8. DISCONTINUED OPERATION AND DISPOSAL GROUP CLASSIFIED AS HELD FOR SALE

As disclosed in the annual consolidated financial statements of the Group for the financial year ended 31 December 2015, a strategic decision was made on 23 June 2014 to place greater focus on the Group's key competencies in gas related industries and the Board resolved a plan to dispose mineral related business. The Company was negotiating with several interested parties to disposal of 88% equity interest in 貴州津維礦業投資有限公司 ("貴州津維"). 貴州津維 owns 70% equity interest in 貴州省台江縣國新鉛鋅選礦有限責任公司 ("貴州國新") which owns a mining right of a lead-zinc mine located in Taijiang County, Guizhou Province. Both 貴州津維 and 貴州國新 are engaged in the mining and trading of lead and zinc operation (collecting as "mineral operation").

As a result, the Group's mineral operation are presented as discontinued operation in the consolidated statement of profit or loss and other comprehensive income separately from continuing operations for the period ended from 30 June 2014 up to now. As at 30 June 2016, the assets and liabilities attributable to the operations have been classified as disposal group held for sale and are separately presented in the consolidated statement of financial position.

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

For the six months ended 30 June 2016

8. DISCONTINUED OPERATION AND DISPOSAL GROUP CLASSIFIED AS HELD FOR SALE

(continued)

In this period, an impairment loss of RMB1,078,000 has been recognised to write down the mining rights included in the assets and liabilities classified as held for sale to its estimated fair value less costs to sell of RMB2,113,000. This is a non-recurring fair value which has been measured using observable inputs, based on the prices for recent sales of mining rights as well as offers received available near reporting dates, and is therefore within level 3 of the fair value hierarchy.

During the initial one-year period since June 2014, the market conditions that existed at the date the disposal group was classified initially as held for sale have deteriorated and, as a result, the disposal group was not sold to the interested parties by the end of that period. Based on the most recent transaction prices as reference, a further impairment loss of RMB1,078,000 has been recognised in the current interim period. The Group remains committed to its plan to sell the disposal group and the disposal group continues to be actively marketed at a price that is reasonable given the change in market conditions. As a result, the directors consider the assets should continue to be classified as held for sale at the end of the reporting period.

The results of the discontinued mining operation included in the loss for the period from discontinued operation are set out below.

PROSPECTS

Development of the PRC Gas Sector

During the “13th Five-Year Plan”, optimising energy structure and managing environmental pollution at the national level will be the most significant driving force for natural gas consumption in China. Since 2013, China has successively released such framework documents such as the Plan of Action for the Prevention of Air Pollution (《大氣污染防治行動計劃》), Detailed Rules for Implementation of the Action Plans for the Prevention and Control of Air Pollution in the Beijing-Tianjin-Hebei Region and the Surrounding Regions (《京津冀及周邊地區落實大氣污染防治行動計劃實施細則》), and the Plan for Strengthening the Prevention and Control of Atmospheric Pollution in Energy Industry (《能源行業加強大氣污染防治工作方案》). In November 2014, China and the USA issued a joint statement in respect of dealing with climate change in Beijing, formally proposing for the first time that China’s carbon emissions will reach its peak in 2030 and China will put effort for early achievement. In accordance with the Action Plan for Energy Development Strategy (2014-2020) (《能源發展戰略行動計劃(2014-2020年)》) released by the State Council, the proportion of natural gas among primary energy consumption will increase to 10% or more by 2020.

The new Natural Gas Utilization Policy (《天然氣利用政策》) issued in 2013 further indicates the future development direction for China’s natural gas utilization. In urban gas field, China’s new urbanization is being promoted constantly. The annual average population of gasification is around 30 million people and national urban gasification rate will reach more than 60% by 2020. As a result, natural gas will become the main fuel of urban residents. In respect of the transportation area, natural gas will become the main fuel for most taxis in middle or small-scale cities. Buses in large and medium-scale cities will also gradually become clean gas-fueled. Liquefied natural gas (LNG) vehicles will further expand to intercity coaches and heavy trucks, and the application of LNG to ships and trains will begin. Natural gas will become a competitive fuel in public transportation. In respect of the industrial field, the progress of substituting natural gas as industrial fuel will be fully accelerated, especially in Bohai Bay Rim area, where coal-burning boilers will be substituted, and traditional

industries, such as iron, steel and ceramics etc, will be upgraded so as to manage air pollution, and central and western regions where the industrial structure of traditional industries will be transferred to. As such, the natural gas consumption in industrial field will be promoted. In respect of natural gas power generation, natural gas peak power stations will be orderly developed and natural gas distributed energy development will be the priority in air pollution control districts such as Beijing, Tianjing, Hebei and Shandong, Yangtze River delta and the Pearl River delta. It is expected that by 2020, urban and industrial consumption will account for over 60% of the total gas consumption. Domestic and overseas consulting agencies forecast that natural gas consumption will reach 300 billion to 360 billion cubic meters by 2020.

Looking ahead, based on the analysis in respect of external environment and inner abilities as well as resources, the Company is positioned as a clean energy integrated solution provider, aiming to maximize returns for its shareholders. The Company plans to expand in the following areas:

- On the premise of ensuring the strategic direction and business needs, lay emphasis on five principles, which are strategic orientation, economical efficiency, financing matching, risk prevention and order of priority, to achieve continuing growth of net cash flows.
- Continue to improve the financial management system, with a view to reducing operating costs, and maximize the benefits from project operations.
- Continue to strengthen the support of scientific and technological innovation to the businesses of the Company, enhance the introduction and development of advanced technologies, as well as apply such advanced technologies to the production management and the internal management.
- Continue to improve the operation management system and mechanism, with emphasis on operation security, optimize management methods and means and promote the pre-control safety management, so as to ensure safe operation.
