## I. BOARD DISCUSSION AND ANALYSIS OF THE OVERALL OPERATION OF THE COMPANY DURING THE REPORTING PERIOD

### (I) Management Discussion and Analysis

#### 1. Overview

During the first half of 2016, China's economy maintained an overall stable development, based on which progress and positive results were achieved. Against the backdrop of supply-side reform and the sustained relatively large downward pressure faced by the economy, the GDP growth rate was 6.7%. According to the report of MIIT, from January to April, the added value of above-scale pharmaceutical enterprises grew by 9.6% on a YOY basis, representing a decrease of 1.1 percentage point as compared with the corresponding period of last year, hence, the advantage over GDP growth rate was narrowed. Following the deepening reform of the medical and health system, the quality standards of the Chinese medical products supply chain will be fully enhanced: 1) the examination and approval standards for medicines and medical devices will be fully enhanced, while the approval process for innovative drugs and products with huge market demand is expected to speed up; 2) consistency evaluation of generic drugs will promote the rapid enhancement of the quality of medicines launched in the market; 3) with the gradual implementation of the "two-invoice" system and the new "B2V" policy came into force, the concentration of the pharmaceutical distribution industry will be further increased. In the long term, the continuing ageing of the population, the increase in demand of medicines and technological advancement, etc. will help the pharmaceutical industry maintain its healthy growth momentum. It is expected that the growth rate of the pharmaceutical industry in the second half of the year will maintain at the same level as the first half of the year.

During the Reporting Period, the Company responded to the market changes proactively based on the new three-year strategic objectives and annual budget plans, further deepened lean manufacturing, strengthened service innovation and enhanced the Group's core competitiveness by focusing on key tasks, as such, the operational objectives of the first half of the year were satisfactorily fulfilled, thereby laying a good foundation for fully accomplishing the annual objectives. Meanwhile, the re-election of the new session for the board of directors and the board of supervisors of the Company was also smoothly completed.

During the Reporting Period, the Company's operating income was RMB59.695 billion, up by 17.16% on a YOY basis. Net profit attributable to the shareholders of the listed company was RMB1.732 billion, representing an increase of 12.94% on a YOY basis. The operating profit margin after deducting sales and administration costs was 3.96%, representing a decrease of 0.13 percentage point on a YOY basis. Basic earnings per share amounted to RMB0.6443, up by 12.94% on a YOY basis; and basic earnings per share after deducting non-recurring profits and losses were RMB0.5956, up by 10.03% on a YOY basis. During the Reporting Period, the Company's net cash flows from operating activities amounted to RMB805 million, up by 66.82% on a YOY basis. As at 30 June 2016, the owners' equity of the Company was RMB35.077 billion; its owners' equity after deducting minority interest was RMB30.819 billion and its total assets were RMB79.035 billion.

### 5.3 Fair value estimation

(a) The table below analyses financial instruments carried at fair value, by valuation method. The different levels have been defined as follows:

- Quoted prices (unadjusted) in active markets for identical assets or liabilities (level 1).
- Inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly (that is, as prices) or indirectly (that is, derived from prices) (level 2).
- Inputs for the asset or liability that are not based on observable market data (that is, unobservable inputs) (level 3).

The following table presents the Group's financial assets that are measured at fair value as at 30 June 2016.

	Level 1 RMB'000	Level 2 RMB'000	Level 3 RMB'000	Total RMB'000

# NOTES TO THE INTERIM CONDENSED CONSOLIDATED FINANCIAL INFORMATION

## 5. FINANCIAL RISK MANAGEMENT (continued)

### 5.3 Fair value estimation (continued)

(a) *The table below analyses financial instruments carried at fair value, by valuation method. The different levels have been defined as follows: (continued)*

(i) *Financial instruments in level 1*

The fair value of financial instruments traded in active markets is based on quoted market prices at the balance sheet date. A market is regarded as active if quoted prices are readily and regularly available from an exchange, dealer, broker, industry group, pricing service, or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm's length basis. The quoted market price used for financial assets held by the Group is the current bid price. These instruments are included in level 1. Instruments included in level 1 comprise primarily equity investments traded in Shanghai Stock Exchange and Shenzhen Stock Exchange classified as trading securities or available-for-sale.

(ii) *Financial instruments in level 2*

The fair value of financial instruments that are not traded in an active market (for example, over-the-counter derivatives) is determined by using valuation techniques. These valuation techniques maximise the use of observable market data where it is available and rely as little as possible on entity specific estimates. If all significant inputs required to fair value an instrument are observable, the instrument is included in level 2.

If one or more of the significant inputs is not based on observable market data, the instrument is included in level 3.

Specific valuation techniques used to value financial instruments include:

- Quoted market prices or dealer quotes for similar instruments.
- The fair value of interest rate swaps is calculated as the present value of the estimated future cash flows based on observable yield curves.
- The fair value of forward foreign exchange contracts is determined using forward exchange rates at the balance sheet date, with the resulting value discounted back to present value.
- Other techniques, such as discounted cash flow analysis, are used to determine fair value for the remaining financial instruments.

The Group's financial assets included in level 2 are all equity investments of which the fair value can be measured by related quoted market prices.

### 5. FINANCIAL RISK MANAGEMENT (continued)

#### 5.3 Fair value estimation (continued)

*(b) Fair value of financial assets and liabilities measured at amortised cost*

The fair value of other long-term receivables and non-current borrowings as at 30 June 2016 and 31 December 2015 approximated to their carrying amount. The fair value is within level 3 of the fair value hierarchy.

The fair value of other long-term receivables and non-current borrowings is estimated by discounting the future cash flows at the current market rate available to the Group for similar financial instruments.

The fair value of the following financial assets and liabilities approximate their carrying amount:

- Trade and other receivables (excluding prepayments and prepaid current income tax or value-added tax recoverable);
- Restricted cash;
- Cash and cash equivalents;
- Current borrowings;
- Trade and other payables (excluding advance from customers, accrued taxes other than income tax, staff salaries and welfare payables).

### 6. SEGMENT INFORMATION

Management has determined the operating segments based on the reports reviewed by the board of directors that are used to make strategic decisions. The board of directors consider the business from a business type perspective.

The reportable operating segments derive their revenue primarily from the following four business types in the PRC:

# NOTES TO THE INTERIM CONDENSED CONSOLIDATED FINANCIAL INFORMATION

## 6. SEGMENT INFORMATION (continued)

Inter-segment revenue are conducted at prices and terms mutually agreed amongst those business segments.

The board of directors assess the performance of the operating segments based on a measure of revenue and operating profit.

Unallocated assets consist of current income tax recoverable and deferred income tax assets. Unallocated liabilities consist of current and deferred income tax liabilities.

Capital expenditure comprises mainly additions to land use rights, investment properties, property, plant and equipment and intangible assets, excluding additions resulting from acquisitions through business combinations under common control.
