Share Option Information

Pursuant to the approved Share Option Scheme, the directors are authorised, at their discretion, to invite certain executives, to take up options to purchase ordinary shares in the Bank as incentive to them. Prior to 1st September, 2001, the option price was 80% of the average last dealt price on The Stock Exchange of Hong Kong Limited ("SEHK") on the five business days immediately preceding the date of offer of such options. After 1st September, 2001, the option price should be at least the higher of :

- the closing price of the shares on the SEHK on the date of the grant, which must be a trading day, and
- the average closing price of the shares on the SEHK for the five business days immediately preceding the date of grant.

The options must be held for at least one year and can be exercised between the first and the tenth anniversaries of the date of grant. The amount payable on acceptance of the share option was HK\$1. The share option scheme will be terminated on 24th April, 2003.

The maximum number of shares in respect of which options may be granted under the Share Option Scheme may not exceed 5% of the issued share capital of the Bank as at the date of approval of the scheme. The share options granted are not recognised in the accounts until they are exercised. The option price of share options granted on 10th March, 1994 for HK\$14.83 was after adjustment of one for five bonus issue in May 1997. The value per option granted in 2002 estimated at the date of grant using the Black-Scholes pricing model was HK\$7.96. The assumption used are as follows:

Risk-free interest rate (%)	6.40
Expected life (in years)	9.50
Volatility (%)	31.91
Expected dividend yield (%)	4.50

The Black-Scholes option pricing model was developed for use in estimating the fair value of traded options that have no vesting restrictions and are fully transferable. In addition, such option pricing model requires input of highly subjective assumptions, including the expected stock price volatility. Because the Bank's share options have characteristics significantly different from those of traded options, and because changes in the subjective input assumptions can materially affect the fair value estimate, the Black-Scholes option pricing model does not necessarily provide a reliable measure of the fair value of the share option.
