Participants will not be entitled to vote or to receive dividends in respect of Bonus Awards which are structured as conditional awards, nil cost options or phantom awards. However, the remuneration committee may decide to pay participants a dividend equivalent on vesting.

(ii) Leaving employment: If a participant leaves the Glencore Group before vesting, his Bonus Award will lapse unless he is a good leaver. A good leaver reason includes disability, ill-health, redundancy, agreed retirement or sale of his employing company/business or any other reason agreed by the remuneration committee. A Bonus Award held by a good leaver will normally vest in full on the normal vesting

date, subject to any forfeiture for malus events. The number of Ordinary Shares may be time pro-rated at the remuneration committee's discretion.

(iii) Malus events: If, prior to vesting, a participant behaves in a way which violates the legitimate interests of the Glencore Group (for example, by breaching confidentiality obligations or otherwise acting in a manner which falls outside the normal course of Glencore's business) and such behaviour results in a material loss or other material detriment to the Glencore Group, the remuneration committee may reduce the Bonus Award as it considers appropriate.

(iv) Corporate events before vesting: On a takeover, merger or other corporate reorganisation, participants may be required or permitted to exchange their Bonus Awards for equivalent awards over shares in the acquiring company. Alternatively, the remuneration committee may determine that Bonus Awards will vest immediately and in full.

(v) Rights issues and other variations of share capital: In the event of a rights issue, demerger or other variation in share capital, the number of Ordinary Shares subject to a Bonus Award may be adjusted.

(e) Vesting

Bonus Awards will vest over or at the end of the period specified by the remuneration committee. It is currently intended that vesting will be over three years.

14.4 **Common terms for both the Glencore Performance Share Plan and the Glencore Deferred Bonus Plan**

(a) Authority to operate

The PSP and DBP will be operated by the Company's remuneration committee or, as appropriate, its duly authorised committee or, by delegation, the Chief Executive Officer.

(b) Timing of award

Awards under the PSP and DBP will normally be granted within 42 days of the announcement of results. Subject to dealing restrictions, awards may be granted at other times, for example to a new hire, if there is a change in tax or share plans legislation or in exceptional circumstances, as determined by the remuneration committee. Awards cannot be granted after the tenth anniversary of Admission.

(c) Tax withholding

To the extent any participant is subject to a tax liability which must be withheld by the Company or any other company in the Glencore Group, the Company may make such arrangements as it considers necessary to meet such liability. This may include the sale or reduction in number of any Ordinary Shares subject to an award.

(d) Restrictions

Awards are not transferrable and are not pensionable.

(e) Funding of awards and dilution limits

PSP Awards and Bonus Awards may be satisfied using new issue shares, treasury shares or shares purchased in the market and will be recognized as a non-cash expense under Selling and administrative expenses in the Group's income statement. The number of shares which may be issued, or committed to be issued, in any 10 year period will not exceed (i) 10 per cent. of the Company's issued ordinary share capital, in respect of any employee share plans operated by the Company; and (ii) 5 per cent. of the Company's issued ordinary share capital, in respect of discretionary employee share plans adopted by the Company. As at the date of Admission, the Company will only have discretionary employee share plans in existence. Shares issued, or committed to be issued, before Admission will not be counted for either of these limits.

(f) Amendments

The plans may generally be amended by the remuneration committee. However, shareholder approval is required for amendments to the following provisions which are to the advantage of participants: eligibility, individual and dilution limits, the rights attaching to awards and Ordinary Shares, the adjustment of awards on a variation in share capital and the amendment power. However, shareholder approval is not required to make minor amendments to the rules to facilitate the administration of the relevant plan, which relate to any change in legislation, or which will obtain or maintain favourable tax, exchange control or regulatory treatments for any participating company or any participant.

The remuneration committee may, without obtaining shareholder approval, establish further plans (whether by way of schedules or otherwise) based on the PSP and/or DBP, but modified to take account of local tax, exchange control or securities law in non-UK territories. Any shares issued under such further plans will count towards the limits described in paragraph (e) above.

14.5 **2011 Long-Service Awards**

In April and May 2011, long-service awards were made to certain employees who were employed by the Group for two years or more at the date of grant and who are not Existing Shareholders. The maximum value of a long-service award which may be granted to any individual is U.S.$100,000. The long-service awards will vest on the first anniversary of UK Admission, subject to continued employment of the relevant individual. Long-service awards will vest early on the death of an award holder or on a change of control, subject to the remuneration committee's discretion to roll them over into equivalent awards that may be settled in shares in an acquiring company. Long-service awards may be satisfied in shares by the issue of new Ordinary Shares, by the transfer of Ordinary Shares held in treasury or by the transfer of Ordinary Shares purchased in the market (in each case with a market value equal to the value of the award at vesting calculated by reference to the average price of Ordinary Shares on the five trading days prior to vesting), or in cash. The maximum aggregate value of long-service awards is U.S.$35 million. There is no intention to grant any further long-service awards post-UK Admission.

14.6 **2011 Phantom Equity Awards**

In April and May 2011, phantom equity awards were made to certain employees in lieu of interests in the Group's existing equity ownership schemes. These phantom equity awards will vest on or before 31 December 2013, subject to the continued employment of the award holder. Phantom equity awards will vest early on the death of an award holder or on a change of control, subject to the remuneration committee's discretion to roll them over into equivalent awards that may be settled in shares in an acquiring company. Each award is over a number of notional Ordinary Shares, determined by reference to the Offer Price.

Phantom equity awards may be satisfied in shares by the issue of new Ordinary Shares, by the transfer of Ordinary Shares held in treasury or by the transfer of Ordinary Shares purchased in the market (in each case with a market value equal to the value of the award at vesting, including dividends paid between UK Admission and vesting), or in cash. The aggregate number of notional Ordinary Shares underlying the awards is 23,808,954, assuming that the Offer Price is set at the mid-point of the Offer Price Range.

The aggregate value of the awards at the Offer Price (assuming that the Offer Price is set at the mid-point of the Offer Price Range) is U.S.$210.3 million. If settled in cash, the amount payable under awards on vesting will be referenced to the average price of Ordinary Shares on the five trading days prior to vesting and to the value of dividends paid between UK Admission and vesting. There is no intention to grant any further phantom equity awards under this arrangement post-UK Admission.

## 15 Working capital

In the opinion of the Company, taking into account the net proceeds of the Global Offer receivable by the Company and Glencore's existing debt facilities, the working capital available to the Company and Glencore is sufficient for the Company and Glencore's present requirements, that is for the next 12 months following the date of this Prospectus.

## 16 Underwriting Agreement

### 16.1 Underwriting Agreement

The Company, Glencore International, the Directors, the Selling Shareholder and the Banks have entered into the Underwriting Agreement relating to the Global Offer. Pursuant to the Underwriting Agreement, subject to execution of the Pricing Agreement by 18 May 2011 (or such later time and date as the Company, the Selling Shareholder and the Joint Global Co-ordinators (on behalf of the Banks) may agree being no later than 15 July 2011 and UK Admission becoming effective no later than 8.00 a.m. on 24 May 2011 (or such later time and date as the Company and the Joint Global Co-ordinators (on behalf of the Banks) may agree, being no later than 31 July 2011) and the satisfaction of certain other conditions, including completion of the Restructuring in all material respects:

(a) the Company has agreed to allot and issue, at the Offer Price, the Offer Shares to be issued in connection with the Global Offer;

(b) the Selling Shareholder has agreed to sell, at the Offer Price, the Sale Shares to be sold by it in connection with the Global Offer;

(c) the International Managers have severally agreed to procure subscribers or purchasers, failing which to subscribe or purchase themselves, the International Offer Shares from the Company and the Selling Shareholder at the Offer Price and in such proportions as set out in the Pricing Agreement;

(d) the HK Managers have severally agreed to procure subscribers, failing which to subscribe themselves, for all of the Hong Kong Offer Shares at the Offer Price and in such proportions as set out in the Underwriting Agreement;

(e) in consideration for their services under the Underwriting Agreement, the Company has agreed to pay the Managers a commission of 1.575 per cent. of the product of the Offer Price and the number of New Offer Shares and, if applicable, the Over-Allotment Shares that are allotted pursuant to the Global Offer. In addition the Company has agreed to pay Citi and MSSL a praecipium fee of 0.175 per cent. of the product of the Offer Price and the number of New Offer Shares and, if applicable, the Over-Allotment Shares, if any, allotted pursuant to the Global Offer;

(f) in consideration for their services under the Underwriting Agreement, the Selling Shareholder has agreed to pay the Managers a commission of 1.575 per cent. of the product of the Offer Price and the number of Sale Shares. In addition the Selling Shareholder has agreed to pay Citi and MSSL a praecipium fee of 0.175 per cent. of the product of the Offer Price and the number Sale Shares, allotted pursuant to the Global Offer;

(g) in addition, the Company may, at its sole discretion, pay within 30 days of UK Admission, to any Manager in such proportions as the Company may in its absolute discretion decide a further commission of up to $82.5 million;

(h) the Company has agreed to pay the costs, charges, fees and expenses incurred in connection with the Global Offer, Admission and the arrangements contemplated by the Underwriting Agreement (together with any related value added tax);

(i) the Joint Global Co-ordinators (on behalf of the Banks) have the right to terminate the Underwriting Agreement, exercisable in certain circumstances prior to UK Admission in respect of the Global Offer. These circumstances, which are typical for agreements of this nature, include the occurrence of certain significant changes in the condition (financial or otherwise), business prospects or earnings of the Glencore Group (taken as a whole) and certain changes in financial, political or economic conditions;

(j) in addition to the commissions referred to above, the Company has agreed to pay (together with any VAT payable) the costs, charges, fees and expenses in connection with or incidental to the Global Offer, Admission and the arrangements contemplated by the Underwriting Agreement subject to an agreed cap in respect of the professional fees of the Banks;

(k) each of the Company, Glencore International, the Selling Shareholder and the Directors has given certain representations, warranties and undertakings to the Underwriters. The liabilities of the Company under the Underwriting Agreement are not limited as to time or amount. The

liabilities of the Directors and the Selling Shareholder under the Underwriting Agreement are limited as to time and amount;

(l) the Company has given an indemnity to the Banks, in a form that is typical for an agreement of this nature. Glencore International has given an indemnity to the Banks, in a form that is typical for an agreement of this nature, up until UK Admission. Glencore International's obligations under the indemnity will cease upon UK Admission;

(m) the parties to the Underwriting Agreement have given certain covenants to each other regarding compliance with laws and regulations affecting the making of the Global Offer in relevant jurisdictions;

(n) the Company has agreed to certain lock-up arrangements pursuant to the Underwriting Agreement, as more fully described in paragraph 17.1 of Section X: "Additional Information"; and

(o) the Underwriting Agreement also contains the terms of the Over-Allotment Option more fully described in paragraph 2 of Section VIII "Details of the Global Offer".

## 17 Lock-up arrangements

### 17.1 Company lock-up

Pursuant to the Underwriting Agreement, the Company has agreed that, subject to the exceptions described in paragraph 17.5 below, during the period commencing on Admission and ending on (and including) the date being the expiry of six months after UK Admission, it will not, without the prior written consent of the Joint Global Co-ordinators (on behalf of the Banks), directly or indirectly, offer, issue, lend, mortgage, charge, pledge, sell or contract to sell, issue options in respect of, or contract to purchase, purchase any option, grant any option, right or warrant to purchase or otherwise dispose of, or announce an offering or issue of, any Ordinary Shares (or any interest therein or in respect thereof) or any other securities exchangeable for or convertible into, or substantially similar to, Ordinary Shares or enter into any transaction with the same economic effect as, or agree to do, any of the foregoing.

### 17.2 Executive Directors' lock-up

Each of the Executive Directors has executed a Lock-Up Deed, pursuant to which he has agreed that, subject to certain customary exceptions more particularly described in paragraph 17.6 below, during the period from and including Admission to and including the fifth anniversary of Admission, he will not, without the prior written consent of the Company (and, during the first year following Admission, the Joint Global Co-ordinators), Dispose of Ordinary Shares held by him at Admission. The percentage of each Executive Director's Ordinary Shares held at Admission that are subject to restrictions on Disposal decreases each year as set out below.

| Period[(1)] | Year 1 | Year 2 | Year 3 | Year 4 | Year 5 |
|---|---|---|---|---|---|
| Percentage of Executive Director's Ordinary Shares held at Admission that are subject to restrictions on Disposal in that period | 100 per cent. | 80 per cent. | 60 per cent. | 40 per cent. | 20 per cent. |

Note:

(1) Year 1 refers to the period commencing on Admission and ending on (but excluding) the first anniversary of Admission. Year 2 refers to the period commencing on (and including) the first anniversary of Admission and ending on (but excluding) the second anniversary of Admission. Year 3 refers to the period commencing on (and including) the second anniversary of Admission and ending on (but excluding) the third anniversary of Admission. Year 4 refers to the period commencing on (and including) the third anniversary of Admission and ending on (but excluding) the fourth anniversary of Admission. Year 5 refers to the period commencing on (and including) the fourth anniversary of Admission and ending on (but excluding) the fifth anniversary of Admission.

The Ordinary Shares that will be held by the Executive Directors following completion of the Global Offer, and which will be subject to the Lock-Up Deeds as described above, will in aggregate represent 16.8 per cent. of the issued share capital of the Company (assuming that the Offer Price is at the mid-point of the Offer Price Range, the Over-Allotment Option is not exercised and the Kazzinc Consideration Shares have not been issued).

17.3 **Existing Shareholders' lock-up**

Each of the Existing Shareholders (other than the Executive Directors) has also executed a Lock-Up Deed, pursuant to which he/she has agreed that, subject to certain customary exceptions more particularly described in paragraph 17.6 below, during a period of time of between one year, two years or four years from and including Admission as set out below, he/she will not, without the prior written consent of the Company (and, during the first year following Admission, the Joint Global Co-ordinators), Dispose of Ordinary Shares held by him/her at Admission. In the case of lock-up arrangements of two years and four years, the percentage of the Existing Shareholder's Ordinary Shares held at Admission that are subject to restrictions on Disposal decreases each year as set out below.

| | **Percentage of issued share capital following completion of the Global Offer subject to lock-up arrangement of that period[1]** | **Percentage of Existing Shareholder's Ordinary Shares held at Admission that are subject to restrictions on Disposal in each year[2]** | | | |
|---|---|---|---|---|---|
| | | **Year 1** | **Year 2** | **Year 3** | **Year 4** |
| One year . . . . . | 22.2 | 100 | — | — | — |
| Two years . . . . . | 12.0 | 100 | 50 | — | — |
| Four years . . . . . | 32.6 | 100 | 75 | 50 | 25 |

Notes:

(1) Assuming that the Offer Price is at the mid-point of the Offer Price Range, the Over-Allotment Option is not exercised and the Kazzinc Consideration Shares have not been issued.

(2) Year 1 refers to the period commencing on Admission and ending on (but excluding) the first anniversary of Admission. Year 2 refers to the period commencing on (and including) the first anniversary of Admission and ending on (but excluding) the second anniversary of Admission. Year 3 refers to the period commencing on (and including) the second anniversary of Admission and ending on (but excluding) the third anniversary of Admission. Year 4 refers to the period commencing on (and including) the third anniversary of Admission and ending on (but excluding) the fourth anniversary of Admission.

The Ordinary Shares that will be held by Existing Shareholders (other than the Executive Directors) following completion of the Global Offer, and which will be subject to the Lock-Up Deeds as described above, will in aggregate represent 66.8 per cent. of the issued share capital of the Company (assuming that the Offer Price is at the mid-point of the Offer Price Range, no conversion of the Convertible Bonds, the Over-Allotment Option is not exercised and the Kazzinc Consideration Shares have not been issued).

17.4 **Cornerstone Investors' lock-up**

Each of the Cornerstone Investors has agreed that (subject to certain customary exceptions more particularly described in paragraph 17.7 below), without the prior written consent of the Company and the Joint Global Co-ordinators, it will not, at any time during the period ending six months following UK Admission, directly or indirectly, dispose of any Offer Shares subscribed for by it pursuant to the Cornerstone Investment Agreement to which it is party.

In addition, each Cornerstone Investor has acknowledged that it is in the interests of all holders of Ordinary Shares that a disorderly or false market in the Ordinary Shares is not created at the time of the expiry of the six month lock-up period. Consequently, each Cornerstone Investor has agreed that in the event that the Cornerstone Investor intends to dispose of any Ordinary Shares acquired pursuant to the Cornerstone Investment Agreement within one month after the expiry of the lock-up period, it may approach the Joint Global Co-ordinators (on a non-binding basis and subject to applicable laws and regulations) shortly before the expiry of the lock-up with a view to discussing with the Joint Global Co-ordinators the possibility of arranging such disposal together with the holdings of other Cornerstone Investors who may also intend to dispose of any such Ordinary Shares.

The Ordinary Shares that will be held by Cornerstone Investors following completion of the Global Offer, and which will be subject to the lock-up arrangements as described above, will in aggregate represent 5.1 per cent. of the issued share capital of the Company (assuming that the Offer Price is at the mid-point of the Offer Price Range, the Over-Allotment Option is not exercised and the Kazzinc Consideration Shares have not been issued).

17.5 **Exceptions to the Company lock-up**

The restrictions to which the Company is subject pursuant to the Underwriting Agreement as described in paragraph 17.1 of this Section X are subject to the following exceptions:

(a) the issue and offer by the Company of the Offer Shares and the issue of the Kazzinc Consideration Shares;

(b) the issue by the Company of any Ordinary Shares or the grant of any options or awards pursuant to the employee share schemes described in paragraph 14 of this Section X;

(c) the issue by the Company of any Ordinary Shares with an aggregate value of up to U.S.$1 billion to fund a specific acquisition, merger or takeover or as part or full consideration for an acquisition, merger or takeover, provided that the subscriber of such Ordinary Shares agrees to be bound by the lock-up restrictions until the date being the expiry of 6 months after UK Admission; and

(d) the issue by the Company of Ordinary Shares to holders of the Convertible Bonds who exercise their rights to convert their Convertible Bonds into Ordinary Shares after UK Admission (as described in this Prospectus).

17.6 **Exceptions to the Lock-Up Deeds**

The restrictions to which the Existing Shareholders and the Executive Directors are subject pursuant to the Lock-Up Deeds do not apply to any Ordinary Shares issued to them pursuant to the Ordinary Shares awarded, and/or exercise of options granted, after Admission under the Glencore employee share schemes described in paragraph 14 of this Section X, and are subject to the following customary exceptions:

(a) any Disposal notified in writing in advance to the Company (and, in the first year following Admission, the Joint Global Co-ordinators) and to which the Company (and, in the first year following Admission, the Joint Global Co-ordinators) gives its (or their) prior consent in writing;

(b) an acceptance of a general offer for the ordinary share capital of the Company made in accordance with the City Code, or the provision of an irrevocable undertaking to accept such an offer, or a sale of Ordinary Shares to an offeror or potential offeror during an offer period (within the meaning of the City Code);

(c) any Disposal of Ordinary Shares pursuant to a compromise or arrangement by the Company with its members or a statutory merger under Jersey law, in each case providing for the acquisition by any person (or group of persons acting in concert, as such expression is defined in the City Code) of 50 per cent. or more of the ordinary share capital of the Company;

(d) any Disposal of Ordinary Shares pursuant to an arrangement by the Company with its creditors under Jersey law;

(e) any Disposal by way of gift by any individual to a family member, to the trustees of a family trust or to a licensed insurance company to be held under a life insurance policy for the individual or any of his/her family members, or by a trustee to a beneficiary of a trust, or by an insurance company to the original life assured, provided that, prior to the making of any such Disposal, the relevant transferee shall have agreed to be bound by the lock-up restrictions in the same terms as the Existing Shareholder;

(f) any Disposal to personal representatives or persons who take after an individual who dies or is incapacitated;

(g) any Disposal of Ordinary Shares by operation of law or pursuant to an order from a court of competent jurisdiction or as otherwise required pursuant to any applicable laws;

(h) any Disposal of rights to new Ordinary Shares granted, or Ordinary Shares subscribed, in respect of a rights issue or other pre-emptive share offering of the Company;

(i) any Disposal of Ordinary Shares pursuant to any offer by the Company to purchase its own Ordinary Shares which is made on identical terms to all holders of Ordinary Shares in the Company; and

(j) any Disposal of Ordinary Shares to Penwith Limited made on the date of Admission for the purpose of Penwith Limited selling such Ordinary Shares as Selling Shareholder in and for the purpose of the Global Offer pursuant to the Underwriting Agreement or for the purpose of Penwith Limited lending such shares pursuant to any stock lending arrangement.

17.7 **Exceptions to the Cornerstone Investors' lock-up**

The restrictions to which the Cornerstone Investors are subject pursuant to the Cornerstone Investment Agreements as described in paragraph 17.4 of this Section X, are subject to the following exceptions:

(a) an acceptance of a general offer for the ordinary share capital of the Company made in accordance with the City Code or the provision of an irrevocable undertaking to accept such an offer or a sale of Ordinary Shares to an offeror or potential offeror during an offer period (within the meaning of the City Code);

(b) any disposal of Ordinary Shares pursuant to a compromise or arrangement under Article 125 of the Jersey Companies Law or pursuant to a merger under Part 18B of the Jersey Companies Law, in each case providing for the acquisition by any person (or group of persons acting in concert as such expression is defined in the City Code) of 50 per cent. or more of the ordinary share capital of the Company;

(c) any disposal of Ordinary Shares (i) pursuant to an arrangement under Article 167 of the Jersey Companies Law in relation to the Company or (ii) by operation of law or pursuant to an order from a court of competent jurisdiction or as otherwise required pursuant to any applicable laws;

(d) any disposal of rights to new Ordinary Shares granted, or of any Ordinary Shares subscribed, in respect of a rights issue or other pre-emptive share offering of the Company or any disposal of Ordinary Shares pursuant to any offer by the Company to purchase its own Ordinary Shares which is made on identical terms to all holders of Ordinary Shares in the Company;

(e) any pledge, charge, mortgage, lien or other structure for giving credit support to the financial institution (each a "security") granted over or in respect of the Offer Shares subscribed for by the Cornerstone Investor pursuant to its relevant Cornerstone Investment Agreement to a financial institution which is providing financing to the Cornerstone Investor in respect of the Ordinary Shares and the transfer of the relevant Ordinary Shares to such financial institution pursuant to such security or its enforcement and any further pledge, repledge, hypothecation, rehypothecation or lending transaction by such financial institution, provided that in the event that such security is enforced, the relevant financial institution agrees to be bound by the lock-up restrictions contained in the Cornerstone Investment Agreement; and

(f) transfers of all or part of the Offer Shares subscribed for by the Cornerstone Investor pursuant to the relevant Cornerstone Investment Agreement to transferees as permitted in the relevant Cornerstone Investment Agreement and on the basis that the transferee will be subject to the same restrictions on disposal as if it were the transferor by the execution and delivery to the Company and the Joint Global Co-ordinators of a deed of adherence to the relevant Cornerstone Investment Agreement;

## 18 Material contracts

The following are the only contracts (not being contracts entered into in the ordinary course of business) which have been entered into by the Company and/or members of the Glencore Group within the two years immediately preceding the date of this Prospectus or which are expected to be

entered into prior to Admission and which are, or may be, material or which have been entered into at any time by the Company and/or members of the Glencore Group and which contain any provision under which the Company and/or any member of the Glencore Group has any obligation or entitlement which is, or may be, material to the Company and/or the Glencore Group as at the date of this Prospectus:

18.1 **Underwriting Agreement**

Please refer to the description in paragraph 16 above.

18.2 **Cornerstone Investment Agreements**

On 4 May 2011, in connection with the International Offer, the Company, Glencore International, the Joint Global Co-ordinators and the Cornerstone Investors entered into the Cornerstone Investment Agreements.

A brief description of each of the Cornerstone Investors is as set out in paragraph 10.1 of Section VIII: "Details of the Global Offer". Each of the Cornerstone Investment Agreements has been entered into on substantially the same terms. A summary of the material terms of the Cornerstone Investment Agreement is as set out below:

Each Cornerstone Investment Agreement contains, amongst others, the following provisions:

(a) the obligation of the Company to deliver, and the obligation of the Cornerstone Investor to acquire and pay for, the Offer Shares pursuant to the relevant Cornerstone Investment Agreement are subject to certain conditions that are typical for an agreement of this nature. These conditions include:

  (i) the Underwriting Agreement not having been terminated on or prior to 24 May 2011 (or such later time and date as the Company and the Joint Global Co-ordinators may agree and notify to the Cornerstone Investor, being no later than 31 July 2011) (the "Closing Date");

  (ii) the Pricing Agreement being entered into by the parties thereto by the Closing Date and compliance by the Company and the Selling Shareholder with the terms and conditions set forth therein;

  (iii) UK Admission occurring not later than 8.00 a.m. on the Closing Date; and

  (iv) the Offer Price being within the price range set out in this Prospectus;

(b) the Company, Glencore International and the Joint Global Co-ordinators have the right to terminate the Cornerstone Investment Agreement in certain circumstances, including the following:

  (i) in the event that payment for the relevant Offer Shares by the Cornerstone Investor is not received or settled in accordance with the terms of the relevant Cornerstone Investment Agreement; and

  (ii) in the event of a material breach of the terms of the Cornerstone Investment Agreement by the relevant Cornerstone Investor;

(c) the Cornerstone Investor may terminate the Cornerstone Investment Agreement, if there is a material breach by the Company of its obligation to deliver the relevant Offer Shares to the Cornerstone Investor in accordance with the terms of the Cornerstone Investment Agreement;

(d) each of the parties has given certain customary representations and warranties to the other, in particular regarding compliance with laws and regulations affecting the entry into of the Cornerstone Investment Agreement in relevant jurisdictions. The terms of the Cornerstone Investment Agreement do not limit the liability of the parties for breach of contract as to time or amount;

(e) the Company has represented and warranted to each of the Cornerstone Investors that the terms of its Cornerstone Investment Agreement (including any amendment, supplement or side letter) are, in all material respects, the same as the equivalent terms contained in the other Cornerstone Investment Agreements entered into with the other

Cornerstone Investors (including any amendment, supplement or side letter to such agreements), save for any deviations required to reflect the corporate structure of a particular Cornerstone Investor or the manner in which a particular Cornerstone Investor will acquire or hold the Ordinary Shares issued to it pursuant to the terms of the relevant Cornerstone Investment Agreement and the terms on which the Cornerstone Investors which are private banks are engaged by their underlying banking clients;

(f) in addition, the Company has represented and warranted to each of the Cornerstone Investors that no waiver, accommodation or amendment in respect of a Cornerstone Investor's rights and obligations under its relevant Cornerstone Investment Agreement (including any amendment, supplement or side letter to such agreement) shall be extended to any Cornerstone Investor unless such waiver, accommodation or amendment is extended to each other Cornerstone Investor on the same basis contemporaneously therewith; and

(g) each Cornerstone Investor has agreed to certain lock-up arrangements pursuant to the Cornerstone Investment Agreement, as more fully described in paragraph 17.4 above.

The total number of Offer Shares to be acquired by the Cornerstone Investors under the Cornerstone Investment Agreements is set out below:

| Name of Cornerstone Investor | Number of Offer Shares subscribed for by the Cornerstone Investor (rounded down to the nearest whole Ordinary Share)[1] | Total amount in U.S.$ committed by the Cornerstone Investor |
|---|---|---|
| Aabar | 96,226,415 | 850,000,000 |
| BlackRock | 40,754,716 | 360,000,000[2] |
| Brookside Capital | 25,471,698 | 225,000,000 |
| Credit Suisse AG[3] | 19,811,320 | 175,000,000 |
| Eton Park Funds | 22,641,509 | 200,000,000 |
| Fidelity | 24,339,622 | 215,000,000 |
| GIC | 45,283,018 | 400,000,000 |
| Och-Ziff | 19,811,320 | 175,000,000 |
| Pictet[3] | 11,320,754 | 100,000,000 |
| UBS AG[3] | 11,320,754 | 100,000,000 |
| York Capital | 22,641,509 | 200,000,000 |
| Zijin | 11,320,754 | 100,000,000 |
| **Total** | 350,943,389 | 3,100,000,000 |

Notes:

(1) Assuming that the Offer Price is at the mid-point of the Offer Price Range, the Over-Allotment Option is not exercised and the Kazzinc Consideration Shares have not been issued.

(2) BlackRock Advisors (UK) Limited has agreed to acquire such number of Offer Shares which may be acquired with £95 million, which has been converted into U.S.$158 million based on the pounds sterling/U.S.$ exchange rate of £1.00 = U.S.$1.667 quoted by Bloomberg on 29 April 2011.

(3) As agent on behalf of underlying clients.

18.3 **Xstrata Acquisition Agreement and Xstrata Call Option Agreement**

*Xstrata Acquisition Agreement*

Pursuant to the sale and purchase agreement dated 29 January 2009 between Glencore International AG, Xstrata (Schweiz) AG and Xstrata Coal South America Ltd. (the "Xstrata Acquisition Agreement"), Glencore agreed to sell, and Xstrata agreed to buy, all of the shares in each of Chestfield Coal Resources Limited, Tikolan Limited, Simkana Limited, Merani Holding Limited and Wichita Holding Limited (the "Prodeco Target Companies") with effect from 1 January 2009. The Prodeco Target Companies collectively held, directly and indirectly, all of the issued shares of each of C.I. Prodeco S.A., Carbones de La Jagua S.A., Carbones El Tesoro S.A., Carbones de la Loma S.A., and Consorcio Minero Unido S.A. (the "Prodeco Operating Companies"). The Prodeco Operating Companies and Ferrocarriles del Norte de Colombia S.A. carry on the Prodeco coal mining operation and associated infrastructure in

Colombia. Glencore's interests in Prodeco are held through the Prodeco Target Companies (the "Prodeco Business").

The aggregate consideration payable by Xstrata Coal South America Ltd. to Glencore under the Xstrata Acquisition Agreement was U.S.$2 billion (subject to certain adjustments to reflect the fact that the economic effect of the transaction was a sale and purchase of the Prodeco Business as at 1 January 2009). Xstrata Coal South America Ltd. also paid interest to Glencore on the purchase price from 1 January 2009 to completion under the Xstrata Acquisition Agreement, which was on 3 March 2009 (the "Prodeco Closing") at LIBOR plus 1.50 per cent.

As is customary for a transaction of this nature, Glencore agreed in a tax covenant to indemnify Xstrata Coal South America Ltd. in respect of certain taxation liabilities of the Prodeco Target Companies and the Prodeco Operating Companies, which, in each case, are attributable to the period up to 1 January 2009. The time limit for tax claims is two months following the expiry of the statutory limitation period in the relevant jurisdiction. Glencore has no liability for any claim under the tax covenant unless (i) any individual claim exceeds U.S.$0.5 million; (ii) all claims (including claims under the Xstrata Acquisition Agreement), in aggregate, exceed U.S.$5 million; and (iii) the claim relates to a loss suffered as a result of the purchase price on the exercise of the option (see below) being reduced. The maximum liability of Glencore for all claims under the Xstrata Acquisition Agreement and the tax covenant is the purchase price (i.e. U.S.$2 billion) payable pursuant to the Xstrata Acquisition Agreement.

*Xstrata Call Option Agreement*

Pursuant to the option agreement between Glencore International AG and Xstrata (Schweiz) AG dated 29 January 2009 (the "Xstrata Call Option Agreement"), Xstrata (Schweiz) AG agreed to grant Glencore an option to repurchase the Prodeco Business on any day in the period from Prodeco Closing (being 3 March 2009) to the day immediately following the first anniversary of the date on which Prodeco Closing occurs (and, in each case, the day may not be a Saturday, Sunday or bank or public holiday in England and Wales or in the Swiss Canton of Zug and Zurich).

The option was exercised on 4 March 2010.

The aggregate consideration paid by Glencore under the Xstrata Call Option Agreement upon exercise of the option was an amount equal to the purchase price payable by Xstrata Coal South America Ltd. under the Xstrata Acquisition Agreement, as adjusted in accordance with the terms of that agreement, plus U.S.$250 million, plus all profits of the Prodeco Business accrued and not distributed to Xstrata and any cash paid into the Prodeco Business by Xstrata, less any amounts distributed by the Prodeco Target Companies to Xstrata, in each case in the period from 1 January 2009 to 13 April 2010, being the date on which the sale of the Prodeco Business pursuant to the exercise of the option was completed. Xstrata retained the economic benefit of profits generated by the Prodeco Business in this period.

Xstrata (Schweiz) AG gave limited warranties to Glencore, including as to Xstrata's ownership at the relevant time of the relevant shares in the Prodeco Target Companies and Xstrata (Schweiz) AG's authority to enter into and perform the Xstrata Call Option Agreement. There is no time limit on these warranties.

18.4 **The revolving credit facilities agreement**

On 10 May 2010 (the "Signing Date"), Glencore International (the "Parent"), Glencore Singapore Pte Ltd. ("GSPL") and Glencore AG entered into a U.S.$10.22 billion revolving credit facilities agreement (the "RCF Agreement" and the facilities granted thereby, the "Facilities") with, among others, Banc of America Securities Limited, Banco Santander, S.A., London Branch, Barclays Capital (the investment banking division of Barclays Bank PLC), BNP Paribas, Citigroup Global Markets Limited, Commerzbank Aktiengesellschaft, London Branch, Coöperatieve Centrale Raiffeisen-Boerenleenbank B.A. (trading as Rabobank International), London Branch, Crédit Agricole Corporate and Investment Bank, Credit Suisse AG, DBS Bank Ltd., London Branch, Deutsche Bank Luxembourg S.A., Fortis Bank (Nederland) N.V., HSBC Bank plc, ING Bank N.V., J.P. Morgan plc, Lloyds TSB Bank plc, Morgan Stanley Bank International Limited, Société Générale Corporate & Investment Banking, Standard Chartered Bank, The Royal Bank of Scotland plc and UBS Limited as

mandated lead arrangers with Barclays Bank PLC acting as facility agent and swingline agent and various financial institutions as lenders. The Parent and GSPL are borrowers under the RCF Agreement. Glencore AG provides a guarantee for the Parent's borrowing obligations and the Parent provides a guarantee of GSPL's borrowing obligations.

There are three separate Facilities under the RCF Agreement, namely Facility A, Facility B and Facility C. Facility C is further divided into two tranches, namely Facility C1 and Facility C2. Facility B also contains a swingline option. Facility A includes an option whereby the revolving advances may be converted into a term advance (such option being the "Term Out Option" and such advance being the "Term Out Advance"). Facility A also includes an extension option whereby the maturity date of Facility A may be extended by a period of 364 days from its initial maturity date (the "Facility A Extension Option"). Facility B includes two extension options ("Facility B First Extension Option" and "Facility B Second Extension Option") whereby the maturity date of Facility B may, in each case, be extended by a period of 12 months from the then applicable maturity date. The Parent may choose to exercise either of the two extension options under Facility B, or both.

The Facilities are to be used towards working capital or general corporate purposes of Glencore, including, in the case of Facilities A and B, towards refinancing certain of its existing facilities.

The availability of the Facilities is as follows:

(a) Facility A is available until the date falling seven days prior to the Facility A Maturity Date (as defined below);

(b) Facility B is available until the date falling seven days prior to the Facility B Maturity Date (as defined below); and

(c) Facility C is available until the date falling seven days prior to the Facility C Maturity Date (as defined below).

Interest is payable on advances under each of the Facilities at the rate which is the aggregate of:

(a) the margin applicable to the relevant Facility as follows:

  (i) in relation to Facility A advances (other than the Term Out Advance), 1.50 per cent. per annum;

  (ii) in relation to the Term Out Advance, 2 per cent. per annum;

  (iii) in relation to Facility B advances, the margin varies between 1.250 per cent. and 2.125 per cent. per annum, depending on the then current rating assigned by Standard & Poor's and/or Moody's in respect of the Parent's long-term senior unsecured debt; and

  (iv) in relation to Facility C advances, 1.35 per cent. per annum;

(b) LIBOR; and

(c) the mandatory cost (being the regulatory costs of the lenders which are passed on to the borrowers).

The maturity dates of the Facilities are as follows:

(a) Facility A matures on:

  (i) the day falling 364 days after the Signing Date; or

  (ii) if the maturity date of Facility A has been extended under the Facility A Extension Option, the day falling 728 days after the Signing Date,

  such maturity date being the "Facility A Maturity Date";

(b) the Term Out Advance matures 12 months from the Facility A Maturity Date (or any shorter period, as is agreed);

(c) Facility B matures on:

  (i) the day falling 36 months after the Signing Date; or

(ii) if only the Facility B First Extension Option or Facility B Second Extension Option is exercised, the day falling 48 months from the Signing Date; or

(iii) if both the Facility B First Extension Option and the Facility B Second Extension Option are exercised, the day falling 60 months from the Signing Date,

(such maturity date being the "Facility B Maturity Date"); and

(d) Facility C matures on the day falling 364 days after the Signing Date (the "Facility C Maturity Date").

The RCF Agreement includes a mandatory prepayment provision in the event of certain specified change of control events.

The RCF Agreement includes certain financial covenants that require Glencore to maintain certain financial ratios. Pursuant to these covenants, which are calculated in accordance with IFRS, on (i) the last day of each financial year and (ii) 30 June in each year (or such other date as is the end of the first half of each financial year), the consolidated financial condition of the Parent and its subsidiaries, as is evidenced by its latest consolidated financial statements, shall be such that:

(a) net consolidated working capital shall not be less than U.S.$750 million;

(b) the ratio of consolidated current assets to consolidated current liabilities shall not fall below 1.10:1; and

(c) long-term debt shall not be more than 120 per cent. of consolidated tangible net worth.

The RCF Agreement contains representations, warranties and undertakings which are typical for these types of credit arrangements. The RCF Agreement also contains customary events of default upon occurrence of which the lenders may cancel their lending commitments and demand repayment of the advances.

On 3 May 2011 (the "New RCF Signing Date"), the Parent, Glencore AG and GSPL entered into a new U.S.$3,535 million revolving credit facilities agreement (the "New RCF Agreement" and the facilities granted thereby, the "New Facilities") with, among others, substantially the same banks as under the RCF Agreement, as mandated lead arrangers, and Barclays Bank PLC as facility agent. The borrowers and guarantors under the New RCF Agreement are the same as under the RCF Agreement. Facility A, Facility C1 and Facility C2 under the RCF Agreement were refinanced by the New Facilities. There are two separate facilities under the New RCF Agreement, namely a U.S.$2,925 million Facility A1 ("New Facility A1") and a U.S.$610 million Facility A2 ("New Facility A2").

The maturity date of each of the New Facilities is the day falling 364 days after the New RCF Signing Date and both have a one year extension option exercisable at the borrower's discretion. The New Facilities each include an option whereby the revolving advances may be converted into a term advance (each such advance being a "New Facility Term Out Advance").

In addition, the Parent extended the final maturity of U.S.$8,340 million of Facility B for a further year to May 2014. The New Facilities, in aggregate with the amount extended under Facility B represent an increase in committed available liquidity of U.S.$1,645 million.

The representations, warranties, undertakings and events of default contained in the New RCF Agreement are substantially the same as those in the RCF Agreement.

Interest is payable on advances under the New Facilities at the rate which is the aggregate of the applicable margin, LIBOR and the mandatory cost (being the regulatory costs of the lenders which are passed on to the borrowers). The applicable margin for an advance (other than a New Facility Term Out Advance) under each of the New Facilities is 1.10 per cent. per annum. The applicable margin in respect of a New Facility Term Out Advance is 1.60 per cent. per annum.

18.5 **Committed secured borrowing base facility agreement**

On 10 November 2010 (the "Signing Date"), Glencore International AG (the "Borrower") and Glencore AG (the "Guarantor") entered into a U.S.$1.7 billion committed secured borrowing base facility agreement (the "Base Facility Agreement" and the facility granted under the Base

Facility Agreement, being the "Base Facility") with, among others, BNP Paribas in each of its capacities as bookrunner and global co-ordinator, as agent, as security agent in respect of inventory and cash collateral, and as security agent in respect of receivables, and various financial institutions as lenders. The Guarantor provides a guarantee for the Borrower's obligations under and in connection with the Base Facility Agreement and the other finance documents.

The Base Facility includes an extension option whereby the maturity date may be extended by a period of 364 days from its Initial Maturity Date (as defined below) (the "Base Facility Extension Option").

The Base Facility is to be used towards working capital purposes, being: (i) the financing of the Borrower's physical base metal inventory of aluminium, copper, lead, nickel, zinc and tin; and (ii) the financing of receivables due to the Borrower or the Guarantor by their debtors, arising in the ordinary course of the Borrower's or the Guarantor's business.

The Base Facility is available until the date falling one week prior to the Termination Date (as defined below).

Interest is payable on advances under the Base Facility at the rate which is the aggregate of:

(a) 1.10 per cent. per annum;

(b) LIBOR; and

(c) mandatory cost (being regulatory costs of the lenders which are passed on to the borrowers).

The Base Facility matures on:

(a) the day falling 364 days after the Signing Date (the "Initial Maturity Date"); or

(b) if the Initial Maturity Date has been extended under the Base Facility Extension Option, the day falling 728 days after the Signing Date,

such maturity date being the "Termination Date".

The Base Facility Agreement includes mandatory prepayment provisions in the event of certain specified events (including a change of control event).

The Base Facility Agreement includes certain financial covenants that require Glencore to maintain certain financial ratios. Pursuant to these covenants, which are calculated in accordance with IFRS, on the last day of each financial year and on 30 June in each year, the consolidated financial condition of the Borrower and its subsidiaries, as evidenced by its latest consolidated financial statements, shall be such that:

(a) net consolidated working capital shall not be less than U.S.$750 million;

(b) the ratio of consolidated current assets to consolidated current liabilities shall not fall below 1.10:1; and

(c) long-term debt shall not be more than 120 per cent. of consolidated tangible net worth.

The Base Facility Agreement contains representations, warranties and undertakings, which are typical for these types of credit arrangements. The Base Facility Agreement also contains customary events of default, upon occurrence of which the lenders may cancel their lending commitments and demand repayment of the advances.

18.6 **U.S.$2.3 billion 5 per cent. guaranteed convertible bonds due 2014**

Glencore Finance (Europe) S.A. (the "Issuer") issued (i) U.S.$2.2 billion 5 per cent. guaranteed convertible bonds due 2014 (the "Original Bonds") constituted by a trust deed dated 23 December 2009 between the Issuer, Glencore International AG, Glencore AG and Citicorp Trustee Company Limited (the "Original Trust Deed") and (ii) a further U.S.$100 million 5 per cent. guaranteed convertible bonds due 2014 (to be consolidated and to form a single series with the Original Bonds) (together with the Original Bonds, the "Bonds"), constituted by the Original Trust Deed as supplemented by a supplemental trust deed dated 10 March 2010 between the Issuer, Glencore International AG, Glencore AG (Glencore

International AG and Glencore AG together, the "Guarantors") and Citicorp Trustee Company Limited (the "Trustee") (together with the Original Trust Deed, the "Trust Deed"). The Bonds constitute direct, general and unconditional obligations of the Issuer.

(a) Guarantee agreement

Pursuant to a guarantee agreement dated 23 December 2009, the Guarantors have unconditionally (subject, in the case of Glencore AG, to applicable Swiss law) and irrevocably guaranteed on a joint and several basis the due and punctual payment of all sums from time to time payable by the Issuer in respect of the Bonds.

(b) Negative pledge

Under the terms of the Bonds, none of the Issuer and the Guarantors will, and the Guarantors will not permit any material subsidiary to, directly or indirectly, create, incur, assume or permit to exist any mortgage, charge, pledge, lien or other security interest, except in certain limited circumstances, on or with respect to any property or assets of such entity or any interest therein or any income or profits therefrom to secure any present or future indebtedness in the form of, or represented or evidenced by, notes, bonds, debentures, debenture stock, loan stock or other securities which are, or are intended to be, with the consent of the person issuing the same, quoted, listed or ordinarily traded on any stock exchange or recognised over-the-counter or other securities market, and any guarantee or indemnity in respect thereof.

(c) Redemption

Unless previously redeemed, converted or purchased and cancelled, the Bonds will mature on 31 December 2014 (the "Maturity Date").

Following a qualifying IPO or a specified merger event, unless previously redeemed, converted or purchased and cancelled, the Issuer will redeem each Bond at its principal amount on the Maturity Date. The Bonds may also be redeemed at the option of the Issuer on the occurrence of certain tax events. Bondholders may require the Issuer to redeem the Bonds in certain limited circumstances, including in the event of a change of control.

If a qualifying IPO or a specified merger has not occurred prior to the Maturity Date, unless previously redeemed, converted or purchased and cancelled, the Issuer will redeem each Bond at 108.10 per cent. of its principal amount on the Maturity Date.

If a qualifying IPO or specified merger event has not occurred by a specified date, bondholders have the right to put their Bonds, if bondholders have requested the Glencore group to carry out a qualifying IPO and certain other conditions have been met, and such request has not been met by a specified date, at a redemption price of between 165.85 per cent. and 209.90 per cent., depending on the relevant redemption date.

(d) Qualifying initial public offering

Under the Bonds, a qualifying IPO shall occur if there is an offering of shares in Holdco by Holdco and/or Existing Shareholders for subscription or sale for cash to retail and/or institutional investors accompanied by the listing and admission to trading of such shares on the London Stock Exchange (premium listing), or other specified stock exchange, and provided that a liquidity condition linked to the amount of free float in respect of the shares is satisfied. If the liquidity condition is not satisfied, bondholders may waive such condition by extraordinary resolution within 120 days following the relevant listing.

(e) Conversion

Following a qualifying IPO or a specified merger event, the Bonds will be convertible into ordinary shares of Holdco at any time up to the 14th day prior to the Maturity Date. The number of shares issued to a bondholder upon conversion shall be equal to the relevant conversion ratio (subject to adjustment in certain circumstances) in effect on the relevant conversion date, as set out in the terms and conditions of the Bonds.

In addition, following a qualifying IPO, the Bonds will be convertible into ordinary shares of Holdco at the option of the Issuer at the conversion ratio in effect on the relevant conversion date, at any time during the period beginning 18 months after the listing and ending on the 14th day prior to the Maturity Date, provided that the share price exceeds 150 per cent. of the conversion ratio for a specified period.

The conversion ratio is subject to adjustment from time to time, for so long as the Bonds remain outstanding, as a result of certain corporate actions taken by the Issuer, the Guarantors and/or Holdco.

Bondholders who exercise conversion rights, other than bondholders who elect to exercise conversion rights and subsequently sell their shares as part of a secondary offering pursuant to the terms and conditions of the Bonds, will not be permitted to sell such shares until the earlier of (i) 90 days from the date of UK Admission; and (ii) the expiry of lock-up arrangements in respect of any Existing Shareholders.

(f) Events of default

An event of default under the Bonds will occur in certain circumstances, including, but not limited to, in respect of a failure to pay principal or interest in respect of the Bonds on the due date for payment thereof and such default continues for a period of 14 days, if the guarantee agreement is not in full force and effect, if any of the Issuer, the Guarantor or any material subsidiary fails to pay when due certain financial indebtedness, or such financial indebtedness becomes due and payable, or where there is a failure to pay when due under any applicable grace period amounts owing under the guarantee, in each case in circumstances where the amount of such financial indebtedness and/or the amount payable under such guarantee individually or in the aggregate exceeds U.S.$50 million (or its equivalent in another currency). If any event of default occurs and is continuing, the Trustee at its discretion may and, if so requested in writing by holders of at least one quarter in principal amount of the outstanding Bonds or if so directed by an extraordinary resolution of the bondholders, shall (subject in certain cases to the Trustee having certified in writing that the happening of such events is in its opinion materially prejudicial to the interests of the bondholders) declare the Bonds due and payable at their principal amount together with accrued interest.

18.7 **U.S.$10 billion EMTN Programme**

Glencore Finance (Europe) S.A. has established a U.S.$10 billion Euro Medium Term Note Programme (the "EMTN Program") under which it may from time to time issue notes (the "EMTN Notes") unconditionally (subject, in the case of Glencore AG, to applicable Swiss law) and irrevocably guaranteed on a joint and several basis by the Guarantors. Deutsche Trustee Company Limited is appointed as trustee (the "Trustee") of the EMTN Notes pursuant to an amended and restated trust deed dated 21 June 2010.

An event of default under the EMTN Notes will occur in certain circumstances, including, but not limited to, in respect of a failure to pay principal or interest in respect of the EMTN Notes on the due date for payment thereof and such default continues for a period of 14 days, if the guarantee agreement is not in full force and effect, if any of the Issuer, the Guarantor or any material subsidiary fails to pay when due certain financial indebtedness, or such financial indebtedness becomes due and payable, or where there is a failure to pay when due under any applicable grace period amounts owing under the guarantee, in each case in circumstances where the amount of such financial indebtedness and/or the amount payable under such guarantee individually or in the aggregate exceeds U.S.$50 million (or its equivalent in another currency).

If any event of default occurs and is continuing, the Trustee at its discretion may and, if so requested in writing by holders of at least one quarter in principal amount of the relevant outstanding EMTN Notes or if so directed by an extraordinary resolution of the noteholders, shall (subject in certain cases to the Trustee having certified in writing that the happening of such events is in its opinion materially prejudicial to the interests of the noteholders) declare the EMTN Notes due and payable at their principal amount together with accrued interest.

As at 29 April 2011, the last practicable date prior to publication of this Prospectus, U.S.$7.9 billion in principal amount of EMTN Notes is outstanding under the EMTN Program.

18.8 **Financing Transaction with Credit Suisse International ("CS") relating to shares in Xstrata (the "CS Financing Transaction") effective as of the first business day after 27 March 2008**

Finges Investment B.V. ("Finges"), a subsidiary of Glencore, entered into the CS Financing Transaction with CS effective as of the first business day after 27 March 2008 in order to obtain financing. The original loan amount under the CS Financing Transaction was U.S.$1.5 billion. Finges "prepaid" U.S.$500 million principal amount of the loan on 14 October 2008, and a further U.S.$250 million principal amount on 29 December 2008, but redrew U.S.$250 million principal amount on 22 April 2009, thereby bringing the principal amount outstanding under the loan to U.S.$1 billion currently. Upon the satisfaction of certain contractual conditions, Finges may increase the amount of financing back up to U.S.$1.5 billion. The loan was structured by way of a prepaid forward sale of a certain number of Xstrata shares by Finges to CS, and a simultaneous equity swap transaction by Finges hedging the exposure of Finges under the prepaid forward sale.

In connection with the CS Financing Transaction, Finges has provided security over a certain number of shares in Xstrata for the benefit of CS in respect of the obligations owed by Finges to CS under the CS Financing Transaction. As at 29 April 2011, the last practicable date before the publication of this Prospectus, the number of Xstrata shares subject to the security arrangement was 70,677,852.

Glencore has guaranteed the payment obligations of Finges under the CS Financing Transaction pursuant to a Swiss law guarantee provided to CS on 11 September 2007, as amended on 27 March 2008.

18.9 **Financing Transaction with the Banks (as defined below) relating to shares in Xstrata (the "Bank Financing Transaction") effective as of the second business day after 25 September 2009**

Finges Investment B.V. ("Finges"), a subsidiary of Glencore, entered into the Bank Financing Transaction with Barclays Bank PLC, Société Générale, The Royal Bank of Scotland plc and Calyon (now known as Crédit Agricole Corporate and Investment Bank following a name change) (together, the "Banks" and each, a "Bank") effective as of the second business day after 25 September 2009 in order to obtain financing. The principal amount outstanding under the loan is currently U.S.$1.3 billion. The loan was structured by way of a prepaid forward sale of a certain number of Xstrata shares by Finges to each of the Banks, and a simultaneous equity swap transaction by Finges hedging the exposure of Finges under the prepaid forward sale.

In connection with the Bank Financing Transaction, Finges has provided security over a certain number of shares in Xstrata for the benefit of each Bank in respect of the obligations owed by Finges to the Banks under the Bank Financing Transaction. As at 29 April 2011, the last practicable date before the publication of this Prospectus, the number of Xstrata shares subject to the security arrangement was 91,881,208.

Glencore has guaranteed the payment obligations of Finges under the Bank Financing Transaction pursuant to a Swiss law guarantee provided to the Banks on 24 September 2009.

18.10 **U.S.$950 million 6 per cent. notes due 2014**

Glencore Funding LLC (the "Issuer") issued (i) U.S.$800 million 6 per cent. notes due 2014 (the "Original Notes") at an issue price of 99.285 per cent. under an indenture dated 5 April 2004 between the Issuer, Glencore International AG, Glencore AG, JPMorgan Chase Bank and BNP Paribas Securities Services, Luxembourg Branch (the "Original Indenture") and (ii) a further U.S.$150 million 6 per cent. notes at an issue price of 96.647 per cent. (fungible, consolidated and to form a single singles with the Original Notes) (together with the Original Notes, the "Notes") issued under the Original Indenture as supplemented by a supplemental indenture dated 21 April 2004 between the Issuer, Glencore International AG, Glencore AG (Glencore International AG and Glencore AG together, the "Guarantors"), JPMorgan Chase Bank (the "Trustee") and BNP Paribas Securities Services, Luxembourg Branch. Interest on the Notes is payable semi-annually in arrears on 15 April and 15 October of each year. The Notes constitute direct, unsecured and unsubordinated obligations of the Issuer.

(a) Guarantee agreement

The Guarantors, jointly and severally, unconditionally (subject, in the case of Glencore AG, to applicable Swiss Law) guarantee the due and punctual payment of the principal and interest on the Notes as they become due and payable (the "Guarantees"). Each Guarantee is a secured obligation of the applicable Guarantor and ranks *pari passu* in right of payment with other unsecured and unsubordinated indebtedness of that Guarantor.

(b) Covenants

Under the Original Indenture, the Issuer and the Guarantors have agreed certain restrictive covenants, including that neither the Issuer nor either of the Guarantors will, and Glencore International AG will not permit any restricted subsidiary to, create, incur or assume any lien on any property or asset of the Issuer, either of the Guarantors or any restricted subsidiary, or any interest therein or any income or profit therefrom, securing any financial indebtedness or interest on any financial indebtedness other than in certain limited circumstances.

The Issuer and each Guarantor, and Glencore International AG on behalf of the restricted subsidiaries, have covenanted with respect to certain limitations for sale and leaseback transactions. The Issuer and each Guarantor have also covenanted with respect to limitations on consolidations, mergers and the conveying, transferring or leasing of their properties and assets.

(c) Redemption

Unless previously redeemed or purchased, the Issuer will redeem each Note on 15 April 2014 (the "Maturity Date"). Notes may also be redeemed at the option of the Issuer or either of the Guarantors in whole or in part at any time for a price equal to the greater of (i) 100 per cent. of the principal amount of the Notes to be redeemed and (ii) the sum of the present values of the applicable remaining scheduled payments discounted to the date of redemption on a semi-annual basis at the U.S. treasury rate plus 35 basis points, together with, in each case, accrued interest on the principal amount of the Notes to be redeemed at the date of redemption. There is no restriction on the ability of the Issuer, the Guarantors or their subsidiaries to purchase or repurchase Notes. Notes are also redeemable at the option of the Issuer or either Guarantor on the occurrence of certain tax events.

(d) Events of default

An event of default under the Notes will occur in certain circumstances, including, but not limited to, a failure to pay any instalment of interest or additional amounts as they become due and payable and continuing for 30 days, non-payment of all or any part of the principal of any of the Notes when due and payable or if there is a failure to perform, or breach of any covenants continuing for 60 days following written notice of such breach. An event of default will also occur if there is a default under any other indebtedness of the Issuer, Guarantors or restricted subsidiary, or such indebtedness is not paid when due within any applicable grace period, or there is a failure by the Issuer, Guarantors or restricted subsidiaries to pay amounts payable under any guarantee or indemnity in respect of borrowed money, in each case provided that the aggregate amount of such financial indebtedness and/or the amount payable under such guarantee or indemnity exceeds U.S.$50 million.

Where an event of default occurs and is continuing, either the Trustee or the holders of not less than 25 per cent. in aggregate principal amount of the Notes then outstanding, by notice in writing to the Issuer and the Guarantors, may declare the entire principal amount of all Notes and interest accrued thereon to be due and payable.

18.11 **Glencore International Purchase Agreement**

Pursuant to the Glencore International Purchase Agreement dated 3 May 2011 between Revelstoke Limited and the Company, Revelstoke Limited has agreed to sell and the Company

has agreed to purchase on the day before the date of UK Admission the entire issued ordinary share capital of Glencore International. In consideration of the transfer to it of the entire issued share capital of Glencore International, the Company has agreed to issue to Revelstoke Limited, on behalf of the Existing Shareholders, 6,000,000,000 Ordinary Shares. As a consequence of the Glencore International Purchase Agreement, the Company will become the parent company of the Group on the day before the date of UK Admission.

18.12 **Kazzinc Share Purchase Agreements**

On 13 April 2011, Glencore International entered into two agreements with respect to the 48.73 per cent. interest in Kazzinc currently held indirectly by Verny Investments and Verny Rost:

(a) a share purchase and option agreement between Glencore International, Pasar Holdings Incorporated AG (a wholly owned Group company) ("Pasar Holdings") and Verny Capital, acting in the interests of Verny Investments (the "Verny Investments SPA"); and

(b) a share purchase agreement between Glencore International, Kazastur Zinc AG (a wholly owned Group company) ("Kazastur") and Verny Capital, acting in the interests of Verny Rost (the "Verny Rost SPA" and, together with the Verny Investments SPA, the "Kazzinc SPAs").

Pursuant to the Verny Investments SPA, Pasar Holdings has agreed to purchase a 12.50 per cent. interest in Kazzinc through the acquisition of interests in holding entities from Verny Investments (the "Kazzinc Tranche 1 Acquisition").

The consideration for the Kazzinc Tranche 1 Acquisition shall be satisfied on closing under the Verny Investments SPA by the issue of such number of Ordinary Shares to Verny Investments, at the Offer Price, as is equal to U.S.$1,000,000,000 (the "Kazzinc Consideration Shares"). The Kazzinc Consideration Shares shall, when issued, be subject to a lock-up with a duration of six months from issue.

Pursuant to the Verny Rost SPA, Kazastur has agreed to purchase a 29.82 per cent interest in Kazzinc, through the acquisition of interests in holding entities from Verny Rost (the "Kazzinc Tranche 2 Acquisition").

Closing under the Verny Rost SPA will be staggered such that a 9.94 per cent interest in Kazzinc will be acquired by Kazastur through the acquisition of interests in holding entities from Verny Rost on the first business day of each of October, November and December 2011 (each a "Tranche 2 Closing Date").

The consideration for the Kazzinc Tranche 2 Acquisition shall be satisfied by the payment in cash of U.S.$2,200,000,000, which shall be paid in installments of U.S.$733,333,333.33 on each Tranche 2 Closing Date (the "Tranche 2 Consideration").

Both the Kazzinc Tranche 1 Acquisition and the Kazzinc Tranche 2 Acquisition are subject to certain conditions precedent, including receipt of approvals for the transaction from the Government of Kazakhstan and the occurrence of UK Admission.

The Verny Investments SPA further sets out the agreement between Verny Investments and Pasar Holdings with respect to the terms of a possible acquisition by Pasar Holdings of Verny Investments' remaining 6.41 per cent. interest in Kazzinc (held indirectly) (the "Kazzinc Tranche 3 Acquisition").

Pasar Holdings and Verny Investments have a call option and a put option, respectively, in relation to the Kazzinc Tranche 3 Acquisition. Closing of the call option or put option is conditional upon, amongst other things, (i) completion of the Kazzinc Tranche 1 Acquisition; (ii) receipt of consent and waiver of pre-emption right from the Ministry of Industry and New Technologies of the Republic of Kazakhstan; (iii) subject, in both cases, to Glencore's commercial decisions on the basis of prevailing market conditions the hive-down of all of Kazzinc's gold assets (excluding its non-ferrous business) to a new holding company wholly owned by Kazzinc ("Altyntau") and Pasar Holdings using its reasonable commercial endeavours to ensure Altyntau's listing on the Premium Listing segment of the Official List, subject to eligibility; and (iv) the publication of a pricing statement related to the initial public offering of Altyntau ("Altyntau IPO"). The put or call option may only be exercised after completion of the

Kazzinc Tranche 1 Acquisition and before the earlier of: (i) the date falling two months prior to the proposed intention to float date for Altyntau (or such other date as the parties may agree in writing) and (ii) 31 December 2012; and if the put or call option is not exercised on or before 31 December 2012 then they shall lapse.

The consideration payable by Pasar Holdings following exercise of the put or call option shall be:

(a) a cash amount of U.S$ 192,000,000, plus

(b) a cash amount equal to 6.41 per cent of the issued share capital of Altyntau multiplied by the Altyntau IPO offer price (the "Altyntau Stake Value"), minus

(c) a cash amount equal to 6.41 per cent of the Altyntau Stake Value,

(the "Option Consideration").

The parties to the Verny Investments SPA have further agreed that, following completion of the exercise of the put or call option, Verny Investments shall subscribe for such number of shares in Altyntau as is equal to 6.41 per cent. of Altyntau's issued share capital (the "Kazzinc Subscription Shares") for an amount in cash equal to the Altyntau Stake Value (the "Verny Investments Subscription"). The Kazzinc Subscription Shares shall be issued to Verny Investments prior to admission to trading of the Altyntau shares on completion of the Altyntau IPO.

If UK Admission is not achieved by 30 June 2011, either Pasar Holdings or Verny Investments may terminate the Verny Investments SPA and either Kazastur or Verny Rost may terminate the Verny Rost SPA.

Further, if the Glencore Group, in its sole discretion, decides not to proceed with the Global Offer, and thereby determines that UK Admission is not likely to be achieved by 30 June 2011, Pasar Holdings and Kazastur may terminate the Verny Investments SPA and the Verny Rost SPA, respectively.

Pursuant to the Verny Investments SPA and Verny Rost SPA, Verny Investments and Verny Rost, respectively, have given certain warranties and indemnities to Pasar Holdings and Kazastur respectively, and Pasar Holdings and Kazastur, respectively, have given certain limited warranties to Verny Investments and Verny Rost, respectively.

In the event of any breach of the Verny Investments SPA by Verny Investments, Pasar Holdings shall have the right to reduce the Option Consideration, to the extent unpaid. In the event of any breach of the Verny Rost SPA by Verny Rost, Kazastur shall have the right to reduce the Tranche 2 Consideration, to the extent unpaid.

Glencore International has guaranteed the obligations of Pasar Holdings and Kazastur under the Verny Investments SPA and Verny Rost SPA, respectively.

18.13 **OAO RussNeft Loan Agreement**

On 21 December 2010, OAO RussNeft and Interseal Limited, a member of the Glencore Group ("Interseal"), entered into an amendment and restatement agreement (the "Consolidated Loan Agreement") which amended and consolidated various loans that had been made by Interseal to OAO RussNeft. This amendment was put in place as part of a wider restructuring of OAO RussNeft's indebtedness.

As a result of the amendment and consolidation effected by that agreement, a single loan from Interseal to OAO RussNeft is outstanding in an amount of U.S.$2,080,655,312.12 (the "Outstanding Principal Amount").

The Consolidated Loan Agreement provides that:

(a) interest is payable on the Outstanding Principal Amount at a minimum interest rate of 9 per cent. per annum, 3 per cent of which is payable quarterly in cash, so long as all indebtedness owed by OAO RussNeft to Sberbank of Russia remains outstanding and is current, with the balance of the interest being accrued for future payment. This accrued interest, together with an amount of unpaid interest accrued prior to the execution of the

Consolidated Loan Agreement, is payable by OAO RussNeft to Interseal monthly along with the Outstanding Principal Amount in the circumstances described in (b) below;

(b) the Outstanding Principal Amount, together with accrued and unpaid interest, is only to be repaid following the repayment in full of all indebtedness owed by OAO RussNeft to Sberbank of Russia, and then in minimum monthly instalments of U.S.$96,000,000, commencing in last quarter of 2017;

(c) in addition to the monthly instalments in (b) above, following the repayment in full of the indebtedness owed by OAO RussNeft to Sberbank of Russia, a quarterly cash sweep will also require OAO RussNeft to reduce further the Outstanding Principal Amount by an amount equal to excess cashflow (i.e. the amount by which cashflow exceeds debt service) generated during the relevant quarter; and

(d) in any event, OAO RussNeft is required to repay the Outstanding Principal Amount, together with all accrued and unpaid interest, in full to Interseal on or before 31 December 2020.

The Consolidated Loan Agreement also includes representations, warranties and undertakings from OAO RussNeft which are typical for these types of credit arrangements. The Consolidated Loan Agreement also contains customary events of default upon occurrence of which Interseal may demand repayment of the Outstanding Principal Amount.

The amounts outstanding under the Consolidated Loan Agreement are secured by various pledges of shares of members of the OAO RussNeft group, the enforcement of which is to be agreed with Sberbank of Russia whilst all indebtedness owed to it by OAO RussNeft remains outstanding.

## 19 Related party transactions

Details of related party transactions entered into by members of the Glencore Group during the period covered by the historical financial information and up to the date of this Prospectus are set out in Notes 14, 26 and 28 to the combined financial information contained in Section VI: "Historical Financial Information".

## 20 Property, plant and equipment

Glencore's material assets are its mining and exploration claims, permits and licences, the most significant of which are summarised in the MERs included in Section XIV: "Independent Technical Reports".

In addition, Glencore leases or uses under licence properties for its business operations around the world. The Directors of the Company are of the opinion that there are currently no material environmental issues that affect Glencore's utilisation of any property or other tangible fixed assets.

For the three years ended 31 December 2010, and in the context of the Glencore Group taken as a whole, Glencore is of the view that in relation to its controlled industrial assets, there have been no material breaches of any material applicable environmental laws and regulations.

## 21 Intellectual property rights of Glencore

Glencore owns or uses certain intellectual property rights for its business operations around the world. These key rights are as noted below. However, Glencore does not consider these rights to be material to the business of the Glencore Group, as a whole.

### 21.1 Trademarks

As at 29 April 2011, the last practicable date prior to publication of the Prospectus, the key trademark in relation to Glencore's business as a whole was the "GLENCORE" logo.

Glencore has approximately 424 trademark applications and registrations relating to the Glencore Group in approximately 117 countries. These trademarks are currently registered, or have been applied for, in the names of companies in the Glencore Group.

21.2 **Domain names**

As at 29 April 2011, the last practicable date prior to publication of the Prospectus, the key domain name registration in relation to Glencore's business as a whole was www.glencore.com.

## 22 Administrative and judicial proceedings

Neither the Company, nor any member of the Glencore Group is or has in the last 12 months been involved in any governmental, legal or arbitration proceedings which may have, or have had in the recent past, a significant effect on the Company's and/or Glencore's financial position or profitability. So far as the Company is aware, no such proceedings are pending or threatened by or against the Company or any member of Glencore.

## 23 Other proceedings

In a criminal investigation in Belgium against a public official, the European Commission's Directorate-General for Agriculture ("DG AGRI") and others for violation of professional secrecy, corruption of an international civil servant and criminal conspiracy, Glencore Grain Rotterdam BV, a subsidiary of Glencore, a former employee and one current employee have been charged with having committed corruption in exchange for information covered by professional secrecy in the course of the applications for European export restitutions. Following a complaint by the European Anti-Fraud Office (the "OLAF"), the investigation led by the Brussels Prosecutor's office in co-operation with the European Commission and the French and Dutch police and judicial authorities was initiated in October 2003, covering facts dating from 1999 until 2003. The European Commission became a civil party to this case without quantifying the damage at this stage. The trial is expected to be scheduled in 2011.

## 24 Significant change

There has been no significant change in the financial or trading position of the Company and/or the Glencore Group since 31 December 2010, the date to which the financial information for the Glencore Group in Section B of Section VI: "Historical Financial Information" was prepared.

## 25 Consents

25.1 Deloitte LLP (a member of the Institute of Chartered Accountants in England and Wales) has given and has not withdrawn its written consent to the inclusion in this Prospectus of its reports which are set out in Section VI: "Historical Financial Information" and Section VII: "Unaudited Pro Forma Financial Information" and/or references to its name included herein in the form and context in which it appears and has authorised the contents of those parts of this Prospectus which comprise its reports for the purposes of Rule 5.5.3R(2)(f) of the Prospectus Rules. As the Offer Shares have not been and will not be registered under the Securities Act, Deloitte LLP has not filed and will not be required to file a consent under the Securities Act.

25.2 Each of MMC, MBGS, WAI, RPS and Golders has given and has not withdrawn its written consent to the inclusion in this Prospectus of its report which is set out in Section XIV: "Independent Technical Reports" and references to its names included herein in the form and context in which appears and has authorised the contents of those parts of this Prospectus which comprise its respective reports for the purposes of Rule 5.5.3R(2)(f) of the Prospectus Rules.

## 26 Disclaimers

26.1 Save as otherwise disclosed in this Prospectus, none of the Directors or the experts named in paragraph 25 above has any direct or indirect interest in the promotion of, or in, any assets which have been, within the two years immediately preceding the date of this Prospectus, acquired or disposed of by or leased to any member of the Glencore Group, or are proposed to be acquired or disposed of by or leased to any member of the Glencore Group, and none of the Directors is materially interested in any contract or arrangement subsisting at the date of this Prospectus which is significant in relation to the business of Glencore as a whole.

26.2 Save as otherwise disclosed in this Prospectus, none of the experts named in paragraph 25 above has any shareholding in any member of the Glencore Group or the right (whether legally

enforceable or not) to subscribe for or to nominate persons to subscribe for securities in any member of the Glencore Group or is an officer or servant or in employment of an officer or servant of Glencore.

## 27 Miscellaneous

27.1 There are no arrangements in existence under which future dividends are to be waived or agreed to be waived.

27.2 The information set out in this Prospectus that has been sourced from third parties has been accurately reproduced and, so far as the Company is aware and has been able to ascertain from that published information, no facts have been omitted which would render the reproduced information inaccurate or misleading. Where third party information has been used in this Prospectus, the source of such information has been identified.

27.3 The expenses of, and incidental to, the Global Offer and Admission payable by the Company, including the London Stock Exchange, the FSA and the Hong Kong Stock Exchange fees, professional fees, the costs of preparation, printing and distribution of documents and Swiss federal issuance stamp tax, are estimated to amount to approximately U.S.$434.6 million.

27.4 Save as otherwise disclosed in this Prospectus, as of 29 April 2011, the last practicable date prior to publication of the Prospectus, the Company did not have any outstanding material mortgages, charges, debentures, bank overdrafts or other similar indebtedness, hire purchase commitments, guarantees or other material contingent liabilities.

27.5 The Directors have been advised that no material liability for estate duty is likely to fall on the Company or any of its subsidiaries.

27.6 The Joint Sponsors have made an application on behalf of the Company to the FSA, the London Stock Exchange and the Listing Committee of the Hong Kong Stock Exchange for the listing of and permission to deal in the Ordinary Shares in issue and to be issued as mentioned in this Prospectus, including any Ordinary Shares that may be issued under the Over-Allotment Option. All necessary arrangements have been made to enable the Ordinary Shares to be admitted into CCASS.

27.7 There is no promoter of the Company.

27.8 The business address of each of the Directors is Baarermattstrasse 3, PO Box 777, CH-6341 Baar, Switzerland.

27.9 Penwith Limited, the Selling Shareholder, is selling all of the Sale Shares in the International Offer. The Selling Shareholder's business address is 13/14 Esplanade, St Helier, JE1 1BD Jersey.

## 28 Documents available for inspection

Copies of the following documents are available for inspection during usual business hours on any weekday (Saturdays, Sundays and public holidays are excepted) for the life of this Prospectus at the London office of Linklaters LLP at One Silk Street, London, EC2Y 8HQ:

(a) the Memorandum and Articles of Association of the Company;

(b) the reports from Deloitte LLP which are set out in Section VI: "Historical Financial Information" and Section VII: "Unaudited Pro Forma Financial Information";

(c) the mineral expert report of RPS Energy Limited which is set out in Sub-section A of Section XIV: "Independent Technical Reports" relating to the West African Oil Assets;

(d) the mineral expert report of Minarco-MineConsult Pty Ltd. and McElroy Bryan Geological Services Pty Ltd. which is set out in Sub-section B of Section XIV: "Independent Technical Reports" relating to Prodeco;

(e) the mineral expert reports of Golder Associates (Pty) Ltd. which are set out in Sub-sections C, D and E of Section XIV: "Independent Technical Reports" relating to Katanga, Mopani and Mutanda, respectively;

(f) the mineral expert report of Wardell Armstrong International Ltd. which is set out in Sub-section F of Section XIV: "Independent Technical Reports" relating to Kazzinc;

(g) the service contracts and letters of appointment referred to in paragraph 10 above;

(h) the material contracts referred to in paragraph 18 above;

(i) the letters of consent referred to in paragraph 25 above; and

(j) this Prospectus.

(collectively the "Banks")

Ladies and Gentlemen:

This letter (a "U.S. Purchaser's Letter") relates either to (a) the issuance of Ordinary Shares (the "Securities") of Glencore (the "Company") acquired in the Global Offer; (b) the acquisition of Securities from the Banks (or their affiliates); or (c) the subsequent transfer of such Securities. In any case, this letter is to be delivered on behalf of the person acquiring beneficial ownership of the Securities by the investor named below or the accounts listed on the attachment hereto (each an "Investor"). Unless otherwise stated, or the content otherwise requires, capitalised terms in this letter shall have the same meaning as is given to them in the prospectus relating to the offering of the Securities described therein published by the Company on 4 May 2011 (the "Prospectus").

The Investor agrees, acknowledges, represents and warrants, on its own behalf or on behalf of each account for which it is acting, that:

1. the Investor has received a copy of the Prospectus and understands and agrees that the Prospectus speaks only as of its date and that the information contained therein may not be correct or complete as of any time subsequent to that date;
2. the Investor is a "Qualified Institutional Buyer" ("Qualified Institutional Buyer") as defined in Rule 144A ("Rule 144A") under the U.S. Securities Act of 1933, as amended (the "U.S. Securities Act") and a "Qualified Purchaser" ("Qualified Purchaser") as defined in section 2(a)(51) and related rules of the U.S. Investment Company Act of 1940, as amended (the "U.S. Investment Company Act");
3. the Investor is not a broker-dealer which owns and invests on a discretionary basis less than U.S.$25 million in securities of unaffiliated issuers;

4. the Investor is not formed for the purpose of investing in the Company;
5. the Investor understands that the Company may receive a list of participants holding positions in its securities from one or more book-entry depositories;
6. the Investor is not subscribing to, or purchasing, the Securities with a view to, or for offer or sale in connection with, any distribution thereof (within the meaning of the U.S. Securities Act) that would be in violation of the securities laws of the United States or any state thereof;
7. the party signing this U.S. Purchaser's Letter is acquiring the Securities for its own account or for the account of one or more Investors (each of which is a Qualified Institutional Buyer and a Qualified Purchaser) on whose behalf the party signing this U.S. Purchaser's Letter is authorised to make the acknowledgments, representations and warranties, and enter into the agreements, contained in this U.S. Purchaser's Letter;
8. the Investor is not a participant-director employee plan, such as a plan described in subsection (a)(1)(i)(D), (E) or (F) of Rule 144A;
9. the Securities are being offered in a transaction not involving any public offering within the United States within the meaning of the U.S. Securities Act and that the Securities have not been and will not be registered under the U.S. Securities Act or with any securities regulatory authority of any state or other jurisdiction of the United States;
10. the Ordinary Shares (whether in physical, certificated form or in uncertificated form held in CREST) are "restricted securities" within the meaning of Rule 144(a)(3) under the U.S. Securities Act, the Ordinary Shares are being offered and sold in a transaction not involving any public offering in the U.S. within the meaning of the U.S. Securities Act and no representation is made as to the availability of the exemption provided by Rule 144 for resales of Ordinary Shares;
11. if in the future the Investor decides to offer, resell, pledge or otherwise transfer any Securities, such Securities will be offered, resold, transferred, assigned, pledged or otherwise disposed of only (i) outside the United States in an offshore transaction complying with the provisions of Regulation S under the U.S. Securities Act ("Regulation S") to a person outside the United States and not known by the transferor to be a U.S. Person, by prearrangement or otherwise and under circumstances which will not require the Company to register under the U.S. Investment Company Act, in each case in accordance with all applicable securities laws, upon surrender of the Securities and delivery to the Company of an Offshore Transaction Letter in the form of Annex I hereto (or in a form otherwise acceptable to the Company); or (ii) to the Company or a subsidiary thereof;
12. notwithstanding anything to the contrary in this letter, the Securities may not be deposited into any unrestricted depositary receipt facility in respect of the Company's securities, established or maintained by a depositary bank;
13. the Investor is knowledgeable, sophisticated and experienced in business and financial matters and it fully understands the limitations on ownership and transfer and the restrictions on sales of such securities;
14. the Investor is able to bear the economic risk of its investment in the Securities and is currently able to afford the complete loss of such investment and the Investor is aware that there are substantial risks incidental to the purchase of the Securities, including those summarised under "Risk Factors" in the Prospectus;
15. the Company has not been and will not be registered as an investment company under the U.S. Investment Company Act and the Company has elected to impose the transfer and selling restrictions with respect to persons in the United States and U.S. Persons described herein as contemplated by Section 3(c)7 of the U.S. Investment Company Act;
16. (i) the Company will not be required to accept for registration of transfer any Securities acquired by the Investor if such transfer is made in violation of the transfer restrictions set out in paragraph 11 above; (ii) the Company may require any U.S. person or any person within the United States who was not a Qualified Purchaser at the time it acquired any Securities or any beneficial interest therein to transfer the Securities or any such beneficial interest immediately in a manner consistent with the restrictions set forth in this U.S. Purchaser's Letter; and (iii) if the obligation to transfer is not met, the Company is irrevocably authorised, without any obligation, to transfer the Securities, as applicable, in a manner consistent with the restrictions set forth in this U.S. Purchaser's Letter and, if such Securities are sold, the Company shall be obliged to distribute the net proceeds to the entitled party;

17. the Investor became aware of the offering of the Securities by the Company and the Securities were offered to the Investor (i) solely by means of the Prospectus, (ii) by direct contact between the Investor and the Company or (iii) by direct contact between the Investor and one or more Banks. The Investor did not become aware of, nor were the Securities offered to the Investor by, any other means, including, in each case, by any form of general solicitation or general advertising, and in making the decision to purchase or subscribe to the Securities, the Investor relied solely on the information set forth in the Prospectus;
18. (i) none of the Banks or their affiliates have made or will make any representation or warranty as to the accuracy or completeness of the information in the Prospectus; (ii) the Investor has not relied and will not rely on any investigation by any Bank, its affiliates or any person acting on its or their behalf with respect to the Company, or the Securities; and (iii) none of the Banks or Glencore makes any representation as to the availability of an exemption from the U.S. Securities Act for the transfer of the Securities;
19. upon a proposed transfer of the Securities, the Investor will notify any purchaser of such Securities or the executing broker, as applicable, of any transfer restrictions that are applicable to the Securities being sold;
20. neither the Investor, nor any of the Investor's affiliates, nor any person acting on the Investor's or their behalf, will make any "directed selling efforts" as defined in Regulation S under the U.S. Securities Act in the United States with respect to the Securities;
21. any Ordinary Shares issued to the Investor in certificated form will bear an appropriate legend setting forth, among other things, the transfer restrictions applicable to the Ordinary Shares and the Investor understands that the legend shall not be removed from the Ordinary Shares, unless the Company agrees, in its sole discretion, to remove the legend;
22. each of the Banks, the Company and their respective affiliates are irrevocably authorised to produce this U.S. Purchaser's Letter or a copy hereof to any interested party in any administrative or legal proceeding or official inquiry with respect to the matters covered hereby; and
23. no agency of the United States or any state thereof has made any finding or determination as to the fairness of the terms of, or any recommendation or endorsement in respect of, the Securities.

The Investor hereby consents to the actions of each of the Banks, and hereby waives any and all claims, actions, liabilities, damages or demands it may have against either Bank in connection with any alleged conflict of interest arising from the engagement of each of the Banks with respect to the sale by the applicable Bank of the Securities to the Investor.

The Investor acknowledges that each of the Banks, the Company and their respective affiliates and others will rely on the acknowledgments, representations and warranties contained in this U.S. Purchaser's Letter as a basis for exemption of the sale of the Securities under the U.S. Securities Act, the U.S. Investment Company Act, under the securities laws of all applicable states and for other purposes. The party signing this U.S. Purchaser's Letter agrees to promptly notify the Company if any of the acknowledgments, representations or warranties set forth herein are no longer accurate.

This U.S. Purchaser's Letter shall be governed by and construed in accordance with the laws of the State of New York.

Where there are joint applicants, each must sign this U.S. Purchaser's Letter. Applications from a corporation must be signed by an authorised officer or be completed otherwise in accordance with such corporation's constitution (evidence of such authority may be required).

Very truly yours,

## ANNEX I TO SECTION XI: OFFSHORE TRANSACTION LETTER

To: Glencore International plc
Queensway House
Hilgrove Street
St. Helier
Jersey JE1 1ES

Ladies and Gentlemen:

This letter (an "Offshore Transaction Letter") relates to the sale or other transfer by us of Ordinary Shares (the "Securities") of Glencore (the "Company") in an offshore transaction pursuant to Regulation S ("Regulation S") under the U.S. Securities Act of 1933, as amended (the "U.S. Securities Act").

Terms used in this Offshore Transaction Letter are used as defined in Regulation S, except as otherwise stated herein.

The undersigned acknowledges (or if the undersigned is acting for the account of another person, such person has confirmed that it acknowledges) that the Securities have not been and will not be registered under the U.S. Securities Act or with any securities regulatory authority of any state or other jurisdiction of the United States and that the Company has not registered as an investment company under the U.S. Investment Company Act of 1940, as amended (the "U.S. Investment Company Act").

The undersigned hereby certifies that:

1. The offer and sale of the Securities was not and will not be made to a person in the United States or to a person known by us to be a U.S. Person.
2. Either (a) at the time the buy order for the Securities was originated, the buyer was outside the United States or the undersigned and any person acting on the undersigned's behalf reasonably believed that the buyer was outside the United States, or (b) the transaction in the Securities was executed in, on or through the facilities of a designated offshore securities market as defined in Regulation S (including, for the avoidance of doubt, a *bona fide* sale on the London Stock Exchange's main market for listed securities or the Hong Kong Stock Exchange), and neither the undersigned nor any person acting on the undersigned's behalf knows that the transaction was pre-arranged with a buyer in the United States.
3. Neither the undersigned, nor any of the undersigned's affiliates, nor any person acting on the undersigned's or their behalf has made any directed selling efforts in the United States with respect to the Securities.
4. The proposed transfer of the Securities is not part of a plan or scheme to evade the registration requirements of the U.S. Securities Act or the U.S. Investment Company Act.
5. Neither the Company nor any of its agents participated in the sale of the Securities.
6. The undersigned confirms that, prior to the sale of the Securities, the undersigned notified the purchaser of such Securities or the executing broker, as applicable, of any transfer restrictions that are applicable to the Securities being sold.

This letter is governed by and shall be construed in accordance with the laws of the State of New York.

Where there are joint transferors, each must sign this Offshore Transaction Letter. An Offshore Transaction Letter of a corporation must be signed by an authorised officer or be completed otherwise in accordance with such corporation's constitution (evidence of such authority may be required).

The undersigned agrees that the Company and its agents and their respective affiliates may rely upon the truth and accuracy of the foregoing acknowledgments, representations and agreements.

Very truly yours,

| "**Noble Houston**" | means Noble Energy EG Limited, a subsidiary of Noble Energy, Inc., an independent third party; |
| "**NOCs**" | means national oil companies; |
| "**Non-Executive Directors**" | means the non-executive directors of the Company as set out in the table in Section II: "Directors and Corporate Governance"; |
| "**Nyrstar**" | means Nyrstar NV, an entity in which Glencore has a 7.8 per cent. interest; |
| "**OAO RussNeft**" | means OAO NK "RussNeft"; |
| "**Och-Ziff Funds**" | has the meaning given to it in paragraph 10 of Section VIII: "Details of the Global Offer"; |

| | |
|---|---|
| "**Offer Price**" | means the price at which each Ordinary Share is to be issued or sold in the Global Offer, to be determined and as set out in the Pricing Statement; |
| "**Offer Price Range**" | means 480 pence to 580 pence; |
| "**Offer Shares**" | means the New Offer Shares and the Sale Shares; |
| "**Official List**" | means the Official List of the FSA; |
| "**Ordinary Shares**" | means ordinary shares of U.S.$0.01 each in the share capital of the Company; |
| "**Over-Allotment Option**" | means the over-allotment option granted by the Company to the Stabilising Manager for up to a maximum of 10 per cent. of the Offer Shares at the Offer Price, exercisable in whole or in part upon notice by the Stabilising Manager at any time on or before the 30th calendar day after the commencement of conditional dealings of the Ordinary Shares on the London Stock Exchange (or, in respect of Hong Kong, before such time in accordance with applicable laws and regulatory requirements); |
| "**Over-Allotment Shares**" | means the Ordinary Shares that are the subject of the Over-Allotment Option; |
| "**P10**" | means the value in a probabilistic distribution which corresponds to 10 per cent. cumulative exceedance probability; |
| "**P50**" | means the value in a probabilistic distribution which corresponds to 50 per cent. cumulative exceedance probability; |
| "**P90**" | means the value in a probabilistic distribution which corresponds to 90 per cent. cumulative exceedance probability; |
| "**Pacorini Group**" | means the group of metal warehousing companies acquired by Glencore in the third quarter of 2010, a group of companies in which Glencore has a 100 per cent. interest; |
| "**Pasar**" | means Philippine Associated Smelting & Refining Corporation, an entity in which Glencore has a 78.2 per cent. interest; |
| "**Pictet**" | has the meaning given to it in paragraph 10 of Section VIII: "Details of the Global Offer"; |
| "**Polymet**" | means Polymet Mining Corp., an entity in which Glencore has 9.3 per cent. interest; |
| "**Portovesme**" | means Portovesme srl, an entity in which Glencore has a 100 per cent. interest; |
| "**PRC**" or "**China**" | means the People's Republic of China but excluding, for the purpose of this document only, Hong Kong, the Macau Special Administrative Region of the PRC and Taiwan; |
| "**Price Determination Date**" | means the date, expected to be on or around 18 May 2011, on which the Offer Price is fixed for the purposes of the Global Offer; |
| "**Pricing Agreement**" | means the pricing agreement to be executed by the Underwriters, the Company and the Selling Shareholder immediately prior to the announcement of the Offer Price; |
| "**Pricing Statement**" | means the statement to be published by the Company detailing the Offer Price and related information; |
| "**PRMS**" | means the 2007 SPE/WPC/AAPG/SPEE Petroleum Resources Management System; |

| | |
|---|---|
| "**Prodeco**" | means Colombian Coal Group, comprising C.I. Prodeco SA, Consorcio Minero Unido SA, Carbones de la Jagua SA, Carbones El Tesoro SA and Puerto Nuevo SA, a group of companies in which Glencore has an interest; |
| "**Prodeco Report**" | means the technical report dated 4 May 2011 prepared by MMC and MBGS in relation to the mineral reserves and mineral resources of Prodeco (comprising the Calenturitas mine and the La Jagua complex) set out in Section XIV: "Independent Technical Reports"; |
| "**Prospectus**" or "**Price Range "Prospectus**" | means this document relating to the Company and the Ordinary Shares, prepared by the Company in accordance with the Listing Rules, the Hong Kong Listing Rules, the Companies Ordinance and the Prospectus Rules; |
| "**Prospectus Directive**" | means Directive 2003/71/EC; |
| "**Prospectus Rules**" | means the Prospectus Rules published by the FSA under Section 73A of the FSMA; |
| "**PSP**" | means the Glencore Performance Share Plan details of which are set out in paragraph 14 of Section X: "Additional Information"; |
| "**PSP Award**" | has the meaning given to it in paragraph 14 of Section X: "Additional Information"; |
| "**QIBs**" | means qualified institutional buyers as defined in Rule 144A under the Securities Act; |
| "**QPs**" | has the meaning as defined in the Investment Company Act; |
| "**Qualifying Reserves**" | means Capital Contribution Reserves in terms of Swiss tax law and according to the Swiss GAAP financial statements as included in the notes to the annual financial statements. These are reserves from capital contributions made by shareholders to the Company after 31 December 1996, which can be repaid free of Swiss Withholding Tax; |
| "**Recylex**" | means Recylex SA, an entity in which Glencore has a 32.2 per cent. interest; |
| "**Regulation S**" | means Regulation S under the Securities Act; |
| "**Relationship Agreement**" | means the relationship agreement as further described in Section I: "Information on Glencore"; |
| "**Restructuring**" | means the reorganisation of Glencore International's shareholding structure pursuant to which the Company will be inserted as the immediate holding company of Glencore International prior to Admission; |
| "**Rio Vermelho**" | means Rio Vermelho Acucar e Alcool SA, an entity in which Glencore has a 76 per cent. interest; |
| "**RPS**" | means RPS Energy Limited; |
| "**RPS Report**" | means the technical report prepared by RPS Energy Limited in relation to the West African Oil Assets as set out in Section XIV: "Independent Technical Reports"; |
| "**Rule 144A**" | means Rule 144A under the Securities Act; |
| "**Sale Shares**" | means the Ordinary Shares sold to the Selling Shareholder prior to UK Admission which are being made available for sale by the Selling Shareholder as part of the Global Offer; |

| | |
|---|---|
| "**SAMREC**" | means the 2007 edition of the South African Code for Reporting of Exploration Results, Mineral Resources and Mineral Reserves; |
| "**SDRT**" | means stamp duty reserve tax; |
| "**SEC**" | means the U.S. Securities and Exchange Commission; |
| "**Secondary Listing**" | means the admission of Ordinary Shares to secondary listing and trading on the HKSE pursuant to the Hong Kong Listing Rules; |
| "**Securities Act**" | means the U.S. Securities Act of 1933, as amended; |
| "**Selling Shareholder**" | means Penwith Limited, a company incorporated under the Jersey Companies Law for the purpose of aggregating the Sale Shares and selling them in the Global Offer; |
| "**SFC**" | means the Securities and Futures Commission of Hong Kong; |
| "**Shanduka Coal**" | means Shanduka Coal (Pty) Limited, an entity in which Glencore has a 70 per cent. interest; |
| "**Shareholders**" | means holders of Ordinary Shares; |
| "**Shell**" | means Royal Dutch Shell plc, an independent third party; |
| "**Sherwin Alumina**" | means Sherwin Alumina Company LLC, an entity in which Glencore has a 100 per cent. interest; |
| "**SHFE**" | means Shanghai Futures Exchange; |
| "**SHG**" | means special high grade; |
| "**Sinchi Wayra**" | means Sinchi Wayra SA, an entity in which Glencore has a 100 per cent. interest; |
| "**Singapore Stock Exchange**" | means Singapore Exchange Securities Trading Limited; |
| "**SIX**" | means SIX Swiss Exchange; |
| "**Stabilising Manager**" | means Morgan Stanley Securities Limited; |
| "**Standard & Poor's**" | means Standard & Poor's Ratings Services, a division of The McGraw-Hill Companies, Inc.; |
| "**ST Shipping**" | means ST Shipping & Transport Pte Ltd., an entity in which Glencore has a 100 per cent. interest; |
| "**Subscriber Shares**" | means the two ordinary shares issued on incorporation of the Company; |
| "**SXEW**" | means Solvent Extraction Electrowinning; |
| "**The West African Oil Assets**" | means Block O in Equatorial Guinea held by Glencore Exploration Ltd. and Block I in Equatorial Guinea and five other discoveries in these blocks (Carmen, Diega (A-sand), Diega (B-sand), Felicita and Yolanda) held by Glencore Exploration (EG) Ltd.; |
| "**Topley**" | means Topley Corporation, an entity in which Glencore has a 100 per cent. interest; |
| "**toz**" | means troy ounce; |
| "**UC Rusal**" | means United Company RUSAL Plc, an entity in which Glencore has a 8.75 per cent. interest; |
| "**UK**" or "**United Kingdom**" | means the United Kingdom of Great Britain and Northern Ireland; |

| | |
|---|---|
| "**UK Admission**" | means admission of the Ordinary Shares to the Official List and to the London Stock Exchange's main market for listed securities; |
| "**UK Companies Act 2006**" | means the Companies Act 2006 of England and Wales, as amended; |
| "**UK Sponsors**" | means Citi and Morgan Stanley; |
| "**Umcebo**" | means Umcebo Mining (Proprietary) Limited, an entity in which Glencore has agreed to acquire a 43.66 per cent. interest; |
| "**Uncertificated Securities Regulations**" or "**CREST Regulations**" | means the Uncertificated Securities Regulations 2001 (S.I. 2001 No. 3755) or the Companies (Uncertificated Securities) Jersey Order 1999 (as applicable); |
| "**Underwriters**" | means ABN AMRO Bank N.V., BNP Paribas, Banco Santander, S.A., Barclays Bank PLC, Barclays Capital Asia Limited, BOCI Asia Limited, Citi, Citi Asia, Commerzbank Aktiengesellschaft, Coöperatieve Centrale Raiffeisen-Boerenleenbank B.A., Crédit Agricole Corporate and Investment Bank, Crédit Agricole CIB Hong Kong Branch, Credit Suisse, Credit Suisse Asia, DBS Asia Capital Limited, HSBC Bank plc, The Hongkong and Shanghai Banking Corporation Limited, ING Bank N.V., Liberum Capital Limited, Merrill Lynch, Merrill Lynch Asia, Mizuho International plc, Mizuho Securities Asia Limited, Morgan Stanley Asia, MSSL, Natixis, The Royal Bank of Scotland N.V. (London Branch), The Royal Bank of Scotland N.V., Hong Kong Branch, Société Générale, Standard Chartered Securities (Hong Kong) Limited, UBS Limited and UBS AG, Hong Kong Branch; |
| "**Underwriting Agreement**" | means the underwriting agreement dated 4 May 2011 relating to the Global Offer entered into by, amongst others, the Underwriters, the Company and the Selling Shareholder as set out in paragraph 16 of Section X: "Additional Information"; |
| "**U.S.**" | means the United States of America; |
| "**U.S. Persons**" | means U.S. Persons as defined in Regulation S; |
| "**USDA**" | means the U.S. Department of Agriculture; |
| "**VaR**" | means value at risk; |
| "**VasGold**" | means Vasilkovskoje gold mine and concentrator; |
| "**VAT**" | means value added tax; |
| "**Verny**" | means Verny Investments together with Verny Rost, each an independent third party (but for its shareholding in Kazzinc); |
| "**Verny Capital**" | means JSC "Verny Capital" (registered in the Republic of Kazakhstan); |
| "**Verny Investments**" | means closed unit risk investment fund "Vernye Investitsii" (represented by Verny Capital, acting in the best interest of closed unit risk investment fund "Vernye Investitsii"); |
| "**Verny Rost**" | means closed unit risk investment fund "Verny Rost" (represented by Verny Capital, acting in the best interest of closed unit risk investment fund "Vernye Rost"); |
| "**Volcan**" | means Volcan Compañia Minera S.A.A., an entity in which Glencore has a 4.1 per cent. interest; |
| "**WAI**" | means Wardell Armstrong International Ltd.; |

| | |
|---|---|
| "**WGC**" | means World Gold Council; |
| "**White Form eIPO Service**" | means the facility for making an application for Hong Kong Offer Shares to be issued in or transferred into the investor's own name by submitting an application online through the designated website of the White Form eIPO Service Provider (being Computershare Hong Kong Investor Services Limited), www.eipo.com.hk; |
| "**Xstrata**" | means Xstrata plc and, where the context requires, its subsidiaries, subsidiary undertakings and associated undertakings, an entity in which Glencore has a 34.5 per cent. interest; |
| "**York Capital Funds**" | has the meaning given to it in paragraph 10 of Section VIII: "Details of the Global Offer"; and |
| "**Zijin**" | has the meaning given to it in paragraph 10 of Section VIII: "Details of the Global Offer". |

*The following information relating to the industry overview has been provided for background purposes only. The information is either based on Directors' beliefs or has been extracted from a combination of data sourced from third party industry data providers and data released by public organisations including:*

***Third party industry data**:*

| | |
|---|---|
| *CRU International Limited* | *Industry data relating to the Metals and Minerals business segment.* |
| *Merlin Trade & Consultancy Ltd.* | *Industry data relating to the Energy Products business segment (in particular in relation to coal).* |
| *SSY Consultancy and Research* | *Industry data relating to the Energy Products business segment.* |
| *Informa Plc* | *Industry data relating to the Agricultural Products business segment.* |

***Data released by public organisations**:*

| | |
|---|---|
| *World Gold Council (Metals and Minerals)* | *Information was taken from the publicly available "Gold Demand Trends 2010" released 17 February 2011.* |
| *International Energy Association (Energy Products)* | *Information was taken from the publicly available "Oil Market Report" released 10 February 2011.* |
| *BP plc (Energy Products)* | *Information was taken from the publicly available "Statistical Review of World Energy 2010" released June 2010.* |
| *U.S. Department of Agriculture (Agricultural Products)* | *Information was taken from the publicly available "World Agricultural Supply and Demand Estimates" released 12 January 2011.* |

*The Company confirms that such third party information has been accurately reproduced and, as far as the Company is aware and is able to ascertain from information published by such sources, no facts have been omitted which would render the reproduced information inaccurate or misleading.*

**Metals and Minerals**

Metals are typically classified into base metals (including non-ferrous base metals such as aluminium, copper, lead, nickel and zinc and ferrous base metals such as iron and ferroalloys) and precious metals (including gold, silver, platinum and palladium). Each metal is mined in the form of ore and subsequently processed into finished metal via specialised concentrating, smelting and refining techniques, before being sold to end users in a variety of industrial applications. The mining and processing of metals can take place within a vertically-integrated system or via multiple parties, each undertaking specific production steps. The extent of vertical integration differs between commodities.

Where ore is processed into finished metal by multiple parties, the transfers of intermediate products such as concentrate or blister that occur between parties may be direct or may involve marketers acting as intermediaries. Finished metals may be sold by producers directly to end users or via intermediaries.

***Zinc/copper/lead and by-products***

*Copper*

Copper is a base metal with desirable properties of malleability, high thermal and electrical conductivity, resistance to corrosion and strength, which make it attractive for use in electrical wiring and piping.

Copper ore is found in two commercially viable forms: sulphide ore and oxide ore. Sulphide ore is normally mined and processed into copper concentrate and is then smelted and refined into copper cathode (or metal) (99.99 per cent. copper). Oxide ore is mined and converted into copper cathode directly via a process known as Solvent Extraction Electrowinning ("SXEW"). Copper concentrate and copper metal are both traded products.

Copper metal is employed in a variety of end uses, with the construction and electric and electronic components sectors being key. Copper consumption can be divided into three main product groups: copper wire rod comprising wire and cable products, which is the key source of global primary

consumption; copper products such as plumbing, pipes, tubes, sheets, strips, rods, bars and sections; and copper alloy products including bronze (copper and tin) and brass (copper and zinc) products.

Copper is found throughout the world and, according to CRU, approximately 28 per cent. of global copper concentrate production in 2010 came from Chile, with China and Peru also being major producers of concentrates. According to CRU, China, Chile and Japan were the largest producers of copper metal globally in 2010. In 2010, according to CRU, global copper concentrate production in terms of contained copper totalled 12.4 million MT, whilst copper metal production totalled 18.7 million MT.

The Directors believe that Chinese consumption continues to be the key driver of copper metal demand, primarily due to industrial production and continued modernisation and investment in infrastructure. According to CRU, in 2010, China was the largest consumer of copper metal globally, accounting for approximately 39 per cent. of total global consumption, whilst the U.S. and Germany were also key consumers.

There are three exchanges where copper metal is traded: the LME, the SHFE and the COMEX/NYMEX. The Directors believe that copper is the second largest traded contract on the LME and prices established on the LME are used for reference globally throughout the industry; however, there are variances in regional supply and demand as well as differences in metal qualities. The exchanges have a network of approved warehouses around the world for use as a last resort, and the stock levels in these warehouses provide an important indicator of market tightness and overall demand. Based on the LME information the Directors believe that at the end of 2010, global closing copper metal stocks on the LME totalled 377k MT, down from 502k MT at the end of 2009.

Copper concentrate is a non-fungible product and cannot be directly traded on an exchange. Pricing of the metal equivalent within the concentrate is made with reference to the quoted exchange price for copper metal.

*Zinc*

Zinc ore is found in several different forms, although 95 per cent. of global mined zinc production is zinc blende (a zinc sulphide ore). Zinc ore is typically mined and processed into zinc concentrate and is then smelted and refined to produce zinc metal. Metal is produced in various refined product forms dependent upon consumer requirements. High grade metal is 99.95 per cent. zinc and SHG metal is 99.99 per cent. zinc. Zinc concentrate and zinc metal are both traded products.

The construction sector is the main end user of zinc metal, whilst the transport and infrastructure sectors are also significant end users. Zinc's main application is in the manufacture of galvanised steel, where a zinc coating is added to steel to protect against corrosion, increasing the performance and lifespan of steel products. Other applications include brass production (a zinc and copper alloy), die-casting and the manufacture of batteries.

According to CRU, zinc is found throughout the world, with approximately 29 per cent. of global zinc concentrate production coming from China, with Australia and Peru also being the significant contributors to global zinc concentrate production in 2010. According to CRU, China was also the largest producer of zinc metal in 2010, accounting for approximately 41 per cent. of global production. Further, according to CRU, in 2010, global zinc concentrate production in terms of contained zinc totalled 12.4 million MT, whilst zinc metal production totalled 12.7 million MT.

The Directors believe that Chinese demand remains the key driver of zinc metal demand due to the continued growth in the high zinc-consuming construction and transport sectors. For example, according to CRU, in 2010, China was by far the largest consumer of zinc metal globally, accounting for approximately 5 MT, or 42 per cent., of total global consumption, whilst the U.S. and Japan were also key consumers.

There are two exchanges on which zinc metal is traded: the LME and the SHFE. The prices established are used for reference globally throughout the industry; however, there are variances in regional supply and demand as well as differences in metal qualities. The LME has a network of approved warehouses around the world for use as a last resort and the stock levels in these warehouses provide an important indicator of market tightness and overall demand. Based on the LME information, the Directors believe that as at the end of 2010, global closing zinc metal stocks on the LME totalled 701k MT, up from 488k MT as at the end of 2009.

Zinc concentrate is a non-fungible product and cannot be directly traded on an exchange. Pricing of the metal equivalent within the concentrate is made with reference to the quoted LME cash price for zinc

metal, with the worldwide standard being 85 per cent., less a treatment charge which is tied to the zinc metal price. A price adjustment is also made for by-product metals contained in the concentrate.

*Lead*

Lead is amongst the most widely used metals in the world due to its electro-chemical properties, malleability, high density, low melting point, corrosion and weather resistance and ease of recycling.

The primary mined lead ore is galena, which is processed into lead concentrate and subsequently smelted and refined to produce lead metal (99.99 per cent. lead). Primary lead production is currently sourced almost entirely from polymetallic mines as a co-product or by-product. There are currently only two operational mines globally which are primarily lead mines.

In 2010, Glencore estimates that more than half of total global lead metal production was secondary or recycled lead. Glencore expects that secondary lead production as a proportion of total lead production will continue to increase steadily in the medium- to long-term. The supply of secondary lead is dependent upon the availability of feedstock sources, with the major source being scrap lead-acid batteries which have reached the end of their life cycle. According to CRU, recycling lead results in approximately 98 per cent. lead recovery from the scrap.

Metal is produced in various refined product forms, dependent upon consumer requirements. Producers tend also to produce zinc, with the production of the two commodities closely linked because of the fact that they are refined through the same metallurgical process. Lead concentrate and lead metal are both traded products.

The Directors believe that the vast majority of global lead metal consumption in 2010 was in the manufacture of lead-acid batteries. This is divided into Starting-Lighting-Ignition ("SLI") batteries mainly used in the automotive industry and industrial batteries which are sub-divided into stationary batteries (used in back-up power supplies) and traction batteries (used for motive power in certain equipment). Other non-battery uses include chemicals, cable sheathing, alloys and rolled lead sheet.

Lead is found throughout the world and according to CRU approximately 43 per cent. of global lead concentrate production in 2010 was from China, whilst Australia and the U.S. are also key lead mining countries. According to CRU, China was also by far the largest producer of lead metal, accounting for approximately 43 per cent. of global production. Further, according to CRU, in 2010, global lead concentrate production in terms of contained lead totalled 4.1 million MT, whilst lead metal production totalled 9 million MT.

Glencore believes that, Chinese demand, both for SLI and industrial batteries, is the key driver of lead metal consumption levels, and remained resilient even through the global economic downturn of 2008/09. In 2010, according to CRU, China was by far the largest consumer of lead metal globally, accounting for 3.9 million MT, or 43 per cent. of total consumption whilst the U.S. and Germany were also key consumers.

Lead metal is traded on the LME. The prices established are used for reference globally throughout the industry; however, there are variances in regional supply and demand as well as differences in metal qualities. The LME does not distinguish between primary and secondary lead. The LME has a network of approved warehouses around the world for use as a last resort, and the stock levels provide an important indicator of market tightness and overall demand. Based on the LME information, the Directors believe that, at the end of 2010, global closing lead metal stocks on the LME totalled 208k MT, up from 147k MT as at the end of 2009.

Lead concentrate is a non-fungible product and cannot be directly traded on an exchange. Pricing of the metal equivalent within the concentrate is made with reference to the quoted LME cash price for lead metal, with the worldwide standard being 95 per cent., less a treatment charge which is tied to the lead metal price. A price adjustment is also made for by-product metals contained in the concentrate.

*Gold*

Gold is a precious metal used both as an investment tool by central banks, governments, international financial institutions and retail investors and in jewellery. Gold is also used in fabrication activities, including electronics and dental applications. According to WGC, jewellery is the largest driver of gold demand, representing approximately half of total demand in 2010, of which a significant portion stemmed from India. Mining of gold ore is typically carried out by a small number of large integrated players that are also involved in its refining for industrial purposes.

There are three main sources of supply for gold: mining, recycled scrap and sales of gold held as reserves by central banks, governments and international financial institutions. Hedging by producers, based on their view of the gold price outlook, is also an important driver of the supply and demand balance. According to WGC, mine production accounted for close to two thirds of total supply in 2010 with recycled scrap representing the balance.

Gold is exchange traded and the benchmark price is fixed twice daily by the five fixing members of the LBMA.

***Alumina/aluminium***

Aluminium is one of the most abundant metallic elements on earth, although it does not exist in nature as a metal. Instead, it is found in the form of bauxite, which can be refined into alumina. Alumina can subsequently be smelted into aluminium. Aluminium is an attractive industrial metal due to its high strength-to-weight ratio, resistance to corrosion, conductivity and recyclability. Bauxite, alumina and aluminium are all traded products.

The key end user markets for aluminium are transportation, construction, and foil stock and packaging. Aluminium consumption can be divided into three main product groups: rolled products such as slabs, plates, sheet and foil; drawn products such as rod, bar, wire and cables; and extruded products.

Mining bauxite is a relatively simple operation and the cost of bauxite forms a small proportion of the total cost of aluminium production. Bauxite is then refined into alumina, an oxide of aluminium, and subsequently alumina is processed into aluminium in an electrolytic smelter. The main costs of smelting aluminium are alumina, power, labour and other raw materials (lime, caustic soda and carbon pitch). The cost of production relative to the cost of freight tends to favour the processing of alumina close to the source of bauxite and the processing of aluminium close to a source of low-cost power. Aluminium is also recycled as a secondary metal from scrap. Typically, four to five MT of bauxite are used to produce two MT of alumina, and two MT of alumina are required to produce one MT of aluminium.

According to CRU, in 2010, global alumina (metallurgical grade) production totalled 81.6 million MT with China, Australia and Brazil being the largest producers. According to CRU, global aluminium production totalled 42 million MT with China, Russia and Canada being the key producers. Further, according to CRU, China produced approximately 36 per cent. of alumina (metallurgical grade) and 40 per cent. of aluminium globally in 2010. China benefits from low capex and short lead times for smelter development, though its aluminium is typically produced at a significantly higher cash cost due to limited access to low cost energy.

The Directors believe that Chinese demand continues to be the key driver of consumption, primarily due to industrial production and continued modernisation and investment in infrastructure. For example, according to CRU, in 2010, China was the largest consumer of aluminium globally, accounting for approximately 41 per cent. of total global consumption.

There are two primary exchanges on which aluminium is traded: the LME and the SHFE. Aluminium that is traded as a commodity generally must meet very specific criteria, principally purity of at least 99.7 per cent. As a result, commoditised aluminium tends to trade at a relatively consistent price between markets. The exchanges have a network of warehouses around the world and the stock levels in these warehouses provide an important indicator of market tightness and overall demand. Based on the LME information, the Directors believe that, at the end of 2010, global closing aluminium metal stocks on the LME totalled 4.3 million MT, down from 4.6 million MT at the end of 2009.

Historically, the price of alumina has been fixed to long-term contracts, which are generally priced by reference to a certain percentage of the LME aluminium price. Since the primary use of alumina is as an input into aluminium production, the two commodities are broadly correlated. In August 2010, Platts launched the first spot-price alumina index with certain major producers beginning to sell some production of alumina on contracts tied to a price index, indicating a movement toward a spot pricing system.

***Ferroalloys/nickel/cobalt/iron ore***

*Nickel*

Nickel is a base metal used primarily in the manufacture of stainless steel and other alloys due to its resistance to corrosion, strength and heat resistant properties. Nickel is also used in the production of coinage, batteries, plating, catalysts and fuel cells.

Nickel is found in two commercially viable forms, laterites (oxide ores) and pentlandites (sulphide ores). The Directors believe that, in 2010, approximately half of mined production was from each form. Nickel ore is processed into nickel concentrate, which is then smelted and refined to produce nickel metal containing 99.99 per cent. nickel, once purified through the Mond process[(1)], hydrometallurgical techniques (leaching), electrowinning. Oxide ores can be leached directly, whereas sulphide ores must first be treated with bacteria to make them amenable to leaching. Metal is the form in which nickel is supplied to end user markets and is traded by nickel producing companies. Nickel metal is produced in various refined product forms, dependent upon consumer requirements.

The key end use for primary nickel production is in stainless steel production. There are several grades of stainless steel, each of which has different properties and alloy content. These can be split into two main groups – austenitic (70 to 75 per cent. of total stainless steel production, of which the 300-series contains 8 to 10 per cent. nickel and the 200-series contains 2 to 4 per cent. nickel) and ferretic/martensitic (25-30 per cent. of total stainless steel production containing no nickel).

Nickel is found throughout the world and according to CRU, the largest global producers of finished nickel[(2)] in 2010 were China, Russia and Japan. According to CRU, global finished nickel production in 2010 totalled 1.4 million MT.

The nickel industry is relatively consolidated and as a result the processing of nickel ore from mined ore to nickel metal and the subsequent sale to end users usually takes place within a vertically-integrated system. However, there are still some specialised market participants, undertaking discrete processing steps in the nickel value chain, between which transfers may be direct or may involve an intermediary.

Glencore believes that nickel demand is primarily driven by the expansion of the Chinese and Indian stainless steel industries and re-stocking in industrial sectors. For example, according to CRU, in 2010, China was the largest consumer of finished nickel globally, accounting for approximately 40 per cent. of the total 1.5 million MT consumed globally, whilst Japan and the U.S. were also key consumers.

Nickel metal is traded on the LME. The prices established are used for reference globally throughout the industry; however, there are variances in regional supply and demand as well as differences in metal qualities. LME nickel contracts specify the purity (99.80 per cent. minimum), tonnage and form/shape (full plate cathode, cut cathode, pellets, briquettes), after which a price is determined based on the prevailing demand and LME stock levels. The LME has a network of approved warehouses around the world for use as a last resort and the stock levels provide an important indicator of market tightness and overall demand. Based on the LME information, the Directors believe that, as at the end of 2010, global closing nickel metal stocks on the LME totalled 137k MT, down from 158k MT as at the end of 2009.

Typically, the contracts covering nickel ore supplies are based on a percentage of the LME nickel price, depending on the nickel grade, and quoted on an FOB basis.

*Chrome and ferrochrome*

Chrome is another key alloying element used in bulk quantities for the production of stainless steel. Chrome's most important property in the context of its industrial application is its ability to form a regenerative oxide film, protecting a metal surface against oxidation, corrosion and wear. Stainless steel contains a minimum of 10.5 per cent. chrome.

Ferrochrome is an alloy of chrome and iron. Global ferrochrome production accounts for the vast majority of chrome ore demand. A significant majority of ferrochrome production is then in turn used in the production of stainless steel and alloy steel. Glencore believes that rapid growth in stainless steel production in China and India in recent years has driven an increase in demand for ferrochrome. According to CRU, in 2010, approximately 9.1 million MT of ferrochrome by gross weight was produced globally.

The ferrochrome market is largely a negotiated market with price and volume agreed on a quarterly basis, typically under long-term contracts of one to five years. In the U.S., prices tend to follow those published in either of the two major industry journals, *Ryan's Notes* and *Metals Week*.

(1) In this process, nickel is reacted with carbon monoxide to form nickel carbonyl, which is then passed at a high temperature into a chamber, causing the nickel carbonyl to decompose and form pure nickel in pellet or powder form.

(2) Finished nickel includes nickel metal and nickel metal substitutes such as ferronickel, nickel pig iron and nickel oxide sinter.

*Cobalt*

Cobalt is used primarily in superalloys, including in the manufacture of parts for turbines and aero engines, given its temperature stability and its corrosion and wear resistance. Other applications include magnets, diamond tools and catalysts, as well as in a variety of chemical applications.

Cobalt is commonly found as a by-product of nickel and, to a lesser extent, copper, meaning production tends to increase or decrease in line with production of these metals. According to CRU, in 2010, approximately 77k MT of cobalt was produced globally, with the Katanga province in the DRC being the key producer of mined cobalt.

Cobalt has been traded on the LME since February 2010 and is classified as a minor metal.

*Iron ore*

Iron is the fourth most abundant rock-forming element and composes about 5 per cent. of the Earth's crust. The principal ore minerals of iron are hematite, magnetite, siderite, and goethite. An estimated 98 per cent. of the ore shipped in the world is consumed in the manufacture of iron and steel. The remaining 2 per cent. is used in the manufacture of cement, heavy-medium materials, pigments, ballast, agricultural products or specialty chemicals. As a result, demand for iron ore is tied directly to the production of raw steel and the availability of high-quality ferrous scrap.

Mining iron ore is a high volume, low margin business, as the value of iron is significantly lower than base metals. It is highly capital intensive, requiring significant investment in infrastructure such as rail in order to transport the ore from the mine to a freight ship. For these reasons, iron ore production is concentrated in the hands of a few major players which enjoy significant economies of scale.

The Directors believe that, in 2010, the vast majority of global trade in iron ore was seaborne trade. The two major exporters are Australia and Brazil while the largest importers during 2010 were China followed by Europe and Japan.

**Energy Products**

Energy products are hydrocarbons sourced from the organic remains of prehistoric organisms or vegetable matter. The main energy products include coal, coke, oil and natural gas.

***Coal***

Coal is the most widely available and well-distributed fossil fuel in the world. According to Merlin, coal is the second largest primary source of energy after crude oil in consumption terms, and the largest in terms of reserves. Global consumption of coal is forecast to increase significantly between 2010 and 2020.

Coal is mined using two techniques: surface mining which is sometimes referred to as open cast mining, and underground or deep mining. The most appropriate mining technique is largely determined by the geology of the coal deposit. Once raw coal is mined, it is often crushed, sized and washed in processing plants where the product consistency and energy content of the coal is improved. Washing is a process where the denser mineral matter in coal is separated from the main carbon rich component of coal.

Coal is classified into four general categories, or rank: lignite, sub-bituminous, bituminous and anthracite, reflecting the progressive response of the coal to increasing heat and pressure and the time of its formation. Lignite and sub-bituminous coals are commonly referred to as "low-rank" coals, while bituminous and anthracite coals are commonly referred to as "hard" coals. Energy content and sulphur content are among the most important characteristics for coal classification—certainly for steam (or thermal) coal used for energy generation—and help to determine the best use of a particular type of coal, as well as helping determine the price of different qualities of coal. Other important characteristics include moisture, ash and nitrogen content. Bituminous coal represents approximately half of world reserves and can be further classified as either "thermal coal" or "metallurgical coal". Thermal coal, also known as "steam coal" or "energy coal", used in electricity generation and other energy-raising processes, according to Merlin, represented approximately 85 per cent. of the 5.4 billion tonnes of total global coal production in 2010. Metallurgical coal (which refers to all coals used in the steel industry, including "coking coal" used to produce coke and PCI (Pulverised Coal Injection) coals which are injected into the base of a blast furnace to make iron), accounts for most of the balance of production.

Coke is a material derived from the destructive distillation ("coking/carbonisation") of coking coal. Coke's main uses are as a fuel and a reducing agent in smelting iron ore in blast furnaces. This process takes place in coke ovens which are likely to be located close to iron- and steel-making plants rather than geographically proximate to coal mines.

According to Merlin, approximately 90 per cent. of proven global coal reserves are found in just eight countries, including the U.S., Russia, China, Australia and India.

According to Merlin, in 2010, global thermal coal production totalled 4.6 billion tonnes, with China being the largest thermal coal producer globally, accounting for approximately 47 per cent. of global thermal coal production, followed by the U.S. and Australia. The majority of thermal coal produced is consumed in the country of production due to its relatively widespread availability and high transportation costs relative to its energy value and price. In 2010, China was also by far the largest producer of coking coal globally, accounting for approximately 57 per cent. of the 0.8 billion tonnes produced (according to Merlin). In 2010, the total global production of coke was 0.6 billion tonnes (according to Merlin).

Of the limited export volumes, the vast majority is seaborne coal. According to Merlin, the two major seaborne thermal coal markets are the Atlantic region and the Asia-Pacific region. European countries and the U.S. are the key importers of thermal coal in the Atlantic region with the key suppliers being South Africa, Russia and Colombia. In the Asia-Pacific region, the key importers are Japan, South Korea, China and Taiwan and the key exporters are Indonesia and Australia (according to Merlin). For some time Australia has been the largest coal exporter globally along with the U.S., Indonesia, Russia, South Africa and China. However, increasing domestic electricity demand in the latter country has resulted in stronger domestic consumption, with China becoming a net coal importer in 2009 (according to Merlin). India is rapidly becoming an important coal importer receiving coal from both South African and Asia-Pacific suppliers (according to Merlin).

Unit ocean freight costs are a significant component of the price of seaborne export coal and coke. Participants in the coal and coke seaborne export markets either own vessels or lease freight on a "spot charter" or "time charter" basis. According to the shipping brokers Simpson Spence and Young, in 2010, the global seaborne dry bulk trade across all commodities was 3.3 billion tonnes, of which 0.9 billion tonnes was thermal and coking coal; a further 1 billion tonnes was iron ore. The global seaborne dry bulk trade is forecast to increase to 4.5 billion tonnes by 2015 across all commodities (according to Simpson Spence and Young).

Global coal demand is subject to a number of drivers, including primary energy consumption, the decommissioning and construction of new coal-fired power plants, the competitiveness of coal versus alternative energy sources and the regulatory environment, including carbon emission constraints in several countries. Increasing imports into China and India reflect their increasing demand, primarily due to increased electricity and steel production, as well as the higher quality of internationally-traded coals compared to India's and China's own domestic production. According to Merlin, in 2010, China was the largest consumer of thermal coal globally, accounting for almost half of total consumption.

Thermal coal is sold under term contracts or on the spot market. It is priced primarily on calorific value and sulphur content. Seaborne coal prices in each market normally fluctuate with changes in supply and demand, production and transportation costs, availability and prices of substitute fuels, general economic conditions, government regulation and weather. Price settlement between Asian power companies and Australian coal producers have typically acted as benchmarks for pricing in the Asia-Pacific coal market and have been used as a reference point in the Atlantic market.

Price indices are used by market participants to monitor spot prices in various geographic regions. The API#4 index is the benchmark price reference for coal exported out of South Africa's Richards Bay Coal Terminal. In Europe, export market prices are reflected in the API#2 index for coals delivered into the "ARA" (harbours of Amsterdam, Rotterdam and Antwerp) region on a CIF basis. The API#2 index is reflective of prices in the Atlantic market, while API#4 reflects market conditions in both the Atlantic and Asian (mainly Indian) markets. In Australia, the API#6, GlobalCOAL's NEWC contract and the Barlow Jonker Index are indicators of the spot price of thermal coal loaded FOB vessel at the port of Newcastle, Australia.

There are four future exchanges where internationally-traded coal qualities are traded: in Chicago, the CME; in Singapore, SGX and in London, ICE and LCH. However, a majority of coal trading is conducted off-exchange through brokers operating bilateral contracts and through the API swap market, which has trading volumes that exceed the physical underlying market.

***Oil***

Crude oil is not a homogenous material, but rather is classified by its density (light to heavy) and sulphur content (sweet to sour). Light sweet crude oils are typically more expensive than heavy sour crude oils because they require less treatment to produce refined products.

The process of transforming crude oil into refined products typically involves multiple steps, including distillation, chemical processing and removal of unwanted elements and compounds. Crude oil is processed into a large number of refined oil products including petroleum gases, petrochemicals, gasoline, naphtha, mid-distillates, fuel oil, residual fuels, petroleum coke and niche refined petroleum products.

The extraction of crude oil and its processing into refined oil products can be performed by vertically-integrated companies or by players specialised in each segment of the oil value chain: in the latter scenario, transfers between specialised parties may be direct or may involve an intermediary.

Within the oil value chain, an important role is played by oil freight, which consists of the transportation of crude oil to refineries and refined products to distribution terminals. A key step of this process involves shipping in tankers, the cost of which has an important impact on the price of oil and oil products. Participants in the oil value chain often own tankers and, in addition, there is a market for tanker capacity which is sold on both a "spot charter" and "time charter" basis.

In 2010, global oil demand totalled an average of approximately 87.8 million bbls per day (according to IEA). Glencore believes that oil demand is largely driven by GDP growth. The main uses of oil products are transportation, power generation and heating. Non-OECD countries accounted for approximately half of oil consumption in 2010, and have shown uninterrupted demand growth for several years, even through the global economic downturn of 2008/09 (according to IEA).

World oil supply, which amounted to an average of approximately 87.3 million bbls per day in 2010, can be split into the Organisation of Petroleum Exporting Countries ("OPEC") and Non-OPEC (according to IEA). OPEC nations supplied approximately 40 per cent. of the world's oil supply in 2010 (according to IEA) and controlled approximately three quarters of the world's known reserves at the end of 2010 (according to BP).

The trading of crude oil and oil products consists of direct physical trading and derivatives trading. Participants in the trading of crude oil and refined oil products markets include both physical traders, who handle physical commodity deliveries, and financial traders, who generally settle contracts in cash. Physical traders gain competitive advantages through the optionality offered by trading large physical volumes and the insight into market fundamentals that physical presence provides; financial traders gain competitive advantage through sophisticated research and superior quantitative analytics underpinning complex derivatives structure.

Price of benchmark crude oils such as West Texas Intermediate Crude and Brent Crude is dependent on supply and demand fundamentals; at the end of 2010, closing WTI and Brent spot prices were U.S.$91.38 per bbl and U.S.$94.75 per bbl, respectively. Other crude oils are usually priced at a premium/discount to those benchmarks to reflect differentials in terms of density, sulphur content and location.

**Agricultural Products**

The agriculture industry includes the farming, processing, movement and storage of crops and products used primarily as food, animal feed or biofuel. The main product groups in which Glencore is active include grains, oilseeds, sugar, cotton and biofuels.

Grains have end uses both in human and livestock consumption and in the production of bioethanol, a substitute for gasoline. Grains for human and livestock consumption are generally milled before reaching end users. Wheat, barley and corn are three of the key grain crops. Oilseeds typically undergo crushing and refining to render them into various types of oils and meals for human consumption and animal feed. Rapeseed, soybean, sunflower and palm are key oilseed crops. Oil contained in these crops is also used to produce biodiesel. Cotton, although primarily used for textile and clothing manufacture, also provides edible oil and seed by-products for livestock feed; about two thirds of the harvested crop is composed of the seed. Sugar-based food crops, such as sugar cane and sugar beet, are used in both the food industry and bioethanol production.

Agricultural production is characterised by a very large number of small players. Even the largest farming players typically only have a fraction of the overall market share in any given country. Agricultural supply primarily evolves as a function of the crop price environment, weather conditions and availability of

croppable area. Higher prices serve as an incentive for farmers to increase production levels, as occurred in 2008 and 2009. However, concentration in processing is higher for many crops, with large integrated players enjoying economies of scale. Processing is typically carried out close to the origin.

Production of some crops is concentrated in a limited number of countries, such as the U.S., EU and Canada for wheat and the U.S., Argentina and Brazil for corn, while demand may come from all over the world. This makes trading and logistics an important component of the industry value chain. Freight, logistics and storage services are offered both for raw and processed products. Key components of these services include procurement, ocean freight and distribution.

In crop year 2009/2010, EU-27 countries were the largest producers of both wheat and barley, with 138 million MT and 62 million MT of production, respectively (according to Informa). However, according to USDA, only a small portion of this translated into exports due to the large domestic demand for own production. In the same crop year, the U.S. were the single largest producer and exporter of corn and also led other countries in soybean production and exports followed by Brazil and Argentina (according to Informa). Also in crop year 2009/2010, Brazil was the largest producer and exporter of sugar with 36k MT of production and 24k MT of exports in 2010 (according to USDA). The U.S. is the single largest exporter of cotton, with 12 million 480 lb. bales of exports in crop year 2009/2010, while China is the largest producer and importer owing to its leading position in the textile industry (according to USDA).

According to USDA, income growth and population growth are two primary drivers behind demand for food. Increasing income per capita, especially in emerging countries, typically leads consumers to move away from staple and traditional food towards diets that are richer in protein. The resulting increase in livestock production boosts animal feed demand. Also contributing to the global demand in recent years has been the growing use of crops for biofuel production. A relatively expensive source of energy *per se*, biofuel is subject to government subsidies in most countries and the demand for biofuels grew even throughout the global economic downturn of 2008/09.

According to Informa, certain Middle Eastern and Asian countries were among the largest importers of selected agricultural products in the crop year 2009/2010, mainly due to their fast economic growth and the lack of climatic and agronomic conditions necessary for the production of crops. China was the single largest importer of soybeans, with 51 million MT of imports, while Saudi Arabia was the single largest importer of barley with 7 million MT, due to the high demand for livestock fodder (according to Informa).

In addition to supply/demand dynamics, global agricultural trades are also influenced by a number of exogenous factors such as weather conditions, changing government regulations, foreign exchange rates and other macroeconomic factors such as energy prices.

Wheat, corn, soybean, soyoil, soymeal, barley, rapeseed and sugar are exchange-traded commodities. The main agricultural commodities exchanges include CME (Chicago), NYSE Euronext, Tokyo Grain Exchange (“TGE”), Singapore Mercantile Exchange (“SMX”) and the Australian Securities Exchange. Sunflower seed products and biodiesel are not exchange traded. Prices of these commodities are determined by reference to prices of exchange-traded commodities, among other factors.

4 May 2011

**VALUATION OF PETROLEUM ASSETS IN BLOCKS O AND I, OFFSHORE EQUATORIAL GUINEA**

In response to Glencore International AG's request of September 2010 and the Letter of Engagement dated 3rd December 2010 with Glencore International AG, RPS Energy Consultants Limited ("RPS") has completed an independent valuation of liquid hydrocarbons in Blocks O and I, offshore Equatorial Guinea (the "Properties") in which Glencore Exploration Limited and Glencore Exploration (EG) Limited respectively (collectively "Glencore") have an interest. The blocks are operated by Noble Energy EG Limited ("Noble", the "Operator").

The information contained in this section is issued by RPS at the request of Glencore International AG as part of the work detailed in the Letter of Engagement made on 3 December 2010 and is subject to the terms and conditions contained therein. This report has been prepared for the specific purpose of inclusion in the prospectus relating to the global offer. This report accords with the requirements set out in the United Kingdom Financial Services Authority's Prospectus Rules and has been prepared having regard to the recommendations for the consistent implementation of the European Commission's Regulation on Prospectuses No. 890/2004 (the European Securities and Markets Authority's ("ESMA") recommendations published by the Committee of European Securities Regulators (now the ESMA) as updated on 23 March 2011 following the publication of a consultation paper in April 2010 in relation to content of prospectuses regarding mineral companies.

The RPS work contained in this section is based on data and information available up to 30th September, 2010. An effective date of December 31st 2010 has been assumed for the valuation.

Both hydrocarbon liquids and gas are present in the discoveries in Blocks O and I and both phases are expected to be present in any future discoveries. The review of in-place hydrocarbon volumes includes both liquids and gas. However, in view of the immaturity of plans to monetise hydrocarbon gas from Equatorial Guinea waters the valuation presented herein was limited to the value of the liquids (both crude oil and condensate).

Where discoveries or prospects straddle the block boundary, RPS has assumed the same equity split as the Operator. These do not represent RPS' opinion on the relative prospects in each block.

The work has been performed by an RPS team of professional petroleum engineers, geoscientists and economists and is based on the Operator's data, supplied through Glencore. All Reserves and Resources definitions and estimates shown in this section are based on the 2007 SPE/AAPG/WPC/SPEE Petroleum Resource Management System ("PRMS").

Our approach has been to review the Operator's technical interpretation of their base case geoscience and engineering data for the field for reasonableness and to review the ranges of uncertainty for each parameter around this base case in order to estimate a range of petroleum initially in place and recoverable. For the prospects, Glencore's technical interpretation of geoscience data was reviewed.

**QUALIFICATIONS**

RPS is an independent consultancy specialising in petroleum reservoir evaluation and economic analysis. The provision of professional services has been solely on a fee basis. Mr Gordon Taylor, Director, Geoscience for RPS Energy, has supervised the evaluation. Mr Taylor is a Chartered Geologist and Chartered Engineer with over 30 years experience in upstream oil and gas.

Other RPS employees involved in this work hold at least a Masters degree in geology, geophysics, petroleum engineering or a related subject or have at least five years of relevant experience in the practice of geology, geophysics or petroleum engineering.

**BASIS OF OPINION**

The results presented herein reflects our informed judgement based on accepted standards of professional investigation, but is subject to generally recognised uncertainties associated with the interpretation of geological, geophysical and engineering data. The Work has been conducted within our understanding of petroleum legislation, taxation and other regulations that currently apply to these interests. However, RPS is not in a position to attest to the property title, financial interest relationships or encumbrances related to the properties.

Our estimates of resources and value are based on the data set available to, and provided by Glencore. We have accepted, without independent verification, the accuracy and completeness of these data.

As the offshore fields are yet to be developed and there are no facilities in place on the blocks to date, a site visit was not deemed necessary.

The information in this section represents RPS' best professional judgement and should not be considered a guarantee or prediction of results. It should be understood that any evaluation, particularly one involving exploration and future petroleum developments, may be subject to significant variations over short periods of time as new information becomes available. As agreed in the Letter of Engagement, RPS cannot and does not guarantee the accuracy or correctness of any interpretation made by it. In particular, RPS does not warrant that the work will be any form of guarantee of geological or commercial outcome.

The information in this section relates specifically and solely to the subject assets and is conditional upon various assumptions a summary of which is included herein. Except with permission from RPS, the information in this section may not be reproduced or redistributed, in whole or in part, to any other person than the addressees or published, in whole or in part, for any purpose without the express written consent of RPS. In instances where excerpts only are to be reproduced or published, other than in relation to the circular and prospectus in connection with an initial public offering this cannot be done without the express permission of RPS.

RPS has given and not withdrawn its written consent to the issue of this prospectus, with its name included within it, and to the inclusion of this information and references to the information in this section in the prospectus. For the purposes of Prospectus Rule 5.5.3R(2)(f) RPS accepts responsibility for the information contained in this section set out in this section of the prospectus and those sections of the prospectus which include references to the information in this section and declares that to the best knowledge and belief of RPS, having taken all reasonable care to ensure that such is the case, the information contained herein is in accordance with the facts and does not omit anything likely to affect the import of such information

Yours faithfully,

RPS Energy

## SPE/WPC/AAPG/SPEE RESERVE/RESOURCE DEFINITIONS

The following is extracted from the SPE/WPC/AAPG/SPEE PRMS 2007 using the section numbering and spelling from PRMS.

### 1.0 Basic Principles and Definitions

The estimation of petroleum resource quantities involves the interpretation of volumes and values that have an inherent degree of uncertainty. These quantities are associated with development projects at various stages of design and implementation. Use of a consistent classification system enhances comparisons between projects, groups of projects, and total company portfolios according to forecast production profiles and recoveries. Such a system must consider both technical and commercial factors that impact the project's economic feasibility, its productive life, and its related cash flows.

### 1.1 Petroleum Resources Classification Framework

Petroleum is defined as a naturally occurring mixture consisting of hydrocarbons in the gaseous, liquid, or solid phase. Petroleum may also contain non-hydrocarbons, common examples of which are carbon dioxide, nitrogen, hydrogen sulphide and sulphur. In rare cases, non-hydrocarbon content could be greater than 50%.

The term "resources" as used herein is intended to encompass all quantities of petroleum naturally occurring on or within the Earth's crust, discovered and undiscovered (recoverable and unrecoverable), plus those quantities already produced. Further, it includes all types of petroleum whether currently considered "conventional" or "unconventional."

Figure A1-1 is a graphical representation of the SPE/WPC/AAPG/SPEE resources classification system. The system defines the major recoverable resources classes: Production, Reserves, Contingent Resources, and Prospective Resources, as well as Unrecoverable petroleum.

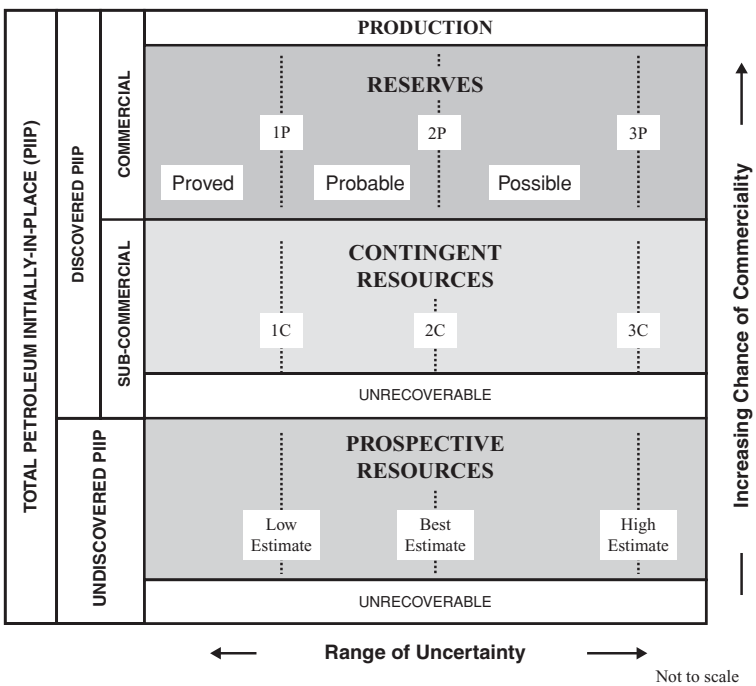

**Figure B.1: Resources Classification Framework**

The "Range of Uncertainty" reflects a range of estimated quantities potentially recoverable from an accumulation by a project, while the vertical axis represents the "Chance of Commerciality, that is, the chance that the project that will be developed and reach commercial producing status. The following definitions apply to the major subdivisions within the resources classification:

**TOTAL PETROLEUM INITIALLY-IN-PLACE** is that quantity of petroleum that is estimated to exist originally in naturally occurring accumulations. It includes that quantity of petroleum that is

estimated, as of a given date, to be contained in known accumulations prior to production plus those estimated quantities in accumulations yet to be discovered (equivalent to "total resources").

**DISCOVERED PETROLEUM INITIALLY-IN-PLACE** is that quantity of petroleum that is estimated, as of a given date, to be contained in known accumulations prior to production.

**PRODUCTION** is the cumulative quantity of petroleum that has been recovered at a given date. While all recoverable resources are estimated and production is measured in terms of the sales product specifications, raw production (sales plus non-sales) quantities are also measured and required to support engineering analyses based on reservoir voidage.

Multiple development projects may be applied to each known accumulation, and each project will recover an estimated portion of the initially-in-place quantities. The projects shall be subdivided into Commercial and Sub-Commercial, with the estimated recoverable quantities being classified as Reserves and Contingent Resources respectively, as defined below.

**RESERVES** are those quantities of petroleum anticipated to be commercially recoverable by application of development projects to known accumulations from a given date forward under defined conditions. Reserves must further satisfy four criteria: they must be discovered, recoverable, commercial, and remaining (as of the evaluation date) based on the development project(s) applied. Reserves are further categorized in accordance with the level of certainty associated with the estimates and may be sub-classified based on project maturity and/or characterized by development and production status.

**CONTINGENT RESOURCES** are those quantities of petroleum estimated, as of a given date, to be potentially recoverable from known accumulations, but the applied project(s) are not yet considered mature enough for commercial development due to one or more contingencies. Contingent Resources may include, for example, projects for which there are currently no viable markets, or where commercial recovery is dependent on technology under development, or where evaluation of the accumulation is insufficient to clearly assess commerciality. Contingent Resources are further categorized in accordance with the level of certainty associated with the estimates and may be subclassified based on project maturity and/or characterized by their economic status.

**UNDISCOVERED PETROLEUM INITIALLY-IN-PLACE** is that quantity of petroleum estimated, as of a given date, to be contained within accumulations yet to be discovered.

**PROSPECTIVE RESOURCES** are those quantities of petroleum estimated, as of a given date, to be potentially recoverable from undiscovered accumulations by application of future development projects. Prospective Resources have both an associated chance of discovery and a chance of development. Prospective Resources are further subdivided in accordance with the level of certainty associated with recoverable estimates assuming their discovery and development and may be sub-classified based on project maturity.

**UNRECOVERABLE** is that portion of Discovered or Undiscovered Petroleum Initially-in-Place quantities which is estimated, as of a given date, not to be recoverable by future development projects. A portion of these quantities may become recoverable in the future as commercial circumstances change or technological developments occur; the remaining portion may never be recovered due to physical/chemical constraints represented by subsurface interaction of fluids and reservoir rocks.

Estimated Ultimate Recovery (EUR) is not a resources category, but a term that may be applied to any accumulation or group of accumulations (discovered or undiscovered) to define those quantities of petroleum estimated, as of a given date, to be potentially recoverable under defined technical and commercial conditions plus those quantities already produced (total of recoverable resources).

### 1.2 Project-Based Resources Evaluations

The resources evaluation process consists of identifying a recovery project, or projects, associated with a petroleum accumulation(s), estimating the quantities of Petroleum Initially-in-Place, estimating that portion of those in-place quantities that can be recovered by each project, and classifying the project(s) based on its maturity status or chance of commerciality.

This concept of a project-based classification system is further clarified by examining the primary data sources contributing to an evaluation of net recoverable resources (see Figure A1-2) that may be described as follows:

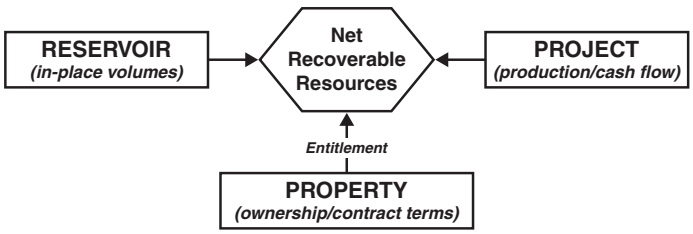

**Figure B.2: Resources Evaluation Data Sources**

- The Reservoir (accumulation): Key attributes include the types and quantities of Petroleum Initially-in-Place and the fluid and rock properties that affect petroleum recovery.
- The Project: Each project applied to a specific reservoir development generates a unique production and cash flow schedule. The time integration of these schedules taken to the project's technical, economic, or contractual limit defines the estimated recoverable resources and associated future net cash flow projections for each project. The ratio of EUR to Total Initially-in-Place quantities defines the ultimate recovery efficiency for the development project(s). A project may be defined at various levels and stages of maturity; it may include one or many wells and associated production and processing facilities. One project may develop many reservoirs, or many projects may be applied to one reservoir.
- The Property (lease or license area): Each property may have unique associated contractual rights and obligations including the fiscal terms. Such information allows definition of each participant's share of produced quantities (entitlement) and share of investments, expenses, and revenues for each recovery project and the reservoir to which it is applied. One property may encompass many reservoirs, or one reservoir may span several different properties. A property may contain both discovered and undiscovered accumulations.

In context of this data relationship, "project" is the primary element considered in this resources classification, and net recoverable resources are the incremental quantities derived from each project. Project represents the link between the petroleum accumulation and the decision-making process. A project may, for example, constitute the development of a single reservoir or field, or an incremental development for a producing field, or the integrated development of several fields and associated facilities with a common ownership. In general, an individual project will represent the level at which a decision is made whether or not to proceed (i.e., spend more money) and there should be an associated range of estimated recoverable quantities for that project.

An accumulation or potential accumulation of petroleum may be subject to several separate and distinct projects that are at different stages of exploration or development. Thus, an accumulation may have recoverable quantities in several resource classes simultaneously.

In order to assign recoverable resources of any class, a development plan needs to be defined consisting of one or more projects. Even for Prospective Resources, the estimates of recoverable quantities must be stated in terms of the sales products derived from a development program assuming successful discovery and commercial development. Given the major uncertainties involved at this early stage, the development program will not be of the detail expected in later stages of maturity. In most cases, recovery efficiency may be largely based on analogous projects. In-place quantities for which a feasible project cannot be defined using current, or reasonably forecast improvements in, technology are classified as Unrecoverable.

Not all technically feasible development plans will be commercial. The commercial viability of a development project is dependent on a forecast of the conditions that will exist during the time period encompassed by the project's activities. "Conditions" include technological, economic, legal, environmental, social, and governmental factors. While economic factors can be summarized as forecast costs and product prices, the underlying influences include, but are not limited to, market conditions, transportation and processing infrastructure, fiscal terms, and taxes.

The resource quantities being estimated are those volumes producible from a project as measured according to delivery specifications at the point of sale or custody transfer. The cumulative production from the evaluation date forward to cessation of production is the remaining recoverable quantity. The sum of the associated annual net cash flows yields the estimated future net revenue. When the cash flows are discounted according to a defined discount rate and time period, the summation of the discounted cash flows is termed net present value (NPV) of the project.

**Licence Overview**

The right of Glencore to conduct petroleum operations in Block O is defined in the Production Sharing Contract (the "Block O PSC") between the Republic of Equatorial Guinea and Glencore Exploration Ltd signed on the 13 July 2004.

The right of Glencore to conduct petroleum operations in Block I is defined in the Production Sharing Contract (the "Block I PSC") between the Republic of Equatorial Guinea Glencore Exploration (EG) Ltd signed on the 3 February 2000.

RPS does not opine on Glencore's rights under these PSC's.

Glencore has 23.75 per cent. equity (working interest) as a non-operating participating partner in the Block I PSC and 25 per cent. equity (working interest) as a non-operating participating partner in the Block O PSC. The following table summarises the partners and their respective equity interest in Blocks O and I.GEPetrol holds a 5 per cent. carried interest in Block I. In Block O GEPetrol has a 30 per cent. equity interest of which 10 per cent. is carried.

**Glencore's Working Interest in Blocks O & I**

| Partner | Block I Interest | Block O Interest |
|---|---|---|
| | *(%)* | |
| Glencore Exploration (EG) Limited | 23.75 | |
| Glencore Exploration Limited | | 25 |
| Noble Energy (Technical Operator) | 38 | 45 |
| Atlas Petroleum International Limited (Administrative Operator) | 27.55 | |
| Osborne Resources Limited | 5.7 | |
| GEPetrol | 5 | 30 |

Within the blocks there are two government approved development projects Aseng and Alen; five discoveries, Carmen, Diega A-sand, Diega B-sand, Felicita and Yolanda; and a number of prospects.

**Licence Status**

The effective dates of the initial exploration licence in Block I was 3rd February 2000 and of Block O was 13th July 2004. The Aseng area of development is currently in an exploitation period (25 years) from the date when the PoD was approved (29 June 2009). Similarly the Alen area of development is in an exploitation period (25 years) from the date when the PoD was approved (11 January 2011).

In Block I, the contractor group has completed all work commitments for the first and second initial exploration sub periods (three years each) and extension periods, as shown in the following table. The second extension period has been extended and will expire on the 3 October 2013. The full activity in Block I to date includes acquisition of 3D seismic over the whole block and drilling of six exploration wells I-1 to I-6.

**Block I Work Commitments**

| Block I PSC | Commitment | |
|---|---|---|
| First initial sub-period | Purchase approximately 1,000 km of 2D seismic | Fulfilled |
| Second initial sub-period | Drill one exploration well to minimum depth of 3,000m kb | Fulfilled |
| First extension period | Drill one exploration well | Fulfilled |
| Second extension period | Drill one exploration well | Fulfilled |

In Block O, the contractor group has completed all work commitments as shown in the following table. Block O is now held as an appraisal area until 10 May 2013 with no future firm obligations. The full activity in Block O to date includes acquisition of 3D seismic and drilling of five exploration wells O-1 to O-5.

**Block O Work Commitments**

| Block O PSC | Commitment | |
|---|---|---|
| First initial sub-period . . . . . | Acquire 800 km$^{(2)}$ of 3D. Drill one exploration well | Fulfilled |
| Second initial sub-period . . . . . | Drill one exploration well | Fulfilled |
| First extension period . . . . . | Drill one exploration well | Fulfilled |
| Second extension period . . . . . | Drill one exploration well | Fulfilled |

**Geological Overview**

Blocks O and I are located in the Douala Basin which is located offshore Equatorial Guinea to the southeast of the Cameroon Volcanic Line (CVL), a chain of Cenozoic basaltic volcanoes which creates a sea-floor ridge separating the Douala Basin from the prolific Niger Delta Basin to the northwest. Sediment input to the Douala Basin is sourced from the Sanaga River drainage system in Cameroon. The Douala Basin lies on a passive margin which has witnessed little deformation since the Early Cretaceous.

To date hydrocarbon exploration within Blocks O & I has focussed on the Miocene section. Sands of this age were laid down across a slope environment as a repetitive series of isolated, laterally discontinuous channel-fill deposits derived from very low sinuosity turbidites. These sands tend to have high net to gross ratios with very good intergranular porosity and high pore connectivity values.

Oil seeps onshore in Cameroon, plus reservoired oil and gas in Blocks O and I in Equatorial Guinea suggest both Cretaceous and Tertiary petroleum systems are present.

The Alen and Aseng sands are Miocene in age. The Aseng and Alen reservoir sandstones were deposited in a deepwater setting on the continental slope in a relatively confined system which allowed for high net-to-gross sand ratios. Well and seismic data suggest that reservoirs are linear, relatively constant thickness sandstone bodies that appear to have the geometry of a feeder channel, and form a sequence of stacked channel sandstones. Up-dip seal is likely to be produced by a shale infill after the channel was abandoned due to avulsion.

**Overview of Discoveries and Prospects**

The Aseng discovery is in water depths ranging from 879m to 1,024m and lies wholly within the Block I PSC license area. The reservoir is stratigraphically trapped Miocene channel sands. The wells across the field have intersected gas, oil and water columns providing good control on the depths of the gas-oil (GOC) and oil-water (OWC) contacts. Over 20 well penetrations have been drilled on the Aseng reservoir.

The Alen Field is predominately in Block O although a small portion of the down dip part of the field extends into Block I. Water depths range from 76m to 679 m. Four wells penetrate the stratigraphically trapped Miocene channel sand. It is believed the field is purely a gas condensate field with no oil leg present.

The Felicita discovery is in Block O at a water depth of 63m. One well penetrates the stratigraphically trapped Miocene channel sand reservoir. The discovery contains gas condensate over water.

The Diega (A-Sand) discovery is in Block I at a water depth of 631m. One well penetrates the stratigraphically trapped Miocene channel sand reservoir. The discovery contains gas condensate over water. The Diega (B-Sand) was also penetrated by the same well. The well encountered gas over oil at this level but did not encounter a water contact. The Diega B-Sand accumulation straddles Blocks O and I.

The Carmen is in Block O at a water depth of 50m. One well penetrates the stratigraphically trapped Miocene channel sand reservoir. The well encountered the wet gas over an oil leg.

The Yolanda discovery is in Block I at a water depth of 895m. One well penetrates the stratigraphically trapped Miocene channel sand reservoir. The discovery contains gas. No water contacts were observed.

A large number of prospects have been identified in Blocks O and I in various sands of Early Miocene age.

**Resources and reserves**

**Reserves and Resources Methodology**

***Reserves and Resources Classification***

All reserves and resources definitions and estimates, and also risk factors, shown are based on the 2007 SPE/AAPG/WPC/SPEE Petroleum Resource Management System ("PRMS") and as reported to Glencore by RPS.

In estimating the following reserves and resources RPS have used standard petroleum engineering techniques. These techniques combine geological and production data with detailed information concerning fluid characteristics and reservoir pressure. RPS has estimated the degree of uncertainty inherent in the measurements and interpretation of the data and has calculated a range of recoverable resources. RPS has assumed that the working interest in the assets advised by Glencore is correct and RPS has not investigated nor does it make any warranty as to the Glencore interest in these properties.

Hydrocarbon resource and reserve estimates are expressions of judgement based on knowledge, experience and industry practice and are restricted to the data made available. They are, therefore, imprecise and depend to some extent on interpretations, which may prove to be inaccurate. Estimates that were reasonable when made may change significantly when new information from additional exploration or appraisal activity becomes available.

***Risk Assessment***

For all prospects and appraisal assets estimates of the commercial chance of success for Contingent Resources, and estimates of geological chance of success for Prospective Resources, have been made. In PRMS the former is called Chance of Development (CoD) and the latter Chance of Discovery (also CoD) in the PRMS system. To avoid confusion with acronyms we have used the term Geological Probability of Success (GPoS) in this document synonymously with Chance of Discovery.

***Contingent Resources***

The chance of success in this context means the estimated chance, or probability, that the volumes will be commercially extracted. A Contingent Resource includes both proved hydrocarbon accumulations for which there is currently no development plan or sales contract and proved hydrocarbon accumulations that are too small or are in reservoirs that are of insufficient quality to allow commercial development at current prices. As a result the estimation of the chance that the volumes will be commercially extracted may have to address both commercial (i.e. contractual or oil price considerations) and technical (i.e. technology to address low deliverability reservoirs) issues.

***Prospective Resources (Exploration Prospects)***

Unlike risk assessment for Contingent Resources, when dealing with undrilled prospects there is a more accepted industry approach to risk assessment for Prospective Resources. It is standard practice to assign a Geological Probability of Success (GPoS) which represents the likelihood of source rock, charge, reservoir, trap and seal combining to result in a present-day hydrocarbon accumulation. RPS assesses risk by considering both a play risk and a prospect risk. The chance of success for the play and prospect are multiplied together to give a Geological Probability of Success (GPoS). We consider three factors when assessing play risk: source, reservoir, seal and we consider four factors when assessing prospect risk: trap, seal, reservoir and charge. The result is the chance or probability of discovering hydrocarbon volumes within the range defined (as set out in the paragraph below "Uncertainty Estimation"). It is not an estimation of commercial chance of success.

***Uncertainty Estimation***

The estimation of expected hydrocarbon volumes is an integral part of the evaluation process. It is normal practice to assign a range to the volume estimates because of the uncertainty over exactly how large the discovery or prospect will be. Estimating the range is normally undertaken in a probabilistic way (i.e. using Monte Carlo simulation), using a range for each input parameter to derive a range for the output volumes. Key contributing factors to the overall uncertainty are data uncertainty, interpretation uncertainty and model uncertainty.

Volumetric input parameters, gross rock volume (GRV), porosity, net-to-gross ratio (N:G), water saturation ($S_w$), fluid expansion factor ($B_o$ or $B_g$) and recovery factor, are considered separately. RPS has internal guidelines on the best practice in characterising appropriate input distributions for these parameters.

Systematic bias in volumetric assessment is a well-established phenomenon. There is a tendency to estimate parameters to a greater degree of precision than is warranted[1] and to bias pre-drill estimates to the high side. Rose and Edwards observe the tendency towards assessing volumes in too narrow a range with overly large low-side and mean estimates. RPS uses benchmarked P90/P10 ratios and known field size distributions to check the reasonableness of estimated volumes.

***Audit Method***

RPS has performed the audit of Reserves and Resources estimates in accordance with generally accepted petroleum engineering evaluation principles as set forth in the Standards Pertaining to the Estimating and Auditing of Oil and Gas Reserves Information promulgated by the Society of Petroleum Engineers ("SPE Audit Standards").

As with any audit RPS reviewed the Operator's interpretation and information and proceeded to perform the tests and procedures deemed necessary to confirm the reasonableness of the Operator's Reserves or Resources estimates. In this case the Operator's work that has been reviewed was confined to the Aseng and Alen fields. The work that RPS audited on the other discoveries in Blocks O and I and the prospect inventory was undertaken by Glencore.

The RPS approach in this instance has been to review the technical interpretation of the geoscience and engineering data for reasonableness. Where necessary RPS has undertaken independent re-interpretation to produce a technically reasonable base case interpretation. RPS then reviewed the Operator's ranges of uncertainty for each parameter around this base case which have been used to estimate a range of petroleum initially in place and recoverable for each field. Production profiles have then been developed for each model. Furthermore, RPS has reviewed the Operator's estimates of operating costs (Opex) and capital expenditure (Capex) for reasonableness.

The following tables show the estimated reserves and resources for Blocks O & I as determined by RPS.

**Reserves as of 31 December 2010 (Exclusive of Resources)**

| | Reserves | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Gross Field | | | Glencore Working Interest[2] | | | Glencore net Entitlement[1] | | |
| | 1P | 2P | 3P | 1P | 2P | 3P | 1P | 2P | 3P |
| | | | | | *(MMstb)* | | | | |
| Aseng[3] | 97 | 113 | 131 | 23 | 27 | 31 | 27 | 30 | 32 |
| Alen[4] | 45 | 82 | 128 | 11 | 20 | 32 | 10 | 17 | 26 |

Notes:

(1) Contractor's net entitlement is their share of Cost Oil and Profit Oil calculated using the Production Sharing Contract (PSC) terms. Aseng reserves include carry repayment from Atlas Petroleum

(2) Glencore working interest in Block O is 25 per cent. Glencore working interest in Block I is 23.75 per cent.

(3) Includes oil and condensate

(4) The Operator's assumption that Alen is 95 per cent. in Block O and 5 per cent. in Block I has been used in this valuation. RPS does not opine on this split for equity determination purposes.

| Diega (B-Sand) | 46 | 94 | 193 | 11 | 22 | 46 | —[2] | —[2] | —[2] |
| Carmen (B-Sand) | 24 | 39 | 64 | 6 | 10 | 16 | —[2] | —[2] | —[2] |

Notes:

(1) Glencore working interest in Block O is 25 per cent. and Glencore working interest in Block I is 23.75 per cent.

(2) Valuation of gas and accumulations with minor liquid volumes not undertaken therefore net Entitlement not estimated

(3) Includes oil and condensate

(4) Yolanda & Diega A are 100 per cent. in Block I: Felicita & Carmen 100 per cent. in Block O: Diega B is approximately 90 per cent. in Block I & 10 per cent. in Block O. These approximations have been used in the valuation where appropriate. RPS does not opine on those splits for equity determination purposes.

**Block O and I Prospective Resources as of 31 December 2010 (on-block) (Exclusive of Reserves)**

| Carla | 369 | 707 | 1327 | 277 | 566 | 1,128 | 68 | 138 | 275 | 23 |

Notes:

(1) Glencore working interest in Block O is 25 per cent. and in Block I is 23.75 per cent.

(2) Sarah A, Isidora, Regina A, Sofia are 100 per cent. in Block I; Adriana NE is 100 per cent. in Block O; Arabella is 90/10 Block O/Block I, and Carla is 50/50 Block O/Block I. These approximations have been used in the valuation where appropriate. RPS does not opine on these splits for equity determination purposes.

(3) Glencore Interest for Arabella and Carla are weighted averages of block working interests.

(4) Gas volumes include inerts.

**Alen Development Plan**

The Alen development plan is split into two phases. During the first phase, the condensate will be produced with the gas recycled to maintain pressure. Gas will be produced from three wells located updip in the field, condensate will be stripped at the platform and dry gas will be re-injected into the reservoir down dip. It is assumed this phase would last a minimum of three years. The second phase of gas production would commence when the infrastructure for gas sales becomes available and other gas sales commercial arrangements are in place. The produced condensate will be stabilised for export through a subsea pipeline to the Aseng FPSO for storage and sales offload. This will save costs associated with a separate storage and offloading facility for the condensate.

The Operator's concept selection calls for two fixed platforms a well protector platform and a production platform. The production platform will consist of a large jacket and topsides with processing equipment, utilities systems, and quarters. Both fixed platforms will be new build structures. This concept offers an opportunity for Alen Field to become a future gas hub for the area after a staged development of Alen. Alen can be developed first, and then more facilities/satellite platforms can be added as other gas is routed to Alen for processing.

The Alen Field will be produced from surface wells at the fixed platform site with gas re-injected into subsea trees and wellhead systems. The remote subsea wells will be connected to the host fixed platforms with seabed flowlines. Umbilicals will also be provided to support the required control and maintenance functions associated with the subsea systems.

The fixed platforms will incorporate installation and handling aids required for these various lines (pull-in systems, I-tubes, etc.). The fixed platforms will also incorporate the subsea control systems and support utility equipment required to operate the subsea systems (e.g. control stations and panels, hydraulic power units, umbilical termination units, etc.).

First production from Alen is expected from 1 January 2014.

The following table outlines the estimated production profile for the Alen field daily production of condensate and illustrates the expected plateau duration, peak production timings, and anticipated decline and field life.

**Average Yearly Production Rate and Cumulative Recovery for Alen**

| | Low Case (P90) | | Base Case (P50) | | High Case (P10) | |
|---|---|---|---|---|---|---|
| Year | Cumulative Production | Annualised Daily Production | Cumulative Production | Annualised Daily Production | Cumulative Production | Annualised Daily Production |

| 2035 | 46.3 | 70 | 85.1 | 456 | 127.0 | 2,154 |

**Aseng Development Plan**

Aseng will be developed by five producers and one water injector that have been drilled and completed subsea from two drill centres. In addition to this, two further water injectors have been drilled and I-1 and I-2 will be completed as gas injectors, I-2 will only be utilised if deemed necessary once production and injection performance has been assessed. These wells will then be tied back to an FPSO, which will be a converted VLCC tanker. Oil export will be by tanker offtake.

The reservoir management plan consists of injecting water (as required) and gas to maintain voidage replacement (and thus maintain reservoir pressure). Later in field life, gas lift can be added (gas lift valves will be included in the initial well completions).

First production from Aseng is expected from 1 January 2012.

The following table outlines the estimated production profile for the Alen field daily production of condensate and illustrates the expected plateau duration, peak production timings, and anticipated decline and field life.

**Aseng Field Liquid Production Rate and Cumulative Recovery after 20 Years (Gross, 100 per cent. Basis)**

| Date | Low Case (P90) | | Base Case (P50) | | High Case (P10) | |

| 2026 | 97 | 1,381 | 111 | 2,647 | 127 | 5,849 |
| 2027 | | | 112 | 2,756 | 128 | 3,260 |
| 2028 | | | 113 | 2,400 | 129 | 2,685 |
| 2029 | | | | | 130 | 2,666 |
| 2030 | | | | | 131 | 2,923 |
| 2031 | | | | | 132 | 1,685 |

Note:

Liquid rates oil plus condensate.

**Diega B Notional Development Plan**

The notional development for Diega B sands has been based on a subsea tie-back to the Aseng FPSO some 20km away. Diega B sand has an excellent reservoir quality, so the initial average 10,000 stb/d per horizontal well from Aseng is maintained for all cases. To minimise the amount of subsea piping, drilling from a subsea template has been assumed. This will necessitate pre-drilling all the producers. Three production wells and one water injector will be required to reach a possible 30,000bopd plateau. The field is timed to come on stream in 2014 when it is thought that sufficient ullage will be available in the Aseng system.

Similar to Aseng a 2-3 years plateau period has been assumed. The forecast is for a 25-year period.

**Valuation of reserves**

***Valuation Assumptions***

*General*

The effective date for the purpose of the valuation is 1 January 2011 and this has been used as the discount date for the valuation. All values are post-tax and have been expressed over a range of discount rates. An annual inflation rate of 2 per cent. has been assumed and is applied to both costs and revenues.

*Oil Prices*

The valuation has been based on the long term forecast for Brent (long term price of U.S.$83.75/stb in real 2010 dollars) as shown in the following table. A Low Price Case ($65/stb in real 2010 dollars) and High Price Case ($100/stb in real 2010 dollars) are also shown in the Table in Money of the Day (MoD) and have been used for price sensitivity purposes.

**Brent Price Forecasts**

| | Low Price Case | Base Price Case | High Price Case |
|---|---|---|---|
| | *(U.S.$/stb, MoD)* | *(U.S.$/stb, MoD)* | *(U.S.$/stb, MoD)* |
| 2010 | 77.84 | 78.59 | 79.09 |
| 2011 | 74.00 | 85.00 | 95.00 |
| 2012 | 71.50 | 87.00 | 102.00 |
| 2013 | 70.00 | 88.00 | 106.00 |
| 2014 | 70.36 | 90.65 | 108.24 |
| 2015 | 71.77 | 92.47 | 110.41 |
| 2016 | 73.20 | 94.32 | 112.62 |
| 2017 | 74.66 | 96.20 | 114.87 |
| 2018 | 76.16 | 98.13 | 117.17 |
| 2019 | 77.68 | 100.09 | 119.51 |
| 2020 | 79.23 | 102.09 | 121.90 |
| 2021 onwards | +2% p.a. | +2% p.a. | +2% p.a. |

The RPS Price Forecast comprises of two components: (i) a near term price forecast for 2011-2013 which is based on the RPS near term MoD price forecast (as set out in the table above) and (ii) from 2014 onwards an equivalent long term 2010 real price of U.S.$65/U.S.$83.75/U.S.$100 for low price case/mid price case/high price case respectively inflated at 2 per cent. p.a. to derive MoD prices. The final low/mid/high price forecasts are a combination of the near and long term price forecasts. They are expressed in the table above and applied in the valuation in MoD terms.

Money of the day prices, sometimes also referred to as nominal or current prices, incorporate the effects of annual inflation and reflect the time value of money. For example, the mid case oil price of U.S.$83.75 in 2010 would be equivalent to U.S.$85.43 one year in the future (2011) assuming that annual inflation was 2%. The figure of U.S.$85.43 would be described as the price in MoD terms. Conversely if the price in one year (2011) was forecast to be U.S.$83.75 in MoD terms this would be equivalent to U.S.$82.11 (i.e. U.S.$83.75/1.02) in (2010). The figure of U.S.$82.11 would be described as the price in real terms. Thus the U.S.$83.75 mid case oil price in 2010 would be equivalent to U.S.$90.65 in 2014 in MoD terms as shown in the table above. The forecast price in every subsequent year after 2014 will increase by 2% over the previous year's forecast price.

The effect of inflation is illustrated below:

| | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 |
|---|---|---|---|---|---|---|
| | | | *(U.S.$)* | | | |
| Price in real terms | 83.75 | 83.75 | 83.75 | 83.75 | 83.75 | 83.75 |
| Price in MoD terms | 83.75 | 85.43 | 87.13 | 88.88 | 90.65 | 92.47 |
| Price in real terms | 83.75 | 82.11 | 80.50 | 78.92 | 77.37 | 75.85 |
| Price in MoD terms | 83.75 | 83.75 | 83.75 | 83.75 | 83.75 | 83.75 |

The Aseng crude price is assumed to have a differential to Brent crude prices of −3 per cent., and this assumption has been applied to the Diega discovery. Alen condensate price is assumed at parity with the Brent price.

*Gas Prices*

The Plans of Development for both Aseng and Alen do not feature gas sales and in view of the immaturity of plans to monetise hydrocarbon gas from Equatorial Guinea waters this valuation does not include possible future gas sales.

**Valuation Methodology**

***Aseng and Alen***

The Aseng Field is within the "Block I" PSC area (the PSC for the D15 Block offshore Bioko Island). The Alen Field straddles Blocks O and I PSC contract areas. For valuation purposes RPS has assumed that 95 per cent. of Alen is within Block O and subject to the Block O PSC terms and 5 per cent. of Alen is in Block I and subject to the Block I PSC terms. As a first pass approximation the valuation assumes that the field will be unitised on this basis. RPS is not opining on the unitisation of the field. The relative proportion in each block has been taken from the Alen PoD and is not necessarily the opinion of RPS. The 5 per cent. of Alen assumed to lie within Block I is valued on an incremental basis relative to the Aseng field P50 development case. Spreadsheet based discounted cashflow models were created to honour each of the Block I and O PSC contract terms.

***Fiscal Regime and Contract Terms***

The PSCs in which Glencore has an interest are typical for Equatorial Guinea. There are royalties payable to the state based on production rates, cost recovery from a percentage of net revenue and contractor profit share based on production. Production bonuses and an abandonment reserve fund also apply. The contractor is subject to Corporation Tax on contractor income. As advised by Glencore, and consistent with both Aseng and Alen PoD submissions, the tax rate on income from Blocks I and O is 25 per cent.

**Valuation Summary**

***Valuation of Aseng***

After applying economic limits and deriving entitlement income from Block I PSC, the 1P, 2P and 3P Reserves for the Aseng Field are summarised in the following table.

**Aseng Field Reserves Summary (Net Glencore Share)**

| | Gross Reserves | Net Entitlement Reserves |
|---|---|---|
| | *(MMstb)* | *(MMstb)* |
| Proved Reserves (1P) | 97 | 27 |
| Proved plus Probable Reserves (2P) | 113 | 30 |
| Proved plus Probable plus Possible Reserves (3P) | 131 | 32 |

The valuation of the Aseng reserves at the 1P, 2P and 3P levels on a 2011 point forward basis over a range of discount factors is shown in the following table.

**Aseng Field Post-Tax Valuation (Net Glencore Share)**

| | Post-Tax Net Present Value | | | |
|---|---|---|---|---|
| **Discount Rate** | **0.0%** | **5.0%** | **10.0%** | **15.0%** |
| | | *(U.S.$m, MoD)* | | |
| Proved Reserves (1P) | 1,355 | 1,133 | 966 | 836 |
| Proved plus Probable Reserves (2P) | 1,496 | 1,234 | 1,041 | 893 |
| Proved plus Probable plus Possible Reserves (3P) | 1,649 | 1,333 | 1,108 | 941 |

The sensitivity of these values to oil price uncertainty was calculated using the low and high price scenarios described above and is shown below.

**Sensitivity of Aseng $NPV_{10}$ to Oil Price (Net Glencore Share)**

| | Net Present $Value_{10}$ of Future Net Revenue | | |
|---|---|---|---|
| **Price Case** | **1P** | **2P** | **3P** |
| | | *(U.S.$m, MoD)* | |
| Low Price ($65) | 800 | 860 | 912 |
| Base Price ($83.75) | 966 | 1,041 | 1,108 |
| High Price ($100) | 1,117 | 1,207 | 1,288 |

*Valuation of Alen*

After applying economic limits and deriving entitlement income from Block O and Block I PSCs, the 1P, 2P and 3P Reserves for the Alen Field are summarised in the table below.

**Alen Field Reserves Summary**

| | Gross Reserves | Net Entitlement Reserves |
|---|---|---|
| | *(MMstb)* | *(MMstb)* |
| Proved Reserves (1P) | 45 | 10 |
| Proved plus Probable Reserves (2P) | 82 | 17 |
| Proved plus Probable plus Possible Reserves (3P) | 128 | 26 |

The valuation of the Alen field Reserves at the 1P, 2P and 3P levels on a 2011 point forward basis over a range of discount rates are in the following table.

**Alen Field Post-Tax Valuation (Net Glencore Share)**

| | Post-Tax Net Present Value | | | |
|---|---|---|---|---|
| **Discount Rate** | **0.0%** | **5.0%** | **10.0%** | **15.0%** |
| | | *(U.S.$m, MoD)* | | |
| **Using RPS Cost Estimates** | | | | |
| Proved Reserves (1P) | 259 | 151 | 73 | 17 |
| Proved plus Probable Reserves (2P) | 665 | 419 | 255 | 144 |
| Proved plus Probable plus Possible Reserves (3P) | 1,148 | 687 | 412 | 240 |
| **Using Operator Cost Estimates** | | | | |
| Proved Reserves (1P) | 290 | 182 | 104 | 48 |
| Proved plus Probable Reserves (2P) | 691 | 447 | 284 | 173 |
| Proved plus Probable plus Possible Reserves (3P) | 1,174 | 715 | 441 | 270 |

The sensitivity of these values to oil price uncertainty was calculated using the Low and High price scenarios described above and is shown below.

**Sensitivity of Alen Field $NPV_{10}$ to Oil Price (Net Glencore Share)**

| | Net Present $Value_{10}$ of Future Net Revenue | | |
|---|---|---|---|
| **Price Case** | **1P** | **2P** | **3P** |
| | *(U.S.$m, MoD)* | | |
| Low Price ($65) | (15) | 126 | 233 |
| Base Price ($83.75) | 73 | 255 | 412 |
| High Price ($100) | 167 | 368 | 542 |

After applying economic limits and deriving entitlement income from Block I and Block O PSCs, the 1C, 2C and 3C Contingent Resources for the Diega B Field are summarised in the following table.

**Diega B Field Contingent Resources Summary**

| | Gross Resources | Net Entitlement Resources |
|---|---|---|
| | *(MMstb)* | *(MMstb)* |
| 1C Resources | 23 | 4 |
| 2C Resources | 49 | 8 |
| 3C Resources | 91 | 14 |

**Environmental and Facilities**

***Environmental Permits and Status***

A summary of the health and safety review carried out by RPS is given below. The review of both the Alen and Aseng field development projects, based on the interpretation of the data, which was made available to RPS, confirms that both projects are in full compliance with the applicable laws and regulations of Equatorial Guinea and recognised best oilfield practice.

*Laws of Equatorial Guinea*

The following table provides an overview of Equatorial Guinea's key laws that are of potential relevance to the project.

| Law | Description |
|---|---|
| Law Regulating the Environment in the Republic of Equatorial Guinea: Ministry of Fishing and Environment (Issued January 2004) | Provides the legal and philosophic basis concerning the basic norms of conservation, protection and recovery of the environment, promoting the sustainable use of natural resources, while achieving sustainable human development in the Republic of Equatorial Guinea. |
| Hydrocarbon Law. Ministry of Mines, Industry and Energy. 8/2006 (November 2006, "The Hydrocarbon Law") | Provides the framework for the licensing and awarding of exploration and production rights and authorizes the MMIE to enter into contracts with oil companies. The legal framework of the Hydrocarbon Law was updated to provide the necessary coverage for elements within the hydrocarbon sector that were previously nonexistent or did not adequately meet the needs of the Government. |
| Law of Territorial Seas and Exclusive Economic Zone (November 1984) | Defines the sovereignty of EG over its territorial sea and defines its rights over the marine resources therein. This sovereignty is exercised, in accordance with international law, over the water column, seabed, subsoil, and resources of the sea, and the superjacent airspace. |

*Social and Environmental Impact Assessment*

Both projects are subject to environmental regulations under the legal framework of the environmental management of Equatorial Guinea and as such, the Operator provided the Equatorial Guinea regulatory authorities with a Social and Environmental Impact Assessment ("SEIA") pursuant to which relevant environmental protection, management standards and procedures which will be continually enforced during the project.

The SEIA sufficiently assesses the potential impact that the proposed project could have on the environment and social community. The SEIA also offers proposed mitigation measures to lower the risk / impact to as reasonably possible. The SEIA exceeds the requirements for an environmental impact study.

In summary, the SEIA for each project demonstrates that operations are in full compliance with the applicable laws and regulations of Equatorial Guinea and also sufficiently assesses / mitigates any potential impacts that could be caused by the project.

*Oil Spill Contingency Plan*

Both fields have been included on one approved Oil Spill Contingency Plan ("OSCP"), which covers operations and responsibility in the event of an oil spill.

The Operator OSCP gives clear directions and identifies responsibility in the event of a spill. It also provides project specific modelling data, which estimates the position of the oil spilt and also gives an estimated beaching location.

## SECTION XIV: INDEPENDENT TECHNICAL REPORTS
## SUB-SECTION B: PRODECO REPORT

(This page has been left blank intentionally.)

*Ref: ADV-SY-03728*

4th May 2011

The Directors
Glencore International plc (the "Company")
Queensway House, Hilgrove Street
St Helier Jersey JE1 1ES

Dear Sirs,

***COMPETENT PERSON'S REPORT – GLENCORE COLOMBIAN COAL ASSETS***

This Competent Person's Report ("*CPR*") has been prepared jointly by Minarco-MineConsult ("*MMC*") and McElroy Bryan Geological Services ("*MBGS*") at the request of Glencore International AG ("*Glencore*"). The scope is to undertake an independent technical review and valuation of the relevant geological, mining and infrastructure assets of Glencore in Colombia; including specifically CI Prodeco SA ("*Prodeco*"), the Calenturitas Coal Mine ("*Calenturitas*") and the La Jagua Coal Mine ("*La Jagua*"). The combined MMC and MBGS technical review team is referred to in this report as "*MMC/MBGS*". It is understood that Glencore will include this report in a prospectus to be published in connection with the Initial Public Offering ("*IPO*") of Glencore International plc on the London Stock Exchange and the Hong Kong Stock Exchange. Glencore International plc is expected to be the parent company of the group.

The purpose of the report is to provide a technical opinion as to the accuracy and reasonableness of the information supporting the assets. The focus of the review is on the technical aspects of the assets; including geology, Resources and Reserve Statements, mine plans, production rates, infrastructure, environment and capital and operating costs estimates.

This report, which summarises the findings of our review, has been prepared in order to satisfy the requirements of the "Prospectus Rules" published by the UK Financial Services Authority from time to time and governed by the UK Listing Authority, the "Prospectus Directive" (2003/71/EC) and the Prospectus Regulations (809/2004), "CESR's (now the European Securities and Markets Authority) recommendations for the consistent implementation of the European Commissions Regulation on Prospectuses No. 809/2004" (as updated by the European Securities and Market Authority on 23 March 2011 following the publication of a consultation paper in April 2010 in relation to the content of prospectuses regarding mineral companies) and Chapter 18 of the Hong Kong Listing Rules. The CPR has been conducted in recognition of the requirements of the "Australian Code for Reporting of exploration Results, Mineral Resources and Ore Reserves" (December 2004) published by the Joint Ore Reserves Committee ("JORC") of the Australasian Institute of Mining and Metallurgy, Australian Institute of Geoscientists and the Minerals Council of Australia (the "JORC Code"). The JORC Code establishes the nature of evidence required to ensure compliance with the JORC Code. The review was conducted with regard to the JORC Code because it is internationally recognised. In this report, all resource and reserve estimates are reported in accordance with the JORC Code and have been substantiated by evidence obtained from our site visits and observation and are supported by details of drilling results, analyses and other evidence and takes account of all relevant information supplied to us by company management and the directors of Glencore.

MMC/MBGS has made no independent review to determine whether Glencore holds any other key Colombian assets. Other global assets of Glencore have not been valued as part of this report.

Glencore, through its wholly owned subsidiary Prodeco, owns and operates two open cut coal mines in Colombia; the Calenturitas and the La Jagua coal mines. The mines are located in an active mining region of the Department of Cesar, Colombia, approximately 100 km south of the city of Valledupar. The Puerto Prodeco is located some 220 km to the north of the project site on Colombia's Caribbean coast near the city of Santa Marta, as shown in **Figure 1**. The two mines are separated by approximately 20 km. Prodeco holds exploration and mining title over both coal deposits.

The Calenturitas mine has **400 Mt** of Resources, **209** Mt of Reserves and for 2011 is budgeted to produce 8.5 Mtpa with plans to expand to approximately 14 Mtpa by 2015 with a life of mine to 2029.

The La Jagua mine has **140 Mt** of Resources, **128 Mt** of Reserves and for 2011 is budgeted to produce 7.1 Mtpa with a life of mine to 2029.

MMC/MBGS has reviewed each of the Prodeco assets and has undertaken a valuation of the operating assets included in Prodeco's cash flow forecasts. MMC/MBGS concludes from this review:

- no material flaws, errors or omissions on the technical aspects of the Project were discovered during the review;
- the technical information reviewed is considered reasonable and has been prepared by professionals using appropriate software and industry standards;
- the geological and geotechnical understanding is of a sufficient level to support short, medium and long-term planning as appropriate;

- the mine plans appropriately reflect known geological and geotechnical understanding and account for predicted mining hazards;
- Prodeco's mining equipment (either in place or planned in the capital forecasts) is suited to its mine plans and supports the production levels forecast;
- the assumptions used in estimating coal and waste production volumes, working room, mining losses and dilutions are appropriate and reasonable;
- coal handling and other infrastructure including rail and port are capable of producing and supplying appropriate coal quality products to satisfy the export markets at the forecast volumes;
- identified environmental issues are being well managed and there are no apparent issues that could impede production nor are any prosecutions pending;
- the assumptions used in estimating operating costs are appropriate and reasonable, covering the spectrum of mining, processing, coal transport, and site administration associated in getting the coal to the point of sale;
- capital costs used in the financial models reflect the mine plans, development and construction schedules and the forecast production levels;
- key risks identified by MMC/MBGS are understood by management and appropriate action to mitigate these risks has been taken. Further, the mine plans and cost forecasts appropriately account for these risks; and
- the drivers of the production and cost forecasts are understood by management and are receiving the management focus required.

MMC/MBGS is of the opinion that the Colombian coal assets of Prodeco:

- represent a significant component of the Colombian coal industry;
- have mine plans over areas of Measured and Indicated Resources which generate forward schedules for more than 19 years;
- have a total value (at 10% discount factor) of Proved and Probable Reserves of approximately USD 4,885 million with 75% of this value associated with Proved Reserves (based on a valuation date 01/01/2011); and
- have value that is most sensitive to changes in coal price with a 15% reduction in coal price decreasing reserve value by over 32 % to USD 3,298 million.

MMC and MBGS have both been commissioned to jointly prepare this CPR and this CPR was undertaken on behalf of MMC and MBGS by the signatories of this report.

The first signatory to this CPR, Mr. Grant Walker, BE (Mining) MAusIMM, is a member of the Australasian Institute of Mining and Metallurgy, and is an employee of MMC. He has over 15 years experience in the mining industry with significant experience in technical reviews, audits, due diligence assessments and valuation of mining assets. He has sufficient experience which is relevant to the style of mineralisation and types of coal deposits under consideration, and to the activity he is undertaking outcome of this CPR, to qualify him as a Competent Person (as defined in the 2004 Edition of the JORC Code).

The second signatory to this letter, Mr. Kerry Whitby, FAusIMM, is a Fellow of the Australasian Institute of Mining and Metallurgy, and is the Managing Director of McElroy Bryan Geological Services. He has 39 years experience in the mining industry and has sufficient experience which is relevant to the style of mineralisation and types of coal deposits under consideration, and to the activity he is undertaking in relation to this CPR, to qualify him as a Competent Person (as defined in the 2004 Edition of the JORC Code).

Yours sincerely,

Grant Walker

# 1. INTRODUCTION

## 1.1 Purpose of Report

This Competent Person's Report ("*CPR*") has been prepared jointly by Minarco-MineConsult ("*MMC*") and McElroy Bryan Geological Services ("*MBGS*") at the request of Glencore International AG ("*Glencore*"). The scope was to undertake an independent technical review and valuation of the relevant geological, mining and infrastructure assets of Glencore in Colombia; including specifically CI Prodeco SA ("*Prodeco*"), the Calenturitas Coal Mine ("*Calenturitas*") and the La Jagua Coal Mine ("*La Jagua*") (together the "Assets"). The combined MMC and MBGS technical review team is referred to in this report as "*MMC/MBGS*". It is understood that Glencore will include this report in a prospectus to be published in connection with the Initial Public Offering ("*IPO*") of Glencore International plc on the London Stock Exchange and Hong Kong Stock Exchange. Glencore International plc is expected to be the ultimate parent company of the group.

The purpose of the report is to provide a technical opinion as to the accuracy and reasonableness of the information supporting the assets. The focus of the review is on the technical aspects of the assets; including geology, resources and reserve estimates, mine plans, production rates, infrastructure, environment and capital and operating costs estimates.

This report, which summarises the findings of our review, has been prepared in order to satisfy the requirements of the "Prospectus Rules" published by the UK Financial Services Authority from time to time and governed by the UK Listing Authority, the "Prospectus Directive" (2003/71/EC) and the Prospectus Regulations (809/2004), "CESR's (now the European Securities and Markets Authority "ESMA") recommendations for the consistent implementation of the European Commissions Regulation on Prospectuses No. 809/2004" (as updated by the European Securities and Market Authority on 23 March 2011 following the publication of a consultation paper in April 2010 in relation to the content of prospectuses regarding mineral companies) and Chapter 18 of the Hong Kong Listing Rules. With respect to resources and reserves the CPR has been conducted in recoginition of the "Australian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" (December 2004) published by the Joint Ore Reserves Committee ("JORC") of the Australasian Institute of Mining and Metallurgy, Australian Institute of Geoscientists and the Minerals Council of Australia (the "JORC Code"). The JORC Code establishes the nature of evidence required to ensure compliance with the JORC Code. The review was conducted with regard to the JORC Code because it is internationally recognised. In this report, all resource and reserve estimates are reported in accordance with the JORC Code and have been substantiated by evidence obtained from our site visits and observation and are supported by details of drilling results, analyses and other evidence and takes account of all relevant information supplied to us by company management and the directors of Glencore.

Also, the CPR recognises the *Code for The Technical Assessment and Valuation of Mineral and Petroleum Assets and Securities for Independent Expert Report, The VALMIN Code, 2005 Edition*, prepared by the VALMIN Committee, a joint committee of the Australasian Institute of Mining and Metallurgy.

MMC has made no independent review to determine whether Glencore holds any other key Colombian assets and other global assets of Glencore have not been valued as part of this report.

## 1.2 Scope of Work

MMC/MBGS carried out the following scope of work:

- Introductory meetings with Glencore's management and consultants to fully understand the business plan.
- Site visits and collection of data.
- Review and assessment of technical aspects of the Assets. The key elements of review included:
    - suitability of existing information supporting the Life of Mine and Business Plans;
    - geology reports and models;
    - resource and reserve estimates;
    - mining operations and proposed expansions;
    - coal preparation and handling;
    - coal transportation;
    - port operations;
    - environmental approvals and matters;
    - estimated capital and operating costs
    - identification of key project drivers and issues; and
    - valuation of Reserves.

- Preparation of this CPR in a format commensurate with the recommendations and guidelines of the UKLA, European Securities and Market Authority and the listing rules.

In accordance with ESMA Recommendations and the Prospectus Rules, only Proved and Probable Reserves have been valued.

### 1.3 Capability and Independence

This CPR was undertaken on behalf of MMC and MBGS by the signatories to this report, details of whose qualifications and experience are set out in **Annex A**. MMC and MBGS both operate as independent technical consultants providing resource evaluation, mining engineering and mine valuation services to the resources and financial services industry.

MMC and MBGS have both been commissioned as technical consultants to Prodeco for Calenturitas and La Jagua for a number of years and previously have produced JORC Code compliant Resources and Reserves Statements as well as Life of Mine ("*LOM*") plans for Prodeco. MMC/MBGS has also carried out assignments for potential investors for other nearby coal projects in the last three years. MMC/MBGS has considered the matter of potential conflict of interest concerning former work and former reviews and have concluded that they would not be conflicted in preparing this CPR, on the basis that it is being prepared as an independent report and their fees are not dependent on the outcome of the report.

None of MMC/MBGS or MMC/MBGS's staff or specialists who contributed to this report has any interest or entitlement, direct or indirect, in Glencore, Glencore International plc, Calenturitas, La Jagua or the outcome of this technical review in the contents of this CPR.

For the purposes of Prospectus Rule 5.5.3R(2) MMC and MBGS are responsible for this report as part of the Prospectus and declare that they have each taken all reasonable care to ensure that the information contained in this report is, to the best of their knowledge, in accordance with the facts and contains no omission likely to affect its import. This declaration is included in the Prospectus in compliance with item 1.2 of Annex I and item 1.2 of Annex III of the Prospectus Directive Regulation.

Drafts of this CPR report were provided to Prodeco and Glencore for review as to any material errors of fact, omissions or incorrect or unreasonable assumptions.

All opinions, findings and conclusions expressed in this CPR are those of MMC/MBGS (as relevant) except to the extent that such opinions, findings or conclusions are based upon, either in whole or in part, on information provided by Prodeco, Glencore or any 3rd parties.

### 1.4 Methodology

The reasonableness of the geological data and the technical assumptions used in Glencore's mine plans and financial models were the prime focus of this review.

The following points cover the main areas that the review focussed on and a brief description of the methodology used:

- Resources and Reserves: The JORC Code reports were reviewed for compliance and then the JORC Code totals were cross referenced to the sales tonnes in the business model;
- Mine Plans: Production assumptions, mining rate and production schedules were reviewed and matched against the Mine Plan model inputs;
- Capital and Operating Costs: The key inputs were cross referenced to an in-house MMC cost database for reasonableness; and
- Key Project Issues: Important issues which may have a material impact on the outcomes presented in the Mine Plan were identified during the review.

### 1.5 Technical Review Team

MMC and MBGS were joint project managers for this Independent Technical Review. A Technical Review Team (the "Team") was assembled including:

- Minarco-MineConsult ("MMC") – Joint project management, review of mining and coal reserves, and valuation of assets;
- McElroy Bryan Geology Services ("MBGS") – Joint project management, review of geology and coal resources, and coal quality;
- Bob Leach Pty Ltd ("B Leach") - Review of coal quality;
- Hansen Bailey Pty Ltd ("Hansen Bailey") – Review of environmental approvals and matters; and
- Inteplan Pty Limited – Review of infrastructure, including coal transport and Port.

We understand from discussions with Glencore that in parallel to these technical reviews, Glencore has commissioned reviews of the corporate, legal and marketing aspects of Prodeco. These reviews and their subject matter are not included in this CPR.

Qualifications of the team are listed in Annex A.

### 1.6 Site Inspection

In general, as part of ongoing technical consultants work for Prodeco, MMC, MBGS, B Leach and Inteplan have all visited the sites on numerous occasions and both signatories to this CPR have visited the mines on many occassions. More recently, for the specific purpose of this CPR, Inteplan and Hansen Bailey visited the sites in November 2010. MMC/MBGS believes the Technical Review Team is suitably familiar with the sites to act as Competent Persons.

### 1.7 Limitations and Exclusions

This CPR specifically excludes all aspects of legal issues, land titles and agreements, except such aspects as may directly influence technical, operational or cost issues. MMC/MBGS has not undertaken an evaluation of marketing or coal pricing forecasts. This CPR does not consider financial or commercial matters, including without limitation loan funding aspects, profit and loss, balance sheet, non-cash items, commodity prices, or exchange rates. MMC/MBGS reserves the right to change its view of any of the conclusions set out in this CPR should any of the fundamental information provided to MMC/MBGS materially change.

### 1.8 Materiality

MMC has adopted the Australian Accounting Standards Board AASB 1031 which proposes that the materiality of information or data can be assessed in terms of the extent to which its omission or inclusion could lead to changes in total value:

- equal to or less than five percent – immaterial;
- between five and ten percent – discretionary; and
- equal to or greater than ten percent – material.

These guidelines were used as a general guide. MMC/MBGS has not in all cases been able to determine the value impact of an issue when determining the materiality of an item.

### 1.9 Information Sources

The contents of this CPR have been created using data and information provided by or on behalf of Glencore. In MMC/MBGS's opinion, the information provided was reasonable and nothing discovered during the review suggested that there was any material error or misrepresentation in respect of that information. Information generated by third parties, consultants or contractors to Glencore has not been independently validated by MMC through the generation of new work or new data.

MMC accepts no liability for the accuracy or completeness of data and information provided to it by, or obtained by it from Glencore or any third parties, even if that data and information has been incorporated into or relied upon in creating this report. The report has been produced by MMC using information that has been provided to MMC as at the date stated on the cover page. MMC is under no obligation to update the information contained in the report at any time after the date shown on the cover page, though MMC reserves the right to change its view of any of the conclusions set out in this CPR should any of the fundamental information provided to MMC materially change.

### 1.10 Information About This Document

This CPR must be read in its entirety and must be read in light of the following.

- Its reliance upon information provided to MMC/MBGS by Prodeco, Glencore and others;
- The methodology and limitations and assumptions referred to throughout the report;
- The limited scope of the report; and
- Other relevant issues not within the scope of the report.

Save as provided under PR5.5.3(2) and to the fullest extent permitted under law, use of or reliance on this report by any third parties is at their sole risk and MMC/MBGS will not be liable for any liability, loss or damage suffered by a third party relying on this report regardless of the cause of action, whether breach of contract, tort (including negligence) or otherwise.

MMC/MBGS makes no warranty, express or implied in respect of this CPR, particularly with regard to any commercial investment decision made on the basis of this CPR. This CPR has been prepared without taking into account the objectives, financial situation or needs of any individual, entity or organization.

This document speaks only as of the date of the report and MMC/MBGS has no duty to update it.

### 1.11 Glossary of Terms

A glossary of terms is listed in Annex B.

### 1.12 Currency

All currency is United States dollars unless otherwise indicated.

### 1.13 Inherent Mining Risks

Coal mining is carried out in an environment where not all events are predictable.

Whilst an effective management team can identify the known risks and take measures to manage and mitigate those risks, there is still the possibility for unexpected and unpredictable events to occur. It is not possible therefore to totally remove all risks or state with certainty that an event that may have a material impact on the operation of a coal mine, will not occur.

It is therefore not possible to state with certainty, forward looking production and economic targets, as they are dependent on numerous factors that are beyond the control of MMC/MBCS and cannot be fully anticipated by MMC/MBGS. These factors include but are not limited to, site specific mining and geological conditions, the capabilities of management and employees, availability of funding to properly operate and capitalise the operation, variations in cost elements and market conditions, developing and operating the mine in an efficient manner. Unforeseen changes in legislation and new industry developments could also substantially alter the performance of any mining operation.

## 2. PRODECO OVERVIEW

MMC/MBGS is satisfied that Glencore management has established a capable management team at each operating asset. MMC/MBGS found that management understands the key drivers and risks at each of the coal mines and has developed credible mine operation plans that address these drivers and risks. Although projected results are subject to variances in accuracy and to risks typically associated with mining, the life of mine plans are based on sound resources, sound technology, supportable production levels, and adequate infrastructure. MMC/MBGS found nothing during the preparation of this CPR which would have a material impact (as defined in Section 1.8) upon the LOM forecast production or capital or operating costs of the assets.

### 2.1 Description of Assets

Glencore, through its wholly owned subsidiary Prodeco, owns and operates two open cut coal mines in Colombia; the Calenturitas and the La Jagua coal mines. The mines are located in an active mining region of the Department of Cesar, Colombia, approximately 100 km south of the city of Valledupar. The Puerto Prodeco is located some 220 km to the northwest of the project site on Colombia's Caribbean coast as shown in **Figure 1**. The two mines are separated by approximately 20 km. Prodeco holds exploration and mining title over both coal deposits.

The Calenturitas mine is currently producing at approximately 8.5 Mtpa with plans to expand to approximately 14 Mtpa by 2015 with a life of mine to 2031. The La Jagua mine is currently producing at approximately 7 Mtpa with a life of mine to 2029.

The mining method is open cut mining. This is based on multi-seam, steep dip, truck and shovel open cut coal mining initially in strips to ex-pit dumps with a progression over time to haulback waste dumping in-pit. Small scale underground mining was undertaken at La Jagua but is no longer operating. Trials of highwall entry methods, such as auger mining, have been conducted at Calenturitas. The auger mining trial has been successfully completed and approximately 200kt of coal has been produced. This exercise has shown good roof stability in the auger holes, confirmed seam consistency and manageable methane gas levels were encountered giving early confidence for future plans to extract additional coal not included in this valuation.

Infrastructure exists at each deposit and consists of a mine camp and facilities, workshops, offices and coal handling facilities. A rail spur was completed in 2008 to replace the previous system of hauling the coal to the coast at Santa Marta by road trucks. Coal from the nearby La Jagua mine is hauled by road trucks to Calenturitas where it is blended and train loaded out to Puerto Prodeco. The mined coal is crushed and shipped to market without any additional washing/processing.

Prodeco owns and operates its own rail haulage and port facilities. The rail line concession is held by Fenoco in which Prodeco holds a 39.76% share.

Most coal is currently sold to the international market as a thermal coal with approximately 0.5 Mt to 1.5 Mt of La Jagua coal sold as high volatile Pulverized Coal Injection ("PCI"). The coal has a track record with recognition in the market and its energy and relatively low sulphur content makes it attractive in the market place. Some of the quality characteristics of the La Jagua coal have allowed sales into the high volatile PCI metallurgical coal markets. The coal is marketed by Glencore, the owner of Prodeco.

The general locations of Prodeco's assets are shown in **Figure 1** and the more specific locations within the relevant coalfields for the various assets are shown in **Figure 2**

A more detailed description of the assets is provided in **Section 3** and **4.**

### 2.2 Summary of Geology

The coal deposits are part of Tertiary coal bearing sediments preserved in the Cesar-Rancheria basin. The basin is limited tectonically by the Oca Fault in the north and the Bucaramanga-Santa Marta Fault in the south and west. Two other structural features control the basin limits, an igneous and metamorphic complex to the northwest (Sierra Nevada de Santamarta) and the Perija Hills to the east which comprises Jurassic and Cretaceous sediments. These hills are an extension of the eastern Andean Mountains of Colombia (Cordillera Oriental).

The basin is subdivided into the Rancheria Basin in the north where the Cerrejon Mine is located and the Cesar Basin in the south with the Calenturitas and La Jagua deposits. Continuity of the coal measures between the two sub-basins has not been demonstrated.

The Calenturitas deposit is part of a regional synclinal structure (La Loma Syncline) and subsequent NE trending thrust faulting has resulted in the current distribution of numerous coal deposits in that area. Those deposits are now the focus of a number of open cut operations such as Pribbenow and El Descanso (Drummond), La Francia (Goldman Sachs) and El Hatillo (Vale). The tectonic setting is predominantly compressive with NE-trending thrust faults the main structural features. Extensive 2D seismic surveys in the Cesar Basin over the last 30 years have clearly indicated the structural control governing the distribution of the coal measure strata.

The La Jagua coal deposit is a synclinal basin formation approximately 5 km long and 2 km wide. The deposit is multi seamed and steeply dipping on both the north-west and south-east flanks. The centre of the deposit is much flatter with dips up to 5°. On the basis of borehole and mining records to date, faulting is not common and no major structures have been identified.

Both deposits are characterised with multiple dipping seams of variable thickness and quality. **Figure 4** and **Figure 9** show cross sections of the coal deposits.

### 2.3 Summary of Resources and Reserves

MMC/MBGS is of the opinion that Glencore understands the geology of the coal resource of each asset. This has enabled technical, operational and marketing personnel to identify opportunities particular to each asset and to implement strategies that maximise resource development within the framework of the total business.

Glencore has standardised the collection and treatment of geological, geotechnical and coal quality data for each asset. Each coal mine has a comprehensive geological and resource assessment team and computerised database and geological model accessible to technical staff.

Glencore's focus on understanding the geology of each asset is evident in the relatively high proportion (87%) of the total coal resources which are classified as Measured and Indicated Resources. Consequently, Glencore can exploit a large Coal Reserve base and integrate long term planning options between the various assets with a reasonable level of confidence.

Coal resources for each mine area were estimated after assessment of the quality, quantity and distribution of geoscientific points of observations and knowledge available for that site. The exploration data was in all cases collected from a variety of sources over the life of each project. Points of observation such as cored and non-cored drill holes, outcrops, geological mapping of open cut pits and previous underground mine workings and geophysical data provided a level of confidence of seam continuity throughout each resource block.

Additional information such as lithological and geotechnical logging of core samples, coal quality analyses from core samples and mine strip samples, downhole geophysical logging and sonic acoustic scanners were used to establish evidence of coal quality continuity and structural disturbance of the coal-bearing strata. Detailed validation of data stored in geological databases was carried out and checked for integrity against raw data, especially in relation to seam thickness and relative density. The process used to create geological computer models was critically reviewed and validated.

Resources were classified as Measured, Indicated and Inferred according to the level of confidence in the geological interpretation and were estimated within discrete resource blocks, on the basis of resource classification, geological and surficial limits. In general, Measured Resources were supported by data points of observation close enough (generally less than 500 m apart) to support a high level of confidence in the geological and/or grade continuity. Indicated Resources were supported by points of observation generally less than 1 kilometre apart and Inferred Resources, characterised by a lower level of confidence in seam continuity and quality, were typically supported by data points more than 1 kilometre apart.

JORC Code compliant Resources Statements were prepared for the assets as of 31st December 2010. The Reserves estimates for both assets were updated to the same date.

Proved and Probable Reserves are based on Measured and Indicated Resources and were estimated for each coal mine for which the appropriate level of planning has been carried out. Coal from each mine is not washed and hence no metallurgical factors were applied.

MMC/MBGS found that Glencore has developed mine layouts over areas of Measured and Indicated Resources, which generate forward schedules in the range of +20 years. This has been achieved by completing mining options studies and economic sensitivity analysis which optimise value whilst minimising mining risks.

The current Resources and Reserves estimates are summarised in **Table 2.1** following.

**Table 2.1 – Summary of Resources and Reserves (as of 31st December 2010)**

| Mine Project | Measured Resources (Mt) | Indicated Resources (Mt) | Inferred Resources (Mt) | Total Resources (Mt) | Proved Reserves (Mt) | Probable Reserves (Mt) | Total Opencut Coal Reserves (Mt) |
|---|---|---|---|---|---|---|---|
| Calenturitas | 170 | 160 | 70 | 400 | 113 | 96 | 209 |
| La Jagua | 117 | 23 | - | 140 | 106 | 22 | 128 |
| **Total** | **287** | **183** | **70** | **540** | **219** | **118** | **337** |

*Note: Reserves are a subset of Resources and are included in the Resources estimate.*

## 2.4 Mines and Projects

### *2.4.1 Mining Methods and Equipment*

MMC/MBGS inspected operations at each coal mine. MMC/MBGS observed that each coal mine operator uses well maintained, modern mining equipment and technology and mining methods typical for the international coal industry and suited to the targeted resources. The open cut mining equipment comprises hydraulic excavators loading off highway rear dump trucks. Support equipment includes bulldozers, drills, water trucks and graders.

MMC/MBGS is satisfied that:

- the major plant items are suited to their intended application at each coal mine;
- plant is well maintained; and
- historical costs and projected costs for repair and maintenance of plant are reasonable.

Glencore forecast capital expenditure for major plant replacement is consistent with the age/condition of equipment and industry practice.

### *2.4.2 Production Levels*

MMC/MBGS reviewed Glencore production forecasts for each coal mine. These forecasts are based on historical performance with increased production included only where clearly defined and realistic operating improvements or expansions have been identified and implemented. MMC/MBGS's review indicates that the overall production under Prodeco management will steadily increase in the period to 2016. This increase will be achieved through operating improvements plus additional output from the development of new mining areas and additional mining equipment. A summary of historical and planned production for the 5 year period from 2009 to 2014 is shown in **Table 2.2.**

**Table 2.2 – Saleable Coal Production**

| Mine Project | 2008 (Actual) Mt | 2009 (Actual) Mt | 2010 (Actual) Mt | 2011 (Plan) Mt | 2012 (Plan) Mt | 2013 (Plan) Mt | 2014 (Plan) Mt |
|---|---|---|---|---|---|---|---|
| Calenturitas | 4.7 | 5.7 | 5.2 | 8.5 | 10.5 | 12.8 | 13.3 |
| La Jagua | 4.4 | 4.8 | 4.8 | 7.1 | 7.1 | 7.1 | 7.0 |
| **Total** | **9.1** | **10.5** | **10.0** | **15.6** | **17.6** | **19.9** | **20.3** |

MMC/MBGS is satisfied that Glencore production forecasts are realistic and achievable.

For the 2010 production year Prodeco are below budget forecasts. Actual production for 2010 at Calenturitas was 5.2Mt against a budget target of 7.2 Mt. Actual production for 2010 at La Jagua was 4.8 Mt against a budget target of 7.3 Mt.

The following points contributed to the 2010 production statistics:

- Higher than expected groundwater inflows from near surface alluvial aquifers in Sector A at Calenturitas impacted on operations. This issue is now better understood by management and appropriate action to mitigate the risks has been taken. Further, the mine plans and cost forecasts appropriately account for this risk.
- There was a 100% increase in mine operating hours lost to wet weather compared to what was budgeted. This was due to record high rainfall, particularly during the second half of the year. Although a risk exists of a repeat of the higher than average rainfall occurring MMC/MBGS do not believe this would be an annual occurence which would impact on long term forecasts.
- The collective bargaining process in Colombia involves direct negotiations between the parties that can last for up to 40 calendar days. If no agreement is reached during this period, the union may opt to call a strike or to go to arbitration. In 2010 the collective bargaining negotiation with the CDJ union at La Jagua did not result in an agreement after the 40 day period and subsequently the union called a strike which lasted for an additional 38 days. At the end of the strike period an agreement was reached and a new collective bargaining agreement was reached which is effective until 2012.
- Due to high coal inventories in early 2010, Prodeco delayed the purchase of additional waste production fleet. Inventories were depleted when the high rainfall occurredhowever the additional fleet was not available to catch up production.

### *2.4.3 Management*

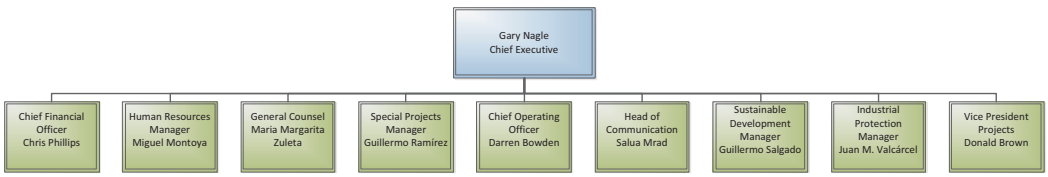
During the conduct of this review, MMC/MBGS project team members were in regular contact and have held numerous discussions with all levels of Prodeco management. Based on this contact, MMC/MBGS is satisfied that:

- Prodeco has established a capable management team at each of its coal mines; and

- coal mine management understands the key drivers and risks at each coal mine and have developed credible mine operation plans that address these issues.

A technical services group within Prodeco coordinates mine planning. This group comprises business development, geological, mining engineering and environmental management. Geological and mine planning functions are maintained at each coal mine and supplemented by outside consultants as required. Each coal mine maintains modern computer-based software for mine planning.

The reported organisation structure of Prodeco is shown below.



### *2.4.4 Manning Numbers*

**Table 2.3** summaries the number of employees and contractors at each of the key project locations.

**Table 2.3 – Current Manning Numbers**

| | La Jagua | Calenturiatas | Port | Rail | Admin | Total |
|---|---|---|---|---|---|---|
| Employees | 866 | 808 | 389 | 145 | 206 | **2,414** |
| Contractors | 1,222 | 1,143 | 505 | 42 | 30 | **2,942** |
| **Total** | **2,088** | **1,951** | **894** | **187** | **236** | **5,356** |

### *2.4.5 Health and Safety*

MMC/MBGS reviewed health and safety management systems and their implementation. MMC/MBGS found that an executive safety committee sets health and safety management policy within Prodeco. Prodeco has appointed a Prodeco group safety manager responsible for implementing overall safety strategy and safety management systems.

Direct health and safety responsibility rests with line management and, as is essential in the effectiveness of any system, relies on workforce involvement.

Prodeco undertakes regular audits, both internal and external, at each coal mine. These audits monitor and identify any improvement needs within the safety management systems.

As noted above, Prodeco requires independent operational and safety audits at each coal mine. Wherever these audits identify shortcomings, there is an auditable process in place for rectification and ongoing improvement in the standard of coal mine operations and safety. This process of ongoing audit and improvement is fundamental to a robust, effective and continuously maintained health and safety management system.

Safety performance in 2010 for Prodeco coal mines, expressed as lost time injury frequency rate, is below the average for the national coal industry.

### *2.4.6 Coal Processing*

MMC/MBGS observed that all ROM coal is crushed at each mine and is the loaded into trucks or trains without further processing. Coal is sold "unwashed", meaning there is no metallurgical treatment required to achieve a saleable product. The yield is therefore 100%.

### *2.4.7 Transport and Port*

Coal from the operating mines of Calenturitas and La Jagua is exported primarily through the port of Puerto Prodeco with some shipments through the Carbosan Port at Santa Marta. The coal is railed approximately 220 km to Puerto Prodeco in train sets owned and operated by Prodeco. The rail line is operated and maintained by Fenoco which has been granted the concession from Chiriguana to Santa Marta. Fenoco is owned by the producing coal companies in the Cesar region with Prodeco holding a 39.76% share. Drummond Coal owns 40.96% of Fenoco with the remainder held by Vale, Carboandes and Carbones del Cesar.

Puerto Prodeco is owned and operated by Prodeco and has the capacity to handle up to 17 Mtpa. The coal loading in this area of Colombia is currently undertaken by barge loading and crane transfer to ships. The Colombian Government has decreed that all coal ports are to implement direct ship loading techniques. The government has granted Prodeco a concession in Cienaga and Prodeco are undertaking a project to develop a new coal loading terminal, Puerto Nuevo, scheduled to commence operations in 2013. At that time the existing Puerto Prodeco will be closed down.

The rail and port operations of Prodeco have been planned to match the forecast throughput and Prodeco has exercised control of its future by:

- investing in Fenoco;
- developing facilities at La Jagua and Calenturitas to ensure the trains can be loaded as required;
- establishing its own rail operation;
- expanding the existing port to cope with the growth; and
- constructing a new port to meet forecast throughput and government requirements.

The assets are in generally good condition, and appear to be well maintained and operated.

### 2.5 Environmental Issues and Management

Hansen Bailey has carried out an environmental review of Glencore's Colombian coal assets including key environmental approval documentation pertaining to its mining operations and port facilities. They have determined environmental management at Prodeco is undertaken generally in accordance with its Environmental Policy. The Environmental Policy forms the foundation of its Environmental Management System (EMS) and describes its vision of environmental management for the mining operations.

The EMS's developed for the Prodeco operations are based on the principles of the ISO14001 international environmental standard. It should be noted that the port facility (Puerto Prodeco) is certified to ISO14001.

Prodeco has undertaken an environmental risk assessment to identify the potential high risk aspects and impacts associated with its activities. Relevant Environmental Management Plans ("EMPs") have been developed to mitigate potential adverse impacts as described in its EMP document. There was evidence of environmental training and general awareness of environmental issues amongst employees.

Environmental monitoring is undertaken in accordance with the relevant EMP which is approved by the Ministry of Environment, Housing and Land Development ("MAVDT"). MAVDT undertakes several site visits per year and reviews the environmental performance of the site against relevant criteria. Prodeco has established environmental monitoring systems to measure its performance and receives regular monthly reports on environmental aspects including surface water, groundwater and ecology. Air quality monitoring is managed by the Regional Environmental Authority ("REA").

There are currently five operating coal mines in the area surrounding Calenturitas, including El Hatillo, Pribbenow, El Descanso, La Francia and Calenturitas. REA commissioned a cumulative air quality impact assessment in 2009 to investigate the potential impacts on local residents and communities located in the area. Results from the assessment indicated that cumulative impacts from the five existing operating mines would adversely impact three local communities (Boqueron, Plan Bonito and El Hatillo). The REA has recommended that the identified communities to be impacted by mining be relocated. Discussions regarding the relocation strategy and responsibility are ongoing and these had not been finalised at the time of this review. A preliminary proposal outlining the shared responsibility between the five mining operations in the area has been put forward by REA. The preliminary proposal includes a methodology to determine the level of contribution of each mining operation. Calenturitas will be required to contribute to the relocation of these communities. The cost of the relocation has been included in the valuation of Calenturitas.

A Biodiversity Offset Management Plan has been developed and will be implemented over the life of the mining projects. It is anticipated that Calenturitas will be required to contribute up to USD 21 Million and La Jagua up to USD 15 Million towards the implementation of the Biodiversity Offset Strategy.

Prodeco has developed Mine Closure Plans for the operations which have been approved by MAVDT. The Mine Closure Plan is reviewed every five years in accordance with MAVDT. There is no rehabilitation security bond required for either La Jagua or Calenturitas.

MMC/MBGS found that Prodeco has developed environmental management systems generally based on international standards. The mines were inspected as part of this review. These inspections found:

- a high level of environmental awareness among senior Prodeco and coal mine staff;
- clear identification of most environmental issues;
- board-level reporting;
- active resolution of identified issues which could have material implications for mining; and
- a high standard of housekeeping.

### 2.6 Statutory Authorisations

Hansen Bailey reviewed the status of the statutory authorisations for the port facilities and mining operations. Prodeco currently holds all necessary leases and licences to cover exploration and mining activities. A summary of the status of the mining leases and authorisations is set out in the following **Table 2.4**.

**Table 2.4 – Prodeco Operations Approvals and Status**

| Doc. | Detail | Granted | Auth. | Comment | Expiry |
|---|---|---|---|---|---|
| **CALENTURITAS** | | | | | |
| **1.** | Mining Lease (ML) 044/89 | 03/07/2005 | Ministry of Mining and Energy (MME) | Mining Authority over 6,677 ha | 03/07/2035 |
| **2.** | Works Program (PTI) | 2005 | MME | Approval to extract up to 7 Million tonnes per annum (Mtpa) ROM Coal | Expires with ML |
| **3.** | PTI - Modification | Dec 2010 | MME | Proposal to extract up to 14.2 Mtpa ROM coal by 2019, submitted in June 2010, additional information provided in October 2010 | Will expire with ML 044/89 |
| **4.** | Environmental Management Plan | 2009 | MAVDT | Includes Environmental Management Plans for each aspect of the mining operation | Expires with ML |
| **5.** | Environmental Pollution Licence | 6/03/2009 | MAVDT | The Environmental Pollution Licence is consistent with the EMP's approval No. 0464 | Expires with ML |
| **LA JAGUA** | | | | | |
| **6.** | ML - CDJ 285-95 | 24/04/1997 | MME | Mining Authority over area identified as CDJ | 23/04/2027 |
| **7.** | ML - DKP 141 | 17/12/2004 | MME | Mining Authority over area identified as DKP | 17/12/2034 |
| **8.** | ML - HKT 08031 | 11/11/2008 | MME | Mining Authority over area identified as HKT | 10/11/2038 |
| **9.** | ML - CMU 109-90 | 25/09/1991 | MME | Mining Authority over area identified as CMU | 24/09/2014 |
| **10.** | ML - CET 132-92 | 23/09/1998 | MME | Mining Authority over area identified as CET | 23/10/2028 |
| **11.** | PTI | 12/04/2010 | MME | PTI approved in letter from MME reference 006954 for up to 7 Mtpa ROM coal from 2010 to 2027 | Expires with relevant ML |
| **12.** | Environmental Management Plan | 09/2008 | MAVDT | Includes 18 Environmental Management Plans for each aspect of the mining operation | Expires with relevant ML |
| **13.** | Environmental Pollution Licence | 18/12/2008 | MAVDT | The Environmental Pollution Licence is consistent with the EMP's approval No. 2375 | Expires with relevant ML |
| **PORT PRODECO** | | | | | |
| **14.** | Environmental Pollution Licence | 28/05/2009 | MAVDT | License Number 983 | Expires with the Port Concession |
| **15.** | Port Concession Resolution 097 | 1/03/2010 | MME | Provides for the ongoing use of the Port Facility, MME audit every 6 months to assess progress of New Port | 1/03/2011 |
| **NEW PORT** | | | | | |
| **16.** | Environmental Pollution Licence 0447 | 5/03/2010 | MAVDT | Provides approval of phase 1 up to a capacity of 35 Mtpa product coal, original Environmental Pollution Licence 0435 dated 02/03/09 modified | Expires with the Port Concession |
| **17.** | Port Concession, Resolution 333 | 4/08/2010 | MME | Approval for terrestrial and marine based activities | n/a |

**Table 2.5** summarises the terminology used in Colombia and for this review.

**Table 2.5 – Colombian Terminology**

| Item | Colombian (Spanish) | Abbreviation |
|---|---|---|
| Mining Lease | Titulo Minero | ML |
| Environmental Management Plan | Plan de Manejo Ambiental | EMP |
| Environmental Pollution Licence | Licencia Ambiental | EPL |
| Ministry of Mining and Energy | Ministerio de Minas y Energía | MME |
| Ministry of Environment, Housing and Land Development | Ministerio de Ambiente, Vivienda Y Desarrollo Territorial | MAVDT |
| Works Program | Programa de Trabajos e Inversiones | PTI |
| Regional Environmental Authority | Corpocesar an Corpamag | REA |

In MMC/MBGS's opinion:

- appropriate statutory authorisations are in place for each coal mine and relevant project;
- management is taking appropriate steps to maintain statutory authorisations for its coal mines and to obtain, where needed, new statutory authorisations for assets;
- the coal mines are generally operated in accordance with statutory authorisations and are not in material breach of those statutory authorisations. However, there was evidence that issues raised and recommendations made in previous government audits had not been fully implemented at Calenturitas. Prodeco are currently working through the outstanding recommendations. These outstanding items are minor and are not considered material; and
- nothing found during the preparation of the CPR indicated that statutory authorisations will not be renewed as they fall due.

## 2.7 Costs

### *2.7.1 Operating Costs*

A summary of historical cash cost for each of the operations from 2008 to 2010 are shown in **Table 2.6** and **Table 2.7.**

**Table 2.6 – Calenturitas Historic Operating Cash Costs**

| Activity | 2008 | 2009 | 2010 |
|---|---|---|---|
| Waste Mined (kbcm) | 38,334 | 54,434 | 42,491[(1)] |
| Coal Mined (kt) | 4,698 | 5,700 | 5,234 |
| Strip Ratio | 8.2 | 9.6 | 8.1 |
| Waste removal ($/t) | 17.61 | 19.88 | 19.52 |
| Coal mining ($/t) | 1.44 | 1.36 | 1.66 |
| Mining support ($/t) | 4.51 | 5.24 | 7.87 |
| Coal handling ($/t) | 0.81 | 0.41 | 0.49 |
| Admin & Infrastructure ($/t) | 1.39 | 1.63 | 2.19 |
| Contractor ($/t) | 0.04 | 0.00 | 0.00 |
| Rail & transport ($/t) | 9.38 | 6.18 | 6.08 |
| Port ($/t) | 5.29 | 5.47 | 4.81 |
| Royalty ($/t) | 11.35 | 11.72 | 6.53 |
| HO & Marketing ($/t) | 1.66 | 1.51 | 2.24 |
| **Total Operating Cost** | **53.48** | **53.40** | **51.39** |

*Note (1): Excludes Boxcut of 8,474 kbcm*

**Table 2.7 – La Jagua Historic Operating Costs**

| Activity | 2008 | 2009 | 2010 |
|---|---|---|---|
| Waste Mined (kbcm) | 23,616 | 36,990 | 30,829 |
| Coal Mined (kt) | 4,366 | 4,787 | 4,808 |
| Strip Ratio | 5.4 | 7.7 | 6.4 |
| Waste removal ($/t) | 12.76 | 17.40 | 21.76 |
| Coal mining ($/t) | 1.73 | 0.95 | 2.03 |
| Mining support ($/t) | 4.96 | 6.56 | 7.37 |
| Coal handling ($/t) | 1.16 | 1.34 | 1.48 |
| Admin & Infrastructure ($/t) | 2.06 | 2.54 | 3.02 |
| Rail & transport ($/t) | 16.71 | 10.39 | 9.74 |
| Port ($/t) | 5.23 | 5.37 | 4.78 |
| Royalty ($/t) | 6.26 | 6.24 | 4.33 |
| HO & Marketing ($/t) | 1.36 | 1.29 | 1.52 |
| **Total Operating Cost** | **52.23** | **52.08** | **56.03** |

Prodeco gave MMC/MBGS their current Business Financial Model for review and for use in generating valuations for Calenturitas and La Jagua. The Model is set up to value Calenturitas and La Jagua separately, or both Calenturitas and La Jagua as combined joint operations.

The Business Model is a time based spreadsheet model, allowing for operations from 2011 to 2030 inclusive with yearly time increments. In summary, the Business Model allows for:

- production schedules (mined, railed, shipped);
- mine equipment fleets, operating hours and productivities;
- labour requirements and hours;
- build up of all mine operating costs;
- coal rail, transport and port operating costs;
- equipment capital costs; both initial and replacements;
- non-mining capital costs (infrastructure, coal handling, administration, contractor mobilization);
- coal stocks and working capital calculations;
- depreciation and tax calculations;
- coal pricing and revenues;
- royalty;
- cash flows; and
- discounted cash flow ("*DCF*") and net present value ("*NPV*") analysis.

A summary of life-of-mine (LOM) average operating costs is given in **Table 2.8**.

**Table 2.8 – Average LOM Operating Cost**

| Activity | Calenturitas (US$/t) | La Jagua (US$/t) | Combined (US$/t) |
|---|---|---|---|
| Waste removal | $28.50 | $20.22 | $25.30 |
| Coal mining | $3.08 | $2.66 | $2.91 |
| Mining support | $3.15 | $3.73 | $3.38 |
| Coal handling | $1.04 | $0.75 | $1.02 |
| Admin & Infrastructure | $1.32 | $2.98 | $1.96 |
| Rail & transport | $3.35 | $5.78 | $4.09 |
| Port | $1.61 | $1.90 | $1.79 |
| Royalty | $10.97 | $11.03 | $11.01 |
| HO & Marketing | $0.96 | $1.40 | $1.14 |
| **Total Operating Cost** | **$53.99** | **$50.46** | **$52.60** |

In MMC/MBGS's opinion:

- the assumptions used in developing Prodeco's financial forecasts are reasonable; and
- the operating cost forecasts are realistic and achievable.

### 2.7.2 *Capital Expenditure*

Capital costs for each of Calenturitas and La Jagua were reviewed. The term "Initial Capital" refers to the investment required to bring the operations to their full forecast production level. This is spread over several years to match the build up and construction period. Replacement capital allows for the fact that the equipment life is shorter than the mine life and therefore when it is worn out allowance has been made in the model to purchase new equipment. Sustaining capital is a more general allowance for smaller capital items of lower cost (for example computers) that is required on an ongoing basis. A summary of all capital costs is given in **Table 2.9**.

**Table 2.9 – Capital Cost Estimates (US$k)**

| Item | Calenturitas (kUS$) | La Jagua (kUS$) | Combined (kUS$) |
|---|---|---|---|
| Intial Capital | | | |
| Waste Removal | $267,443 | $50,584 | $318,028 |
| Coal Mining | $26,454 | $4,620 | $31,074 |
| Mining Support | $10,675 | $7,347 | $18,022 |
| Coal Handling | $23,933 | $21,637 | $45,570 |
| Admin & Infrastructure | $24,735 | $24,567 | $49,302 |
| Rail & Transport | $9,061 | $4,539 | $13,600 |
| Port | $335,233 | $167,904 | $503,137 |
| HO & Admin Support | $4,331 | $2,169 | $6,500 |
| Total Initial Capital | $701,866 | $283,367 | $985,233 |
| Replacement Capital | | | |
| Waste Removal | $622,488 | $197,077 | $819,565 |
| Coal Mining | $87,183 | $28,419 | $115,602 |
| Mining Support | $54,613 | $24,514 | $79,127 |
| Total Replacements | $764,284 | $250,010 | $1,014,295 |
| Sustaining Capital | | | |
| Mining Support | $72,000 | $71,250 | $143,250 |
| Coal Handling | $18,000 | $18,000 | $36,000 |
| Admin & Infrastructure | $17,600 | $26,500 | $44,100 |
| Rail & Transport | $3,798 | $1,902 | $5,700 |
| Port | $3,398 | $1,702 | $5,100 |
| HO & Admin Support | $12,659 | $6,341 | $19,000 |
| Total Sustaining | $127,455 | $125,695 | $253,150 |
| Total Capital | $1,593,605 | $659,072 | $2,252,677 |

These expenditure estimates are planned to support each coal mine and to fund the development of projects and expansions.

MMC/MBGS found that capital expenditure for approved projects and coal mine expansions is supported by the appropriate level of feasibility study and engineering design.

The capital allowances made by Prodeco in the forecasts are appropriate and are in line with industry norms.

In MMC/MBGS's opinion, Prodeco's capital expenditure forecasts:

- reflect the current condition of equipment and infrastructure;
- allow for replacement of equipment and facilities as required;
- allow for the development of projects and upgrade of operations to bring new production online; and
- are reasonable and comparable with other coal mines in Colombia.

## 2.8 Issues and Risks

Coal mining has inherent risk, which is a function of the geological setting and mining methods. These inherent risks can be mitigated by sound management, however they cannot be totally removed. Prodeco has minimised the potential impact of these inherent risks to their overall business by building two mines with multiple pits and also by controlling the transport chain and over time improving this so it is more efficient and less prone to disruption.

MMC note the following potential issues:

- The depth of the Calenturitas pit (> 300 m) increases the risk of potential geotechnical issues in highwall and lowwall stability;
- Due to the proximity of the mines to several rivers the potential effects of flooding causing ingress of water are increased. Prodeco have reduced the risk through the construction of bunds around the mining areas;
- Failure to meet planned production levels caused by events such as higher than average rainfall or strikes will impact on cash flows;

- Geological risk is always present however with progressive exploration drilling and increasing in-pit exposures this risk is constantly being reduced;
- Political activity and government policies;
- Risk in the production build up period. Some items that may impact on the rate of production build up include construction of the new port facility, delivery of new mining equipment or staffing shortages; and
- Prodeco do not currently have approvals in place to implement the final stage of the river diversion at Calenturitas. Failure to gain approvals will impact on mining in Pit B.

MMC/MBGS is satisfied that none of these risks presents any significant threat to the assets of Prodeco because Prodeco:

- is aware of them;
- has addressed and is continuing to address them through prudent and diligent management; and/or
- has made appropriate allowance in its cash flow forecasts.

### 2.9 Synergies

There are significant synergy opportunities available within the Prodeco operations. In a general sense, these include economies of scale, sharing of expertise and blending synergies, all of which have been discussed elsewhere. Prodeco has realised these opportunities through:

- a flat management structure with low head office overheads. MMC/MBGS observed that the executive management team was aware of issues across the business and spent a significant portion of their available time with site management; and
- integrated production and marketing allowing key productivity drivers at each coal mine to be optimised with a focus on Prodeco's markets.

### 2.10 Sales and Marketing

MMC/MBGS reviewed exploration data, coal quality analysis, and mining practices and concluded that forecast product quality can be achieved.

The quality of the coal produced by Prodeco is typical for the relevant coal field. The rank of the coal is medium to high volatile bituminous. The coal mines have flexibility to produce to a broad range of specifications by controlling the seam mined, the mining horizon and coal blending. The transport process allows Prodeco to buy in coal and blend products to meet customer specification.

All coal from Calenturitas and La Jagua is sold raw into the export market with a major portion sold blended from both mines to meet a general energy target ranging from 11,100 Btu/lb to 11,500 Btu/lb on a gross, as received (gar) basis. Most coal from La Jagua however, is sold into higher energy markets above 12,000 Btu/lb gar.

Both coal sources have relatively similar thermal properties:

- Total sulphur typically 0.5% to 0.7% gar though both mines have some coal with sulphur in excess of 1% which is blended down to meet specifications. In addition to the high sulphur seams there are also coals with sulphur 0.4% or below;
- Chlorine 0.02% to 0.04% is low to moderate;
- HGI 44 – 48 indicates the coal is moderately hard but this does not impact adversely on grindability when combusted;
- Nitrogen 1.5% to 1.7% is moderate and acceptable in most export markets;
- Ash fusion (reducing condition) Initial Deformation Temperature (IDT) 1250ºC to 1,450 ºC and Flow Temperature 1,450ºC to 1,550ºC. La Jagua has slightly superior ash fusion characteristics likely due to lower calcium and sodium oxides in ash (1% to 2.5%) and (0.5% to 0.8%) respectively compared to Calenturitas (2% to 4%) and (0.8% to 1.5%) respectively though both scenarios are acceptable; and
- Silicon, aluminium and iron oxides in ash are respectively 50% - 57%, 18% - 23%, 9% - 12% for both mines.

### 2.11 Valuation of Reserves

#### *2.11.1 Methodology and Assumptions*

Each of the coal mines that contributes to Prodeco's cash flow forecasts have been valued separately and have been valued using discounted cash flow methods. The cash flows used are those provided by Prodeco in their LOM schedules

as modified by MMC/MBGS to allow for CPR specific requirements such as valuing only reserves and valuing Proved and Probable Reserves separately.

The key valuation assumptions are as follows:

- cash flows are ungeared and unescalated and are real values;
- cash flows have been discounted mid year;
- the valuation is carried out on real post-tax cash flows;
- cash flows have been allocated to Proved and Probable Reserves and valued separately;
- post tax real discount rates for a range of discount rates of 8% to 12% have been applied;
- long term coal prices were provided by Glencore and checked for reasonableness;
- it is assumed that all coal mined is processed and sold in the same year;
- rehabilitation is concurrent with mining and has been allowed for in the operating cost estimates;
- valuation is in USD; and
- plant has not been valued separately. As the plant and equipment is an integral component in the generation of the cash flows used to estimate the value of the Reserves, and the coal mines and projects have in general long lives, the value of the plant and equipment is therefore included in the Reserves value. Any residual value is not considered to be material.

In the Prodeco Business Model coal revenues are estimated by applying assumed future benchmark coal prices to the annual coal quantities given in the production schedules and adjusting for the annual specific energy of the mined coals. MMC/MBGS is not aware of any independent coal pricing and/or marketing studies being commissioned by Prodeco.

Based on specific energy and freight advantages coal sold from La Jagua generally experiences approximately a $6 premium above the bench mark price when sold into the thermal coal market. The premium is usually higher when the La Jagua coal is sold into the metallurgical market.

The benchmark prices and the adjusted prices for each deposit are given in **Table 2.10**.

**Table 2.10 – Coal Pricing**

| Sector | 2011 | 2012 | 2013 | 2014 | 2015 | LT |
|---|---|---|---|---|---|---|
| **Bench Mark Price** | | | | | | |
| La Jagua (@12,400BTU) | 101.54 | 115.83 | 115.09 | 123.76 | 124.00 | 102.00 |
| Calenturitas (@11,300 BTU) | 82.35 | 95.57 | 95.67 | 105.99 | 106.00 | 85.75 |
| **Average Coal Price** | | | | | | |
| La Jagua | 98.68 | 114.32 | 112.28 | 121.74 | 121.28 | 96.32 |
| Calenturitas | 80.36 | 93.09 | 94.00 | 103.99 | 104.48 | 81.59 |
| **Average Coal Price** | **88.70** | **101.64** | **100.54** | **110.12** | **110.23** | 88.38 |

*Supplied by Glencore*

### *2.11.2 Valuations*

Based on the methodology and assumptions set out in **Section 2.11.1**, a summary of the NPV valuation carried out by MMC/MBGS for a range of discount rates is included in **Table 2.11.**

A summary of financial analysis for both projects separately and for the combined projects is given in **Table 2.11**.

**Table 2.11 – Summary of Financial Analysis**

| Sector | Units | Calenturitas | La Jagua | Combined |
|---|---|---|---|---|
| **Production** | | | | |
| Peak Coal | Mtpa | ~14 | ~ 7.0 | ~ 21 |
| JORC Reserve | Mt | 209 | 128 | 337 |
| Strip Ratio | bcm/t | 10.0:1 | 6.5:1 | 8.7:1 |
| **Operating Costs** | | | | |
| Average | US$/t | $53.99 | $50.46 | $52.60 |
| **Capital Costs** | | | | |
| Life of Mine | US$ M | $1,594 | $659 | $2,253 |
| Net Present Value | | | | |
| @ 8% DR | US$ M | $2,786 | $2,780 | $5,566 |
| @ 10% DR | US$ M | $2,439 | $2,446 | $4,885 |
| @ 12% DR | US$ M | $2,148 | $2,172 | $4,320 |

**Table 2.12** shows the attributable value estimated for both Proved and Probable Reserves for each coal mine and project.

**Table 2.12 – Valuation of Attributable Reserves @ 10% DR**

| | Proved Reserve (US$M) | Probable Reserve (US$M) | Total Open Cut Coal Reserve (US$M) |
|---|---|---|---|
| La Jagua | $2,089 | $357 | $2,446 |
| Calenturitas | $1,775 | $664 | $2,439 |
| **Valuation** | **$3,864** | **$1,021** | **$4,885** |

### *2.11.3 Sensitivity Analysis*

The values of the coal mines have been tested seperately for sensitivity to movements in the key parameters of operating cost, production, capital cost and coal price.

- Operating Costs - Forecast operating costs are supported by operating history but the mine is expanding and a new port is yet to be built and therefore a 10% sensitivity test is considered appropriate;
- Production - Coal mines can be subject to relatively large short term production variations from plan. However, the likelihood of long term variation is largely mitigated by Prodeco's portfolio of assets, which reduces the impact of poor performance from any one asset and also allows production to be made up from other assets. A sensitivity of 10% is considered appropriate;
- Capital Cost - Prodeco have completed detailed capital cost forecasts. These forecasts, whilst appropriate and not likely to vary much in the short term, may be subject to variation in the medium to long term. Therefore a 25% sensitivity is considered appropriate; and
- Coal Price - Historically export coal prices have been highly variable with the variability largely driven by high barriers to industry entry and exit and a relatively inelastic demand. A 15% sensitivity is considered appropriate for export prices.

A summary of the effect of sensitivity of the valuation of reserves to these variables is included in **Table 2.13.**

**Table 2.13 – Sensitivity of Attributable Reserves Valuation**

| | Base Case Total Value US$M | Operating Cost (+10%) US$M | Production (-10%) US$M | Capital Cost (+25%) US$M | Coal Price (-15%) US$M |
|---|---|---|---|---|---|
| Valuation | $4,885 | $4,187 | $4,052 | $4,641 | $3,298 |

## 2.12 Summary of Conclusions

**Table 2.14 – Summary Table – Group Level**

MMC/MBGS has reviewed each of the Prodeco assets and has undertaken a valuation of the operating assets included in Prodeco's cash flow forecasts. MMC/MBGS concludes from this review:

- no material flaws, errors or omissions on the technical aspects of the Project were discovered during the review;
- the technical information reviewed is considered reasonable and has been prepared by professionals using appropriate software and industry standards;
- the geological and geotechnical understanding is of a sufficient level to support short, medium and long-term planning as appropriate;
- relevant miing authorities and environmental approvals are in place and new approvals are sufficiently advanced to achieve the proposed future production targets;
- the mine plans appropriately reflect geological and geotechnical understanding and account for predicted mining hazards;
- Prodeco's mining equipment (either in place or planned in the capital forecasts) is suited to its mine plans and supports the production levels forecast;
- the assumptions used in estimating coal and waste production volumes, working room, mining losses and dilutions are appropriate and reasonable;
- coal handling and other infrastructure including rail and port are capable of supplying appropriate quality products to satisfy the export markets at the forecast volumes;
- environmental issues are generally well managed and there are no issues that could significantly impede production nor are any prosecutions pending;
- the assumptions used in estimating operating costs are appropriate and reasonable, covering the spectrum of mining, processing, coal transport, and site administration associated in getting the coal to the point of sale;
- capital costs used in the financial models reflect the mine plans, development and construction schedules and the forecast production levels;
- key risks identified by MMC/MBGS are understood by management and appropriate action to mitigate these risks has been taken. Further, the mine plans and cost forecasts appropriately account for these risks; and
- the drivers of the production and cost forecasts are understood by management and are receiving the management focus required.

MMC/MBGS is of the opinion that the Colombian coal assets of Prodeco:

- represent a significant component of the Colombian coal industry;

- have mine plans over areas of Measured and Indicated Resources which generate forward schedules for more than 19 years;
- have a total value of Proved and Probable Reserves of approximately USD 4,885 million with 75% of this value associated with Proved Reserves; and
- have value that is most sensitive to changes in coal price with a 15% reduction in coal price decreasing reserve value by over 32 % to USD 3,298 million.

## 3. CALENTURITAS COAL MINE

### 3.1 Description

Calenturitas commenced operation over 10 years ago but only established a box cut with the mine remaining on a "care and maintenance" basis for a number of years. Full scale production re-commenced in early 2004 with the establishment of a strip mine on the eastern subcrop of the coal deposit.

The mining rate in 2011 is planned for 8.5 Mtpa increasing to approximately 14 Mtpa by 2015. This involves opening up and developing three active pits (called Sectors A, B and C) to provide the working area required to support this mining rate. This development strategy also ameliorates many of the possible mining risks such as flooding, short term geological issues and geotechnical instability. It also allows for blending of the different seams to provide uniform quality.

The Calenturitas River meandered across the northern part of the deposit from northeast to southwest and has been diverted in order to extract the coal. Infrastructure including workshops, offices and coal handling facilities is located in the central part of the deposit above the deeper coal.

The Calenturitas site visit confirmed the following:

- the equipment is owned and managed by Prodeco;
- some contractors are used for maintenance (such as Chaneme and Gecolsa which is known as a "MARC" or maintenance and repair contract);
- stage 1 of the river diversion, which covers the current mining limits of Sector A is in place. A second diversion is required for the mining of the southern portion of Sector B. Approvals for the second diversion have not been granted;
- sufficient land has now been purchased for the operational requirements;
- the railway loading facility is installed and working;
- Sector C is fully developed with haulback in to in-pit dumps;
- Sector A is being opened up;
- Sector B has yet to commence;
- additional equipment is required for the mine expansion; and
- new offices and workshops have just been completed.

### 3.2 Maps and Plans

The regional location of the mine is shown on **Figure 1**. Typical stratigraphy and a cross section showing the geological structure is shown on **Figures 3** to **Figure 4**.

### 3.3 Geology

#### *3.3.1 Regional Geology*

The Calenturitas coal deposit is part of Tertiary coal-bearing sediments preserved in the Cesar-Rancheria Basin. This basin is limited tectonically by the Oca Fault in the north and the Bucaramanga-Santa Marta Fault in the south and west. Two other structural settings control the basin limits, the igneous and metamorphic complex of Sierra Nevada de Santa Marta to the north and the Serrania de Perija to the southeast. These mountain ranges are an extension of Colombia's Eastern Cordillera.

The basin is subdivided into the Rancheria Basin in the north where Cerrejon Mine is located and Cesar Basin in the south which contains La Jagua and Calenturitas mines. Continuity of coal measures between the two sub-basins has not been demonstrated.

Outcrop in the Cesar-Rancheria Basin ranges from Jurassic to Quaternary in age. The unit containing the main coal seams is the Los Cuervos Formation of Palaeocene to early Eocene age. Los Cuervos Formation conformably overlies the Barco Formation which consists of massive sandstone units and the coal-bearing Los Cuervos Formation is unconformably overlain in some areas by coarse-grained sediments of the Cuesta Formation. This unconformable surface does not erode coal measures in the Calenturitas lease area, however in some areas to the west and southwest of Calenturitas, erosion of coal measure strata is apparent on the basis of seismic and borehole information. Alluvial sediments overly the coal-bearing strata at Calenturitas and these sediments are predominantly fine to coarse grained sand ranging from 5 m to 40 m thick. The Los Cuervos Formation is between 250 m and 1,600 m thick.

The tectonic setting is predominantly compressive with northeast trending thrust faults that divide the basin into a number of northeast-oriented elongate blocks within which the strata have been folded with the Los Cuervos coal seams brought

up to the surface by the thrust faults. (see **Figure 2**). Most of these blocks are the focus of a number of open cut operations such as Pribbenow, El Descanso, La Francia, El Hatillo, Calenturitas and La Jagua.

Extensive 2D seismic surveys have identified three main thrust structures that govern the distribution of coal measure strata into structural blocks – El Hatillo Fault; La Loma Fault; El Tigre Fault. Within each structural block, the disposition of the coal seams is controlled by the main fold structures – El Boqueron Syncline; La Loma Syncline (Calenturitas Mine); El Descanso Syncline; La Jagua Syncline.

#### *3.3.2 Site Geology*

The Calenturitas coal deposit occurs within a northeast-trending asymmetrical syncline, the axis of which plunges at less than 10º towards the southwest (see **Figure 2**). Seams dip at 5º to 10º on the northeastern nose of the syncline (Sector A). Seam dips increase along the limbs of the syncline to 18º along the eastern limb (Sectors C and D) and up to 55º on the western limb (Sector B). Coal seams are relatively flat-lying in the vicinity of the synclinal axis with dips less than 10º observed on seismic lines crossing the area.

The Calenturitas deposit is divided into sectors A to D based on geological/geographical and mining characteristics. The majority of exploration drilling has focussed on the northern and eastern margins (Sectors A, C and D) of the deposit and as a result, the seams in those areas are mostly classified as Measured Resources. Coal resources in the western area (Sector B) tend to be classified as Indicated or Inferred because of the effect of steeply dipping strata and further drilling is required in that area to elevate resource to Measured status. Resources within the deeper area of the syncline (close to the axis) have not been classified due to the lack of drill hole information in this area and these resources are not included in the current Calenturitas life of mine plan. These resources will be the subject of studies related to the potential for future underground mining.

**Figure 4** shows typical cross-sections through the deposit

#### *3.3.3 Stratigraphy*

The Los Cuervos Formation comprises three stratigraphic units; a lower unit containing interbedded claystone, siltstone and thin coal bands; a middle unit that contains the economic coal seams; an upper unit of primarily fine to medium grained sandstone interbedded with siltstones. A typical stratigraphic column for the Cesar Basin and geology of Calenturitas is presented in **Figure 3** shows how the coal seams at Calenturitas are correlated with those of the La Jagua deposit.

At Calenturitas, a total of 47 seams sub-crop along the western and eastern limbs of the syncline (C420 to C100). Seam C420 is the uppermost coal seam and Seam C199 is at the base of the main economic sequence, a stratigraphic interval approximately 245 m thick with 30 m of cumulative coal thickness. Seams C200 and C270 Upper and Lower are the thickest coal seams (average 4 m) and Seams C330, C310, C270, C260, C250, C210 and C200 contain an intra-seam stone parting greater than 0.10 m thick (see **Figure 5**). Some of the seams below Seam C199 (down to Seam C130) are considered to be economically mineable in parts of the deposit thickness. There are a number of thin seams below C130 however they tend to be quite thin (<0.5 m) and as they appear to have no economic significance, they have not been included in the Resource estimate.

#### *3.3.4 Structure*

The Calenturitas coal deposit is in an asymmetrical syncline aligned northeast to southwest and plunging at a shallow (<10°) angle towards the southwest. The seams dip at 5° to 10° on the northeastern nose of the syncline ("*Sector A*"). Seam dips increase along the limbs of the syncline to 14° and 18° along the eastern limb ("*Sector C*") and up to 50° on the western limb ("*Sector B*") and in the eastern limbs of Sector A. Coal seams are flat lying in the vicinity of the synclinal axis with dips less than 10° observed along seismic lines crossing the area. On the basis of seismic data at least five thrust faults (Maracas, Calenturitas, La Loma, La Francia and El Tigre) oriented NE-SW have been interpreted affecting the deposit. The Calenturitas Fault and The El Tigre Fault have the greatest impact on dip angles in the eastern flank of the syncline with fault throws greater than 50 m.

#### *3.3.5 Resources*

The JORC Code identifies three levels of confidence in the reporting of Resources categories as follows:

- Measured: that part of Coal Resources for which tonnage, densities, shape, physical characteristics, and coal quality can be estimated with a high level of confidence;
- Indicated: can be estimated with a reasonable level of confidence; and
- Inferred: can be estimated with a low level of confidence.

Coal Resources within the Calenturitas coal tenements total **400** million tonnes (Mt) to a depth in excess of 400 m, comprising:

- **170 Mt** of Measured Resources;

- **160 Mt** of Indicated Resources; and
- **70 Mt** of Inferred Resources.

**Table 3.1 – Calenturitas Gross and Net Attributable Resources (as of 31st December 2010)**

| Sector | Measured (Mt) | Indicated (Mt) | Inferred (Mt) | TOTAL (Mt) |
|---|---|---|---|---|
| A | 103.9 | 57.7 | 50 | 211.6 |
| B | 0.0 | 98.0 | 12 | 110.0 |
| C/D | 69.0 | 5.4 | 8 | 82.4 |
| **Totals** | **172.9** | **161.1** | **70** | **404** |
| **Rounded** | **170** | **160** | **70** | **400** |

Because of the shallow southwesterly plunge of the Calenturitas Syncline, the coal seams intersected in drill holes in Sector C and Sector B on the eastern and western limbs of the syncline respectively, may occur in the core of the syncline in the south of Calenturitas, but at considerable depth. This deep coal is considered to be an exploration target in the order of 300M-400M tonnes, provided the coal seams in Sectors B and C maintain their thickness at depth. This tonnage range was estimated on the basis of including all seams down dip of Sectors B and C where the dip of the seams is more than 10 degrees (to an approximate depth of 600m). Below that depth, within a zone proximal to the synclinal axis, where the strata dip is likely to be less than 10 degrees, Resource tonnages for the thicker seams only (seams C400 – 1.9m, C330 – 2m, C270 – 3m, C200/199 – 5m) were estimated. The potential tonnage is conceptual only as there is no drill data that confirms the thickness or even the presence of coal in the deeper part of the syncline, although historical seismic surveys, conducted by Ecopetrol and some private hydrocarbon exploration companies, have clearly delineated the shape of the synclinal fold at depth. There has been insufficient exploration, however, to define a Coal Resource and it is uncertain if further exploration will result in the determination of a Coal Resource.

### *3.3.6 Resource Coal Quality*

The geological model has utilised all the coal quality data obtained in previous exploration programs since the early 1990's. Average estimated in situ moisture was determined from total moisture analysis of core samples which had been sampled and placed in cold storage immediately after the sample was retrieved on the surface. A sub-sample of the crushed coal was analysed for relative density together with air dried moisture and ash from proximate analyses. Using the Preston-Sanders equation, the RD was converted to the average in situ moisture basis. Ash was also converted to in situ moisture basis.

The average coal qualities for each seam are presented in **Table 3.2**.

**Table 3.2 – Calenturitas Resource Coal Qualities by Seam (@moisture Insitu)**

| Seam | Density (t/cu.m) | Ash (%) is | Energy (BTU/lb) is | Total Sulphur (%) is | Volatile Matter (%)is | Total Moisture (%) is |
|---|---|---|---|---|---|---|
| C420 | 1.32 | 6.0 | 10,860 | 1.43 | 36.2 | 14.7 |

## 3.4 Mining

### *3.4.1 Reserves*

The process used in converting the Coal Resources into Coal Reserves included the following:

- The latest (October 2010) geological model was used to update the Life of Mine Plan;
- Pit limits incorporate physical boundaries such as river diversions (now completed), lease boundaries, sub crops of the coal seams and economic limits (determined as the coal seams get deeper);
- Appropriate and reasonable allowances were made for mining recovery; losses and dilution for the proposed equipment and past experience;
- Coal is not washed and hence no metallurgical factors were applied; and
- Based on the level of confidence in the mine planning, all of the Indicated Resources within the practical pit shell are classified as "Probable Reserves" and the Measured Resources within the practical pit shell are classified as "Proved Reserves". Inferred Resources were not included in the Reserves.

The difference between the Measured and Indicated Coal Resources (330 Mt) and the Coal Reserves (209 Mt) is explained by the following:

- there are geological and mining losses and dilution gains in the Reserves estimation;
- minimum coal seam thickness rules have been applied in estimating Reserves; and
- the Measured and Indicated Resource polygons extend beyond the practical pit shell in some instances.

The review and cross reference against the JORC Code check list showed no material omissions and confirmed that the reserve estimating process is in compliance with JORC guidelines.

Total Coal Reserves are **209 Mt** including 113 Mt of Proved Coal Reserves and 96 Mt of Probable Coal Reserves. The average coal quality is 11,112 BTU/lb (ar), ash 7.2% (ar) and sulphur 0.6% (ar). As received moisture is 12%. Coal Reserves are classified based on the level of detail completed in the mine planning and also the level of confidence in the Resources. Coal Resources are reported inclusive of Coal Reserves (that is, Coal Reserves are not additional to Coal Resources).

**Table 3.3 – Calenturitas Gross & Attributable Coal Reserves (as of 31st December 2010)**

| Date | Proved (Mt) | Probable (Mt) | Totals (Mt) |
|---|---|---|---|
| **Reserves 31st Dec 2010** | **113** | **96** | **209** |

### *3.4.2 Mining Operations*

The Calenturitas coal deposit can be characterised as a deep, multiple seam, sub-cropping and steep to moderately dipping synclinal basin. The dipping nature of the coal structure makes it suitable for excavation using conventional open cut mining methods that initially excavate low strip ratio sub-cropping coal followed by deeper coal mining that progresses from one end of the deposit to the other.

A combinatation of small and large hydraulic excavators (100 t - 550 t) are used to load overburden into off highway rear dump trucks which haul the material to a combination of inpit and expit dumps.

Coal mining is by a combination of hydraulic excavators working in tandem with dozers. Medium sized backhoes excavate the overburden and interburden to near the contacts between waste and coal. Smaller dozers or flat bladed small hydraulic excavators clean the waste materials from the coal roof contact. The care taken in this method determines the amount of both loss and dilution. Finally, excavators dig the waste material which has been heaped by the dozers.

In determining the pit layout Prodeco has made considerations for working room, slope angles, safety considerations, haul road designs, production requirements and materials balance. All pits have been designed to operate with ramp access developed in the advancing faces, these ramps will carry all coal haul trucks to the surface and waste trucks either to the surface or to benches with direct access to the horizontal haul back roads to the in-pit waste dumps.

Coal is hauled to the ROM pad located at the current coal handling facility.

### *3.4.3 Production Schedules*

Key production scheduling criteria included:

- mining from the three pits at the same time;
- nominal 3 months in-pit coal inventory; and
- maximum coal production of 14.3 Mtpa (9.5 Mtpa from Sector A, 2.0 Mtpa from Sector B and 2.8 Mtpa from Sector C).

The mine scheduling blocks have been sequenced into a logical mining progression. All pits have been sequenced with a layback angle of 11°-15° on the advancing face. The resulting waste and coal production schedule is given in summary in **Table 3.4**.

**Table 3.4 – Calenturitas Waste and Coal Production**

| Seam | Waste (Mbcm) | ROM Coal (Mt) | Strip Ratio (bcm/t ROM) | ROM Energy @12.5% moist. (BTU/lb) |
|---|---|---|---|---|
| 2011 | 90.7 | 8.5 | 10.7 | 11,027 |
| 2012 | 102.8 | 10.5 | 9.8 | 11,006 |
| 2013 | 109.7 | 12.8 | 8.6 | 11,102 |
| 2014 | 127.7 | 13.3 | 9.6 | 11,086 |
| 2015 | 133.4 | 13.6 | 9.8 | 11,138 |
| 2016 | 133.6 | 14.0 | 9.6 | 11,132 |
| 2017 | 134.2 | 14.2 | 9.5 | 11,114 |
| 2018 | 134.8 | 14.1 | 9.6 | 11,150 |
| 2019 | 133.2 | 14.3 | 9.3 | 11,158 |
| 2020 | 135.2 | 14.1 | 9.6 | 11,131 |
| 2021 | 133.0 | 14.0 | 9.5 | 11,137 |
| 2022 | 127.3 | 12.1 | 10.5 | 11,149 |
| 2023 | 118.7 | 11.4 | 10.4 | 11,107 |
| 2024 | 116.2 | 10.9 | 10.7 | 11,082 |
| 2025 | 105.6 | 8.6 | 12.3 | 11,125 |
| 2026 | 105.7 | 8.5 | 12.4 | 11,053 |
| 2027 | 88.8 | 8.7 | 10.3 | 11,040 |
| 2028 | 62.7 | 5.3 | 11.4 | 11,097 |
| **Total** | **2,093.3** | **208.8** | **10.0** | **11,112** |

*Note: Additional non JORC Reserve in the LOM Pit shell could potentially extend mine life by approximately 3 years*

### *3.4.4 Mining Equipment*

Large production equipment currently operates on a 7-day, 2 x 12-hour roster with 3 panels. Although equipment is scheduled to work 7 days at 24 hours per day, there are many factors that reduce the actual operating time.

**Table 3.5** shows the typical main equipment types and numbers operating at Calenturitas.

**Table 3.5 – Calenturitas Fleet Numbers**

| Category | | Size | 2010 |
|---|---|---|---|
| Budget Coal | | Mt | 7.2 |
| Budget Waste | | Mbcm | 67.0 |
| **Waste Equipment** | **Specification** | | |
| Excavators | O&K RH340 | 34 cu.m | 1 |
| | EX 3600 | 23.5 cu.m | 5 |

### 3.5 Coal Handling & Processing

Calenturitas coal is not washed; there is no wash plant for either Calenturitas or La Jagua coal. ROM coal is sized and sold as product coal.

ROM coal from the Calenturitas mine is truck dumped into a 320 t hopper and fed through both primary and secondary sizing, weighed, sampled and stacked via a linear stacker onto the product stockpile at a rate of up to 3,000 tph. The stockpile is designed to hold 80,000 t of live coal in two grades. Dozer pushout of the pile will enable up to 400,000 t of product coal to be stockpiled.

A new truck dump area will be operational in 2011 with a 60 t hopper feeding to one of two radial stackers onto the product stockpile. Two grades of coal with 30,000 t live capacity for each grade (60,000 t total) can be stockpiled. Dozer pushout can increase the stockpile to 350,000 t.

Beneath the stockyard is a 4,000 tph reclaim conveyor fed by eight valves which can be controlled to blend the coal being loaded into the trains. Coal is weighed and sampled before entering a 360 t surge bin above the rail loadout. A Coalscan device is fitted to the base of the inclined belt and provides instantaneous quality control.

A 65 t batch weigh bin prepares the coal for the final loading into the rail wagons.

There are stockpiles at the mine to facilitate blending and to smooth fluctuations in coal supply due to weather and interruptions to the continuity of coal supply due to equipment maintenance and other interruptions.

There are variations in coal quality between each seam and between each pit. Blending is achieved by:

- mining from different pits during the one shift;
- mining from different seams;
- blending at the crusher;
- blending on the stockpile before the train is loaded; and
- further blending at the port(s).

### 3.6 Long Term Prospects

The Calenturitas deposit has to a large extent been optimised with limited upside in extending the economic pit limits or the annual mining rate. There are opportunities to mine from the high wall with underground techniques such as highwall miners, augers and traditional underground mining. These methods have not been examined in the current mine plan.

# 4. LA JAGUA COAL MINE

## 4.1 Overview

The La Jagua coal deposit is contained within an isolated, elongated basinal structure (La Jagua Syncline) and is typified by the presence of a prominent hill (Cerro de Piedra) overlying the coal reserves in the southern part of the deposit.

La Jagua had many local producers operating in the deposit during the 1990's. Five years ago there were three companies producing coal out of the La Jagua deposit; Carbones del Caribe ("*CD*"), Concorcio Minero Unido ("*CMU*") and Carboandes ("*CA*"). Prodeco purchased these leases and consolidated what were three different mine plans into a single operation which provided the opportunity to develop a mine plan that delivered the maximum recovery of coal otherwise lost in the boundary between each lease.

Prodeco bought the main lease of the deposit and established the company Carbones de La Jagua ("*CDJ*") in 2005. In 2006, Prodeco purchased CMU and in 2007 the CA Lease was acquired and the new company Carbones El Tesoro ("*CET*") was formed. Each company previously developed separate areas of the deposit which created the South Pit , North Pit, El Tesoro Pit and the CMU Pit. CDJ/CMU/CET now operates all three areas as one operation.

Prodeco mines La Jagua in combination with the other Prodeco coal deposit, Calenturitas, located 20 km west of La Jagua. By operating both deposits under similar management and pooling resources, costs can be reduced and revenue can be optimised by blending coal.

The target production from the La Jagua deposit is 7 Mtpa. The mine is being developed from the north to south using Caterpillar haul trucks loaded by O&K excavators. The entire deposit (except for a small wedge in the north) will be mined with underburden on the western side due to geotechnical constraints. Mining under the Tucuy River will commence in 2014. New offices and workshop facilities are currently being built and will be completed early 2011.

The mining sequence is based on haulback mining progressing south along the length of the deposit. This allows in-pit dumping, thereby minimizing ex-pit dump size. This also results in a better final landform because more material is backfilled into the mined out areas.

Coal is hauled from the pit to the ROM stockpile were it is stockpiled according to coal quality. Coal is crushed to size and loaded to road trucks where it is hauled to Calenturitas for blending and train load out for transport to the port. The coal is not washed.

Most of the product coal is primarily sold on the international market as a thermal coal with approximately 0.5 Mt to 1.5 Mt of La Jagua coal sold as high volatile PCI. The coal has a track record with recognition in the market and its energy and relatively low sulphur content makes it attractive in the market place. Some of the quality characteristics of the La Jagua coal would lend it to potential sales into the high volatile PCI markets. The coal is marketed by Glencore, the owner of Prodeco.

## 4.2 Maps and Plans

The regional location of the mine is shown on **Figure 1**. Typical stratigraphy and a cross section showing the geological structure is shown on **Figures 9** and **Figure 10**.

## 4.3 Geology

### *4.3.1 Site Geology*

La Jagua is a multi-seam coal deposit in a northeast-oriented synclinal basin structure, approximately 5km long and 2km wide. The deposit dips steeply on the northwest and southeast flanks. The centre of the deposit is flatter with dips up to 5 degrees. On the basis of borehole and mining records to date, two faults have been identified within the deposit, La Victoria and La Nueva faults. La Victoria is a southwest-trending normal fault with a throw up to 20 m parallel to and close to the syncline axis. La Nueva Fault has been interpreted from drill hole data and occurs to the west of La Victoria Fault and has a throw up to 10 m. A series of geological cross sections, illustrating the synclinal shape and distribution of coal seams are presented in **Figure 9**. A significant topographic feature which impacts on the open cut strip ratio is the hill in the southern half of the deposit (Cerro de Piedra).

### *4.3.2 Stratigraphy*

A typical stratigraphic column for Cesar basin and geology of La Jagua is illustrated in **Figure 2** and a coal seam correlation with Calenturitas is shown on **Figure 3**.

A total of 23 seams with a cumulative thickness of approximately 35 m occur within the La Jagua deposit sub cropping along the western and eastern limbs of the syncline. Seam M0 is the uppermost coal seam and Seam M45 is at the base of the main economic sequence – a stratigraphic interval approximately 200 m thick. Seam M15 is the thickest coal seam (average 5m) and seams M2 and M3 contain a thin intra-seam stone band.

#### 4.3.3 Resources

Coal Resources within the La Jagua area total **140** million tonnes (Mt) comprising:

- **117 Mt** of Measured Resources;
- **23 Mt** of Indicated Resources; and
- **There are no Inferred** Resources.

**Table 4.1 – La Jagua Gross and Net Attributable Resources (as of 31st December 2010)**

| Sector | Measured (Mt) | Indicated (Mt) | Inferred (Mt) | TOTAL (Mt) |
|---|---|---|---|---|
| Totals | 117.2 | 23.1 | 0.0 | 140.3 |
| **Rounded** | **117** | **23** | **0** | **140** |

#### 4.3.4 Resource Coal Quality

The average estimated in situ moisture was determined from total moisture analysis of core samples which had been sampled and placed in cold storage immediately after the core reached the surface. A sub-sample of the crushed coal was analysed for relative density together with an air dried moisture and ash from proximates. Using the Preston Sanders equation, the RD was converted to the average in situ moisture basis at 7.5%. Ash was also converted to 7.5% moisture basis.

Average coal qualities for each seam are presented in **Table 4.2**.

**Table 4.2 – La Jagua Resource Coal Qualities by Seam (@ 7.5% moisture ar)**

| Seam | Density (t/cu.m) | Ash (%) | Energy (BTU/lb) | Total Sulphur (%) | Volatile Matter (%) |
|---|---|---|---|---|---|
| M00 | 1.32 | 4.2 | 12,460 | 1.3 | 38.8 |
| M01 | 1.36 | 8.6 | 11,750 | 1.1 | 38.0 |
| M02U | 1.32 | 2.5 | 12,673 | 0.6 | 38.3 |
| M02L | 1.34 | 7.6 | 12,039 | 3.8 | 38.5 |
| M03U | 1.31 | 2.8 | 12,795 | 0.5 | 38.8 |
| M03A | 1.35 | 5.8 | 11,927 | 0.8 | 37.5 |
| M03B | 1.35 | 7.6 | 12,072 | 0.9 | 36.7 |
| M04 | 1.33 | 5.0 | 12,439 | 2.4 | 39.7 |
| M05 | 1.30 | 2.8 | 12,798 | 0.8 | 38.6 |
| M08 | 1.33 | 4.6 | 12,235 | 0.9 | 37.4 |
| M09 | 1.34 | 7.5 | 12,033 | 0.8 | 35.8 |
| M10 | 1.30 | 2.6 | 12,777 | 0.9 | 37.7 |
| M11 | 1.33 | 6.0 | 12,265 | 2.3 | 39.1 |
| M15 | 1.30 | 2.4 | 13,068 | 0.4 | 37.4 |
| M17 | 1.34 | 6.6 | 12,126 | 0.6 | 36.4 |
| M20 | 1.32 | 4.0 | 12,764 | 0.4 | 36.9 |
| M25 | 1.32 | 4.2 | 12,717 | 1.0 | 36.8 |
| M27 | 1.48 | 23.1 | 9,795 | 0.5 | 27.5 |
| M28 | 1.37 | 9.1 | 11,596 | 0.8 | 37.4 |
| M30 | 1.33 | 5.7 | 12,407 | 0.5 | 36.1 |
| M35 | 1.30 | 3.0 | 12,988 | 0.7 | 36.7 |
| M40 | 1.32 | 4.7 | 12,718 | 1.1 | 38.3 |
| M45 | 1.30 | 2.2 | 13,071 | 0.6 | 37.3 |
| **Average** | **1.31** | **3.8** | **12,741** | **0.8** | **37.4** |

### 4.4 Mining

#### 4.4.1 Reserves

The process used in converting the Coal Resources into Coal Reserves included the following:

- The latest (October 2010) geological model has been used to update the Life of Mine Plan;
- The mine design includes all coal in the basin;
- The side slopes have been flattened to allow for stability. This means some waste material below the lowest coal seam has to be mined;
- Pit limits incorporate physical boundaries such as river diversions, lease boundaries, sub crops of the coal seams and economic limits (determined as the coal structure gets deeper);
- Appropriate and reasonable allowances have been made for mining recovery; losses and dilution considering the proposed equipment and past experience;

- Coal is not washed and hence no metallurgical factors have been applied; and
- All of the Indicated Resources within the practical pit shell are classified as "Probable Reserves" and the Measured Resources within the practical pit shell are classified as "Proved Reserves". There are no Inferred Resources.

The difference between the Measured and Indicated Coal Resources (140 Mt) and the Coal Reserves (128 Mt) is explained by the following:

- geological and mining losses and dilution gains in the Reserves estimation;
- a small portion of Resource coal falling outside the practical pit shell; and
- minimum thickness rules being applied in estimating Reserves.

Coal Reserves total **128 Mt** comprising 106 Mt of Proved and 22 Mt of Probable Coal Reserves as shown in **Table 4.3.**

The average strip ratio over the mine life is 6.6 bcm/ tonne. The average coal quality is 12,154 BTU/lb (ar), ash 8.4% (ar) and sulphur 0.78% (ar). As received moisture is estimated at 8.0%. Coal Reserves are classified based on the level of detail completed in the mine planning and also the level of confidence in the resources. Coal Resources are reported inclusive of Coal Reserves.

**Table 4.3 – La Jagua Gross & Attributable Coal Reserves (as of 31st December 2010)**

| Date | Proved (Mt) | Probable (Mt) | Totals (Mt) |
|---|---|---|---|
| Coal Reserves 31st December 2010 | 106 | 22 | 128 |

### *4.4.2 Mining Operations*

The La Jagua coal deposit consists of 23 seams and can be characterised as a deep, multiple seam, sub-cropping and steep to moderately dipping synclinal basin. The dipping nature of the coal structure makes it suitable for excavation using conventional open cut mining methods that initially excavate low strip ratio sub-cropping coal followed by deeper coal mining that progresses from one end of the deposit to the other.

A combinatation of small and large hydraulic excavators (100 t - 550 t) are used to load overburden into off highway rear dump trucks which haul the material to a combination of in-pit and ex-pit dumps.

Coal mining is by a combination of hydraulic excavators working in tandem with dozers. Medium sized backhoes excavate the overburden and interburden to near the contacts between waste and coal. Smaller dozers or flat bladed small hydraulic excavators will clean the waste materials from the coal contact. The care taken in this method determines the amount of both loss and dilution. Finally, excavators dig the waste material which has been heaped by the dozers.

In determining the pit layout Prodeco have made considerations for working room, slope angles, safety considerations, haul road designs, production requirements and materials balance. All pits have been designed to operate with ramp access developed in the advancing faces, these ramps will carry all coal haul trucks to the surface and waste trucks either to the surface or to benches with direct access to the horizontal haul back roads to the in-pit waste dumps.

### *4.4.3 Production Schedules*

All pits have been sequenced with a layback angle of 11°-15° on the advancing face. The resulting waste and coal production schedule is given in summary in **Table 4.4**.

**Table 4.4 – La Jagua Waste and Coal Production**

| Seam | Waste (Mbcm) | ROM Coal (Mt) | Strip Ratio (bcm/t ROM) |
|---|---|---|---|
| 2011 | 47.1 | 7.1 | 6.6 |
| 2012 | 49.7 | 7.1 | 7.0 |
| 2013 | 49.6 | 7.1 | 7.0 |
| 2014 | 53.9 | 7.0 | 7.7 |
| 2015 | 54.5 | 7.1 | 7.7 |
| 2016 | 54.5 | 7.2 | 7.6 |
| 2017 | 54.4 | 7.0 | 7.8 |
| 2018 | 54.7 | 7.1 | 7.7 |
| 2019 | 54.6 | 7.1 | 7.7 |
| 2020 | 54.5 | 7.0 | 7.8 |
| 2021 | 52.1 | 7.0 | 7.4 |
| 2022 | 52.0 | 7.0 | 7.4 |
| 2023 | 45.0 | 7.0 | 6.4 |
| 2024 | 40.9 | 7.1 | 5.8 |
| 2025 | 35.0 | 7.1 | 4.9 |
| 2026 | 30.0 | 7.1 | 4.2 |
| 2027 | 25.0 | 6.0 | 4.2 |
| 2028 | 24.0 | 6.0 | 4.0 |
| 2029 | 7.5 | 2.9 | 2.6 |
| **Totals** | **839.9** | **128.2** | **6.5** |

### *4.4.4 Mining Equipment*

Large production equipment currently operates on a 7-day, 2 x 12-hour roster with 3 panels.

**Table 4.5** shows the typical main equipment type and number operating at La Jagua.

**Table 4.5 – La Jagua Fleet Numbers**

| Category | | Size | 2010 |
|---|---|---|---|
| Budget Coal | | Mt | 7.3 |
| Budget Waste | | Mbcm | 49.5 |

### 4.5 Coal Handling & Processing

La Jagua coal is not washed; there is no wash plant for either La Jagua or Calenturitas coal. ROM coal is sized and sold as product coal. There is no rail connection between La Jagua and Calenturitas. The coal from La Jagua is generally trucked 20 km to Calenturitas.

Prodeco is currently relocating and upgrading the La Jagua ROM stockpiles at Las Flores with new primary and secondary sizing and an overhead bin for truck loading scheduled to be operational in early 2011. The bin has been designed to batch weigh the coal and load 35 t, 50 t and 70 t trucks. Additionally, the National Highway between La Jagua and Calenturitas is to be fully sealed by July 2011 to improve the truck cycle time. A new contract for the coal haulage is being negotiated and will include the required truck fleet to support the proposed throughput.

The product stockpiles at Calenturitas facilitate blending and smoothe fluctuations in coal supply due to weather and interruptions to the continuity of coal supply. There are variations in coal quality between each seam and between each pit and blending is achieved in a similar fashion as described for Calenturitas in **Section 3.5**.

### 4.6 Long Term Prospects

The La Jagua deposit has to a large extent been optimised with limited upside in extending the economic pit limits or the annual mining rate.

# 5. PORT AND RAIL

## 5.1 Overview

Coal from the operating mines of Calenturitas and La Jagua is exported primarily through the port of Puerto Prodeco with some shipments through the Cabosan Port at Santa Marta port. The coal is railed approximately 220 km to Puerto Prodeco in train sets owned and operated by Prodeco. The rail line is operated and maintained by Fenoco which has been granted the concession from Chiriguana to Santa Marta. Fenoco is owned by the producing coal companies in the Cesar region with Prodeco holding a 39.76% share. Drummond Coal owns 40.96% of Fenoco with the remainder held by Vale, Carboandes and Carbones del Cesar.

Puerto Prodeco is owned and operated by Prodeco and has the capacity to handle up to 17 Mtpa. The coal loading in this area of Colombia is currently undertaken by barge loading and crane transfer to ships. The Colombian Government has decreed that all coal ports are to implement direct ship loading techniques. The government has granted Prodeco a concession in Cienaga and Prodeco are undertaking a project to develop a new coal loading terminal, Puerto Nuevo, scheduled to commence operations in 2013. At that time the existing Puerto Prodeco will be closed down.

## 5.2 Rail

### *5.2.1 Fenoco Track*

Fenoco is a company incorporated to hold the rail concession from Chiriguana to Santa Marta. Currently, the only traffic on the rail line is coal transported from the Cesar region to the ports of Rio Cordoba, Drummond and Puerto Prodeco for various coal companies which are also shareholders of Fenoco.

The Fenoco main line is a narrow gauge line (914 mm) covering a distance of approximately 200 kms (excluding Calenturitas spur). The various mines and ports are connected to the main line at various points. The actual main line has been and is continuing to be upgraded; initially through the construction of sidings to increase its capacity and ultimately through the construction of a parallel railroad. The construction phases are being carried out by Fenoco. The original timetable for construction of the parallel line has been delayed for a number of reasons including approval processes. **Figure 12** shows the expected track configuration in 2011 when existing duplications are connected.

An area known as Sector 2 from km 865 to km 922 (57 km) does not have an environmental licence for construction due to encroachment by local communities. A number of alternative rail operation scenarios are being considered and negotiated with the government to ensure that adequate capacity is available when required through an alternative alignment for the second line through Sector 2 or through placement of additional passing loops.

In the sector from Puerto Drummond to Puerto Prodeco a curfew restriction was imposed on the operation and trains are not allowed to use that section between 2300 hr and 0500 hr, which limits the operations of Prodeco into their port. This will be immaterial in 2013 when the new port becomes operational as it branches off the main line before the Drummond port. In the last two quarters of 2012 the night time restrictions will be an issue for Prodeco. Management have developed appropriate procedures to implement as required including partial easing of the restrictions and/or additional rolling stock.

### *5.2.2 Prodeco Rail Operation*

Prodeco has developed its own above rail operations with a fleet of 18 x GE C21 locomotives and 700 x FreightCar America coal wagons with nominal 60 t load and bottom dump doors. Operations commenced in 2008 and have been steadily increasing throughput, delivering 10.8 Mt in the 2010 calendar year.

Current operations use trains made up of two locomotives and 97 wagons carrying 5,820 t. The average theoretical cycle time is approximately 19.5 hours although non-operational delays such as the night restrictions into the port and passing loop delays increase the current cycle time to an average 24.5 hours. The capacity of the existing rail fleet under current conditions is 14.5 Mtpa. It is expected that the cycle time can be reduced with the completion of Fenoco track duplications which will enable faster running times, improved unloading rates at the port with the recent port expansion and the use of an additional standby siding at the port which reduces the impact of the night restrictions. The anticipated rail fleet capacity in 2011, considering the night restrictions, is 15.9 Mtpa.

To cope with future forecasts a number of alternatives are being considered including:

- some direct trucking of coal to Carbosan port rather than transporting by rail to Puerto Prodeco and loading trucks at the port to transport on to Carbosan port;
- negotiating some easing of the night time restrictions for a limited period of time; and
- adding an additional train consist which will increase the capacity to 16.7 Mtpa.

When Puerto Nuevo becomes operational, the train sizes will increase to 3 locomotives and 133 wagons hauling 7,980 t. With 5 train sets and the reduced cycle times the capacity will increase to approximately 21.9 Mtpa. The loading capacity at Calenturitas and the unloading capacities at Puerto Prodeco and Puerto Nuevo will always be higher than the rolling stock capacity.

## 5.3 Port

### *5.3.1 Puerto Prodeco*

Puerto Prodeco is located 15 km south of Santa Marta. The operation has been continuously expanded over the last few years and the latest expansion to 17 Mtpa was completed in May 2010. The port is a barge loading facility and was started after a port concession was granted in 1979. Until 2008, coal was transported to the port by road trucks travelling 227 km from the mines.

Rail operations commenced with trains dumping through one 3,000 tph unloading pit and the coal being sent either to 2,500 tph stacking conveyors or directly to the barge loading conveyor with 2,500 tph capacity. In 2009 a port upgrade was commenced to increase the port capacity from 11 Mtpa to 17 Mtpa. The upgrade involved a second rail unloading pit, a second radial stacker, a second surge bin, and a barge loading system with 3,000 tph capacity. Additionally, a system for reloading trucks for transport to Carbosan port was installed.

The terminal operates with small stockpiles; maximum 300,000 t with up to 60% of coal being directly loaded into barges from the trains. Seven barges (5 x 2,800 t and 2 x 3,000 t) have been operating in 2010. Two more barges have been purchased and will be operational from January 2011.

Ocean going ships are moored at one of 3 mooring points located 2.75 km offshore. The mooring points are capable of accommodating large Capesize vessels up to 180,000 dwt. The October 2010 year-to-date shipping mix is 20% Handy, 35% Capes and 45% Panamax. Coal is transferred from the barges to the ships by cranes. The crane operation is contracted to Louis Dreyfus Armateurs and as at 1 January 2011 there will be four cranes in operation; 1 x 35 t, 2 x 25 t and 1 x 17 t with a backup 15 t crane held in reserve.

The Puerto Prodeco operation will be closed down in 2013 when Puerto Nuevo becomes operational.

### *5.3.2 Puerto Nuevo*

In 2007 the Colombian government decreed that coal loading ports should be direct loading and the practice of indirect loading via barges should be eliminated. Prodeco, after committing to the new port construction in Cienaga, were granted an extension of the operational concession Puerto Prodeco until the new port is operational.

The land based environmental impact statement (EIS) has been completed and an Environmental License issued. The marine concession has been granted and the marine EIS completed with an environmental license granted. The marine areas are under appeal by Drummond; but are expected to be resolved by early 2011.

The port is designed for a capacity of 27 Mtpa and will include:

- a rail loop enabling one train (3 Locomotives and 133 wagons) before and one train after the dump station;
- an inbound storage track parallel to the loop track to allow queuing of one additional train;
- an outbound storage track parallel to the loop track to allow the unloading of two consecutive trains;
- an 8,000 tph dump station;
- 2 x 8,000 tph stacker reclaimers servicing a central 1 Mt stockyard;
- a 1.7 km long conveyor trestle;
- a 350 m long loading pier, 21 m wide;
- 1 x 8,000 tph ship loader capable of slewing to load on either berth; and
- a 8.5 km navigation channel, 20.3 m deep and a ship turning basin.

The design is consistent with recent developments and current design proposals elsewhere in the world; particularly in Australia where NCIG in Newcastle commissioned its 30 Mtpa first stage in 2010. Similar 30 Mtpa designs are proposed for Wiggins Island in Gladstone, Australia and for Abbot Point near Bowen in Australia.

Modeling of the new terminal has been undertaken by Sandwell, demonstrating that under the proposed operating conditions the port terminal is capable of handling 27 Mtpa. The assumptions used in the modeling appear appropriate and the results are consistent with modeling and performance evaluation of similar direct loading terminals around the world.

The modeling assumed that the Fenoco main line could operate with 20 minute headways and that duplication of the main line will be complete. This implies that a cycle time of approximately 12 hours will be required. Since there is some risk that the duplication will not be completed we have reviewed this aspect. Prodeco has modeled the 22 Mtpa operation and has used a cycle time of 15 hours which is consistent with dynamic simulation results from the Inteplan model of the system when Sector 2 is not duplicated. An additional passing loop at Nuevo Sevilla is included. The potential throughput of Drummond and the other rail users is important in determining the timing of additional rail infrastructure. We believe that the 22 Mtpa throughput will be achievable and that there is scope for additional throughput with the implementation of efficiencies such as reduced maintenance possessions and additional passing loops on the Fenoco track infrastructure.

### 5.4 Cost Estimates

Cost estimates have been provided by Prodeco, and have been analysed and reviewed.

#### *5.4.1 Operating Costs*

Rail costs have been budgeted based on historical performance and use forecast throughputs to calculate forward costs.

**Table 5.1 – Rail Costs**

| Year | Below Rail | | Above Rail | | Total Rail | |
|---|---|---|---|---|---|---|
| | US$/t | US¢/ntk | US$/t | US¢/ntk | US$/t | US¢/ntk |
| 2010 (9 mths) | 2.45 | 1.2 | 2.71 | 1.4 | 5.16 | 2.6 |
| 2011 | 2.56 | 1.3 | 2.28 | 1.1 | 4.83 | 2.4 |
| 2012 | 2.66 | 1.3 | 2.39 | 1.2 | 5.05 | 2.5 |

Above Rail costs include o'heads, amortization and depreciation

Benchmark figures in Australian coal regions would be in the range of 0.6US¢/ntk – 1.7US¢/ntk below rail and 2.5US¢/ntk above rail. The below rail cost is at the upper end of general benchmark ranges and is associated with the significant capital investment undertaken by Fenoco recently and ongoing and the current exclusive use of the rail line by coal exporters. The above rail cost, operated by Prodeco, is particularly competitive.

Prodeco holds a concession with the Colombian government to operate a Port on the coast just south of the city of Santa Marta. After coal is unloaded from the trains it is stockpiled or else loaded directly via conveyor onto barges. Tugboats tow the barges to floating cranes offshore which then transfer the coal from the barges to the ship.

This facility has limited capacity in its current form and the government policy is to build a new "direct loading port" further south. This will allow for expansion as well as reducing operating costs by 66% as the tugboats, barges and floating crane will not be required.

**Table 5.2** shows port operating costs at Puerto Prodeco:

**Table 5.2 – Port Costs**

| Year | Operating US$/t | Overheads US$/t | Totals US$/t |
|---|---|---|---|
| 2010 (9 mos) | $4.24 | $0.97 | $5.21 |
| 2011 | $3.99 | $1.16 | $5.16 |
| 2012 | $3.78 | $1.08 | $4.86 |

Overheads include amortization and depreciation

The barge loading port is scheduled to be closed down in 2013 when Puerto Nuevo commences operations.

Operating costs for the new direct loading port have been estimated by Sandwell for an annual throughput of 23 Mtpa as US$1.20/t. The savings compared to the existing port arise from reduced manning levels (260 compared to 400), higher handling rates, higher throughput and removal of costs associated with barges and cranes. Depreciation is assumed to be approximately US$1.60/t giving a total estimated operating cost for Puerto Nuevo of US$2.80/t. Benchmark rates in Australia for new and existing expanded terminals are in the order of US$4/t - US$6/t although the new proposed terminal in Gladstone has been reported as US$9/t. The rate for the existing port is similar but the new port will be considerably cheaper due to the lower labour rates and lower capital cost.

#### *5.4.2 Capital Costs*

There appear to be no major capital expenses scheduled in 2011 for the rail operation other than completion of rail connections and crossings on the mine spur line, maintenance equipment and fire suppression installation in locomotives. Total capital required for rail in 2011 is approximately US$6 million.

The existing port requires capital in 2011 of US$3.6 million for dry-docking of barges, US$1.2 million for tugboat dry-docking and US$1.4 million for D10 equipment. Other capital items include berths for the additional cranes, warehouse equipment, barge mooring and utility vehicles. Total capital required for theexisting port in 2011 is approximately US$7 million.

The major forecast capital expenditure is for the new port at Puerto Nuevo is US$528 million. The capital cost estimate for development of Puerto Nuevo is given in **Table 5.3**. At the end of 2010 approximately US$56 of this budget estimate has been spent.

**Table 5.3 – Puerto Nuevo Capital Costs (US$ millions)**

| Item | Capital Cost (US$ mill) |
|---|---|
| Trestle/Pier | $111.1 |
| Dredging | $33.1 |
| Coal Handling | $138.8 |
| Infrastructure | $76.5 |
| Other Direct Costs | $33.4 |
| **Total Direct Costs** | **$392.9** |
| Indirect Costs – Owner | $42.6 |
| Land | $20.1 |
| Financing – Taxes | $40.3 |
| **Total Indirect Costs** | **$103.0** |
| Contingency | $32.1 |
| **Total with Contingency** | **$528.0** |

For the scope of work proposed this is less than might be anticipated when comparing against similar developments elsewhere in the world and is also lower than the Sandwell estimate of US$844 million. Installed capacity in Australia is often quoted as US$30 – US$50 per Mt of throughput whereas Puerto Nuevo is proposed at US$20/Mt of annual throughput. Prodeco has undertaken significant negotiation with prospective contractors both on cost and scope and the lower estimate is based on the results of these negotiations.

Sandvik has been awarded the Coal Handling contract and the Onshore Civil, Marine Civil and Dredging contracts should be awarded by December 2010. Phase 1 of the onshore civil works is almost complete with major earthmoving to form the rail loop, stockyard, screening bunds and drainage channels.

### 5.5 Summary

The rail and port operations of Prodeco have been planned to match the forecast throughput and Prodeco has exercised control of its future by:

- investing in Fenoco;
- developing facilities at La Jagua and Calenturitas to ensure the trains can be loaded as required;
- establishing its own rail operation;
- expanding the existing port to cope with the growth; and
- constructing a new port to meet forecast throughput and government requirements.

The assets are in generally good condition, and appear to be well maintained and operated.

# Annex A – Qualifications and Experience

***Grant Walker – Consulting Mining Engineer at Minarco-MineConsult - Bachelor of Engineering - Graduate Diploma in Applied Finance - Member of Australasian Institute of Mining and Metallurgy***

Grant has over 15 years experience as a mining engineer, initially with operational experience at a number of coalmines in Australia and Indonesia, and later as a consultant. He has extensive experience of reserve calculation, mine design, feasibility studies and bankable documents and has developed and continues to operate a coal supply cost model for the Australian coal industry.

Grant has worked on numerous mine valuations, technical audits, operational assessments and coal supply studies within Australia, Colombia and other overseas countries and has carried out numerous due diligence exercises for financiers and investors.

Grant is a Competent Person as described by the JORC Code.

***Kerry Whitby - Managing Director of McElroy Bryan Geological Services Pty Ltd - Bachelor of Science - Fellow of Australasian Institute of Mining and Metallurgy - Member Australian Institute of Geoscientists - Member Geological Society of Australia***

Kerry Whitby is the Managing Director of McElroy Bryan Geological Services Pty Ltd, a consulting company based in Sydney, Australia that focuses on providing technical support and advice to the international coal exploration and mining industry. Kerry has been employed by the company since 1971. In that time he has been responsible for designing, implementing and managing coal exploration programmes in all major coal basins within Australia as well as a variety of coal deposits in South America, Africa and Asia. Over the last 15 years, Kerry has been involved in the preparation of geological appraisals, resource estimates and technical opinions related to project valuations on behalf of numerous companies in a variety of locations including Australia, U.K, U.S.A, Canada, Colombia, Mozambique, South Africa, Botswana, Mongolia, China, Indonesia, Sarawak, Myanmar and Bangladesh. Kerry is a Competent Person as described by the JORC Code and a Qualified Person in relation to NI 43-101.

***Bob Leach***

Bob Leach is a self employed coal quality consultant with a B Sc in Chemistry and M Sc in Primary Metallurgy. His current work committment involves diligence exercises conducted on behalf of several major companies focusing their attentions in the coal and related industries, peer review of project work and management of several coal quality and coal preparation projects located within Australia and internationally. He has worked on over 50 coal quality and coal preparation projects in the past ten years, within Australia and overseas. These projects have targeted either or both, thermal and coking coal products. Some current and recent projects are:

- Hinton Project, Canada for Coalspur Coal Ltd,
- Baruun Naran, Mongolia, for QGX Ltd,
- Donkin project Nova Scotia Canada, for Xstrata,
- Wandoan, Australia, for Xstrata,
- Calenturitas and La Jagua, Colombia, for Prodeco (Glencore).

***Ben Eastwood - Senior Environmental Scientist at Hansen Bailey – Bachelor of Natural Resource Management (2nd class Hons)***

Ben Eastwood is a senior environmental scientist with over seven years experience in both coal mine site environmental management and in the gaining of mine planning approvals. Ben has recently project coordinated mining authorities applications for the West Muswellbrook Project and has just completed an Environmental Assessment for the Continuation of Boggabri Coal Mine in the Gunnedah Coal Basin of NSW.

Ben has also conducted numerous due diligence audits for large scale coal mining and exploration projects throughout Australia. Ben has lived and worked in South America for six years and has a good understanding and appreciation of the people and culture. Ben is fluent in South American Spanish.

***Ian Travis - Managing Director at Inteplan Pty Limited – Bachelor of Engineering (Hons) – MIEAust, CPEng, FCIT, MAICD***

Ian was responsible for planning the expansion of the Port Waratah Coal Services Carrington Terminal during the 1980s and gained considerable experience in the management/planning of coal stockpiling systems. In 1989 Ian became Chief Executive of a joint venture company developed to promote major infrastructure projects, and held senior management positions with rail rolling stock manufacturers.

In 1991 Ian founded Inteplan Pty Limited, a consultancy service providing assistance to numerous logistics based industries with the main focus being Coal Export Supply Chain development; intermodal infrastructure capacity/development; rail industry business development; and freight contract development. Clients have included most major coal producers, port operators and banks. Significant work has been undertaken to provide expert advice on coal system capacities including for the development of Newcastle Coal Infrastructure Group and for coal export systems in Colombia, Russia and New Zealand.

## Annex B – Glossary of Terms

| | |
|---|---|
| **acid mine drainage** | Acidic run-off water from mine waste dumps and mill tailings ponds containing sulphide minerals. Also refers to ground water pumped to surface from mines. Such drainage often requires treatment to buffer acidity. |
| **adb** | Air dried basis, defining the moisture basis for coal quantity and quality parameters |
| **adit** | A horizontal or nearly horizontal entrance/access to an underground mine from the surface. |
| **ar** | As received basis, defining the moisture basis for coal quantity and quality parameters |
| **alluvial** | Relatively recent deposits of generally poorly consolidated sedimentary material laid down in river beds, flood plains and lakes. |
| **ANFO** | Acronym for Ammonium Nitrate and Fuel Oil, a mixture used as a blasting agent in many mines. |
| **angle of repose** | The maximum angle from horizontal at which a given material will rest on a given surface without sliding or rolling. |
| **anthracite** | Coal of the highest rank with a carbon content above 92%. This type of coal has a semi-metallic lustre |
| **anticline** | A line or axis to which strata rise from both directions in an arch shape. |
| **aquifer** | A water-bearing bed of permeable rock. |
| **Ash** | The inorganic residue remaining after a pulverised sample of coal is incinerated under standard laboratory conditions |
| **attributable production** | That part of the mine or operation production in which Glencore has an economic interest. It therefore excludes production attributable to the interests of any other partners |
| **attributable reserves** | That part of the reserves from a mine or project in which Glencore has an economic interest. It therefore excludes reserves attributable to the interests of any other partners. |
| **attributable resources** | That part of the resources from a mine or project in which Glencore has an economic interest. It therefore excludes reserves attributable to the interests of any other partners. |
| **attributable sales** | That part of the sales from a mine or project in which Glencore has an economic interest. It therefore excludes reserves attributable to the interests of any other partners. |
| **A$** | Australian dollars |
| **bank cubic metre** | The volume in cubic metres of an excavation measured in place before being disturbed |
| **basalt** | Fine grained igneous rock from an extrusive lava flow |
| **basement** | The older rock mass which underlies an ore body or a sedimentary basin. Often refers to rocks of Precambrian age which may be covered by younger rocks. |
| **beneficiation** | Treatment of mined coal by either drying, flotation, or gravity to improve the quality of the product material. |
| **bord and pillar** | A mining method for underground mines in which supporting pillars are formed as the development proceeds, and which may or may not be subsequently mined |

| | |
|---|---|
| **calorific value** | The heat of combustion of a unit quantity of coal; expressed in either British thermal units per pound (Btu/lb), kilocalories per kilogram (kcal/kg) or megajoules per kilogram (MJ/kg). The gross calorific value includes all heat of vapourisation of water. Net calorific value assumes that all water is in the vapour phase. See "*specific energy*". |
| **Carboniferous** | The period from about 345 to 280 million years ago. It is part of the Paleozoic era |
| **Chapter 19** | Chapter 19 of the London Stock Exchange Listing Rules |
| **CHPP** | Coal Handling and Preparation Plant |
| **coal, bituminous** | A rank of black coal |
| **coal, coking** | Coal which is suitable for marketing and use as metallurgical coal, which is generally used in the steel making process |
| **coal, high vol PCI** | Coal which is suitable for direct injection into blast furnaces in a pulverized state and which has a high level of volatile matter |
| **coal measures** | A sequence of strata deposited within the same geological period that contains coal seams |
| **coal, metallurgical** | A broader term for describing coal which comprises both coking coals and PCI coals, both of which are used in the steel making process |
| **coal, semi-soft** | Coal which is not sutiable as a hard coking coal but is suitable as a component in coke oven blends |
| **coal, thermal** | Coal which is combusted to provide heat for steam generation and subsequent power generation, or burned for heat generation only |
| **comminution** | The physical breaking of the rock and coal into smaller sizes |
| **Competent Person** | A professionally qualified specialist defined in Chapter19. |
| **conglomerate** | A coarse grained sedimentary rock comprising large fragments set in a fine grained matrix of sand and cementing material |
| **CPR** | Competent Person's Report |
| **CSN** | Crucible Swell Number; a measure of the swelling properties of coal when heated; one of the most common tests to determine coal suitability for coking |
| **dilution** | The contamination of ore with barren or low grade rock during the mining process; effectively lowering the grade of the mined ore. |
| **dyke** | Igneous material cutting across the strata usually in a vertical or near vertical plane |
| **fault** | A fracture in the earth one side of which is displaced with respect to the other in any direction |
| **fluvial** | Pertaining to rivers. River environment for deposition of material |
| **FOB** | Free on board; commonly used to describe quantities or costs to deliver coal loaded onto a coal carrying ship |
| **FOR** | Free on rail; commonly used to describe quantities or costs to deliver coal loaded onto rail cars. |

| | |
|---|---|
| **fold** | Deformation of the strata due to tectonic forces |
| **froth flotation** | A coal cleaning process applied for the beneficiation of fine particles typically 0.5 millimetres in diameter. Hydrophobic coal particles attach themselves to air bubbles in a water medium and rise to the surface to form a froth |
| **gar** | Gross as received basis |
| **geotechnical** | The engineering properties of rocks |
| **Glencore** | Glencore International AG |
| **graben** | The lowering of strata between two fault planes forming a block of overburden rock interrupting the continuity of the coal seam |
| **grade** | The quality of an ore, alloy or metal; often expressed as a percentage contained within an ore, but sometimes a combination of numerous properties |
| **greenfields** | A location where no previous mining activity has taken place |
| **Hansen Bailey** | Hansen Bailey Environmental Consultants |
| **Igneous** | Material that has originated from a molten state |
| **In situ** | Material in the ground in its natural state; not mined, not processed |
| **Inteplan** | Inteplan Pty Limited, coal logistics consultants |
| **interburden** | Rock material separating coal seams |
| **ITR** | Independent technical review |
| **joint** | Natural fractures in rock generally vertical |
| **JORC Code** | *"Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves, The JORC Code, 2004 Edition"*; prepared by The Joint Ore Reserves Committee of The Australasian Institute of Mining and Metallurgy, Australian Institute of Geoscientists and Minerals Council of Australia (JORC) |
| **km** | Kilometre |
| **LD core** | Large diameter exploration boreholes from which samples of the strata are retrieved. The diameter of the core is generally 100 mm or more. |
| **lithological** | Description of the features of sedimentary rocks such as colour, grain size and composition |
| **lithology** | General description relating to the physical composition of rock forming materials |
| **LOM** | Life of mine |
| **loose cubic metre** | The volume in cubic metres of excavated materials after being disturbed; normally applied to materials in stockpiles, in haulage trucks and on conveyors |

| | |
|---|---|
| **losses, geological** | Ore lost due to unpredictable geology |
| **losses, mining** | Ore lost due to inefficiency in mining operations |
| **m** | Metre |
| **magnetic survey** | A geophysical technique that measures the earth's magnetic field and its changes |
| **MBGS** | McElroy Bryan Geology Services, geology consultants |
| **mm** | Millimetres |
| **MMC** | Minarco-MineConsult, a subsidiary of Runge Limited, mining consultants |
| **moisture, air dried** | Moisture in the analysis sample (as determined) or the residual moisture in equilibrium with the prevailing laboratory conditions |
| **moisture, as received** | Moisture determined on the as-received coal. |
| **moisture, bed** | In situ moisture; natural moisture content of the coal in the seam, that exists as an integral part of the coal seam in its natural state. |
| **moisture, equilibrium** | Moisture in a coal sample after attaining equilibrium at a temperature of 30 °C and a humidity of 97 % (by mass fraction). |
| **moisture, free** | Moisture that is lost by the coal in the course of attaining approximate equilibrium with the atmosphere to which it is exposed. |
| **moisture, inherent** | Moisture that exists as part of the coal seam in its natural state. In the case of most coals, the inherent moisture may be equated to the bed moisture and to the total moisture. In South Africa however, the term inherent moisture generally refers to the moisture in the analysis sample or the residual moisture. |
| **moisture, in situ** | Bed moisture; natural moisture content of the coal in situ in the seam, that exists as an integral part of the coal seam in its natural state. |
| **moisture, residual** | Moisture content that remains in the coal after it has been air-dried at room temperature and that can be removed by heating at 105 °C. |
| **moisture, surface** | The difference between total moisture and residual moisture. |
| **Mbcm** | million bank cubic metres |
| **Mbcmpa** | million bank cubic metres per year |
| **Mt** | million metric tonnes |
| **Mtpa** | million metric tonnes per year |
| **MUS$** | million US dollars |
| **MW** | mega (million) watts |
| **Mylec** | AB Mylec, coal quality/processing consultants |

| | |
|---|---|
| **outcrop** | An exposure of strata projecting through the overlying cover of detritus and soil |
| **overburden** | Strata that lies above the coal seam |
| **paleo** | Ancient reference to past geological times |
| **paleozoic** | An era of geological time from about 570 to 225 million years ago |
| **PCI** | Pulverized Coal Injection |
| **Permian** | The period from 280 to 225 million years ago. It is sometimes considered part of the Carboniferous period. It is part of the Paleozoic era |
| **ply** | A layer of a coal seam of distinguishing properties formed from different plant and sediment material deposited separately |
| **£** | British pounds |
| **Project** | A coal deposit which is in the pre-operating phase of planning and/or development and may be brought into operation subject to feasibility and approvals processes |
| **Quaternary** | The period following the Tertiary extending to the present |
| **reject** | The material extracted from the ROM coal feed during cleaning |
| **relative density (RD)** | |
| **Reserves, Probable** | As per Chapter19, "*..those measured and/or indicated mineral resources which are not yet "proved" but of which detailed technical and economic studies have demonstrated that extraction can be justified at the time of the determination and under specific economic conditions;*" |
| **Reserves, Proved** | As per Chapter19, "*..those measured mineral resources of which detailed technical and economic studies have demonstrated that extraction can be justified at the time of the determination, and under specified economic conditions,*" |
| **Resources, Indicated** | As per Chapter19, "*..that portion of a mineral resource for which quantity and quality can only be estimated with a lower degree of certainty than for a measured mineral resource because the sites used for inspection, sampling and measurement are too widely or inappropriately spaced to enable the material or its continuity to be defined, or its grade throughout to be established.*" |
| **Resources, Inferred** | A third classification of Mineral Resources with lower confidence than both Measured Resources and Indicated Resources which is defined in many international mineral estimating codes; including both the JORC (Australian) and the SAMREC (South African) codes. Note that Inferred Resources are not mentioned in Chapter19. |
| **Resources, Measured** | As per Chapter19, "*..that portion of a mineral resource for which tonnage or volume can be calculated from outcrops, pits, trenches, drill-holes or mine workings, supported where appropriate by other exploration techniques. The sites for inspection, sampling and measurement must be so spaced that the geological character, size, shape, quality and mineral content will be established with a high degree of certainty;*" |
| **Resources, Mineral** | As per Chapter19, "*..include metallic and non-metallic ores, mineral concentrates, industrial minerals, construction aggregates, mineral oils, natural gases, hydrocarbons and solid fuels including coal;*" |
| **ROM** | Run-of-mine, which defines a state of material which has been mined but not yet processed |

| | |
|---|---|
| **sandstone** | A sedimentary rock comprising sand set in a matrix of silt or clay united by a cementing material. Contains 85%-90% quartz |
| **seam** | A stratum of coal |
| **shaft** | A vertical or inclined excavation, commonly from the surface, of limited size, and normally used for mining, drainage, ventilation, people access, and delivery of mined materials to the surface |
| **specific energy** | The heat of combustion of a unit quantity of coal; expressed in either British thermal units per pound (Btu/lb), kilocalories per kilogram (kcal/kg) or megajoules per kilogram (MJ/kg). See "*calorific value*". |
| **strip ratio** | The ratio (bcm/t) of volume of waste mined (in bcm) to weight of coal mined ( in t) in an open cut mining operation |
| **sub-basin** | A regional low area within a wider basin structure |
| **subcrop** | A mineral occurrence, including coal seams and plies, which comes near the surface but is covered by a thin layer of non-mineral overburden |
| **syncline** | A line or axis towards which strata dip or slope down from both directions |
| **t** | metric tonnes |
| **tailings** | The waste material remaining from finely ground ore from which the valuable minerals have been extracted |
| **t/bcm, t/cm** | Metric tonnes per bcm, or per cm, usually a measure of density |
| **TC** | Total carbon |
| **tectonic** | Relates to the movement and structural features of the earth's crust |
| **Tertiary** | The period between about 65 million and 2 million years ago |
| **TM** | Total moisture |
| **tpa** | metric tonnes per year |
| **tph** | metric tonnes per hour |
| **Triassic** | The period from 225 to 190 million years ago. It is part of the Mesozoic era |
| **TS** | Total sulphur |
| **tuff** | A general term for consolidated material ejected from a volcanic vent |
| **US$** | United States dollars |
| **wash plant** | A process plant designed to size and clean ores to produce beneficiated ore with higher grade and/or predetermined sizes |
| **waste** | Rock that is not part of the coal seam |

| | |
|---|---|
| **VALMIN Code** | "*Code for the Technical Assessment and Valuation of Mineral and Petroleum Assets and Securities for Independent Expert Reports, The VALMIN Code, 2005 Edition*", prepared by the VALMIN Committee, a joint committee of The Australasian Institute of Mining and Metallurgy, the Australian Institute of Geoscientists and the Mineral Industry Consultants Association with the participation of the Australian Securities and Investment Commission, the Australian Stock Exchange Limited, the Minerals Council of Australia, the Petroleum Exploration Society of Australia, the Securities Association of Australia and representatives from the Australian finance sector. |

**MINERAL EXPERT'S REPORT: KATANGA MINING LIMITED**

Dear Sirs

## PURPOSE OF REPORT

Golder Associates Africa (Pty) Ltd ("GAA") has been commissioned by Glencore International AG ("Glencore") on behalf of Glencore International plc (the "Company"), which is expected to be the ultimate parent company of the group, to prepare a Mineral Expert's Report ("MER") in respect of the mining assets owned by and operated by Katanga Mining Limited ("KML") (the "Material Assets"), a company in which Glencore has an interest.

KML owns a 75% equity interest in Kamoto Copper Company SARL ("KCC") which owns the Material Assets which are the subject of this MER.

The Material Assets comprise of the following:

- Kamoto Underground Mine ("KTO");
- T17 Open Pit;
- KOV Open Pit;
- Mashamba East Open Pit;
- Tilwezembe Open Pit;
- Kananga Mine;
- Extension of Kananga Mine;
- The Kamoto Concentrator ("KTC"); and

- Luilu Metallurgical Plant ("Luilu Refinery").

This MER has been prepared by a team of Competent Persons with each team member possessing the appropriate technical and professional qualifications.

This report, which summarises the findings of GAA's review, accords with the requirements set out in the United Kingdom Financial Services Authority's Prospectus Rules ("Prospectus Rules") and has been prepared having regard to the recommendations for the consistent implementation of the European Commission's Regulation on Prospectuses No. 890/2004 (the European Securities and Markets Authority ("ESMA") recommendations) published by the Committee of European Securities Regulators (now the ESMA, as updated on 23 March 2011 following the publication of a consultation paper in April 2010 in relation to content of prospectuses regarding mineral companies) and Chapter 18 of the Hong Kong Listing Rules.

GAA understands that this MER will be included as part of the prospectus (the "Prospectus") to be published in connection with a global offering of shares and the admission of the ordinary shares of the Company to the Official List of the United Kingdom Financial Services Authority and the admission of such shares to trading on the London Stock Exchange plc's market for listed securities and the main board of the Hong Kong Stock Exchange Limited (together, "Admission").

This MER provides an audit of the mineral resource estimates, classification of resources and reserves (to the extent applicable) and evaluation of the Material Assets.

The practices and estimation methods undertaken by GAA are in accordance with the criteria for internationally recognised reserve and resource categories of the "Australasian Code for Reporting Mineral Resources and Ore Reserves" (2004) published by the Joint Ore Reserves Committee ("JORC") of the Australasian Institute of Mining and Metallurgy, Australian Institute of Geoscientists and the Minerals Council of Australia (the "JORC Code").

In addition, GAA is of the opinion that such practices and estimations accord with the requirements set out in the Prospectus Rules in conjunction with the ESMA recommendations. In this report, all reserves and resources estimates, initially prepared by KCC in accordance with the JORC Code, have been substantiated by evidence obtained from GAA's site visits, interviews, own data collection, analysis and modelling. Where appropriate reliance has been placed on the work of other experts, in particular the Independent Technical Report on KML's Material Assets Report (March 2009) compiled by SRK Consulting, which was prepared in order to ensure compliance with the National Instrument 43-101: Standards of Disclosure for Mineral Companies ("NI 43-101"). Only proven and probable reserves have been valued, which accords with the requirements set out in the Prospectus Rules in conjunction with the ESMA recommendations. Other assets of KML, which include extensive resources, have not been included in the valuation.

## CAPABILITY AND INDEPENDENCE

GAA has 50 years of mining and engineering expertise built up on 6 continents. GAA operates as an independent technical consultant providing resource evaluation, mining engineering and mine valuation services to clients. GAA has received, and will receive, professional fees for its preparation of this report. However, neither GAA nor any of its directors, staff or sub-consultants who contributed to this report has any interest in:

- the Company, Glencore, KML, KCC or any of their subsidiaries; or
- the Material Assets reviewed.

Drafts of this report were provided to Glencore, KML and KCC, but only for the purpose of confirming both the accuracy of factual material and the reasonableness of assumptions relied upon in the report.

For the purposes of Prospectus Rule 5.5.3R(2)(f), GAA is responsible for this report as part of the Prospectus and declares that it has taken all reasonable care to ensure that the information contained in this report is, to the best of its knowledge, in accordance with the facts and contains no omission likely to affect

its import. This declaration is included in the Prospectus in compliance with item 1.2 of Annex I and item 1.2 of Annex III of the Prospectus Directive Regulation.

This MER has been prepared based on a technical and economic review by a team of consultants and associates sourced from the GAA's Johannesburg offices. Details of the qualifications and experience of the consultants who carried out the work are included in the MER.

## METHODOLOGY

The methodology used to compile this report consists of the following:

- site visits conducted by GAA representatives between October and December 2010 to inspect the mine site (open pits and underground workings), plant and processing facilities, waste dumps and tailings facilities in order to audit technical content of previous Technical Reports and studies conducted for and on behalf of KML and where necessary for GAA staff to evaluate current requirements and future developments;
- interviews with various senior KCC managers;
- GAA own data analysis, engineering, financial, resource, mining and resource modelling; and
- reliance on previous technical studies and experts reports.

The information contained in this report is current and effective from 1 January 2011, unless otherwise indicated. The results of GAA evaluation are as set out in this MER.

All opinions, findings and conclusions expressed in this report are those of GAA and its sub-consultants.

## DECLARATIONS

GAA will receive a fee for the preparation of this MER in accordance with normal professional consulting practice. This fee is not contingent on the outcome of Admission and GAA will receive no other benefit for the preparation of this report. GAA does not have any pecuniary or other interests that could reasonably be regarded as capable of affecting its ability to provide an unbiased opinion in relation to the mineral resources, ore reserves and the valuation of Material Assets.

GAA does not have, at the date of this report, and has not previously had any shareholding in or other relationship with the Company, Gelncore, KML or KCC and consequently considers itself to be independent of the Company, Glencore, KML and KCC.

The results of the technical and economic reviews are summarised herein.

## GLOSSARY OF TERMS

Defined and technical terms used in this report are set out in APPENDIX A of this MER.

## QUALIFICATIONS OF CONSULTANTS

The individuals listed in the table below, have provided input to this MER are Qualified/ Competent Persons as defined in the JORC Code, the Prospectus Rules, the ESMA recommendations and Chapter 18 of the Hong Kong Listing Rules and have extensive experience in the mining industry and are members in good standing of appropriate professional institutions.

| Name | Company | Qualification |
|---|---|---|
| Peter Onley | GAA | MBA MSc BSc(Hons) FAusIMM CP<br><br>Peter Onley has more than 40 years experience in the mining industry holding qualifications in geology, geotechnical engineering and business. |

| Name | Company | Qualification |
|---|---|---|
| | | He has worked in a variety of roles, starting as an exploration geologist, a mining geologist, exploration manager, mineral industry consultant, business manager and director of two Australian listed companies. He has worked as a mining industry consultant for over 25 years. He was formerly a director of Golder Associates Pty Ltd employing more than 800 staff in Australia.<br><br>He has consulted to the industry on a wide range of commodities including diamonds, gold, uranium, iron-ore, bauxite, base metals and both sulphide and lateritic nickel together with some minor commodities such as molybdenum and tungsten.<br><br>He has for some years been a member of the Geological Survey Liaison Committee which reviews and advises on future work programs for the Geological Survey of Western Australia. He is also a member of the AusIMM Geoscience Committee. |
| Willem van der Schyff | GAA | BSc (Geology), GDE (Mine Engineering)<br><br>Willem is an Associate with Golder Associates, the Business Unit Leader for the Mining Services Business Unit and a geologist specialising in resource modelling and evaluation.<br><br>He has 20 years experience on diverse commodities, ranging from Iron Ore, Coal, Heavy Mineral Sands, Base Metals, Gold, Bauxite and Industrial Minerals, on five continents. This experience includes exploration geology, mining geology and resource modelling and estimation. He is a registered Professional Geologist with the South African Council for Natural Scientific Professions and is a member of the Geological Society of South Africa. |
| Jaco Lotheringen | Ukwazi | B Eng Mining Engineering (UP), Mine Manager's Certificate of Competency<br><br>Jaco is currently a director of Ukwazi Mining and it its senior mine engineer. He has 12 years mining experience and has been involved in resource estimates, mine feasibility and mine design studies for the past 6 years for major mining companies such as Kumba, BHP Billiton and Anglo Platinum.<br><br>His professional memberships include:<br>Registered as a Professional Engineer at Engineering Council of South Africa (20030022);<br>Registered as a Member at South African Institute of Mining and Metallurgy (SAIMM) (701237).<br>Member of the Institute of Directors in South Africa. |

| Name | Company | Qualification |
|---|---|---|
| | | Jaco has specific commodity experience in precious metals (gold, platinum), base metals (iron and copper) and minerals such as coal. |
| Anthony James Nieuwenhuys | SNC Lavlin | BSC (Eng) MDP<br><br>Anthony James Nieuwenhuys is Managing Director – SNC-Lavalin South Africa with over 30 years of extensive experience in managing international multi-disciplinary projects in the mining, metallurgical and beverage sectors.<br><br>This experience includes both technical and financial aspects of major projects. Mr Nieuwenhuys' management capabilities include sourcing and arranging financing for projects, strong organizational and interpersonal skills, leadership, initiative, marketing, managing a multi-disciplinary engineering company and the ability to work in different business environments.<br><br>On the technical side, James has extensive experience in the design, construction and operational aspects of most metallurgical facilities and has specific mining and commodity experience in respect of gold, nickel, diamonds and cobalt. |

This report was prepared by GAA in order to support the mineral reserve and resource information contained in the Prospectus. The project manager of the Technical Report was Spencer Eckstein and project director was Frank Wimberley.

Yours Faithfully,

**GOLDER ASSOCIATES AFRICA (PTY) LTD.**

# 1.0 EXECUTIVE SUMMARY

## 1.1 Introduction

Golder Associates Africa (Pty) Ltd ("GAA") was commissioned by Glencore International AG ("Glencore") on behalf of Glencore International Plc (the "Company") which is expected to be the ultimate parent company of the group, in November 2010 to prepare a Mineral Experts Report ("MER") in respect of the Material Assets (as described below) owned and operated by, Katanga Mining Limited ("KML"), a company in which Glencore has a majority shareholding.

KML owns a 75% equity interest in Kamoto Copper Company SARL ("KCC") which owns the Material Assets, which are the subject of this report.

The Material Assets comprise of the following

- Kamoto Underground Mine ("KTO")
- T-17 Open Pit
- KOV Open Pit
- Mashamba East Open Pit
- Tilwezembe Open pit
- Kananga Mine
- Extension of Kanaga Mine
- The Kamoto Concentrator ("KTC")
- The Luilu Metallurgical Plant ("Luilu Refinery")

Further details of the Material Assets are set out in the paragraphs below

The purpose of the MER is to provide a technical report which evaluates the nature and value of the Material Assets held by KCC in order to assist Glencore in listing on the London and Hong Kong stock exchange.

The MER is based on the KML Technical Report dated 17 March 2009 compiled by SRK Consulting (South Africa) (Pty) Limited which has been up-dated to confirm current resource and reserve statements and to include amendments to mine plans and project development activities. The MER also includes observations and comments from GAA following site audits conducted in December 2010 to determine environmental compliance with Equator Principles and to assess closure costs.

This MER has been prepared in accordance with the Australasian Code for Reporting of Exploration Results Mineral Resources and Ore Reserves (2004) published by the Joint Ore Reserves Committee ("JORC") of the Australasian Institute of Mining and Metallurgy, Australian Institute of Geoscientists and the Minerals Council of Australia. In respect of the valuations, they have been prepared under the guidelines of the Code for the Technical Assessment and Valuation of Mineral and Petroleum Assets and Securities for Independent Expert Reports (2005 edition), as prepared by the VALMIN Committee, a joint committee of the Australasian Institute of Mining and Metallurgy, the Australian Institute of Geoscientists and the Mineral Industry Consultants Association.

The methodology used to compile this report consists of the following:

- Site visits conducted by GAA representatives between October and December 2010 to inspect the mine site (open pits and underground workings), plant and processing facilities, waste dumps and tailings facilities in order to audit technical content of previous technical reports and studies conducted for and

on behalf of KML and where necessary for GAA staff to evaluate current requirements and future developments;

- Interviews with various senior KCC managers;
- GAA own data analysis, engineering, financial, resource, mining and resource modelling
- Reliance on previous technical studies and experts reports.

The information contained in this report is current and effective from 1 January 2011, unless otherwise indicated. The results of GAA evaluation are set out below.

## 1.2 Ownership

KML, an entity listed on the Toronto Stock Exchange in Canada (TSX:KAT), holds a 75% stake in KCC a joint venture with La Generale des Carrieres et des Mines ("GCM"), a State-owned mining company in the DRC.

## 1.3 History

Following the merger of KML and Nikanor PLC ("Nikanor") in January 2008, the Material Assets were held by KML through a 75% equity interest in KCC and a 75% equity interest in DRC Copper and Cobalt Project SARL ("DCP"). The balance of the equity interest in both KCC and DCP was owned by GCM.

In April 2007, prior to the merger of KML and Nikanor, a Commission of Enquiry was formed by the DRC government to review approximately sixty (60) mining agreements entered into by para-statal companies of the Congolese government. The KCC joint venture agreement and the DCP joint venture agreement were included in the mining agreements to be reviewed.

The Commission provided its conclusions in its report made public in November 2007.

KCC and DCP were notified on 11 February 2008 by the DRC Ministry of Mines of the objections and requirements regarding their partnerships with GCM further to the above-mentioned November 2007 report.

In July 2008, GCM and Katanga Finance Limited ("KFL" a 100% subsidiary of KML) entered into a memorandum of understanding under which certain amendments were agreed to be reflected in an amended joint venture agreement and the parties agreed to the merger of KCC and DCP.

In August 2008, the DRC Ministry of Mines issued terms of reference for the renegotiations and/or termination of the mining contracts entered into by KCC and DCP.

Following a number of meetings during the course of the last quarter of 2008 and the first quarter of 2009, GCM , KFL and Global Enterprises Corporate Ltd. ("GEC"), in the presence of KCC, DCP, SIMCO, Katanga Mining Holdings Limited, Katanga Mining Finance Limited and KML (BVI) Holdco Ltd. entered into on 25 July 2009 (which is also its date of entry into force) an agreement (the "Amended Joint Venture Agreement") which resulted in the termination of the original KCC joint venture agreement and DCP joint venture agreement. The merger of KCC and DCP was ratified by Presidential Decree on 27 April 2010.

The consequences of the Amended Joint Venture Agreement on KCC mining rights and equipment installations are;

- The whole of PE525 (comprising 13 carres) and part of PE4958 (i.e. new PE11602 described below and comprising two carres containing the T17 deposit) was transferred to KCC. The Kamoto, Mashamba East and T17 deposits and any extensions of these deposits which are within the perimeter of PE525 and the two carres of PE4958 have been transferred, shall be for the sole benefit of KCC. Such transfer was completed pursuant to a transfer deed dated 27 July 2009 and evidenced by the CAMI in its exploitation certificate No. CAMI/CE/5621/2009 dated 27 November 2009.

- The DCP exploitation permits were transferred to KCC following completion of the merger with DCP. In addition, one carre of PE 7044 (i.e. new PE11601 being an extension of the Kananga deposit) shall be transferred by GCM to KCC once the holder of PE652 has released the carre to be transferred from its tailings area, or earlier if KCC has agreed to grant an easement to the holder of PE652. Such transfer was completed pursuant to a transfer deed dated 27 July 2009 and evidenced by CAMI in its exploitation certificate no. CAMI/CE/5622/2009 dated 27 November 2009.
- The perimeter of the merged KCC/DCP concession area will contain the Necessary Surfaces as defined in the Amended Joint Venture Agreement.

Pursuant to the Amended Joint Venture Agreement, the Necessary Surfaces will be sourced from PE8841 held by GCM and from one carré close to the T17 deposit. Easements have been granted to enable KCC to establish and maintain operating facilities for the KOV Open Pit waste removal conveyor belt system. KCC shall fund an independent contractor to determine whether the surfaces identified as potential Necessary Surfaces contain any mineral reserves. Provided no reserves are discovered, the relevant surfaces shall be converted into multiple exploitation permits (where required) and shall be leased to KCC Should any reserves be discovered in the identified surfaces, the reserves shall be transferred to KCC and shall count as Replacement Reserves (as defined below) under the terms of the Amended Joint Venture Agreement.

In addition, under the Amended Joint Venture Agreement, KCC was granted an option for a period of three years following the merger with DCP to increase the Necessary Surfaces by the five carrés (to be leased) contained in PE8841 if such extension is required for the project. Beyond this three-year period, KCC shall have a pre-emptive right on these five carrés in case GCM is willing to transfer or make any part of them available to third parties.

The rent for the Necessary Surfaces (including the five additional carrés if the option is exercised within the 3 year period) amounts to USD 600,000/year. However, KCC, as the merged entity, will remain liable for the payment of the rental tax (22%) which will be in addition to the royalties owed by KCC to GCM.

As part of the Amended Joint Venture Agreement, it has also been agreed that upon the winding up or liquidation of KCC, the mining rights and titles of KCC shall revert to GCM without further consideration.

Pursuant to the Amended Joint Venture Agreement, GCM and KCC have signed an agreement relating to the lease by GCM to KCC of the equipment and installations described in an annex to the Amended Joint Venture Agreement (the "Equipment and Installations"). The rent for the Equipment and Installations payable by KCC to GCM is USD 1,200,000/year to be deducted from the royalties owed by KCC to GCM. However, KCC will remain liable for the payment of the rental tax (22%) which will be in addition to these royalties.

KCC shall retrocede the Equipment and Installations free of charge to GCM upon lawful termination or final expiry of the Amended Joint Venture Agreement.

As part of the Amended Joint Venture Agreement, it has also been agreed that GCM grants and/or makes available to KCC, subject to payment of the reasonable maintenance costs, the following rights: (i) the right to use roads, railways, rail routes, waterways, etc; (ii) to avail itself of rights of way, easements, rights to water, etc. and (iii) all the supplementary rights that can facilitate access to or use of the lands involved and the facilities located thereon, which GCM enjoys outside the perimeter of the KCC project in so far as the same are necessary or desirable to carry out the project in the most cost effective manner.

## 1.4 Legal Tenure

Following on from the ratification of the Amended Joint Venture Agreement, KCC holds the permits listed in the table below.

Exploitation permits under the Mining Code of the DRC are renewable in accordance with the terms of the Mining Code for periods of 15 years.

An exploitation permit grants to its holder the exclusive right to carry out exploration and exploitation works for the minerals for which it has been granted. This right covers the construction of necessary facilities for

mining exploration, the use of water and wood resources, and the free commercialisation of products for sale, in compliance with corresponding legislation.

| Property | Exploitation Permit Number | Rights Granted | Location | Held By | Area of Title | Valid Until |
|---|---|---|---|---|---|---|
| Kamoto Undergound Mine and Mashamba East Open Pit | PE525 | Cu, Co and associated minerals | 10°43'S 25°24'E | KCC | 13 blocks, 11,04km$^2$ | 03/04/2024 Renewable |
| T17 Open Pit | PE11602 | Cu, Co, nickel and gold | | KCC | 2 blocks, 1,698km$^2$ | 03/04/2024 Renewable |
| Extension of Kananga | PE11601 | Cu, Co, nickel and gold | | KCC | 1 block, 0,849km$^2$ | 07/05/2022 Renewable |
| KOV Open Pit | PE4961 | Cu, Co and associated minerals + Use of Surface | 10°42'S 25°25'E | KCC | 10 blocks, 8,49km2 | 03/04/2024 Renewable |
| Tilwezembe Open Pit | PE4963 | Cu, Co and associated minerals + Use of Surface | 10°47'S 25°42'E | KCC | 9 blocks, 7,64km2 | 03/04/2024 Renewable |
| Kananga Mine | PE4960 | Cu, Co and associated minerals + Use of Surface | 10°40'S 25°28'E | KCC | 13 blocks, 11,04km2 | 03/04/2024 Renewable |

The property boundaries of the exploitation permits of KCC are described in the figure below. Such figures also show the Necessary Surfaces.

2km
SCALE

The boundaries have been taken from the maps at the CAMI relating to the boundaries of the KCC exploitation permits. KML has not separately surveyed the area. There are certain limited areas outside land currently held by GCM where KCC will need to make application for licences to operate infrastructure and tailings.

## Status of Material Assets

This MER covers the following operations, projects and associated infrastructure of KCC located in the Kolwezi District of the Katanga Province in the Democratic Republic of Congo ("DRC") which are collectively referred to herein as the "Material Assets" and which are tabulated below.

| Property | Holder | Type | Status | Licence | | Comments |
|---|---|---|---|---|---|---|
| | | | | Expiry Date | Area | |
| KTO Mine<br>Mashamba East Open Pit | KCC | Ug<br>OP | Operating<br>Development | 3 April 2024 | 11,04 km$^2$ | Mine Operational<br>Development project, dewatering to commence in 2013 |
| T17 Open Pit | KCC | OP | Operating | 3 April 2024 | 1,698 km$^2$ | Mine Operational |
| KOV Open Pit | KCC | OP | Operating | 3 April 2024 | 8,49 km$^2$ | Mine Operational |
| Tilwezembe Open Pit | KCC | OP | Dormant | 3 April 2024 | 7,64 km$^2$ | Operations ceased in November 2008 due to lower copper/cobalt prices |
| Kananga Mine | KCC | OP | Dormant | 3 April 2024 | 11,04 km$^2$ | Operations ceased due to pending relocation of rail line |
| Extension of Kananga | KCC | OP | Dormant | 7 May 2022 | 0,849 km$^2$ | Operations ceased due to pending relocation of rail line |

OP = Open Pit

Ug = Underground

Summary Table of Mineral Processing Assets:

| Property | Holder | Status |

| Kamoto Concentrator | KCC | Operating |
| Luilu Metallurgical Plant | KCC | Operating |

## Replacement Reserves

Pursuant to the Amended Joint Venture Agreement, the reserves to be replaced in exchange for the Dikuluwe and Mashamba West deposits surrendered to GCM pursuant to the release agreement (the "Released Deposits") amount to 3 992 185 tonnes of copper and 205 629 tonnes of cobalt.

No "pas de porte" shall be paid to GCM in relation to the transfer of the reserves to be transferred to KCC as compensation for the Released Deposits (the "Replacement Reserves").

Pursuant to the Amended Joint Venture Agreement, GCM and KCC are also required to jointly scope, implement and manage an exploration programme (the "Exploration Programme") with the object of identifying sufficient Replacement Reserves and transferring them to KCC by no later than 1 July 2015. The Exploration Programme can take place within the perimeters of: (i) the KCC Exploitation Permits (excluding the Kamoto, Mashamba East, Tilwezembe, Kananga, T17 and KOV Open Pit deposits and any extensions of these deposits), (ii) the Necessary Surfaces, or (iii) in other perimeters belonging to GCM.

The Exploration Programme is to be financed by way of a loan from KCC to GCM and refunded, without interest, by GCM by way of set-off against the royalties and dividends payable by KCC.

If any Replacement Reserves are identified by GCM as a result of the Exploration Programme or otherwise, they shall be evaluated and certified in accordance with the Australasian Code for Reporting of Mineral Resources and Ore Reserves prepared by the Joint Ore Reserves Committee of the Australasian Institute of Mining and Metallurgy, Australian Institute of Geoscientists and Mineral Council of Australia, as amended.

Once GCM has satisfied KCC that it has good legal title to such Replacement Reserves and they are covered by valid exploitation permits, KCC shall enter into a transfer deed or a lease, pursuant to which the Replacement Reserves shall be transferred or leased (amodié) to KCC.

If GCM does not replace these Released Deposits by 1 July 2015 it must pay USD 285,000,000 as financial compensation. KFL, GEC and GCM agreed that the financial compensation would be due from 1 July 2015 and that interest would be changed if the financial compensation is not paid within the two months following 1 July 2015. During the first 12 months following the two month grace period the interest rate applicable to the unpaid financial compensation amount would be limited to the London Interbank Offering Rate (“Libor”) (6 month) as opposed to Libor (6 month) + 300 basis points which will become applicable as of the end of the 12 month period.

GCM accepts that KCC may withhold any future revenues owed to GCM (i.e. royalties and dividends, with the exception of the pas de porte) until the financial compensation is fully paid.

## 1.5 Resources Model

### Geology

The mineralized zones are at the western end of the Katangan Copperbelt, one of the great metallogenic provinces of the world, and which contains some of the world’s richest copper, cobalt and uranium deposits.

These deposits are hosted mainly by metasedimentary rocks of the late proterozoic Katangan system, a 7 km thick succession of sediments with minor volcanics, volcanoclastics and intrusives. Geochronological data indicate an age of deposition of the Katangan sediments of about 880 million years and deformation during the Katangan orogeny at less than 650 million years. This deformation resulted in the NS-SE trending Lufilian Arc, which extends from Namibia on the west coast of Africa through to Zambia, lying to the south of the DRC. Within the DRC, the zone of deformation extends for more than 300 km from Kolwezi in the north-west to Lubumbashi in the south-east.

Stratigraphically, the rich copper and cobalt deposits found in Zambia and the DRC are localized in the Roan Supergroup (the “Roan”). The Roan occurs at the base of the Katanga succession, unconformably overlying the basement rock of Kibaran age (mid-proterozic). The Roan is separated from the overlying rocks of the Kundelungu and Nguba Supergroups by a conglomerate, the Grand Conglomerate. The Nguba (previously known as the Lower Kundelungu) is composed of sandstones and shales with a basal conglomerate, while the Kundelungu consists essentially of sediments and is separated from the Nguba by a conglomerate, the (French) ‘petit conglomerat’.

Within the Lufilian Arc are large-scale E-W to NW-SE trending folds with wavelengths extending for kilometres. The folds are faulted along the crests of the anticlines through which rocks of the Roan have been diapirically injected into the fault zones, squeezed up fault planes and over-thrust to lie above rocks of the younger Kundelungu. The over-thrust Roan lithologies occur as segments or “fragments” on surface. The

fragments are intact units that preserve the original geological succession within each. A fragment could be of hundreds of metres aligned across the fault plane.

In the Katangan copperbelt, mining for copper and cobalt occurs in these outcropping to sub-outcropping fragments.

## Mineralisation

Primary mineralisation, in the form of sulphides, within the Lower Roan is associated with the D Strat and RSF for the OBI and the SDB and SDS for the OBS and is thought to be syn-sedimentary in origin. Typical primary copper sulphide minerals are bornite, chalcopyrite, chalcosite and occasional native copper while cobalt is in the form of carrolite. The mineralization occurs as disseminations or in association with hydrothermal carbonate alteration and silicification.

Supergene mineralization is generally associated with the levels of oxidation in the sub-surface sometimes deeper than 100m below surface. The most common secondary supergene minerals for copper and cobalt are malachite and heterogenite. Malachite is the main mineral mined within the confines of the current KOV Open Pit.

The RSC, a lithological unit stratigraphically intermediate between the Upper and Lower Ore body host rocks, contains relatively less copper mineralization. The RSC contains appreciable copper mineralization near the contacts with the overlying SDB formation and the underlying RSF formations. The middle portion of the RSC, considered to be “sterile” by GCM, normally contains relatively less copper mineralization and is sometimes not sampled. The mineral potential of the RSC is less well known than that of other formations.

The RSC has been observed to be well mineralized in supergene cobalt hydroxide, heterogenite, which occurs as vug infillings, especially near the surface.

The mineralization at Tilwezembe Mine is atypical being hosted by the Mwashya or R4 Formation. The mineralization generally occurs as infilling of fissures and open fractures associated with the brecciation. The typical mineralization consists mainly of copper minerals (chalcopyrite, malachite and pseudomalachite), cobalt minerals (heterogenite, carrolite and spherocobaltite) and manganese minerals (psilomelane and manganite).

## Mineral Resources

The consolidated Mineral Resources of the various areas of KCC as on 31 December 2010 in summarised in the table below. The actual mined out areas as on 31 October 2010 were used in conjunction with the forecasted tonnes for the last two months of the year.

**KCC: Consolidated Mineral Resources as at 31 December 2010**

| Classification | Project Area | Mt | %TCu | %TCo |
|---|---|---|---|---|
| Measured | KTO Mine | 30.7 | 4.54 | 0.54 |
| | Subtotal | 30.7 | 4.54 | 0.54 |
| Indicated | KTO Mine | 35.7 | 4.69 | 0.6 |
| | Mashamba East Open Pit | 75.0 | 1.80 | 0.38 |
| | T17 Open Pit | 8.5 | 2.75 | 0.87 |
| | KOV Open Pit | 123.9 | 5.37 | 0.4 |
| | Kananga Mine | 4.1 | 1.61 | 0.79 |
| | Tilwezembe Open Pit | 9.5 | 1.89 | 0.6 |
| | Subtotal | 256.7 | 3.95 | 0.45 |
| Total Measured and Indicated | KTO Mine | 66.4 | 4.62 | 0.57 |
| | Mashamba East Open Pit | 75.0 | 1.80 | 0.38 |
| | T17 Open Pit | 8.5 | 2.75 | 0.87 |
| | KOV Open Pit | 123.9 | 5.37 | 0.4 |
| | Kananga Mine | 4.1 | 1.61 | 0.79 |
| | Tilwezembe Open Pit | 9.5 | 1.89 | 0.6 |
| | TOTAL | 287.4 | 4.02 | 0.46 |
| Inferred | KTO Mine | 10.6 | 5.11 | 0.59 |
| | Mashamba East Open Pit | 65.3 | 0.76 | 0.1 |
| | T17 Open Pit | 15.3 | 1.91 | 0.61 |
| | KOV Open Pit | 71.2 | 3.56 | 0.32 |
| | Kananga Mine | 4.0 | 2.00 | 0.98 |
| | Tilwezembe Open Pit | 13.8 | 1.75 | 0.60 |
| | Total | 180.2 | 2.32 | 0.32 |

1) Mineral Resources have been reported in accordance with the classification criteria of the Australian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves, 2004 Edition (the "JORC Code").

2) Mineral Resources are inclusive of Ore Reserves.

3) Mineral Resources are not Ore Reserves and do not have demonstrated economic viability.

## 1.6 Reserve Estimate

Ukwazi Group visited the Material Assets of KCC during October 2010 and received geological and mineralogical data to assess and optimise mining plans developed for life of mine ("LOM"). The active operations for KCC can be classified into underground operations, namely KTO mine and surface mining operations, namely T-17 Open Pit and KOV Open Pit.

The current plan for KTO is to ramp yearly production up to 2.2 million tonnes of sulphide ore, to coincide with the completion of the Phase 4 processing plant expansion. Dilutions and mining over breaks applied vary from 4% to 13% and mining extractions including geological losses from 90% to 50%, depending on the mining methodology used. The run-of-mine ("ROM") head grade remains relatively constant at an average of 3.9% Cu over the life of 37,8 million tonnes ROM.

Two underground mines are planned for a production ramp up from 2018 onwards to replace and / or supplement production from the open pit operations. Conceptual work has been completed on T-17 underground and Kamoto East underground projects. These projects are planned on a total of 13.7 and 20.5 million tonnes ROM respectively at diluted grades of 2.6% Cu and 4.4% Cu.

T-17 Open Pit is approaching depletion and surface mining will conclude within the current open pit economic boundaries during 2012. The production plan is to achieve a total of 1.5 million tonnes of ROM oxide ore during 2011 and 2012 at an average head grade of 2.7% Cu. The production scheduled up to 2012 is converted to probable mineral reserves.

The KOV Open Pit delivers a ROM head grade of 4.14% Cu for a total of 83.2 million tonnes of ROM ore up to 2030. Ore production from the KOV Open Pit is primarily oxide material at 78% on average. The mineral reserve is estimated at 55.7 million tonnes at 4.7% Cu, classified as probable mineral reserve. KOV Open Pit is the major operational source of copper based on the current LOM plan.

For Mashamba East open pit, a total ROM production of 12.8 million tonnes at 2.8% Cu is planned at a production rate of up to 2.0 million tonnes per year. The pit would produce only oxide ore and the Probable Mineral Reserve is estimated at 5.9 million tonnes at 3.0% Cu.

KCC currently has an operational plan up to 2030 to mine a total of 169 million tonnes of copper ore, at an average copper grade of 3.9% Cu. The reserve estimate is 97 million tonnes at an average grade of 4.2% Cu.

**KCC: Consolidated Mineral Reserves as at 31 December 2010**

| Proved | | | Probable | | | Total | | |
|---|---|---|---|---|---|---|---|---|
| Tonnes (*000) | % TCu | % TCo | Tonnes (*000) | % TCu | % TCo | Tonnes (*000) | % TCu | % TCo |
| 14 589 | 3.47 | 0.51 | 82 450 | 4.33 | 0.46 | 97 039 | 4.20 | 0.47 |

## 1.7 Plant and Equipment

The Kamoto Concentrator ("KTC") and the Luilu Refinery constitute the process plants of KCC with KTC being approximately 4km from Kolwezi and the Luilu Refinery being 6 km distance from KTC.

### Kamoto Concentrator

The original Kamoto Concentrator consists of Kamoto 1 and 2 sections built in 1968 and 1972 respectively and DIMA 1 and 2 sections built in 1981 and 1982 respectively.

Kamoto 1 treated mixed ore and oxides. The circuit comprised the following unit processes:

- autogenous milling operating in closed circuit with hydro cyclones;
- sulphide flotation including roughing, cleaning and middlings regrind to produce a sulphide concentrate;
- sulphidisation of oxide minerals; and
- oxide flotation including roughing and cleaning to produce an oxide concentrate.

Kamoto 2 primarily treated sulphide ore from the KTO mine. The circuit comprised the following unit processes:

- autogenous milling operating in closed circuit with hydro cyclones; and
- sulphide flotation including roughing, cleaning and middlings regrind.

The DIMA 1 circuit primarily treated oxides and mixed oxide / sulphide ore feeds. The circuit comprised the following unit processes:

- primary autogenous milling and secondary ball milling operating in closed circuit with hydro cyclones;
- sulphide flotation including roughing, cleaning, re-cleaning and middlings re-grind to produce a sulphide concentrate;
- sulphidisation of oxide minerals; and
- oxide flotation including roughing and cleaning to produce an oxide concentrate.

The DIMA 2 circuit treated oxide ore. The circuit comprised the following unit processes:

- primary autogenous milling and secondary ball milling operating in closed circuit with hydro cyclones;
- sulphidisation of oxide minerals; and
- oxide flotation including roughing and cleaning to produce an oxide concentrate.

### Luilu Refinery

Production at the Luilu Refinery, located approximately 6 km north of KTC, commenced in 1960. The process route employed was roast leach-electro-winning typical of other contemporary DRC and Zambian Copperbelt operations. The circuit comprised the following unit processes:

- sulphide and oxide concentrate receipt, dewatering and storage;
- sulphide concentrate roasting;
- sulphuric acid copper leach of roaster calcine and oxide concentrate (oxidising leach assisted by air injection);
- secondary leach using high acid-consuming (dolomitic) concentrates;
- counter-current decantation and clarification;
- leach tailings filtration and residual sulphide flotation;
- tailings neutralisation and disposal;
- selenium removal via up-flow reactor containing copper granules;
- copper electro-winning onto copper starter sheets (being converted to stainless steel blanks);
- de-copperising of cobalt bleed solution – two-stage electro-winning;
- cobalt bleed solution purification including the following steps;
- iron removal by controlled pH precipitation using milk of lime;
- copper removal by two-stage controlled pH precipitation using milk of lime;
- nickel removal by controlled pH precipitation with sodium hydrogen sulphide (“NaHS”) and cobalt chips;
- zinc removal by the addition of hydrogen sulphide (“$H_2S$”) and neutralisation with sodium carbonate solution;
- controlled pH precipitation of cobalt with milk of lime;

- cobalt re-leaching with spent electrolyte and sulphuric acid under controlled pH;
- cobalt electro-winning; and
- cobalt vacuum degassing and burnishing.

The Luilu Refinery was designed to process sulphide and oxide concentrates with an initial capacity of 80 ktpa copper cathode. During the 1970s, capacity was expanded to 175 ktpa copper cathode and 8 ktpa cobalt cathode. The grade of cathode copper produced in the first electro-winning stage never met London Metal Exchange Limited ("LME") Grade 'A' quality, while most of the cathode and copper sponge produced in the secondary electro-winning was not of commercial quality and was recycled to the Shituru smelter at Likasi. Cobalt recovery across the plant was <65%, with the majority of the cobalt losses occurring at nickel and zinc sulphide precipitation with some also at iron removal and cobalt precipitation.

The condition of the plant in 2004, when taken over, was extremely poor and almost totally run down. A progressive renewal programme was planned, to match the increasing throughput. Considerable progress has been made to-date in the phased rehabilitation exercise. Completion of Phase 1 was December 2007 and completion of Phase 2 December 2009. The new roaster was commissioned in late 2009.

Phase 3 for which SNC-Lavalin (South Africa) are undertaking the engineering and procurement services will essentially complete the rehabilitation of KTC and the Luilu Refinery. A process simulation model has been developed, which indicates that Phase 3 of KTC and Luilu Refinery will produce 150 ktpa of copper and 8 ktpa of cobalt. Completion of Phase 3 will be in July 2011

Further production increases above the capacity of 150 ktpa copper and 8 ktpa cobalt have been assessed by a scoping study completed in July 2010. The study compared alternatives for increasing copper output to 270 ktpa or 310 ktpa.

A front end engineering and early works project is currently in progress. The design output will be 270 ktpa or 310 ktpa of copper and 8000 ktpa of cobalt metal with the additional cobalt sold as cobalt hydroxide. The most significant construction works to realise the 310ktpa copper production capacity are:

- Conversion of the DIMA mills from an autogenous application to a semi-autogenous application;
- Additional milling and flotation facilities;
- Additional concentrate filtration facilities;
- Additional roasting facilities;
- A neutral leach circuit;
- A copper solvent extraction ("SX") plant;
- Conversion of the existing unused electro-refinery to electrowinning as base load copper production;
- Refurbishment and re-use of the existing copper electrowinning facility as variable top up capacity;
- Upgrading the cobalt purification facilities; and
- Cobalt hydroxide bagging facility.

It is currently anticipated that the conversion and construction works will be completed in 2013 which will allow for 250ktpa copper production in 2014. The refurbishment of the existing copper electrowinning facility will be completed in 2014 to allow for 310ktpa copper production in 2015.

## 1.8 Closure

A closure assessment was conducted on the mine infrastructure and footprint. The key findings from the closure assessment have been based on the interpretation of Google Earth images of the respective sites. Moreover, in those instances where the required information was not available, estimates were made based on experience. Unit rates for the purpose of the review were obtained from GAA existing data base and/or from demolition practitioners. Where required, these were adapted to reflect site-specific conditions.

The review of the existing closure costs as well as recommendations in this regard has been completed from a risk-averse perspective and mainly errs on the side of caution. This approach allows for the costs to be refined as appropriate information becomes available, as opposed to possible under-estimation and associated provision that could lead to liability shortfalls.

Due to the severely disturbed and possibly contaminated nature of the mining area, even small differences in battery limits could have a notable effect on the computed closure costs. Notwithstanding uncertainty in this regard, the indicative closure costs of USD 111million determined by GAA indicate that the 2008 cost determined by SRK appears to be appropriate and can be applied as the basis for reclamation and restoration related financial provision at this point in time.

More work is required to arrive at definitive closure costs, also giving attention to those aspects highlighted in this report.

## 1.9 Environmental, Health and Safety

This report presents the findings of an environmental and social audit conducted by GAA at KCC on 8th December 2010.

### Results of the Audit: Permits

In regards to authorisations required, it was demonstrated during the audit that:

- KCC holds approved operating licenses for all its concessions (PE525, PE4960, PE4961, PE4963, PE11601 and PE11602) in accordance with Article 64 of the DRC Mining Code (Law No 007/2002 of 11th July, 2002).
- A draft Environmental Impact Study ("EIS") and Environmental Management Plan ("EMP") has been compiled for the KCC Project by SRK in March, 2010. KCC has submitted this document to the Department for the Protection of the Mining Environment ("DPEM") in January 2011 for their approval, as per the DRC Mining Code and DRC Mining Regulations (Decree No 038/2003 of March 2003). The main body of the report includes a table summarises the extent to which KCC environmental and social management complies with Equator Principles and the International Finance Corporation ("IFC") performance standards. This assessment is heavily based on the findings of a previous audit (Metago, 2009) which were then updated with information from EIS and EMP (SRK, 2010) and our findings in this audit.

### Results of the Audit: Environmental Impacts

Environmental impacts which may represent a risk to KCC operation and to compliance with the Equator Principles include:

- Tailing and plant effluent discharges to the Luilu River which include, amongst other sources:
  - Process effluents and residues from the Luilu Refinery entering a ground depression to the south of the plant and overflowing into the Luilu River. This activity has been practiced since construction of the Luilu Refinery and represents a legacy issue. However, KCC has recognised the potential environmental risk it poses and is addressing the issue through an engineering study which has been completed by SNC-Lavalin and which is currently scheduled for implementation in 2011; and

  - Uncontrolled release of minor quantities of tailings from the Kamoto Interim Tailings Dam ("KITD") through the penstocks and spillways into downstream redundant tailings facilities and eventually into the Luilu River, which represent a significant environmental risk to KCC by virtue of their high total dissolved solids ("TDS"), variable pH, high total suspended solids ("TSS") (> 500 mg/l) and non-compliant levels of copper ("Cu"). These releases were addressed in 2010 with an extension to the KITD facility and with further works scheduled to be completed on KITD in 2011 in advance of the LOM tailings facility being engineered and constructed in preparation for long term tailings management in 2012. .

- Discharge of KOV Open Pit water to the Musonoi River resulting in a relatively low risk of silt loading. and contamination with Cu, cobalt ("Co") and manganese ("Mn"). The KOV Open Pit discharges to the Musonoi River are monitored daily and to date have been >98% compliant with DRC discharge limits for TSS and the other referenced metals.

- Dust fall and vibration impacts to surrounding villages (particularly Luilu and Musonoi) from KCC blasting, Waste Rock Dumps ("WRD"), tailings storage facilities ("TSF"), haul roads and other activities. These impacts represent a nuisance factor, a potential health/safety risk, and potential source of community complaints and compensation claims. KCC has taken note of the issue and provided capital to monitor and address these concerns. It should be noted that dust fall can not exclusively be assigned to KCC operations due to the presence of artisan mining activities and historical WRD and tailings facilities from GCM operations.

- Radioactivity impacts associated with various ore storage areas, TSF, WRD and processing plants. The most significant risk to KCC is possibly via exposure of artisanal miners to radioactive waste rock which is stored separately from non-radioactive waste rock. However, the radioactive waste rock dumps adjacent to KOV Open Pit, are a consequence of historical mining activities by GCM and remain GCM's liability.

- The rehabilitation of steep-sloped WRD on which re-contouring is first required. This represents rehabilitation and closure cost liability to KCC.

- Historical sites of soil pollution within the KCC Concession, particularly those associated with copper and cobalt effluent releases from the Luilu Refinery and KTC. As previously stated, where this has occurred prior to 2004, the reclamation and rehabilitation remains the responsibility of GCM.

- The risk of generating acid rock drainage with future mining of deeper sulphide ores. Geochemical testing of geological and waste materials would assist in characterising and quantifying this risk.

The following observations were made in relation to overall management of KCC environmental issues:

- Following the drafting of the Environmental Management System ("EMS"), it requires dedicated human and financial resources in order to be effective.

## Results of the Audit: Community Relations

The following observations were made in relation the management of KCC social issues:

- The organisational structure, staffing, budget and allocation of funds to corporate social investment projects are well managed. Approximately USD 8M was allocated to community development projects in 2010 with projects including: construction of community infrastructure (schools, water supplies roads, hospitals); health interventions (malaria and HIV control); and agricultural projects. The Community Development Manager anticipates a budget of approximately USD 10M for 2011.

- There is a good interface between KCC and communities directly affected by KCC operations

- A resettlement program was conducted in 2006 / 2007 to relocate (1) approximately 25 families from KCC owned ground within Kolwezi town; and (2) approximately 80 people from ground which was

allocated for the Far West Tailings Dam which they were occupying on a seasonal basis for farming activities. All resettlement was conducted in compliance with Equator Principles and involved local community leaders.

- Community issues and concerns appear to have been meticulously managed in 2010 through the communication and grievance procedures set up by the Community Development Department. The main grievances identified appear to be as a result of blasting and mine waste disposal at T17 Open Pit and KOV Open Pit, which affects the nearby Musonoi community.
- The draft EIS forms an acceptable basis for the social and environmental management of the mine in the future.
- Fully implemented, the EIS and EMP will guide the actions necessary to comply with world standards, including Equator Principles and IFC performance standards

In our opinion, implementation of the site EMP (once submitted and approved by the DPEM) and EMS will be fundamental in enabling KCC to meet Equator Principle requirements and to adequately address its' key environmental and social liabilities.

## 1.10 Economic Evaluation

An economic evaluation of KML's interest in KCC was done using the discounted cash flow method. Revenue, capital expenditure and operating costs were projected over the life of mine and discounted to give the expected value of KCC.

### Revenue, capital and operating cost estimates

Production levels of copper and cobalt for KCC were based on the mine plans for the various operations and the expected recoveries from the processing plants. The price obtained for the production was derived from futures prices on the LME. Operating cost estimates were based on contractual, current and budgeted costs.

Capital expenditure is required for development of future mining operations, the completion of the existing phase 3 and the new phase 4 plans to enable annualised copper production of 310 ktpa, and associated support infrastructure. USD 25 million per annum is required as sustaining capital. The future capital requirements for KCC over the life of the mine are shown in the following table:

**Capital Expenditure for KCC**

| USD million | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 - 2035 | LOM Total |
|---|---|---|---|---|---|---|---|
| Capital expenditure | 320 | 353 | 370 | 132 | 120 | 1 352 | 2 649 |

### Valuation

The valuation was done at a discount rate of 10%, base date 1 January 2011. The net present value ("NPV") of KML's investment in KCC is USD 6 008 million.

## 1.11 Katanga MER Extraction Table

*Capacities refer to annualized capacity at year end - 31 December

* Overall plant recovery is 85% for Copper and 65% for Cobalt

| | | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 |
|---|---|---|---|---|---|---|---|---|---|
| **Finished metal production capacity** | **Units** | | | | | | | | |
| Copper | t | 40 800 | 70 000 | 130 000 | 150 000 | 150 000 | 200 000 | 250 000 | 310 000 |
| Cobalt | t | 2 050 | 3 240 | 5 500 | 8 000 | 8 000 | 8 000 | 8 000 | 8 000 |

# Table of Contents

**1.0 EXECUTIVE SUMMARY ..... 1**
1.1 Introduction ..... 1
1.2 Ownership ..... 2
1.3 History ..... 2
1.4 Legal Tenure ..... 3
1.5 Resources Model ..... 7
1.6 Reserve Estimate ..... 9
1.7 Plant and Equipment ..... 10
1.8 Closure ..... 13
1.9 Environmental, Health and Safety ..... 13
1.10 Economic Evaluation ..... 15
1.11 Katanga MER Extraction Table ..... 16
**2.0 INTRODUCTION ..... 30**
2.1 Project Description and Location ..... 30
2.1.1 Project Description ..... 30
2.1.2 Location ..... 30
2.2 Ownership ..... 31
2.2.1 History ..... 31
2.2.2 Legal Tenure ..... 32
2.2.3 Status of Material Assets ..... 34
2.2.4 Replacement Reserves ..... 35
**3.0 DESCRIPTION OF RESOURCES ..... 35**
3.1 Geological setting ..... 35
3.1.1 General Geology ..... 35
3.1.1.1 General Stratigraphy ..... 38
3.1.2 Local Geology and Geological Models ..... 39
3.1.2.1 KTO Mine ..... 39
3.1.2.2 T17 Open Pit ..... 41
3.1.2.3 KOV Open Pit ..... 42
3.1.2.4 Mashamba East Open Pit ..... 42

3.1.2.5 Kananga Mine ..... 43
3.1.2.6 Tilwezembe Open Pit ..... 44
3.1.3 Deposit types ..... 44
3.1.4 Mineralisation ..... 45
3.2 Mineral Resource Estimation Methodology ..... 45
3.2.1 Exploration and Data ..... 46
3.2.1.1 Drilling ..... 46
3.2.1.2 Sampling Method and Approach ..... 49
3.2.1.3 Data quality and quantity ..... 50
3.2.1.4 Sampling Preparation and Analyses ..... 51
3.2.2 Data Verification ..... 52
3.2.2.1 Quality Control and Quality Assurance ("QA/QC") ..... 52
3.2.2.2 QA/QC Procedure ..... 52
3.2.3 Exploratory Data Analysis ..... 53
3.2.3.1 KTO Mine ..... 53
3.2.3.2 T17 Open Pit ..... 54
3.2.3.3 KOV Open Pit ..... 54
3.2.3.4 Mashamba East Open Pit ..... 56
3.2.3.5 Kananga Mine ..... 57
3.2.3.6 Tilwezembe Open Pit ..... 58
3.2.4 Variography Analysis ..... 58
3.2.5 Estimation Parameters ..... 62
3.2.5.1 Estimation Plan ..... 62
3.2.5.2 Density Assignment and Determinations ..... 63
3.2.6 Mineral Resource Classification ..... 67
3.2.7 Mineral Resource Statement ..... 68
**4.0 DESCRIPTION OF RESERVES ..... 69**
4.1 Overview of Mining Operations ..... 69
4.2 Underground Mining Operations and Projects ..... 73
4.2.1 KTO Mine ..... 73
4.2.1.1 Design Constraints Applicable to KTO ..... 74
4.2.1.2 RAP Mining Method ..... 75
4.2.1.3 CAF Mining Methods including Post Pillar Cut and Fill ("PPCF") ..... 75

4.2.1.4 Sub-level Caving Mining Methods ..... 76
4.2.1.5 Backfill ..... 76
4.2.1.6 Production Scheduling ..... 77
4.2.2 T-17 Underground Mine ..... 79
4.2.3 Kamoto East Underground Mine (“KTE”) ..... 80
4.2.4 Underground Mining Mineral Reserve Estimate ..... 82
4.3 Surface Mining Operations and Projects ..... 82
4.3.1 LOM Planning Process ..... 82
4.3.1.1 SMU Model / Mining Model ..... 83
4.3.1.2 Pit Optimisation ..... 84
4.3.1.3 Pit Design ..... 84
4.3.1.4 Scheduling Units ..... 85
4.3.1.5 Production Scheduling ..... 85
*4.3.2* T-17 Open Pit ..... 85
4.3.2.1 Modifying Factors ..... 85
4.3.2.2 Pit Optimisation ..... 86
4.3.2.3 Pit Design ..... 87
4.3.2.4 Production Scheduling ..... 88
*4.3.3* KOV Open Pit ..... 88
4.3.3.1 Modifying Factors ..... 89
4.3.3.2 Pit Design ..... 90
4.3.3.3 Production Scheduling ..... 92
*4.3.4* Mashamba East Open Pit ..... 92
4.3.4.1 Modifying Factors ..... 93
4.3.4.2 Pit Design ..... 94
4.3.4.3 Production Scheduling ..... 95
*4.3.5* Reserve Statement ..... 96
4.4 Mining Risks ..... 96
*4.4.1* KTO Mine ..... 96
*4.4.2* T-17 Underground and KTE Mine ..... 96
*4.4.3* Surface Operations ..... 96
**5.0 PLANT AND EQUIPMENT ..... 97**
5.1 General Process Commentary ..... 97

5.2 Processing Facilities ..... 97
5.2.1 Kamoto Concentrator ..... 97
5.2.2 Luilu Refinery ..... 98
5.3 The Kamoto Concentrator ..... 99
5.3.1 Ore Reception and Crushing ..... 99
5.3.2 Milling ..... 99
5.3.2.1 Oxide Ore Milling ..... 99
5.3.2.2 Sulphide Ore Milling ..... 100
5.3.3 Flotation ..... 102
5.3.3.1 Oxide Flotation ..... 102
5.3.3.2 Sulphide Flotation ..... 102
5.3.4 KTC Project Development ..... 103
5.4 Luilu Refinery ..... 103
5.4.1 Concentrate Reception ..... 104
5.4.2 Copper Production ..... 105
5.4.2.1 Sulphide Concentrate ..... 105
5.4.2.2 Oxide Concentrate ..... 106
5.4.3 Leach Circuits ..... 106
5.4.4 Cobalt Circuit ..... 107
5.5 Risks ..... 109
**6.0 TAILINGS AND WASTE ..... 109**
6.1 Desktop Review of Available Environmental Reports ..... 111
6.2 Assessment of Compliance with Statutory Requirements ..... 112
6.3 Review of Rehabilitation Provisions and Liabilities ..... 112
**7.0 CLOSURE ..... 112**
7.1 Approach and Limitations to Closure Cost Review ..... 112
7.1.1 Approach ..... 112
7.1.2 Limitations ..... 113
7.2 Available Information ..... 113
7.3 Battery Limits ..... 113
7.3.1 Available information ..... 114
7.3.2 Additions by GAA ..... 114
7.4 Assumptions and Qualifications ..... 115

7.4.1 General ..... 115
7.4.2 Site specific ..... 116
7.4.3 Additional allowances ..... 117
7.5 Closure Cost Comparison ..... 117
7.6 Infrastructural areas ..... 120
7.7 Mining areas ..... 120
7.8 General surface reclamation ..... 121
7.9 Water management ..... 122
7.10 Post closure aspects ..... 122
7.11 Additional allowances ..... 122
7.12 Matters Requiring Further Attention ..... 123
7.13 Conclusion ..... 123
**8.0 ENVIRONMENTAL, HEALTH AND SAFETY ..... 123**
8.1 Terms of Reference ..... 123
8.2 The KCC Concession Area ..... 124
8.3 Information Sources Reviewed ..... 124
8.3.1 Site documentation ..... 124
8.3.2 Interviews with site personnel ..... 125
8.3.3 Site areas visited ..... 125
8.4 Limitations of the Audit ..... 126
8.5 Results of the Audit ..... 126
8.5.1 Authorisations ..... 126
8.5.1.1 Operating licences ..... 126
8.5.1.2 Environmental Impact Study and Environmental Management Plan ..... 126
8.5.2 Compliance against Equatorial Principles ..... 126
8.6 Key environmental risks relating to KCC operations ..... 132
8.6.1 Impact of TSF and plant effluent discharges on river systems ..... 132
8.6.2 Impact of KOV Open Pit dewatering on Musonoi and Luilu River quality ..... 132
8.6.3 Impact of dust fallout on communities ..... 133
8.6.4 Impact of blasting and vibration on communities ..... 135
8.6.5 Radioactivity impacts ..... 135
8.6.6 Rehabilitation of waste rock dumps ..... 136
8.6.7 Disposal of hazardous and non-hazardous wastes ..... 137

8.6.8 Historical soil pollution sites ..... 137
8.6.9 Risk of acid rock drainage with future mining of sulphide ores ..... 137
8.7 Key Social Aspects and Risks Relating to KCC Operations ..... 137
8.8 Summary of Key Audit Findings ..... 139
8.9 References ..... 139
**9.0 MARKET ..... 140**
9.1 Copper ..... 140
9.2 Cobalt ..... 141
**10.0 TECHNICAL AND ECONOMIC ASSUMPTIONS ..... 143**
10.1 Revenue assumptions ..... 143
10.2 Capital Cost Estimate ..... 143
10.3 Operating Cost Estimate ..... 144
10.4 Taxation, Royalties and Other Business Parameters ..... 145
**11.0 ECONOMIC ANALYSIS ..... 146**
11.1 Valuation Methodology ..... 146
11.2 Valuation Assumptions ..... 146
11.3 The Valuation of KML's Interest in KCC ..... 147
**12.0 RISK ANALYSIS ..... 154**
12.1 Mining risks ..... 154
12.2 Processing risks ..... 155
12.3 Capital risks ..... 155
12.4 Operating risks ..... 155
12.5 Sovereign risk ..... 156
12.6 Economic and Market risk ..... 156
12.7 Environmental and Social risks ..... 157

# 2.0 INTRODUCTION

## 2.1 Project Description and Location

### 2.1.1 Project Description

SRK compiled a feasibility study in 2008 on the material assets of the project. This study and other documentation as received during the site visits, were used as the basis for reporting the Mineral Resources in this MER. GAA reviewed the resource models of KOV Open Pit, KTO and T17 Open Pit as received from KCC, and the resource models of Kanaga Mine, Tilwezembe Open Pit and Mashamba East Open Pit as received from SRK. KCC is made up of several separate land packages for a total concession area of 15,235 hectares. The physical facilities include the Kamoto Concentrator and Luilu Refinery, related shops, warehouses, railroads and power lines.

### 2.1.2 Location

The geographical location for the site is set out below.

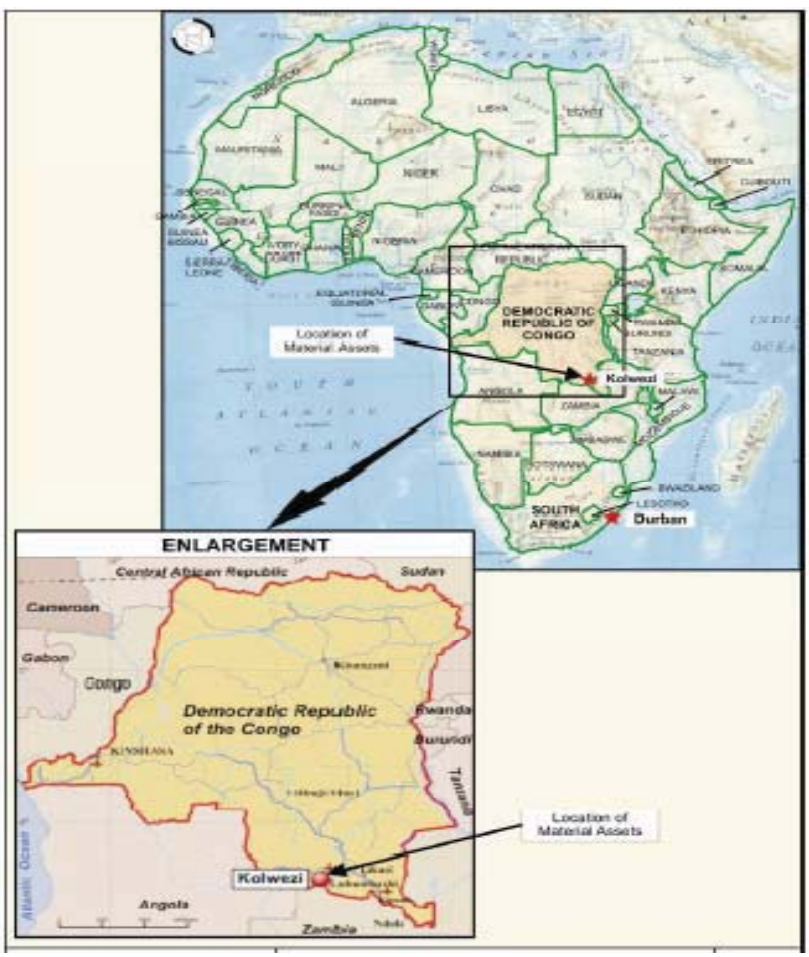

*Figure 1: Geographic Location Map of the Material Assets*

## 2.2 Ownership

KML, an entity listed on the Toronto Stock Exchange in Canada (TSX:KAT), holds a 75% stake in Kamoto Copper Company ("KCC") a joint venture with La Generale des Carrieres et des Mines ("GCM"), a State-owned mining company in the DRC.

### 2.2.1 History

Following the merger of KML and Nikanor PLC ("Nikanor") in January 2008, the Material Assets were held by KML through a 75% equity interest in KCC and a 75% equity interest in DRC Copper and Cobalt Project SARL ("DCP"). The balance of the equity interest in both KCC and DCP was owned by GCM.

In April 2007, prior to the merger of KML and Nikanor, a Commission of Enquiry was formed by the DRC government to review approximately sixty (60) mining agreements entered into by para-statal companies of the Congolese government. The KCC joint venture agreement and the DCP joint venture agreement were included in the mining agreements to be reviewed.

The Commission provided its conclusions in its report made public in November 2007.

KCC and DCP were notified on 11 February 2008 by the DRC Ministry of Mines of the objections and requirements regarding their partnerships with GCM further to the above-mentioned November 2007 report.

In July 2008, GCM and Katanga Finance Limited ("KFL" a 100% subsidiary of KML) entered into a memorandum of understanding under which certain amendments were agreed to be reflected in an amended joint venture agreement and the parties agreed to the merger of KCC and DCP.

In August 2008, the DRC Ministry of Mines issued terms of reference for the renegotiations and/or termination of the mining contracts entered into by KCC and DCP.

Following a number of meetings during the course of the last quarter of 2008 and the first quarter of 2009, GCM , KFL and Global Enterprises Corporate Ltd. ("GEC"), in the presence of KCC, DCP, SIMCO, Katanga Mining Holdings Limited, Katanga Mining Finance Limited and KML (BVI) Holdco Ltd. entered into on 25 July 2009 (which is also its date of entry into force) an agreement (the "Amended Joint Venture Agreement") which resulted in the termination of the original KCC joint venture agreement and DCP joint venture agreement.

The merger of KCC and DCP was ratified by Presidential Decree on 27 April 2010.

The consequences of the Amended Joint Venture Agreement on KCC mining rights and equipment installations are;

- The whole of PE525 (comprising 13 carres) and part of PE4958 (i.e. new PE11602 described below and comprising two carres containing the T17 deposit) was transferred to KCC. The Kamoto, Mashamba East and T17 deposits and any extensions of these deposits which are within the perimeter of PE525 and the two carres of PE4958 have been transferred, shall be for the sole benefit of KCC. Such transfer was completed pursuant to a transfer deed dated 27 July 2009 and evidenced by the CAMI in its exploitation certificate No. CAMI/CE/5621/2009 dated 27 November 2009.
- The DCP exploitation permits were transferred to KCC following completion of the merger with DCP. In addition, one carre of PE 7044 (i.e. new PE11601 being an extension of the Kananga deposit) shall be transferred by GCM to KCC once the holder of PE652 has released the carre to be transferred from its tailings area, or earlier if KCC has agreed to grant an easement to the holder of PE652. Such transfer was completed pursuant to a transfer deed dated 27 July 2009 and evidenced by CAMI in its exploitation certificate no. CAMI/CE/5622/2009 dated 27 November 2009.
- The perimeter of the merged KCC/DCP concession area will contain the Necessary Surfaces as defined in the Amended Joint Venture Agreement.

Pursuant to the Amended Joint Venture Agreement, the Necessary Surfaces will be sourced from PE8841 held by GCM and from one carré close to the T17 deposit. Easements have been granted to enable KCC to establish and maintain operating facilities for the KOV Open Pit waste removal conveyor belt system. KCC shall fund an independent contractor to determine whether the surfaces identified as potential Necessary Surfaces contain any mineral reserves. Provided no reserves are discovered, the relevant surfaces shall be converted into multiple exploitation permits (where required) and shall be leased to KCC Should any reserves be discovered in the identified surfaces, the reserves shall be transferred to KCC and shall count as Replacement Reserves (as defined below) under the terms of the Amended Joint Venture Agreement.

In addition, under the Amended Joint Venture Agreement, KCC was granted an option for a period of three years following the merger with DCP to increase the Necessary Surfaces by the five carrés (to be leased) contained in PE8841 if such extension is required for the project. Beyond this three-year period, KCC shall have a pre-emptive right on these five carrés in case GCM is willing to transfer or make any part of them available to third parties.

The rent for the Necessary Surfaces (including the five additional carrés if the option is exercised within the 3 year period) amounts to USD 600,000/year. However, KCC, as the merged entity, will remain liable for the payment of the rental tax (22%) which will be in addition to the royalties owed by KCC to GCM.

As part of the Amended Joint Venture Agreement, it has also been agreed that upon the winding up or liquidation of KCC, the mining rights and titles of KCC shall revert to GCM without further consideration.

Pursuant to the Amended Joint Venture Agreement, GCM and KCC have signed an agreement relating to the lease by GCM to KCC of the equipment and installations described in an annex to the Amended Joint Venture Agreement (the "Equipment and Installations"). The rent for the Equipment and Installations payable by KCC to GCM is USD 1,200,000/year to be deducted from the royalties owed by KCC to GCM. However, KCC will remain liable for the payment of the rental tax (22%) which will be in addition to these royalties.

KCC shall retrocede the Equipment and Installations free of charge to GCM upon lawful termination or final expiry of the Amended Joint Venture Agreement.

As part of the Amended Joint Venture Agreement, it has also been agreed that GCM grants and/or makes available to KCC, subject to payment of the reasonable maintenance costs, the following rights: (i) the right to use roads, railways, rail routes, waterways, etc; (ii) to avail itself of rights of way, easements, rights to water, etc. and (iii) all the supplementary rights that can facilitate access to or use of the lands involved and the facilities located thereon, which GCM enjoys outside the perimeter of the KCC project in so far as the same are necessary or desirable to carry out the project in the most cost effective manner.

### 2.2.2 Legal Tenure

Following on from the ratification of the Amended Joint Venture Agreement, KCC holds the permits listed in the table below.

**Table 1: KCC Permits**

| Property | Exploitation Permit Number | Rights Granted | Location | Held By | Area of Title | Valid Until |
|---|---|---|---|---|---|---|
| Kamoto Undergound Mine and Mashamba East Open Pit | PE525 | Cu, Co and associated minerals | 10°43'S 25°24'E | KCC | 13 blocks, 11,04km$^2$ | 03/04/2024 Renewable |
| T17 Open Pit | PE11602 | Cu, Co, nickel and gold | | KCC | 2 blocks, 1,698km$^2$ | 03/04/2024 Renewable |
| Extension of Kananga | PE11601 | Cu, Co, nickel and gold | | KCC | 1 block, 0,849km$^2$ | 07/05/2022 Renewable |
| KOV Open Pit | PE4961 | Cu, Co and associated minerals + Use of Surface | 10°42'S 25°25'E | KCC | 10 blocks, 8,49km2 | 03/04/2024 Renewable |
| Tilwezembe Open Pit | PE4963 | Cu, Co and associated minerals + Use of Surface | 10°47'S 25°42'E | KCC | 9 blocks, 7,64km2 | 03/04/2024 Renewable |
| Kananga Mine | PE4960 | Cu, Co and associated minerals + Use of Surface | 10°40'S 25°28'E | KCC | 13 blocks, 11,04km2 | 03/04/2024 Renewable |

Exploitation permits under the Mining Code of the DRC are renewable in accordance with the terms of the Mining Code for periods of 15 years.

An exploitation permit grants to its holder the exclusive right to carry out exploration and exploitation works for the minerals for which it has been granted. This right covers the construction of necessary facilities for mining exploration, the use of water and wood resources, and the free commercialisation of products for sale, in compliance with corresponding legislation.

The property boundaries of the exploitation permits of KCC are described in the figure below. Such figures also show the Necessary Surfaces.

The boundaries have been taken from the maps at the CAMI relating to the boundaries of the KCC exploitation permits. KML has not separately surveyed the area. There are certain limited areas outside land currently held by GCM where KCC will need to make application for licences to operate infrastructure and tailings.

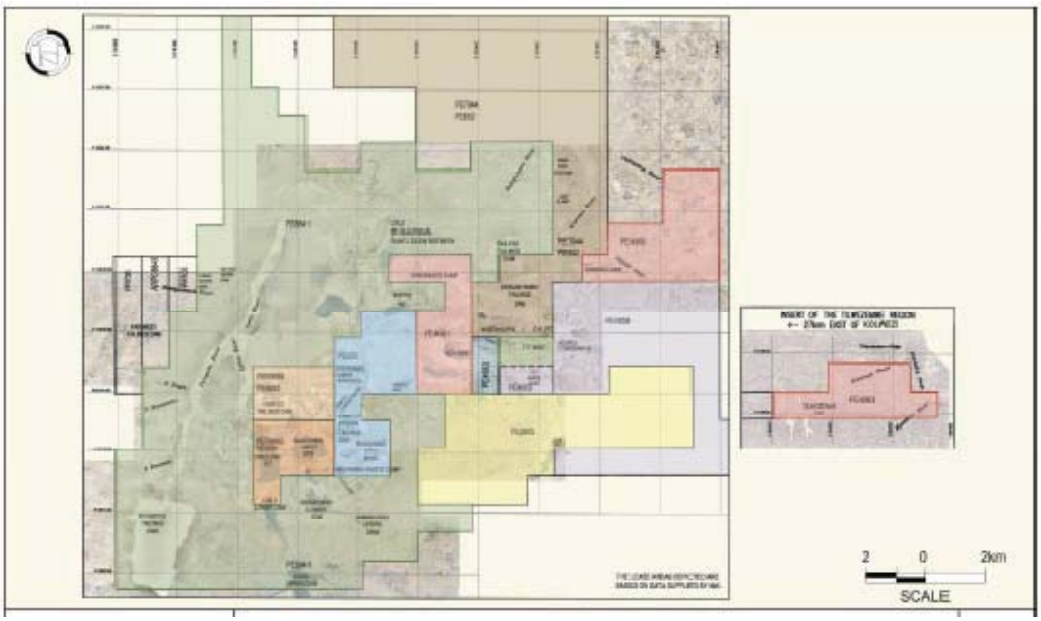

*Figure 2: Concession Boundries*

### 2.2.3 Status of Material Assets

This MER covers the following operations, projects and associated infrastructure of KCC located in the Kolwezi District of the Katanga Province in the Democratic Republic of Congo ("DRC") which are collectively referred to herein as the "Material Assets" and which are tabulated below.

**Table 2: Mining Assets**

| Property | Holder | Type | Status | Licence | | Comments |
|---|---|---|---|---|---|---|
| | | | | Expiry Date | Area | |
| KTO Mine and Mashamba East Open Pit | KCC | Ug OP | Operating Development | 3 April 2024 | 11,04 km$^2$ | Mine Operational Development project, dewatering to commence in 2014 |
| T17 Open Pit | KCC | OP | Operating | 3 April 2024 | 1,698 km$^2$ | Mine Operational |
| KOV Open Pit | KCC | OP | Operating | 3 April 2024 | 8,49 km$^2$ | Mine Operational |
| Tilwezembe Open Pit | KCC | OP | Dormant | 3 April 2024 | 7,64 km$^2$ | Operations ceased in November 2008 due to lower copper/cobalt prices |
| Kananga Mine | KCC | OP | Dormant | 3 April 2024 | 11,04 km$^2$ | Operations ceased due to pending relocation of rail line |
| Extension of Kananga | KCC | OP | Dormant | 7 May 2022 | 0,849 km$^2$ | As above |

**Table 3: Mineral Processing Assets**

| Property | Holder | Status |
|---|---|---|
| Kamoto Concentrator | KCC | Operating |
| Luilu Metallurgical Plant | KCC | Operating |

### 2.2.4 Replacement Reserves

Pursuant to the Amended Joint Venture Agreement, the reserves to be replaced in exchange for the Dikuluwe and Mashamba West deposits surrendered to GCM pursuant to the release agreement (the "Released Deposits") amount to 3 992 185 tonnes of copper and 205 629 tonnes of cobalt.

No "pas de porte" shall be paid to GCM in relation to the transfer of the reserves to be transferred to KCC as compensation for the Released Deposits (the "Replacement Reserves").

Pursuant to the Amended Joint Venture Agreement, GCM and KCC are also required to jointly scope, implement and manage an exploration programme (the "Exploration Programme") with the object of identifying sufficient Replacement Reserves and transferring them to KCC by no later than 1 July 2015. The Exploration Programme can take place within the perimeters of: (i) the KCC Exploitation Permits (excluding the Kamoto, Mashamba East, Tilwezembe, Kananga, T17 and KOV Open Pit deposits and any extensions of these deposits), (ii) the Necessary Surfaces, or (iii) in other perimeters belonging to GCM.

The Exploration Programme is to be financed by way of a loan from KCC to GCM and refunded, without interest, by GCM by way of set-off against the royalties and dividends payable by KCC.

If any Replacement Reserves are identified by GCM as a result of the Exploration Programme or otherwise, they shall be evaluated and certified in accordance with the Australasian Code for Reporting of Mineral Resources and Ore Reserves prepared by the Joint Ore Reserves Committee of the Australasian Institute of Mining and Metallurgy, Australian Institute of Geoscientists and Mineral Council of Australia, as amended.

Once GCM has satisfied KCC that it has good legal title to such Replacement Reserves and they are covered by valid exploitation permits, KCC shall enter into a transfer deed or a lease, pursuant to which the Replacement Reserves shall be transferred or leased (amodié) to KCC.

If GCM does not replace these Released Deposits by 1 July 2015 it must pay USD 285,000,000 as financial compensation. KFL, GEC and GCM agreed that the financial compensation would be due from 1 July 2015 and that interest would be changed if the financial compensation is not paid within the two months following 1 July 2015. During the first 12 months following the two month grace period the interest rate applicable to the unpaid financial compensation amount would be limited to Libor (6 month) as opposed to Libor (6 month) + 300 basis points which will become applicable as of the end of the 12 month period.

GCM accepts that KCC may withhold any future revenues owed to GCM (i.e. royalties and dividends, with the exception of the pas de porte) until the financial compensation is fully paid.

# 3.0 DESCRIPTION OF RESOURCES

## 3.1 Geological setting

### 3.1.1 General Geology

The mineralized zones are at the western end of the Katangan Copperbelt, one of the great metallogenic provinces of the world, and which contains some of the world's richest copper, cobalt and uranium deposits.

These deposits are hosted mainly by metasedimentary rocks of the late proterozoic Katangan system, a 7 km thick succession of sediments with minor volcanics, volcanoclastics and intrusives. Geochronological data indicate an age of deposition of the Katangan sediments of about 880 million years and deformation during the Katangan orogeny at less than 650 million years. This deformation resulted in the NS-SE trending Lufilian Arc, which extends from Namibia on the west coast of Africa through to Zambia, lying to the south of the DRC. Within the DRC, the zone of deformation extends for more than 300 km from Kolwezi in the north-west to Lubumbashi in the south-east.

Stratigraphically, the rich copper and cobalt deposits found in Zambia and the DRC are localized in the Roan Supergroup (the “Roan”). The Roan occurs at the base of the Katanga succession, unconformably overlying the basement rock of Kibaran age (mid-proterozic). The Roan is separated from the overlying rocks of the Kundelungu and Nguba Supergroups by a conglomerate, the Grand Conglomerate. The Nguba (previously known as the Lower Kundelungu) is composed of sandstones and shales with a basal conglomerate, while the Kundelungu consists essentially of sediments and is separated from the Nguba by a conglomerate, the (French) ‘petit conglomerat’.

Within the Lufilian Arc is large-scale E-W to NW-SE trending folds with wavelengths extending for kilometres. The folds are faulted along the crests of the anticlines through which rocks of the Roan have been diapirically injected into the fault zones, squeezed up fault planes and over-thrust to lie above rocks of the younger Kundelungu. The over-thrust Roan lithologies occur as segments or “fragments” on surface. The fragments are intact units that preserve the original geological succession within each. A fragment could be of hundreds of metres aligned across the fault plane.

In the Katangan copperbelt, mining for copper and cobalt occurs in these outcropping to sub-outcropping fragments.

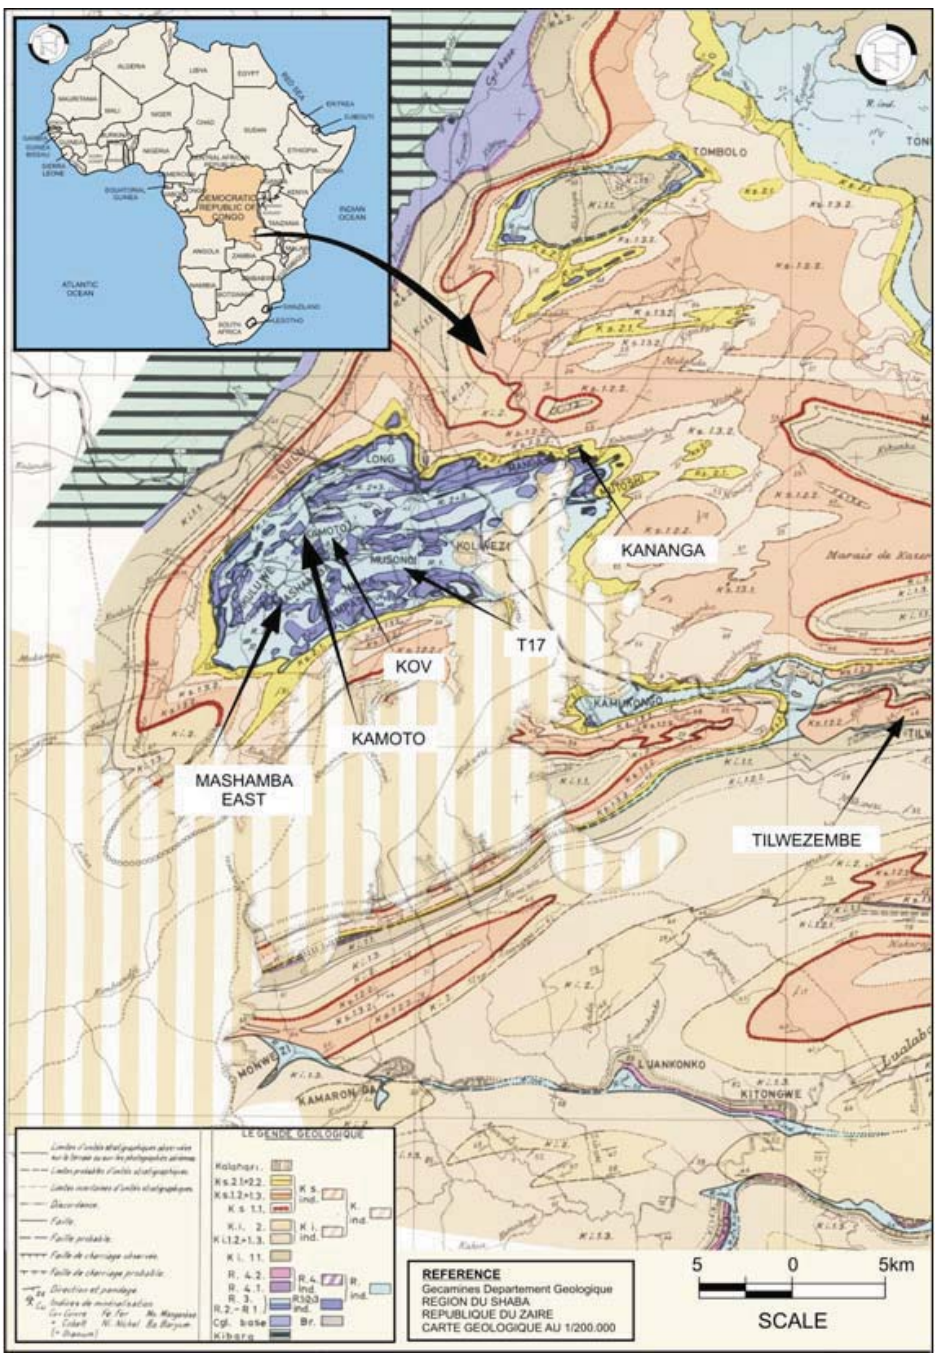

*Figure 3: Regional Geology*

### 3.1.1.1 General Stratigraphy

The generalized stratigraphy of the Katangan System is shown in Table 4. The Roan has been correlated across the Katangan Copperbelt into four main formations or groupings, R1 to R4. The divisions between each of the R series are often marked by an unconformity.

**Table 4: General Stratigraphy of the Katangan System**

| KATANGA SYSTEM | | | | | | STRATIGRAPHY | |
|---|---|---|---|---|---|---|---|
| System | Series | Formation | Local Name | | | Description | Thickness (m) |
